The sensor utilizes thick-film technology on a ceramic substrate. The probe is soldered to a circuit board with surface-mounted electronics sealed in the cap of the probe. A protective coating guards against conductive and nonconductive fluids and corrosive environments.

Surface-mounted electronics eliminate leads and holes, Wickes said. They drive the probe and provide an electronic output signal for driving a lamp or interfacing with another system.

The sensor will survive underhood temperatures from minus 40 to 150 degrees Centigrade, Wickes said.

Wickes said the sensor can be used in three ways: As a single, stand-alone unit; multiplexed with multiple probes to provide a complete fluid-sensing system, or with each probe multiplexed to the vehicle's on-board computer or electronic control system.

Automotive News analysis of new-car registrations based on R.L. Polk & Co. statistical report. Oklahoma for 1986 and 1985 based on manufacturers' sales records.

January domestic registrations up

By Jenny L. King
Detroit Reporter

New-car registrations in January were up a healthy 16.83 percent over the year-ago total and were best for the month since 1978 when they topped one-million.

U.S. registrations numbers released by R.L. Polk & Co. showed a record 912,644 new domestic and imported cars enrolled in January. The total consisted of 635,239 domestics and a record 277,405 imports.

Domestic registrations were up 10.36 percent year to year, to 635,-239 from 575,585. They increased 14.44 percent from 555,104 in December, 1985.

Imports were up 34.91 percent, to 277,405 from 205,621 in January, 1985.

Table on Page 46

The import share of the market grew by more than four percentage points, expanding to 30.39 percent from 26.32 percent.

The second-largest market segment went to domestic intermediates with 26.05 percent of the January total. Compacts were third with 17.67 percent, followed by subcompacts at 11.69 percent, luxury cars at 7.55 percent and standards at 6.65 percent.

Excluding imports, the January market was made up of 37.43 percent intermediates, 25.38 percent compacts, 16.80 percent subcompacts, 10.84 percent luxury cars and 9.55 percent standards.

A year ago imports claimed 26.41 percent of the month's market. Intermediates had 25.29 percent, compacts had 17.98 percent, compacts had 11.96 percent percent, standards had 10.02 percent and luxury models had 8.34 percent.

General Motors domestic cars comprised 58.51 percent of the domestic market in January, Ford Motor Co. had 26.67 percent, Chrysler Corp. had 13.75 percent and American Motors had 1.07 percent.

Ex-business manager offers service as car-shopper

RALEIGH, N.C.—C. Ashby Pamplin, a Raleigh resident who has been in the automobile business for 10 years, has opened a new business here called Car-Search to guide buyers of new and used cars.

Pamplin, who most recently served as business manager for two local dealerships, said some practices used in selling cars should be reformed. B. Wade Isaacs, executive vice president of the North Carolina Automobile Dealers Assn., said Pamplin's business is like that of a person who is paid to prepare people's income-tax returns.

"He is offering a service that a consumer can do for himself if he wants to, or he can pay someone else to do it," Isaacs said. "But we believe in the free-enterprise system. If he feels he can make a living out of it, fine."

Pamplin plans to charge a customer buying a car $45 per hour or a retainer of $200, which pays for six hours of time. He said, "For the average person, there is no question I can get a better deal.

"There seems to me to be a great need for honesty and openness in the car business, and I can help."

For his fee, Pamplin will help individuals and companies negotiate car deals for personal or business use. He will locate the particular car or fleet of vehicles wanted, advise the customer of the fair market value and negotiate for the lowest price.

Buyers considering a tradein are advised on whether they should trade or sell their car themselves.

Pamplin said he decided to start his service after having helped several friends negotiate with dealerships. He said that "one day, someone said, 'You ought to charge for this,' so that's what I'm doing."

German makes strong in Japan

TOKYO—Yanase, Japan's biggest car-importing company, has announced preliminary figures showing sizeable increases in sales of German cars in March.

Volkswagen sold 1,789 cars in Japan in March, an increase of 32.5 percent over the year-earlier month. BMW sales in March totaled 1,535, a rise of 36.4 percent. Mercedes-Benz sales came to 1,-231, for a gain of 29.6 percent, and Audi sales rose 25.4 percent to 963, a record for Audi.

First-quarter totals were: Volkswagen, 3,489; BMW, 3,276; Mercedes-Benz, 2,704, and Audi, 1,685.

Toyota professorship

NEW YORK—Rockefeller University has received $1.5 million from Toyota Motor Corp. to establish a Toyota professorship in the biomedical sciences.

AUTO-MOBILITY

Missouri's Big Three auto plants—Chrysler, Ford and General Motors—produce more cars than anywhere outside Detroit. And in production growth, we lead the nation.

Our central location and outstanding transportation system are major reasons Missouri's auto industry is thriving. We're a natural crossroads for America, and shipping to and from Missouri is fast and efficient.

Add to that our ranking as the country's number one pro-business state, and you'll know why automobility is part of the Missouri Advantage™.

To find out how to make that advantage yours, just call us at (314) 751-4539. Call collect.

The Missouri Advantage™

RUMBLE.

Missouri is making a lot of noise these days in auto production.

Our Big Three plants—Chrysler, Ford and GM—are second only to Detroit in production volume. And in production growth, we lead the nation.

Noise like that is music to our ears. It reflects the healthy industrial climate Missouri offers—a climate ranked number one in America for being pro-business.

They're all part of the Missouri Advantage™. To find out how to make it yours, call (314) 751-4539. Collect.

New Chinese contract law hailed

ANN ARBOR, Mich.—China's long-awaited international contract law holds new opportunities for Chinese-American joint ventures, according to University of Michigan Prof. Whitmore Gray.

Passed last summer, the new Chinese law is the first to provide specific rules covering international contracts. Gray believes the legislation will facilitate trade negotiations, although "judges and lawyers will be busy over the next few years interpreting the new law."

In the meantime, Americans should draft Chinese trade contracts "very carefully," Gray said. "Until the meaning of the new law becomes clearer, it is important to anticipate problems which may arise and provide specific solutions in the contract," he said.

He characterized Chinese businessmen as "shrewd" but generally "very cooperative" with foreign investors.

Americans, who until recently out-invested the Japanese 50 to one in China, should particularly welcome the new legislation, he said.

"Just five years ago, the U.S. passed the watershed mark of having more trade partners in the Pacific Rim area than across the Atlantic," Gray noted.

An expert on Chinese trade law, Gray has taught law courses at Jilin University in Changchun and will teach at Xiamen (Amoy) University in China in May. He has served as consultant to two Michigan firms that have entered into agreements involving projects in China.

Where contracts with the Chinese once were negotiated on an ad hoc, case-by-case basis, the new international law was designed to create a "solid legal framework within which foreign businesses can negotiate," he said.

"The Chinese have tried to encourage foreign investors by keeping favorable provisions from the former practice in the law as well as providing beneficial new ones," Gray said. In general, he said, the law codifies standard international practices and avoids new concepts.

The new trade law may eventually reduce the chances of contract disputes. In the past, "as much as possible was written into contracts to make up for the lack of consistent, clear-cut laws," Gray said. Under the new rules, contracts should be less cumbersome and ambiguous.

However, "Get a lawyer" is Gray's advice to any American firm about to sign a trade contract with a Chinese business or unit of government. Although the Chinese are less experienced in international trade than some of their Asian neighbors, many are "sharp bargainers," he said.

The new contract law also includes statutory provisions for licensing technological material such as industrial technology and eventually computer software.

Although the provisions have not yet been finalized, "the law has laid a foundation for contractual protection of software sold as part of a business deal," Gray said. A patent law has been enacted and a copyright law is "not quite ready" but forthcoming, he predicted.

For all its benefits, the legislation does not guarantee instant resolution of every trade question, Gray said. Foreign trade is still subject to separate legislation within China's more than 20 Special Economic Zones, areas designated to encourage foreign investment. Each zone is allowed to have its own contract law.

Not surprisingly, the demand for American lawyers with strong backgrounds in Chinese language and culture is growing, he said.

Gray and other experts in Chinese language, law and government are training both American and Chinese lawyers to mediate and arbitrate trade disputes and to interpret China's domestic and international trade laws.

Used-car dealer accused by U.S. as a tax cheat

SPRINGFIELD, Mass.—Daniel Kaeffer, a used-car dealer in Agawam, Mass., has been charged in U.S. District Court with failure to report more than $1 million in sales income.

U.S. Attorney William F. Weld said Kaeffer, doing business as Dan's Auto Sales, is charged in a two-count federal indictment with filing false tax returns for 1979 and 1980.

The indictment, returned by a grand jury, claims that Kaeffer filed a tax return for one of the years claiming $16,006 in income from wages. The government claims that Kaeffer failed that year to report additional income of $588,557 from car sales.

The indictment also charges Kaeffer with claiming wage income of $6,166 for the other year, but that he failed to report income from car sales of $659,225. If convicted, Kaeffer faces a possible sentence of six years and a fine of up to $200,000.

Reuss revamping GM marketing approach

Continued from Page 1

and Bonneville—beginning in the 1988 model year.

Eventually GM10 cars also will replace GM's A-models—the Chevrolet Celebrity, Buick Century, Oldsmobile Cutlass Ciera and Pontiac 6000.

"With the A-cars, we've got umpteen models," said Reuss. "As we make the transition from the A-bodies to the GM10 cars, we won't be keeping nearly as many models in the lineup as we have today.

"Product will be more focused so that everyone doesn't have everything, which is the way we've been doing it at GM traditionally," Reuss said.

The idea, Reuss said, is for the divisions to shift their focus to the competition outside of GM, not with sister divisions.

Reuss and the heads of the two car groups—William Hoglund at Buick-Oldsmobile-Cadillac and Robert J. Schultz at Chevrolet-Pontiac-Canada—have been examining what Reuss calls market segmentation.

"The objective," he said, "is to define the market segment for each division and then deproliferate those models so that we make it easier for our dealers and our distribution system to handle our products and make it simpler in our plants, which obviously helps the quality and cost."

Division by division, Reuss, Hoglund and Schultz have determined which models represent each division's core products, those products which make up 80 percent of the division's sales.

At Chevrolet, for example, the core products are the Celebrity and Cavalier; at Oldsmobile, they are the Delta 88 and Cutlass.

"We intend to expand our market penetration of those core products," he said.

The other 20 percent of sales represents areas where the divisions overlap. "That's where we've proliferated our models and options far too much," Reuss said. "That's where the difficult decisions have to be made—who has this particular type of customer and who goes after them."

Lloyd E. Reuss

Reuss said the divisions will eventually follow what Pontiac has done. "They have the most well-defined market segment, and their product reflects it. What we have to do now is work at all five divisions."

As each division's market segment is defined, product will be designed to be distinctive to that division. Reuss said much of the $9 billion GM dedicates annually to capital spending during the next few years will go toward putting "specificity" into models, instead of into retooling for basic components, suspensions and automatic transmissions, as has been the case in recent years.

"What we're doing is designing more specific and unique body panels and instrument panels," he said. "The new GM10 cars, which come out in 1988, will be the first public demonstration of what we've done. All the exterior panels are unique for each of the three divisions that will get the cars first (Buick, Oldsmobile, Pontiac). The entire instrument panels are unique to each.

"In fact," he added, "there's more personality difference between, say, the Grand Prix for '88 and the Cutlass Supreme for '88 than we've ever had in the Pontiac and Oldsmobile lines on a similar platform."

Don't cannibalize, Saturn told

Continued from Page 1

tract top-notch dealers," he said. "We have to make sure we have enough product to make it a stand-alone outlet."

While a separate franchise will be required to sell Saturn cars, Reuss sees the basic franchise system remaining intact.

He said GM is quizzing dealers on their reaction to different ideas for distribution of Saturn cars and on ideas for such things as service departments and the layout of the dealership.

"We're looking at new ideas, but my feeling is we'll use the basic franchise system," he said. "The basic franchise system is a sound system and has been very successful for us.

"While Saturn is taking a clean sheet of paper approach," he added, "we're not going to be destroying anything that's our strength, and the franchise system is one of those strengths."

Many observers had speculated Saturn cars would be sold through such mass merchandisers as K mart and Sears. "That always make nice conversation," Reuss said. "And we've looked at that for 15 years, but I don't see that happening for the rest of my career."

At the same time, Saturn officials are trying to decide what kind of personality the Saturn car should have, what appointments it needs to portray its personality and what market segment Saturn should pursue.

Saturn Corp., with GM's other five car divisions, is participating in a review of market segments. All of GM's divisions are examining their market segments and figuring out ways to improve their penetration of those segments.

GM10 program shows progress

By Michelle Krebs
Financial Editor

The GM10 program, General Motors' massive project to replace its mid-sized car lines, remains on track as GM's largest new-car program ever.

Lloyd Reuss, executive vice president in charge of North American Passenger Car Groups, said that ultimately the program will represent a $7-billion investment, though over what period of time is in question.

Reuss denied speculation that GM was scaling back the new-car program. Rather, he said, GM is rethinking when it will bring out various GM10 models and which divisions will get the various models.

"The question is not whether we do GM10 or not," Reuss said. "The question is at what rate, and what models do you bring on."

The first GM10 cars will be sold through Pontiac, Oldsmobile and Buick. They will be 1988 models and will replace the rear-wheel-drive G-bodies—Buick Regal, Chevrolet Monte Carlo, Oldsmobile Cutlass Supreme and Pontiac Grand Prix and Bonneville. The G-body cars will be discontinued when the GM10 cars are introduced.

"We have the sedan and station wagons designed," Reuss said. "Now, what we have to decide is at what rate do we bring them in. Then, once we decide that, we have to decide what plants will make them."

To date, GM has selected only three plants to produce GM10 cars—Fairfax, Kans.; Oshawa, Ont., and Doraville, Ga. It was originally thought that seven assembly plants would be producing the 1.7 million GM10 cars a year.

The timing question is complicated by the continued success of GM's A-body cars—Chevrolet Celebrity, Buick Century, Oldsmobile Cutlass Ciera and Pontiac 6000. GM has been running six plants on two shifts "wide open throttle" to make the A-cars.

"We have a very successful intermediate product line, and we have to be very careful about making a transition," Reuss said. "As long as they are selling well, and they are, we certainly don't want to disrupt that very successful product."

Reuss said it is possible that some A-cars will remain in the product lineup with the GM10 cars. He said the situation is similar to the situation at Cadillac. The plan had been for the front-wheel-drive models to replace older rear-wheel-drive cars.

"But then the market showed us we really shouldn't drop those," Reuss noted. "As a result, the rwd stayed around. What it looks like to me is that the rwd Cadillac (Fleetwood Brougham) is going to be around for a long time to come, as is the rwd Chevrolet Caprice."

Reuss said the first GM10 cars to be developed represent the greatest distinction by divisions of any so far.

"We have more product distinction—interior and exterior—than any of our products in the past," he said. "The exterior is entirely new and entirely different for each division."

Reuss explains GM price hike

By Michelle Krebs
Financial Editor

General Motors was forced to raise car prices by hefty capital spending plans while at the same time providing a return to stockholders, according to the head of GM's North American automobile operations.

"We are going through a major renovation not only of our product line but of our plants as well," Lloyd Reuss, executive vice president in charge of North American Passenger Car Groups, said in an interview with Automotive News.

GM plans $9 billion to $10 billion in capital spending this year and will maintain that spending level for the next few years.

"There's nobody else making that kind of investment in the future," Reuss said. "To do that and still provide a good return to our stockholders required us to raise prices."

Nevertheless, GM has been criticized for its 2.9-percent price increase, which took effect last Monday. Critics contend GM blew a perfect opportunity to pick up market share from the imports.

"We don't know that," argued Reuss. "We are in a better position versus the imports after the price increases than we were six or seven months ago."

He contended that GM is taking a long-term view while critics look at the short term. "Had we gone with a price increase like the imports," he said, "then I would agree we would be losing some sales. It's a delicate balance. We've got to provide returns and the money for the investments."

Reuss called the GM price increase "modest" compared with that of the competition.

"Our import competition has been doing double-digit (percentage) price increases," said Reuss. "If you look at our price increase, it was sort of modest."

Reuss said that unlike its domestic competitors, GM has decided to become more vertically integrated.

"At GM," he said. "We've taken a long-term view and said the solution to international competition is to gear up to maintain a strong industrial base in this country."

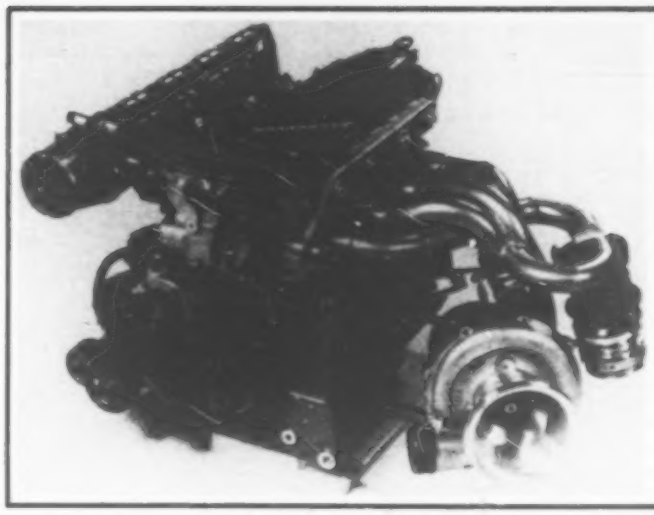
In addition to increasing car prices, GM has reduced the bonus-level head count by 14 percent since it announced its reorganization two years ago. The goal is to cut it by 25 percent by 1990.

The same day that GM put price increases into effect, it also put into effect a new round of financing incentives, ranging from 6.9 percent to 9.9 percent interest rates. Reuss said incentives are "a way of life" right now.

"We're going to continue to have a lot of competition out there," he said. "We at GM are going to be darned aggressive making sure we don't lose market share."

Reuss said he is not overly concerned with GM's high inventory. GM's days' supply as of April 1 was up to 85, compared with 51 a year ago.

"Our inventories are a little bit higher than they normally would be," Reuss said, "but as we move into the spring selling season, we're bullish enough to think that the inventory will be an asset."



New Alfa F1 engine

Alfa Romeo will make its new Gianni Tonti-designed 1.5-liter turbocharged 4-cylinder Formula One engine available to selected chassis manufacturers and racing teams beginning next year. The double-overhead-cam, aluminum block, electronically fuel-injected engine produces 830 HP under current racing federation rules. (Under 1985 standards, 890 HP is achievable.) Alfa will conduct testing of the 279-pound 415/85T engine for the remainder of 1986 at its Bolocco proving grounds near Milano, Italy.

Early-April car sales are highest since '78

By Jenny L. King
Detroit Reporter

Early-April domestic new-car sales responded politely to the continuing incentives programs, climbing 2.67 percent above the year-ago total to their highest level since 1978.

General Motors' 4.90-percent advance was the determining force behind the year-to-year increase.

April 1-10 sales of 227,304 were up some 6,000 units from 221,392 in 1985. It was the strongest early April for the domestic industry since 1978, when sales totaled 232,581. The record of 261,673 for the period was notched in 1971.

Lower-interest-rate programs offered by GM dealers and scheduled to expire April 12 stimulated increased activity in early April, with sales up 4.90 percent, to 129,506 from 123,461 last year.

Ford Motor Co., also involved in a consumer incentive program, reported a 1.04-percent sales improvement for the period, with sales moving to 58,973 from 58,368. Chrysler Motors sales dipped 4.71 percent, to 30,511 from 32,018. Chrysler's consumer approach has been to offer rebates rather than low-interest-rate guarantees on new cars.

American Motors released a sales estimate of 1,600 new passenger cars for the period, down 46.67 percent from 3,000 in 1985. Volkswagen reported 1,868 Golf sales, up 22.09 percent from 1,530. Honda was up 13 cars or 0.43 percent, to 3,028 from 3,015, and Nissan sales totaled 1,818 its first April 1-10 in the domestic market.

The market for the period included GM up to 56.98 percent from 55.83 percent; Ford slipped to 25.95 percent from 26.39 percent, and Chrysler earned 13.42 percent, down from 14.48 percent.

Honda had 1.33 percent, down from 1.36 percent; VW was up to 0.82 percent from 0.58 percent, while AMC dropped to its lowest penetration level of the year—to 0.70 percent from 1.36 percent. Nissan had 0.80 percent of the most recent domestic market, pushing AMC to the lowest rung of the ladder.

Makes reporting sales increases included Chrysler, up 26.23 percent; Ford, up 2.60 percent; Lincoln, up 2.75 percent; Buick, up 1.24 percent; Cadillac, up 32.88 percent; Pontiac, up 17.76 percent; VW, up 22.09 percent and Honda, up 0.43 percent.

Plymouth sales dropped 22.35 percent, Dodge was down 10.77 percent, Mercury was down 31.61 percent and Chevrolet was off 0.62 percent. Oldsmobile missed the year-ago mark by 0.10 percent, AMC was down an estimated 50.00 percent and Renault was down 46.00 percent.

The daily selling rate of 25,256 was up 2.67 percent from 24,599 a year earlier. There were nine selling days in the period both years.

Year-to-date sales reached 2,125,930, down 6.08 percent from 2,263,556 in 1985.

Chevrolet Celebrity was the number-one selling nameplate April 1-10. Celebrity, at 11,329, was followed by Ford Escort at 11,280, Chevrolet Cavalier at 9,782, Oldsmobile Cutlass Ciera at 8,343 and Ford Tempo at 7,240.

Import stock up; days' total steady

By Kathy Boyer
Detroit Reporter

The stockpile of unsold imported cars on April 1 was up, but brisk sales kept the days' supply even with a month ago.

The April 1 inventory of 338,084 cars was the highest since Jan. 1 when 338,315 were in stock.

The April 1 count compares with 333,893 a month earlier and 221,179 a year earlier.

Despite the rise in the stockpile, the days' supply remained at 37, even with the month-earlier total but more than the 29 reported a year earlier.

Truck inventories on April 1 dipped slightly to 137,012 from 138,800 a month-earlier. A year earlier, the count had been 92,259.

The stockpile of trucks represented a trim 40-day supply, the lowest since August when a 20-day supply was tabulated.

The April 1 combined imported car and truck inventory rose to 475,096, the highest since Jan. 1, 1983, when 487,851 units were reported.

The current total compares with the 472,693 a month earlier and 313,438 a year earlier.

The import-car inventory on April 1 was split this way: Japan, 58.00 percent; West Germany, 29.59 percent, and other countries, 12.41 percent.

A month-ago, the shares were: Japan, 64.00 percent; West Germany, 24.20 percent, and other countries, 11.80 percent.

All inventory figures in this article include dealer and port inventories and vehicles in transit.

These are the April 1 days-supply figures for imported cars by country of origin: Japan—Toyota, 5; Mazda, 11; Honda, 12; Mitsubishi, 25; Subaru, 27; Nissan, 42; Chrysler Corp., 62; Isuzu, 68, and Chevrolet, 92, (including 103 for the Isuzu-built Spectrum and 73 for the Suzuki-built Sprint).

West Germany—Mercedes Benz, 26; Porsche, 49; BMW, 71; Merkur, 76; Volkswagen, 83, and Audi, 87.

Other countries—Jaguar, 22; Yugo, 32; Saab, 54; Alfa Romeo, 55; Volvo, 57; Peugeot, 69, and Renault, 242.

Trucks and their days' supplies were: Suzuki, 8; Toyota, 21; Mazda, 31; Nissan, 47; Chrysler, 74; Mitsubishi, 79; and Isuzu, 84.

All import truck figures include Nissan's U.S. built models.

Customs Service probes fraud in old 'gray' cars

Continued from Page 1

runs the VIN numbers through Interpol, he said.

Richard Gow and his partner, Robert Goldstein, inspectors with the major crime unit of Customs at the port, are on the front lines as the cars come off the ships.

Gow called some of the people who bring in the cars "straw importers."

He said that in many cases, Customs investigators have found that names on documents have been obtained from tombstones and that addresses are vacant lots. Today, in order to receive a car from the port, "importers" or buyers must identify themselves and present Social Security numbers and telephone numbers.

Stiffel said while 60 cases are now under investigation—most involving fraudulent documentation—he expected the number to rise.

If Customs finds a case of outright fraud, rather than an error, the car can be forfeited.

The penalties for errors can range from $1 to the value of the car.

As for cars which have been impounded, Gow said in some cases it's simply a case of people not picking up the cars. He said he did not know why.

But the cars are sitting at the port and eventually will be disposed of. Some are auctioned by the Customs Service. Others are shipped overseas for use by federal agencies.

More incentives bloom in thorny sales patch

Continued from Page 2

programs were scheduled to expire April 16, did some propping of its own by extending that incentive through April 20.

The Ford program features 7.7-percent Ford Credit financing on Escort, Escort EXP and Lynx models (except Escort Pony) delivered from dealer stock and 9.9-percent financing on a wide range of Ford and Mercury passenger cars, several Ford light trucks and all 1985 and 1986 Lincoln Town Cars.

After April 20, what? "The matters are being decided, literally, at the highest levels of the company," said a Ford source.

According to the insider, Ford viewed the market as split: There is the "Grand Boulevard" (GM) option of a 2.9 percent price hike followed by an even more aggressive set of APR incentives. Or there is the "Highland Park" (Chrysler) philosophy of holding the line on prices and trying to gain market advantage strictly on price, sweetened as needed with rebates or low interest rates.

Chrysler Motors announced last week that it would offer 6.8-APR financing on 1985 and 1986 models of the Dodge Omni and Plymouth Horizon, Dodge Ram Van, Ram Wagon and Ramcharger. The rate was available immediately.

The company touted it as the lowest rate in Chrysler history. A new twist is that the low APR, available only through Chrysler Credit, may be applied for up to 60 months. The program offers the buyer a choice of 6.8 APR or $500 cash back on the Omni/Horizon and $1,000 back on the trucks.

Last week the corporation also announced a special bonus for stockholders. A $250 cash certificate, valid through May 31 and applicable to the purchase of any new North-American-built car or truck (except minivans and Ramchargers) accompanies the shareholder's April 15 dividend check.

Chrysler's earlier rebate program, in place since March 1 and scheduled to run through the end of this month, provides $500 to $1,000 cash back, depending on model, on all new 1985 and 1986 domestic cars and some trucks.

American Motors has interest rates from 7.7 percent on 36-month loans to 9.9 percent on 48 months and 11.9 percent on loans up to 60 months. The AMC program runs through April 30.

Volkswagen said it had an interest-back program on its Wolfsburg limited-edition Golf effective through April 20. Assuming a four-year purchase plan, the customer could retrieve the equivalent of the interest paid during one year. Prior to the Wolfsburg target, VW offered consumer incentives on the GTI.

The European imports have kept their distance from customer incentive programs. "They're selling everything they bring in as it is," said an industry observer.

The Japanese have tampered with their pickup truck market in the U.S. but they, too, are order takers when it comes to new-car sales. Nissan offers a 7.7-APR to customers taking 48-month loans on pickups, domestic or imported. Scheduled to expire at the end of this month, the program probably will be continued.

Toyota's Truck-Dealin' Dollar dealer incentive program, underway through the end of May, offers cash awards to dealership personnel based on sales of pickup trucks and Cargo Vans.

At American Isuzu, a three-month President's Cup dealer incentive ends April 30. It is coupled with an 8.6-APR consumer interest plan on the company's P'UP pickup trucks.

"We haven't heard about any new programs and since this one has been running since the first of the year, it may not be extended," said an Isuzu spokeswoman.

Mitsubishi has an intricate web of dealer incentives including a March-April program offering $500 back per pickup truck sold at the 35-units-and-above level. A concurrent bonus plan includes trips to Scotland for 15 top-volume dealers, plus cash awards for dealerships coming close to or surpassing their assigned sales objectives.

Throughout April, dealerships receive $200 per pickup sold in addition to the previous awards, and a bonus plan pays sales managers handsomely for meeting or exceeding Mitsubishi-designated sales goals.

A Mazda spokesman reported no incentives on cars and a recently initiated dealer trip program based on truck sales which should run "a month or two."

Auto production declines for week

By Kathy Boyer
Detroit Reporter

Last week's scheduled production of domestic cars was the lowest for a full work week in six months.

The targeted output of 164,856 cars was the lowest since the week ended Oct. 26, 1985, when Chrysler Corp. plants were on strike, slowing production to 152,430 units.

Affecting last week's build were production cuts at General Motors; the idling of Nissan Motor Mfg. Co., U.S.A.'s car line in Smyrna, Tenn., for model changeover, and downtime at American Motor's Kenosha plant for inventory adjustment.

Last week's build was 6.38 percent below the previous week's 176,098 and 10.24 percent below the year-ago week's 183,669.

So far this year, 2,605,125 cars have been assembled, down 3.17 percent from the 2,690,455 completed last year at this time.

Companies shared last week's estimated production as follows: GM, 56.65 percent; Ford Motor Co., 24.60 percent; Chrysler Corp., 13.47 percent; Honda of America Mfg. Co., 2.21 percent; New United Motor Mfg., Inc., 1.86 percent, and Volkswagen of America, 1.21 percent.

AMC's plant is expected to resume production today (April 21).

Chrysler's Sterling Heights (Mich.) plant, which produces the Chrysler LeBaron GTS and Dodge Lancer, remains closed in preparation for the addition of Plymouth Sundance and Dodge Shadow.

GM's Fiero plant in Pontiac is idle this week for inventory adjustment.

The plant is scheduled to resume output April 28.

Ford slated Saturday (April 19) overtime at its Wayne (Mich.) plant.

All Ford plants except Chicago are scheduled for daily overtime this week.

Chrysler's Belvidere (Ill.) plant was slated for overtime Saturday.

Daily overtime is scheduled this week at that plant and at Chrysler's St. Louis facility.

Belvidere workers vote on salvation contract

By Mary Connelly
Detroit Reporter

At presstime, UAW Local 1268 officials were predicting Sunday ratification of a progressive labor agreement and assurance of continued operation at Chrysler Corp.'s assembly plant in Belvidere, Ill.

Members of Local 1268 were scheduled to vote on a tentative local agreement reached with Chrysler last Thursday.

If the union agrees to the new local contract, Chrysler has said it will invest $800 million to produce its 1988 full-sized, front-wheel-drive C-body models at the plant.

Both sides declined to detail terms of the tentative contract.

However, Richard E. Dauch, Chrysler executive vice president of manufacturing, said the number of production job classifications is between the 16 in force at Chrysler's Sterling Heights (Mich.) assembly plant and the 27 at Windsor assembly. There are currently 120 job classifications at Belvidere.

Classification reduction has been among Chrysler's major quests at its plants.

Asked to detail the key elements of progressive labor agreements, Dauch listed several but would not specify which are contained in the Belvidere pact.

He cited:

1. Job classification reduction.
2. Management's right to a two-week, vacation downtime each year.
3. Flexibility regarding manpower assignments.
4. Overtime decisions determined by an employe's competency, not seniority.
5. Reduction in ability to invoke seniority rights to change shift preference.
6. Stability of work force and fewer job transfers six to eight months prior to a new-model buildout and six to eight months after model launch.

"Obviously, I wouldn't tell you I feel we have a good tentative agreement (at Belvidere) if the major elements didn't have some form or fashion of what we require to put all that money in the plant," he said.

The union declined comment on Dauch's remarks except to confirm that the tentative pact at Belvidere does contain classification reductions.

Toyota reports production gain

TOYOTA CITY, Japan—Toyota Motor Corp. said it produced 310,477 vehicles in February, an increase of 2.0 percent over February, 1985. It was the 17th consecutive month in which production surpassed the year-earlier month's total.

The production breakdown showed 223,419 passenger cars, up 7.0 percent, and 87,058 trucks, down 9.1 percent.

Domestic registrations totaled 109,508 passenger cars in February, down 0.1 percent from 1985.

Truck production jumps 5 percent

U.S. truck makers targeted a build of 75,813 trucks last week, 4.88 percent more than the previous week's 72,285 and 6.88 percent better than the year-ago week's 70,932.

At 1,103,340, year-to-date production is 5.02 percent ahead of last year's 1,050,629 t this point.

Nissan Mfg. Co., U.S.A., increased truck production at its Smyrna (Tenn.) plant when it closed the car line for model changeover on March 31.

Nissan is aiming for an increase of about 6,500 units per month, which would bring the total monthly production to 15,000 trucks.

General Motors scheduled Saturday (April 19) overtime at its Flint (No. 1) and St. Louis plants.

Ford slated overtime Saturday at its plants in Norfolk and Twin Cities.

Daily overtime is scheduled for all Ford truck plants this week (April 21).

Canadian makers hike auto output

Canadian makers planned to build 25,670 cars last week, 2.17 percent more than the previous week's 25,124 and 10.69 percent better than the year-ago week's 23,190.

So far this year, 350,490 cars have been assembled, 13.95 percent more than the 307,587 built at this point last year.

Truck production was pegged at 19,452 last week, 1.35 percent below the previous week's 19,718 and 3.54 percent fewer than the year-ago week's 20,166.

Year-to-date, 292,958 trucks have been assembled, 4.91 percent more than the 279,239 built last year at this time.

Makers hunger to turn Belvidere vote into trend

By Mary Connelly
Detroit Reporter

News Analysis

The new progressive labor agreement ironed out between Chrysler Corp. and UAW Local 1268 at the Belvidere (Ill.) assembly plant may offer a glimpse of the future at other Chrysler manufacturing plants.

Chrysler is seeking progressive local contracts at its plants to boost efficiency, flexibility and productivity. In cases such as Belvidere, Chrysler has told the union that it must agree to the pact if it wants future product slated at the plant.

On April 21, UAW employes at Belvidere won the prize when 70 percent of union members voting approved a progressive contract calling for a 50 percent cut in production classifications.

The agreement also permits Chrysler to deduct two weeks of an employe's vacation time during plant shutdowns occurring June 1 through Sept. 1 and to enact a freeze on department transfers for several months after a new-product launch.

In return, Chrysler has assured Local 1268 that Belvidere has a future. The company will build its 1988 full-sized, front-wheel-drive C-body line and a luxury model derivative in the Illinois plant.

Chrysler's approach of withholding its $800 million investment in product and plant at Belvidere until union members agreed to do business a new way is being replayed in other companies and at other manufacturing locations in the U.S.

At Chrysler's Newark (Del.) assembly plant is being considered for the K-car replacement but will be required to agree to a new-style local contract.

In Detroit, many factors are being debated as Chrysler tries to determine the future of its aging Jefferson Avenue assembly plant. But as part of that life-saving effort, the local membership had to authorize the union to negotiate a progressive agreement.

The changes are occurring not only in assembly operations.

A plan to invest $60 million in Huntsville, Ala., to create a Chrysler Electronics City is contingent on the union reaching a

18 U.S. firms pool ideas to sell in Japan

By Bob Berger
Special Correspondent

TOKYO—Following the adage "In unity there is strength," 18 subsidiaries of U.S. auto parts manufacturers have formed the American Automotive Parts Industry Assn. in Japan.

Their goal is to increase sales in this country.

Members include Japanese sales subsidiaries and manufacturing joint ventures of Champion Spark Plug Co.; Borg-Warner Corp.; Bendix Corp.; Chrysler Corp.; TRW, Inc.,; Garrett Corp.; Cummins Engine Co., and Dana Corp.

Steven C.S. Chang, of Nippon Champion Spark Plug K.K., is chairman of the association. Hiromichi Ito, of Borg-Warner K.K., is secretary.

Members expect to benefit from exchanging ideas on the special techniques of marketing in Japan. At first, members were hesitant, particularly when meeting with a rival company.

But any initial reluctance quickly vanished.

One executive explained: "Before we formed our group, each of us was banging his head against the wall, trying to find an entrance into the market. At times, one of us would come up with some answers, but no one had the complete solution worked out. By meeting with each other, we can compare notes and benefit from each other's experiences."

Though the group produced some rather strange bedfellows, he noted that "American companies are so under-represented in the Japanese market, and their market share is so small, that even long-standing competitors feel a sort of team spirit as members of the association.

It may be that you have 1/10th of one percent of the market here in Japan," he said, "and your competitor also has 1/10th, but both of us are up against a Japanese company that has 99 percent of the market.

"In that case, it's pretty easy for us to forget our rivalry and see what we can come up with to grab a piece of the business that the

Pininfarina's Alfa Romeo-based spyder and coupe

U.S. makers join Turin pilgrimage

By Richard Feast
European Editor

TURIN, Italy—For the auto industry, this place is Style City. The Europeans have been coming to Italy for their artwork since the Renaissance, and the more recent arrival of the automobile merely continued the trend.

It was not long before the Japanese—who know a good thing when they see it—started pilgrimages here.

Now the Americans have seen the light. Soon there will be the Pininfarina Cadillac. Later there will be the Ghia-designed Ford sports cars. Chrysler will have its Maserati engine and Q-coupe, and the forthcoming sedan and coupe from American Motors began on the drawing boards of ItalDesign's Giugiaro.

The auto companies arrive with checkbooks at the ready for the creativity and craftsmanship of the designers concentrated in the Piedmont capital. A glimpse of just what the big companies are buying is provided by the biennial Turin Auto Show which opened last week.

Were it not for the designers—and the efforts of the town's proprietorial Fiat company—the Turin show would be a pretty parochial affair, just as the one in Birmingham, England, has become. The shows in Geneva, Paris and Frankfurt attract top auto industry management from around the world to the preview days reserved to the trade and press. That is just not the case with Turin.

Fiat Auto, incidentally, will report a profit of about $300 million for 1985, double the $148 million in 1984. Fiat will make the official announcement May 30.

Of the new production models on display, only one was worth a second glance—the Ferrari V-8-engined Lancia Thema 8.32 (8 cylinders, 32 valves). The car will carry a price tag in the region of $35,000 when it goes on sale this summer as Italy's answer to the best of BMW and Mercedes-Benz.

Otherwise, the trends were almost exclusively tracked by the designers. Their offerings ranged from the simple beauty of the Alfa Romeo-based coupe and spyder of Pininfarina to the outright eccentricity of Ital's Machimoto. Well, would you believe a six-seater motorcycle?

On a more serious note, the same company also created Incas, a mid-engined, four-wheel-drive, four-seater that develops the ideas seen with Maya in 1984. But

Japan's exports just over quota

By Francis J. Gawronski
Copyright, 1986, Automotive News

TOKYO—Preliminary figures show Japanese auto makers will miss their voluntary export quota of 2.30 million cars to the U.S. by 4,000 units. According to unofficial industry figures, the Japanese manufacturers shipped some 2,304,000 units in the fiscal year ended March 31. The official numbers will be reported this week.

In the first year of quotas, fiscal year 1981-1982, the Japanese makers exported one car less than the 1.68 million they were alloted by their government.

In subsequent years, Japan Automobile Mfrs. Assn. figures show them exporting precisely at their limits of 1.68 million for both 1982-1983 and 1983-1984, and 1.85 million for fiscal year 1984-1985.

In Washington, the U.S. Commerce Department said its analysis shows the Japanese exports fell short of quotas for the first three years but exceeded the limits by a very small percentage (0.05 of a percent or less) in the fourth and fifth years.

This year's quota remains unchanged from the 2.30 million of last year.

Analysts noted the smaller makers affiliated with U.S. car producers received the greatest individual allocations of last year's 24-percent increase.

Mitsubishi Motors Corp., which

Output cut by Toyota and Nissan

TOKYO—Japan's two leading automobile manufacturers, Toyota Motor Corp. and Nissan Motor Co., said they are cutting their auto output to cope with the adverse effects the appreciation of the yen against the U.S. dollar has had on their exports.

Toyota revealed that it cut its March output to 322,837 units, down 1.6 percent from the year-earlier total. It was the first year-to-year dip in 17 months.

Toyota's March production consisted of 230,667 cars, up 1.9 percent, and 92,170 trucks and buses, down 9.3 percent, compared with last year's figures.

Nissan's production in March, according to a company spokesman, dropped to 205,131 units, down 14.7 percent from the year-ago figure. The spokesman said it "reflected production adjustments the company made in light of prospects of sluggish exports."

Despite the decline in March, Toyota reported that production for the fiscal year ended March 31 reached an alltime high of 3,675,-185 units, an increase of 5.1 percent from the preceding year.

Toyota's domestic sales and exports were 1,690,080 units and 1,-977,787 units, respectively, also records. The year-to-year increases were 2.5 percent for domestic sales and 1.8 percent for exports.

Toyota said March domestic sales totaled 241,755, up 1.0 percent, while exports sagged 1.8 percent to 125,177 due mainly to declines in shipments to Asia, Oceania and the Middle East.

Nissan's exports in March declined 27.2 percent to 81,931 units, due mainly to adjustments in shipments to Europe.

Nissan's domestic sales in March totaled 164,234 units, down 7.4 percent.

For fiscal 1985, Nissan said it produced 2,438,520 units, down 1.4 percent, and exported 1,408,-024 units, up 2.4 percent.

Smith according to Nader

By Michelle Krebs
Financial Editor

The portrait of General Motors Chairman Roger B. Smith painted by consumer advocate and long-time GM adversary Ralph Nader in his new book predictably is not a pretty one.

Nader along with William Taylor are authors of The Big Boys: Power & Position in American Business. The book, which has a May 19 publication date, profiles nine top business executives, three of which, including GM's Smith, refused to be interviewed.

Nader said he was turned down on the Smith interview in a memo which stated that "in view of your long history as an adversary of GM, (Smith) does not want to lend to your book the cooperation you request."

Nader said of all the executives involved with the book "none was more dismissive and aloof than the GM chairman."

A GM spokesman said since the company chose not to participate in the book, the company had no comment on its contents.

The book portrays Smith as cold, humorless, calculating and manipulative. As one would expect, Nader accuses Smith of ignoring safety, quality and innovation in automobiles.

Imports say tariff plan means higher prices

By Helen Kahn
Washington Bureau Chief

WASHINGTON—If the Senate tax bill is not changed, consumers will have to pay about $100 more for an average-priced imported car and as much as $500 more for an imported light truck, according to Donald H. Graves, a California Nissan dealer and chairman of the American International Automobile Dealers Assn.

Graves, speaking for more than 7,000 dealers, testified before the Senate Finance Committee on a proposal to eliminate the deductibility of tariffs.

He added that once the prices of imported cars rose, the domestic companies would follow suit "permitting monopoly profits of over $1 billion to be reaped by the Big Three automobile manufacturers at the expense of the American consumer."

Separately, the Automobile Importers of America (whose members include 11 European, five Japanese and one South Korean company) filed a position paper along the same lines. The AIA also objected to the proposed linking of the transfer price for tax purposes to the value for customs purposes.

Graves said that in 1985, the imported-vehicle industry paid about $2 billion in tariffs. He said $697 million came from the 2.6 percent tariff on cars; $900 million came from the 25 percent tariff on light trucks; $15 million came from the 4 percent tariff on medium and HD trucks, and $400 million came from various tariff rates on parts for cars and light trucks.

The Senate bill, proposed by Senator Robert Packwood, Oregon Republican, would also mean that taxes would be imposed on tariffs, which would be added to income as the "cost of goods sold"—in effect, a tax on a tax or a tax on the cost of earning income rather than just on earned income itself. Graves called that "ludicrous."

Another "particularly bizarre feature" pinpointed by Graves is an "anti-avoidance" provision, which says that taxpayers liable for payment of tariffs would be deemed to have taxable income in an amount no less than their tariff liability.

Thus, a company with income less than its tariffs would have to pay tax on the higher amount, and it would seem that a company with nothing but losses would still have to pay tax on tariffs, which Graves called "fictitious income." AIADA thinks that raises constitutional questions.

The Packwood bill sets a maximum corporate tax of 35 percent. That would mean that each dollar of tariff paid would reduce tax by 35 cents, leaving the after-tax cost of each dollar of tariff at 65 cents. But if the dollar of tariff is no longer deductible, then tariffs would be in effect raised 54 percent under the 35 percent corporate tax, according to the import groups.

Both AIADA and AIA expect the cost of imports to rise, partly because of the drastic rise in the value of the yen and partly because of upscale models. They also expect Detroit to follow suit, and both agree the ultimate cost to consumers could be as much as $1 billion each year. Moreover, they said, those costs fall more heavily on low-income groups.

AIA said the effective 54 percent hike in tariffs might well invoke retaliation from U.S. trading partners. AIADA mentioned a likely ripple effect that would eventually impact U.S. export industries, "impairing their international competitiveness and worsening an already grotesque trade deficit."

Shop volume dips slightly for month

By Arthur Flax
Service Editor

Service and parts business at new-car dealerships in February was down slightly compared with February, 1985, but business for the year was ahead of the 1985 pace.

According to the Automotive News Service Index, shop business at dealerships in February amounted to 99.6 percent of the volume recorded in February, 1985.

Service volume last showed a monthly decline in November, 1985, when the Service Index amounted to 98.1 percent of November, 1984, volume.

For the first two months of 1986, service and parts volume showed a gain of 3.6 percent over the like period a year ago.

Most indicators in February showed losses from the previous year. Repair orders written suffered the biggest loss, down 14.3 percent from the 1985 month. Sales of all parts and accessories were down 2.1 percent, and shop parts sales (customer-paid and warranty) were off 0.1 percent.

In addition, parts and accessories sales to off-premises customers were down 3.6 percent in February.

Indicators which increased in February compared with year-earlier figures were gross profit on all labor, parts and accessories sales, up 10.7 percent, and total labor sales (customer-paid and warranty), up 3.7 percent.

Indicators for the first two months showed mixed results. Gross profit on all labor, parts and accessories sales was up 10.4 percent from the 1985 period. Total labor sales were up 9.3 percent and shop parts sales increased 2.5 percent.

Showing declines for the two-month period were repair orders written, down 3.4 percent, and sales of all parts and accessories, down 0.7 percent.

Parts and accessories sales to off-premises customers were also down 3.2 percent through February, 1986.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new car dealerships.

SERVICE INDEX
99.6★

	Feb., '86 vs. Feb., '85	2 mos., '86 vs. 2 mos., '85
Gross Profit on All Labor and P&A Sales	+10.7%	+10.4%
Repair Orders Written	−14.3%	−3.4%
Total Labor Sales (Customer & Warranty)	+3.7%	+9.3%
Shop Parts Sales (Customer & Warranty)	−0.1%	+2.5%
Sales of All P&A	−2.1%	−0.7%

★—Survey by Automotive News shows that dealers' service and parts business in February, 1986, was 99.6 percent of business in February, 1985. Service business in the first 2 months of 1986 was 103.6 percent of business in the corresponding period in 1985.

Ford rethinks offshore buying

By Richard Johnson
Detroit Reporter

With the U.S. dollar plunging even more last week, Ford Motor Co. may be about to slam the brakes on its ambitious strategy for rapidly increasing offshore components purchases.

Ford has begun reassessing a long-term foreign sourcing program that was expected to lower domestic content of vehicles produced in North America to less than 90 percent by the end of the decade.

The dollar last week fell to a post-World War II low against the Japanese yen, putting Ford's overseas parts purchasing plan in a state of flux.

"I see us in somewhat of a transitory state right now as we look at the weakening of the dollar," said Lionel M. Chicoine, Ford vice president for purchasing and supply. "We're reassessing our strategy right now."

Since last November, the dollar has fallen from approximately 210 Japanese yen to a bit below 170, making Japanese-sourced goods less attractive to North American OEMs. The dollar was also falling last week against the West German mark, the Swiss franc and the French franc.

In an interview with Automotive News, Chicoine said a revised offshore sourcing plan at Ford could be set in the next few weeks.

"I think in the near future we will come to an approach which will not be a switch, but a modification of what we have been doing," he said. "I'm not really in a position where I can quite answer the question because I don't have all the inputs I expect to have in the next month or so."

Revision of long-range sourcing aims could impact future component deals with Mazda, which is 25 percent owned by Ford. Company officials have acknowledged plans to become increasingly reliant on Mazda in product, parts and technical areas.

Rumors have circulated in recent weeks about a major Ford/Mazda component program that is in a crucial decision-making stage. Presumably, an overall review of purchasing objectives would impact such a decision. Chicoine last week declined comment on any pending deals with Mazda.

On a typical Ford car produced in North America, about 6 percent of the value comes from offshore suppliers, principally from Japan and Mexico.

The U.S. industry in recent years has been pursuing low-cost offshore component sources in an effort to stave off inherent price advantages enjoyed by Japanese producers and others.

Ford officials had expected North American content to dip below 90 percent by 1990, but in recent weeks that thinking has been redirected.

"A year or so ago, I'd have told you (foreign content) would be 10 percent or perhaps a bit more by the end of the decade," said Chicoine. "I'm less certain of that now. The movement of exchange rates has altered my perspective."

He predicted "some additional growth" in foreign content levels at Ford but said "it will not be dramatic or particularly large."

Chicoine said the refiguring at Ford also takes into account an increasingly competitive set of domestic suppliers.

"They recognize the need to be competitive on a world-class basis and are showing signs, in many instances, of being able to achieve that goal," he said.

Chicoine said the reassessment at Ford has not yet resulted in cancellation of a specific offshore purchasing program.

Chicoine said Ford now concentrates offshore purchases in labor-intensive component areas. For example, wiring harnesses are produced in Mexico. Certain types of machined assemblies, such as transmissions, are supplied to Ford by Mazda in Japan.

Mitsubishi bonanza from Diamond-Star

By Dave Zoia
Detroit Reporter

BLOOMINGTON-NORMAL, Ill.—Mitsubishi Motor Sales of America may derive the most benefit from Diamond-Star Motors Corp.

Diamond-Star, a $600-million 50/50 joint-venture between Chrysler Corp. and Mitsubishi Motors Corp., recently broke ground here for an assembly plant capable of producing up to 240,000 cars annually.

And although output will be divided equally between the U.S. dealer networks of the two firms, Mitsubishi stands to gain the most from the infusion of an extra 120,000 cars.

Currently, Japanese export restrictions severely limit the number of cars available to U.S. Mitsubishi dealers. In calendar 1985, about 50,000 Mitsubishi-branded cars were sold in the U.S.

The influx of Diamond-Star vehicles, once production hits stride, could mean a more than threefold increase in volume for Mitsubishi. The boost will allow the company to broaden its dealer network.

"We currently have 95 dealers," said Richard Recchia, executive vice president and chief operating officer of Mitsubishi Motor Sales of America. "By the close of the year, we'll have 135.

"Our (future growth) ultimately depends on how fast Diamond-Star production comes up and how many cars we can import," Recchia continued. "But all things being equal and unchanged, we're looking at an annual volume of 250,000 to 275,000 cars and trucks and an average of 250 dealers."

This year, Recchia said, Mitsubishi will sell 100,000 cars and trucks in the U.S.

The company's toughest task may be fending off Chrysler, which is ready to take more than its share of Diamond-Star production should Mitsubishi dealers not be able to keep up with the increased volume.

"Selling the 120,000 cars won't be a problem," Recchia said. "The only problem we could have is not getting the right mix of vehicles. But I don't think even that will be a problem."

Diamond-Star will produce two vehicles. First off the line in January, 1988, will be a sporty subcompact that will complement Mitsubishi's Cordia and Tredia lines. The second model, to follow about six months later, will be a four-door sedan version of the Mitsubishi Mirage.

Mitsubishi and Chrysler will be able to choose individually how they want to split their allotments between the two car lines, but decisions will have to be made some 18 months before production startup.

Although there will be some cosmetic differences between the models built for Mitsubishi and those going to Chrylser, Mitsubishi-supplied powertrains will be identical in both sets of vehicles.

Volvo works with Lotus on suspension

TURIN, Italy—The normally secretive Volvo Car Corp. announced here that it is working on a version of Active Suspension which it calls Computer Controlled Suspension (CCS). The work has been carried out in conjunction with the engineering section of Group Lotus.

Lars-Runo Tillback, CCS project manager at Volvo, would give no indication of when the system will be seen in a production car. He and his team have run a pair of 760 Turbos fitted with CCS "all over Europe" during the past 18 months.

Tillback explained that testing new suspension systems would normally require rebuilding a car or building a new one.

"With CCS, we can change at least 66 different properties on one and the same chassis, entirely independent of each other," he said. A complete chassis change requires less than a minute.

The advantages of Active Suspension are being investigated by many companies, including Daimler-Benz. A prime reason for the recent General Motors' acquisition of Group Lotus is thought to have been the company's pioneering progress on the advanced suspension.

Among the areas still to be solved, according to Tillback, are having a backup for the electronics, the unknown reliability of the valves, the higher noise levels the system creates and the simple lack of availability of suitable components. At present, Volvo is using aircraft industry parts—with the resulting cost penalty that implies.

'Even including increases for safety and emissions equipment, the average car today takes no more of the consumer's real purchasing power than it did in 1973.'

—F. James McDonald
President,
General Motors

McDonald skirts hot issues

By Geoff Sundstrom
Washington Reporter

CHICAGO—The policies of General Motors—including price increases, incentive programs, oversupply and executive compensation—were much discussed at the 19th annual meeting of the National Assn. of Fleet Administrators here last week.

But GM President F. James McDonald, the keynote speaker, skirted the hot topics.

He chose instead to warn of the dangers of protectionist trade legislation and claimed that "even including increases for safety and emissions equipment, the average car today takes no more of the consumer's real purchasing power than it did in 1973." He didn't provide any figures to back up the assertion, however.

Although McDonald eloquently addressed the conference theme, Harnessing the Winds of Change, by describing "free-market winds" as a positive force for better products, he failed to address many of the issues on the minds of conference attendees.

Throughout the three-day NAFA conference and at the Automotive Fleet and Leasing Assn.'s annual meeting which preceded it, speaker after speaker questioned GM's recent decision to raise prices with one hand while offering incentives with the other.

Many speakers, such as former UAW President Douglas Fraser, criticized the amount of executive bonuses paid by the corporation, especially in light of reduced earnings and high inventories. Fleet administrators, dealers and leasing companies groused about "look-alike models" and higher prices.

McDonald steered clear of those topics, however.

He complimented NAFA members for being "major contributors to GM's record sales of 1.1 million cars and trucks to fleet customers in 1985." He also said, "In the not too distant future, GM will provide customers with an entirely new kind of automobile, one in which all functional parts within the car will be part of an integrated electronic system."

He said the company will invest $80 billion during the 1980s to help bring that about.

Contrasting current GM products with vehicles made before the first oil import shock of 1973, he told his audience that "today's typical GM car gets 26 MPG—double that of its 1973 predecessor."

He added that "regular maintenance is simplified—from 43 service items to just 17—corrosion protection is better and virtually all pollutants are removed before they get to the tailpipe."

He also said that safety has improved because "highway fatalities have fallen to new lows in the last three years."

He said the future holds "greater efficiency, better fuel economy, increased performance and lower operating costs" for GM cars and trucks.

McDonald said his company supports trends toward deregulation in the U.S. economy and that trade protectionism is a form of regulation the economy can do without.

He said government help is needed to "combat the twin deficits—the budget deficit and the trade deficit." He also said that "only government can step in where the free market cannot serve . . . such as in emission control and safety.

GM busy purchasing automation at Oshawa

By Roger Rowand
Engineering Editor

CHICAGO—General Motors is in what one vendor called "a feeding frenzy of automation" as it revamps its Oshawa (Ont.) facilities plants at a cost of some $1.4 billion.

The Oshawa complex consists of two car assembly plants, a truck assembly plant and a stamping plant.

"GM is snapping at everything it can get in the way of automation, especially the automated guided vehicles (AGVs) that will replace the assembly line," he said.

Talks with individuals attending Robots 10, a trade show at McCormick Place here, indicate AGVs will be more widely used at the Chevrolet-Pontiac-Canada Group's Oshawa facility than at any other plant in the industry's North American assembly operations.

AGV makers, and those familiar with work being done in Oshawa, said that by 1990, Volvo America Corp.'s Automated Systems Division, Sterling Heights, Mich., will have about 1,300 of its AGVs at work at CPC's GM Autoplex in Oshawa.

About 425 additional AGVs made by Conco-Tellus, Inc., Mendota, Ill., part of Interlake Co., will be installed. GMF Robotics Corp., Troy, Mich., a joint venture of General Motors and Japan's Fanuc, Ltd., is expected to put about 100 AGVs into the Oshawa works.

GMF recently signed a licensing agreement with Eaton-Kenway Co., Salt Lake City, a subsidiary of Eaton Corp., under which it will make and market Eaton-Kenway guided vehicles.

GM said the reworked Oshawa car plants will not have assembly lines. Computer-controlled AGVs will allow the new vehicles, GM-10 cars, to be built in what it calls work islands. Cars will be worked on by groups of eight to 15 people and will proceed to the next station only when operators are satisfied with their work, GM said.

'Perpetual' breath test urged for drunks

SACRAMENTO—Legislation has been introduced in the California Assembly that would require drivers caught with a blood alcohol level of 0.14 percent or higher (the legal limit is .10 percent) to install a $300 device in their vehicles that would prevent the engine from starting if alcohol could be detected on the driver's breath.

The device prevents the vehicle's starter motor from turning over until the driver breathes for four seconds into a hand-held instrument connected to the sensors of the device. The sensors are pre-set to respond to temperature and pressure as well as to alcohol.

Period's sales dive despite incentives

By Jenny L. King
Detroit Reporter

Mid-April domestic new-car sales failed to respond to the market resuscitation stimulus of low interest rates and rebates. The total was down 32.02 percent from the strong total reached a year ago.

The decline was aggravated by one less selling day in the April 11-20 period this year (eight vs. nine), so on a daily-rate basis the difference was minus 23.53 percent.

The latest flurry of consumer incentives began with General Motors' April 14 announcement of record-low interest rates on short-term loans on some models, plus lower-than-usual financing rates on almost all remaining models for longer GMAC loans. Chrysler Motors followed suit April 17, and Ford Motor reported its marketing plans April 21.

Ford said its participating Ford and Lincoln-Mercury dealers will offer 6.9-APR Ford Motor Credit loans on contracts up to 36 months on all Ranger models, with 7.9 contracts up to 36 months on Escort, Escort EXP, Lynx, Tempo, Topaz, Mustang, Capri, Thunderbird, Cougar and all Bronco II, F-150 and F-250 models.

Contracts up to 48 months with 7.9-APR and 8.9-APR financing are available on certain light trucks, according to the company. Cutoff dates run through July 5—some programs expire sooner.

April 11-20 sales totaled 193,772, down more than 90,000 units from 285,063 the preceding year. The daily rate averaged 24,222 compared with 31,674 a year earlier. The daily rate for the first 10 days of the month was 25,256.

Year-to-date sales were 8.95 percent behind 1985, dropping to 2,319,702 from 2,547,792.

GM's mid-month sales of 113,360 were down 30.89 percent from 164,034 last year (down 22.25 percent daily rate). Ford reported sales of 46,557, down 37.62 percent from 74,636 (down 29.82 percent daily rate). Chrysler dropped 29.59 percent, to 25,864 from 36,732 (down 20.78 percent daily rate).

Honda reported sales of 3,650, an increase of 3.40 percent from 3,530 (up 16.33 percent daily rate). Volkswagen was off 21.10 percent, to 1,683 from 2,133 (down 11.39 percent daily rate). American Motors' estimated sales of 1,600 were down 53.28 percent from 3,425 (down 47.39 percent daily rate), and Nissan sales of 1,058 were up 84.64 percent from 573 (up 106.25 percent daily rate).

GM earned 58.50 percent of the April 11-20 domestic market, up from 57.54 percent in 1985. Ford had 24.03 percent compared with 26.18 percent a year earlier. Chrysler climbed to 13.35 percent from 12.89 percent.

AMC had 0.82 percent, down from 1.20 percent. Honda was up to 1.88 percent from 1.24 percent; VW was up to 0.87 percent from 0.75 percent, and Nissan grew to 0.55 percent from 0.20 percent.

There was an almost uninterrupted line of minus signs for individual makes. Plymouth was down 41.93 percent from last year; Chrysler dropped 16.17 percent, and Dodge was off 29.54 percent. Ford sales plunged 36.96 percent; Mercury was down 43.98 percent, and Lincoln dropped 15.74 percent.

Buick was down 37.91 percent; Cadillac was off 20.38 percent; Chevrolet was down 27.49 percent; Oldsmobile dropped 33.15 percent, and Pontiac missed by 30.29 percent.

AMC was down an estimated 11.11 percent; Renault was off an estimated 56.25 percent, and VW dropped 21.10 percent. Honda was up 3.40 percent, and Nissan was up 84.64 percent.

Chevrolet Celebrity, with sales of 10,765, was the top mid-April nameplate. Ford Escort was second at 9,363, followed by Chevrolet Cavalier at 8,212.

GM slashes loan rates

Reacting to its current sharp sales decline, General Motors announced late last week it was shaving a full percentage point from its low-interest-rate loans on almost all car and light-truck models.

Effective April 26, participating dealers can offer a record-low 5.9 annual percentage rate on GMAC loans up to 30 months on four models: Chevrolet Chevette, Pontiac Fiero, Oldsmobile 88 and Buick LeSabre.

Loans up to 36 months at a rate of 6.9 percent are available on all remaining models except Buick Riviera, Oldsmobile Toronado and Cadillac Eldorado and Seville. Special financing on longer-term contracts, including 8.9 APR for 48 months and 9.9 APR for up to 60 months, remains in effect, according to GM.

The new low 5.9-percent rate on short-term loans also applies to the following trucks: Chevrolet S-10 pickup and El Camino and GMC S-15 and Caballero. A 6.9-percent rate covers Chevrolet S-10 Blazer and CK pickups and GMC S-15 Jimmy and CK full-size pickups.

The program runs through the end of June.

Correction

Contrary to a report in the April 21 issue of Automotive News, owners who import cars five years old or older cannot obtain a special one-time waiver of Department of Transportation requirements. They can, however, obtain such a waiver of EPA requirements.

Big-truck sales dip fans speculation

Continued from Page 18

and 500 cabovers that will debut at midyear.

Navistar is continuing to look at ways to cut costs, according to Springer.

It "may be looking" at closer future tie-ins with equipment suppliers like Allied Automotive, for example, to reduce manufacturing/assembly complexities, delivery time and costs, Springer added.

To cut costs and speed delivery, Navistar is studying modular assembly concepts.

"Why couldn't we get bodies in five pieces and assemble them on the assembly line?" Springer asked rhetorically.

Navistar is currently running in the "mid-to-high-70s to 80 percent capacity" at its plants and doesn't foresee any near-term need to reduce capacity further, Springer added.

Overall, he found it nearly impossible to forecast sales and profitability because of the volatility of the market.

All the historical indicators that formerly were used to gauge market demand no longer apply, Springer concluded.

During the first quarter, manufacturers retailed 25,829 Class 8 trucks, off from 32,959 a year earlier, according to MVMA.

Navistar's deliveries of 5,836 were off 17.2 percent from 7,046 a year earlier; Freightliner's sales of 3,960 were off 19.7 percent from 4,934, and Mack's Class 8 sales of 3,847 were off 39.8 percent from 6,386 a year earlier.

Ford's sales of 3,173 were off 8.7 percent from 3,477 last year; Volvo-White sales of 2,433 were up 2.9 percent from 2,364.

GMC, as noted, had sales of 2,054, off from 2,973 last year.

Kenworth's sales of 2,181 were off 18.1 percent from 2,664; Peterbilt's sales of 2,075 were off 28.8 percent from 2,915.

MVMA's miscellaneous category of "other truck" manufacturer showed sales of 270, a 35.0 percent increase over 200 deliveries a year ago.

Diesel demand in Europe remains high

By Richard Feast

There is little doubt that diesel passenger-car sales in Western Europe will reach an unprecedented 2 million units in 1986. In fact, there seems to be no let-up in demand, despite market growth of 21 percent in 1985 and 30 percent in 1984.

The scene is far different from that in Europe a decade ago, when diesels took only 2 to 3 percent of new-car sales, and from today's U.S. market where diesels are bombing.

Last year more than one of every four new-car buyers in Belgium and Italy purchased a diesel. Better than one out of five bought them in West Germany. The count was one of seven in France and the Netherlands.

Aside from a minor dip in 1983, when many predicted the diesel phenomenon in Europe had ended, sales have soared upward unremittingly.

In some cases, such as Italy, Belgium and France, the popularity results basically from the fact that diesel fuel costs less than gasoline at the pump. But that doesn't explain the popularity in West Germany, where diesel and gasoline prices are similar; yet more than half a million diesel cars were sold there in 1985, about a third of all diesels purchased on the continent.

DIESEL NEW-CAR SALES IN EUROPE

Country	1985	% Market	1984	% Change '84-'85
Austria	32,800	13.5	14,200	+130.9
Belgium-Lux.	95,000	26.4	96,900	−1.9
Denmark	10,400	6.6	10,300	+0.2
Finland	14,700	10.4	14,100	+4.0
France	264,800	15.0	240,400	+10.1
Ireland	8,400	14.2	6,000	+41.7
Italy	438,600	25.1	425,300	+3.1
Netherlands	71,300	14.4	61,000	+17.0
Norway	1,700	1.1	2,700	−37.3
Spain	124,900	22.6	126,700	−1.4
Sweden	5,700	2.2	9,500	−40.3
Switzerland	9,400	3.5	7,100	+31.7
United Kingdom	66,200	3.6	45,100	+46.8
West Germany	530,800	22.3	321,800	+64.9
TOTAL	1,674,600	15.9	1,381,100	+21.3

Source: AID, England

The West German impetus stems from the country's divisive debate over exhaust emission regulations. While German authorities pushed through legislation on cleaner exhaust for gasoline-engine cars, arguments over when it should take effect created uncertainty among consumers.

Despite sales incentives on gas-engined cars, Germans flocked to diesels. For one thing, they figured if they drove over the border to France or Italy in gas-powered cars, they might not be able to obtain lead-free gasoline. But they knew they could fill their tanks — more cheaply, to boot — with diesel fuel.

As a result, diesel sales shot up nearly 65 percent in Germany last year, moving the country past Italy as the top-volume market for the engines.

By far the largest increase in 1985 diesel sales, however, was in Austria, up nearly 131 percent. Gains of more than 40 percent were scored in the U.K. and Ireland, while Switzerland posted a volume increase of more than 30 percent.

In market penetration, diesels scored highest last year in Belgium/Luxembourg (26.4 percent), Italy (25.1), Spain (22.6) and Germany (22.3).

Statistics compiled by AID of Lichfield, England, indicate there has been a seven-fold increase in diesel purchases over the past decade. It is described as "far away the most dynamic growth sector in the European automotive scene."

The organization predicts an important increase in France this year as a result of the introductions late last year of the diesel version of the Renault 5 and launch of the important mid-range Peugeot 309. The Citroen AX, scheduled to debut in September, is expected to be available with a diesel engine from the start.

Other factors that are expected to spur diesel sales on a broad European front are their adoption in the smallest models on the market (Fiat Panda, Volkswagen Polo, Opel Corsa), growth in demand for low-pollution cars throughout Europe, and introduction of more competitive and powerful diesel versions in medium and upper market segments.

Predicts AID: "As oil prices rise, they are expected to create renewed emphasis on economy, favoring a new generation of diesels; 100 mpg is a certainty for the future."

Other sources indicate Volkswagen group was the leading diesel-car retailer in 1985 at about 350,000 units, followed by Peugeot group (300,000) and Fiat Auto (260,000).

On an individual model basis, VW's Golf/Jetta topped the diesel sales chart at about 233,000 units, trailed by Fiat Uno (128,000) and Peugeot 205 (99,000).

Europe's two American-owned companies, Ford and GM Opel/Vauxhall, appear under-represented in the diesel market, which one manufacturer projects will grow at an annual rate of 20 to 30 percent in Europe.

Of 1985's 1.67 million diesel sales in Europe, 44 percent were in the lower-medium market segment (Escort-size cars) with 23 percent in the upper-medium segment (Ascona-type cars). Large cars took 22 percent of diesel purchases and the other 11 percent went to small ones such as Fiat Uno. ■

WORLD NEWS BRIEFS

Lifetime warranty

The Lex Group-owned importers of Volvo passenger cars in the U.K. will offer a lifetime warranty on its products. The move is being watched by other European Volvo concessionaires, some of whom already offer eight-year anti-corrosion guarantees. The U.K. concept requires a car to be serviced and maintained regularly by an approved Volvo dealer.

2CV updated?

For the Citroen company in France, a model update for its venerable 2CV (introduced in 1948) means no exterior panel changes. Instead, it concentrates on special paint jobs and limited editions, the latest of which is the two-tone Dolly.

Hello, Dollies

AA OK

Membership in Britain's Automobile Assn., which claims to be the biggest organization of its type in the world, reached a record 5.9 million in 1985.

GM European deficit

General Motors financial reports indicate a substantially increased loss in 1985 on its European operations which include Adam Opel; Vauxhall and Bedford in the U.K.; and manufacturing operations in Belgium, Spain and Austria. The consolidated European deficit increased 28 percent to $372.1 million, while sales rose nearly 14 percent to $7.94 billion.

Positive in France...

French auto industry exports last year totaled FF 95.05 billion ($13.27 billion) by value, while imports amounted to FF 65.57 billion ($9.16 billion), reports CSCA, the French manufacturers' association.

...Negative in the U.K.

Similar stats from Britain's SMMT indicate imports hitting 7.804 billion pounds sterling ($11.47 billion) and exports reaching 5.046 billion pounds ($7.42 billion) in 1985.

Nissan gets ready

Nissan's first European plant, at Washington in northeast England, starts assembling Auster models in July. Phase one involves annual assembly of 24,000 units from Japanese kits, but reports from Japan suggest phase two (100,000 annual manufacturing) is being moved ahead to 1988.

Peugeot goes 4x4

Automobiles Peugeot will bring to market the off-road 4wd vehicle it makes for the French military. Called the P4, it's a license-built version of the Mercedes-Benz G-wagon, but uses Peugeot power. Peugeot has an order for 15,000 P4s from the French army, and believes there is a limited market among the general public.

Alfa Romeo sells out

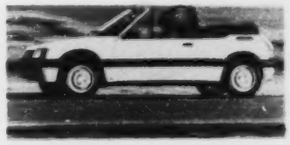
Alfa Romeo is selling control of it U.K. import company to Tom Kemsley and Millbourn (TKM), former BMW importer and present Daihatsu distributor. Alfa Romeo has steadily lost sales in the country, dropping to 3,093 units last year.

French imports increase

Imports continued to make ground in the French market in the first two months of 1986. Their 38 percent share compared to 35.5 percent a year earlier.

Peugeot 205s keep coming

Automobiles Peugeot continues to broaden the market appeal of its 205 model with a new cabriolet, versions with ZF automatic transmission and a sportier GTI with 115 horsepower. The cabriolet is the work of Italian design house Pininfarina.



205 Cabrio.

Naylor exports

Naylor Cars, Bradford, England, has acquired type approval in West Germany. Its TF 1700 — a look-alike of the MG TF of the 1950s — goes on sale there and in Austria in June. Naylor currently produces about 10 automobiles a month, 40 percent of them for export.

Daf's BL deal

Daf Trucks will sell the Leyland Roadrunner truck and Freight Rover Sherpa 300 van along with its own heavy trucks in Europe. They will all carry the Daf nameplate. About 1,000 of each are expected to be sold this way, in competition with BL's own sales companies.

Britain exports Peugeots

Peugeot Talbot in the U.K. will export cars for the first time in a decade. Left-hand-drive versions of the new Peugeot 309 will go to the Netherlands and Belgium starting in September. Ford and GM's Vauxhall ceased sourcing cars for Europe from the U.K. several years ago.

Rover intro

Austin Rover's XX sedan — the U.K. version of the Honda Acura — is expected to be launched July 15, a few weeks later than planned. European reports suggest the delay was caused by difficulties in developing the M16 2.0-liter engine's single-point injection system. A more conventional multi-point is now likely to be used.

BL sees red

The pre-tax loss of the U.K.'s state-owned BL concern jumped more than 50 percent to 110.3 million pounds/$162 million last year. However, 1984 figures were distorted by the sale of Jaguar Cars. Sales in 1985 increased more than 15 percent to 3.42 billion pounds/$5.03 billion. Land Rover group, including Freight Rover, increased its profits; Unipart profits declined; Austin Rover and Leyland Vehicles remained in the red.

More BMWs

BMW's Munich plant will operate six Saturday shifts to the end of May in order to produce more 3-series models. The 3-series is currently being produced at a daily rate of 1,325, not enough to keep pace with demand.

Renault goes ragtop

Renault is the latest of Europe's big auto makers to offer a cabrio version of one of its most popular models. The R5 convertible, shown at the recent Geneva auto show, will go on sale this summer. It is the work of the Brussels-based EBS concern. Its main competitors will be the Peugeot 205 (by Pininfarina), Ford Escort (by Karmann) and Fiat Ritmo (by Bertone). Later this year Opel will add a Bertone-built Kadett convertible. ■

R5 ragtop.

New study warns West about Japanese

By Richard Feast

The terms on which investments and collaborative ventures between Japanese and Western auto makers are to be made must be such that Western manufacturers and governments gain a benefit equal to that obtained by the Japanese, warns a report from the Motor Industry Research Unit at England's University of East Anglia.

Japanese Automotive Strategies concludes that the next few years will be crucial for the auto industries of the West. The Japanese companies will be compelled to invest in the U.S. and Europe in order to maintain sales in the face of growing concern about Japan's favorable balance of trade in the sector.

But these Japanese joint ventures and investments will entail the increasing use of Japanese and Far Eastern sources of components. If vehicles produced with a low level of local content replace genuinely domestic products, the market available to indigenous component producers, particularly in the area of high-value, high-technology parts, will shrink.

The report adds, "This trend will be reinforced if domestic manufacturers are forced to source more parts from Japanese and Far Eastern suppliers in order to compete with the Japanese cost advantage. This implies a long-term degeneration of the automotive industry in Europe and the U.S., a loss of employment and of the capability to develop new technology in sectors besides motor manufacturing of which governments and decision-makers should be aware."

The report, compiled by a team under Prof. Krish Bhaskar, addresses itself to what it calls "the single most important factor in the recent history and future development of the world motor industry — the rise of Japanese vehicle manufacturers." By listing the individual companies' plans, the magnitude of the impact is illustrated.

The so-called Japanese problem has not gone away, and auto industry and national policy-makers cannot afford to be complacent, says Bhaskar.

The report aims to show that the Japanese have the need and ability to take their sales and manufacturing expansion in Europe and the U.S. into a new phase over the next decade. This new phase will represent a new dimension in companies' strategies, involving increased overseas investments, collaboration and reorientation of product ranges.

It looks at the Japanese makers' domestic environment, their relations with suppliers, other manufacturers and financial institutions. It examines their sales development in the U.S. and Europe, and the logic behind the current investments there.

The principal motivating factors, it believes, are "the fear of a protectionist backlash, the desire to preserve a cost advantage over Western producers in the face of the powerful effects of exchange-rate fluctuations on profits, and the need to reduce dependence on revenue from the U.S. (which is said to generate between 75 and 90 percent of the gross profits of Japanese car makers) by increasing sales and profits elsewhere."

The known U.S. assembly facilities, by Nissan, Honda, Toyota, Mazda and Mitsubishi, will add more than 1 million to capacity there. Together with collaborative agreements and marketing ties with built-up Japanese cars sold through local producers, it will give Japan a three-pronged attack on the country.

The task facing the Japanese in Europe will be more complex because of the differing national attitudes to import restrictions, pricing, safety and pollution regulations, taxation, taste and languages. The cost will be higher and the rewards slower, but the Japanese cannot afford to ignore the European market if they are to reduce their dependence on the U.S., the authors believe. ■

Benton quits Anglo American post

By Jenny L. King
Detroit Reporter

Growth plans are proceeding on schedule at one of the largest wholesale auto auctions in the U.S., despite the resignation of its chairman.

William P. Benton, chairman of Anglo American Auto Auctions, Inc., quietly left his post at the end of January after less than two years with the British-based company.

Benton, a former Ford Motor Co. vice president, had been instrumental in forming Sandgate Corp., with All-State Vehicles, Inc., and Anglo American Auto Auctions, Inc., as subsidiaries.

Benton remains a member of the board. The posh Bloomfield Hills (Mich.) office he occupied has been closed.

Michael Richardson, Anglo American president and chief executive, said only that Benton's activity in Anglo American was limited. Richardson said Benton was hired in England by David Wickins, head of British Car Auction Group plc, which was Anglo's parent.

Along with consolidation and fleet management programs, Benton was "occupied with Lotus, which we sold—a good move for us, I think," Richardson said from his Nashville office.

"If the premise is that Bill Benton got fed up with Anglo and that the company is not as well off without him, that is totally false," Richardson added.

Richardson, who has directed Anglo American's meteoric growth in the U.S. since 1982, said the company is studying the business of truck auctions. With 12 auto auctions in the fold, Anglo opened its first truck venture at its Taylor (Mich.) site last December for the sale of heavy trucks, trailers and equipment.

The new-truck market appears to be slumping, he said, indicating an opportunity to deal in used heavy equipment and trucks.

The situation differs from cars in several respects. There are fewer buyers, prices—and profits—are higher per vehicle, and turnover is slower since trucks last longer than cars. In addition, storage and transportation must be handled differently.

Anglo American, which sells as many as 10,000 cars a week, may be experimenting with trucks, but it will never move into retail auto auctions, Richardson said. "I'm often asked the question because there are retail auctions in England," he said.

"There is no point in selling to retail customers," he continued. "To the buyer who is not knowledgeable, cars at auction appear cheap. If something happens after the purchase, you know whom they'll blame.

"Dealers know what to expect, what has to be done (with cars). Our warranties necessarily are short-term."

Strap-Eze

Strap-Eze Corp., Riverdale, N.Y., introduces Strap-Eze, a cushioned pad designed to make seat belts more comfortable. The hand-washable pad can be positioned on the shoulder or neck once the seat belt is secured, the company said.

Insurance cut for sober drivers

By John A. Russell
New York Staff Writer

NEW YORK—Sentry Insurance has introduced an automotive insurance policy which rewards persons for not driving while intoxicated. If the policyholder remains claim-free for five years, the company will refund 50 percent of one year's premium annually.

There are strict guidelines to this coverage, called the "Payback Policy." The policyholder must have a clean driving record for the past three years and he/she must sign an agreement forfeiting collision and uninsured-motorist coverage if he/she is involved in an accident while legally intoxicated.

The policy was introduced in New York and Madison, Wis., recently. Sentry Chairman Larry Ballard said, "We think this is the first policy to offer people a meaningful financial incentive to drink and drive responsibly."

According to a Sentry spokesperson, the policy will be offered in Wisconsin initially and will be extended to about 21 states after the required state approvals are obtained. Since each state has its own insurance regulations, the spokesperson said it is doubtful that this type of program would be available in all states.

Under the policy agreement, the "first-party" coverage—the person who actually purchases the Sentry plan—is waived only if the driver is legally intoxicated and is involved in an accident or makes a claim. The intoxication level may vary from state to state, but in Wisconsin and many other states, it is a blood alcohol content of 0.10 percent

However, all liability claims are covered under the program.

The only coverages the policyholder waives are collision; rental expense; uninsured motorist insurance (beyond required financial responsibility limits); auto liability insurance, which is an optional coverage that pays a weekly benefit is the disability resulted directly from an injury caused by a car accident, and accidental death.

Under the program, if a motorist remains claim-free after five years, Sentry will pay 50 percent of the first year's premium to the policyholder. Those payments will continue as long as the person remains claim-free.

General Electric acquires Bay Cities Auto Auction

FREMONT, Calif.—Bay Cities Auto Auction here has been acquired by General Electric Credit Corp. through its Auto Financial Services Operations.

Bay Cities joins three other auctions, all purchased within the past year, in AFSO's auction group, General Electric Credit Auto Auction. Bay Cities will relocate to a 48-acre, eight-lane facility in Hayward late this year.

Lamont appointed

WESTLAKE, VILLAGE, Calif.—Dennis D. Lamont has been appointed president of Security Pacific Credit Corp., which provides retail sales financing and leasing programs for automobile dealers and manufacturers.

Production

'86 auto build loses more ground

With production cuts taking their toll last week, the year's domestic auto output fell farther behind 1985's.

So far this year, 2,768,353 cars have been assembled, 3.76 percent below the 2,876,528 assembled last year at this point.

Last week's targeted production of 165,609 cars was 1.93 percent more than the previous week's 162,475, but it was 7.98 percent below the year-ago week's 179,980.

The prior week's build was the lowest production of any full work week this year.

Estimated production last week was split this way: General Motors, 54.70 percent; Ford Motor Co., 24.13 percent; Chrysler Corp., 14.61 percent; Honda of America Mfg. Co., 2.29 percent; New United Motor Mfg., Inc., 1.85 percent; American Motors, 1.21 percent, and Volkswagen of America, 1.21 percent.

Nissan's car line in Smyrna, Tenn., remains down for model changeover to the new four-door Sentra.

AMC's Kenosha plant resumed production last week (April 21) after being idle for inventory adjustment.

GM's Fiero plant in Pontiac is scheduled to resume output today (April 28).

The plant had been down one week for inventory adjustment, affecting 1,450 workers.

GM's temporary layoffs now total 8,700.

Ford has slated daily overtime this week at all of its plants.

Saturday overtime (May 3) is scheduled at Ford's plant in Wayne, Mich.

Chrysler slated overtime Saturday (April 26) as well as daily overtime this week at its Belvidere (Ill.) plant.

Chrysler may review need for another truck plant

By Mary Connelly
Detroit Reporter

Chrysler Corp. may review the need for an additional plant for pickup truck assembly, according to its chief manufacturing executive.

Richard E. Dauch, executive vice president—manufacturing, said Chrysler's sales ratio of trucks to cars is increasing. He raised the possibility that truck production could be boosted by integrating truck and car assembly in one plant.

"I think we need to be reviewing a vehicle assembly plant as a second assembly plant for pickup trucks," Dauch told the Detroit Auto Writers Group.

"The ratio of trucks to cars is continuing to grow. There is a good margin and we have an excellent reputation of being good truck producers.

"Chrysler was a strong truck company in its heyday. Then we had a weaker market and difficult times in the past and we neglected our truck business. Now, we're back into trucks 100 percent."

Dauch said the aging Jefferson Avenue assembly plant in Detroit, which has no product scheduled after the 1987 model year, is a potential candidate for truck or car production but not a mixed-volume line.

Currently, Chrysler pickups are produced at the Dodge City plant in Warren, Mich., which has recently resumed production after a $500 million modernization project. On May 8, Chrysler will mark the formal production launch of the new 1987 mid-sized Dodge Dakota pickup which is being assembled at the plant along with the present line of full-sized pickups.

Dauch spoke about trucks as he detailed Chrysler's constrained production capacity. Assembly plants are currently running at 118 percent of straight-time capacity, he said.

Because of the constrained domestic capacity, Chrysler's Mexican plants will get "good utilization," Dauch said.

The car assembly plant in Toluca, Mexico, is being upgraded, and line speed will be increased from 30 to 35 units an hour. It will supply about 40 percent of the volume of Chrysler's 1987 intermediate J-coupe, Dauch said.

"This also gives us flexibility so we have more than one source for this very important image car," he said.

The domestic source will be the St. Louis I assembly plant. Production is expected to begin in October.

"The number one priority for Chrysler in vehicle assembly capacity is to decide in three or four months the question of Jefferson's future," Dauch said. "We are hopeful we can work out a business equation that is good for everybody."

Dauch said that even if Jefferson continues in operation, there is "a potentially strong need for a vehicle assembly plant in addition to that. Then (the question is) would it be car or truck or would it be a mixture of volume."

He continued, "It's not wise to run vehicle assembly plants consistently at the rates we have in the last 2½ or three years. One hundred eighteen percent is just too much utilization of your vehicle assembly capacity."

Dauch also said Chrysler is working to increase its in-house production of stampings. Presently, 25 percent of the stamping work is handled outside the company, he said, and the goal is to reduce that to 7 to 8 percent.

Truck production holding steady

Last week's scheduled domestic truck production of 75,346 units was about the same as (0.68 percent below) the previous week's 75,864 and 3.29 percent more than the year-ago week's 72,947.

Year-to-date, 1,178,737 trucks have been completed, 5.07 percent more than the 1,121,905 assembled at this time last year.

Kenworth Truck Co.'s Kansas City plant will close indefinitely Wednesday (April 30).

A spokesman for PACCAR, Kenworth's parent firm, said the shutdown is due to overcapacity in Class 8 truck production in North America.

General Motors slated Saturday (April 26) overtime at its Janesville (Wis.) and Detroit plants.

Ford Motor Co. has scheduled daily overtime at all of its truck plants this week (April 28).

Ford's Twin Cities and Norfolk plants are slated for overtime Saturday (May 3).

Canadian output climbs to 25,670

Canadian auto makers scheduled production of 25,670 units last week, 1.02 percent more than the previous week's 25,412 and 7.43 percent above the year-ago week's 23,894.

So far this year, 375,902 cars have been built, 13.88 percent more than the 330,077 assembled last year at this point.

The makers targeted production of 19,428 trucks last week, 1.07 percent below the previous week's 19,639 but 2.84 percent more than the year-ago week's 18,892.

Year-to-date, 312,573 trucks have been assembled, 3.99 percent more than the 300,577 completed last year at this time.

1986 MARKET DATA BOOK

COVER ILLUSTRATION BY DAVID N. FRASER

PRODUCTION 3

The U.S. wasn't the only country whose auto makers posted production gains last year. Here are the global totals.

SALES/ REGISTRATIONS 19

When 1985 sales figures were tallied, all domestic auto makers heaved a tremendous sigh of satisfaction — except for AMC.

PRODUCTS/ SPECIFICATIONS 37

Need to know the wheelbase of an '86 Chevette diesel? How about a Maserati Quattroporte? We've got those and more.

PRICES 53

Here are all the prices: Domestic and import auto prices, average new-car selling prices, and more.

OPTIONS/ EQUIPMENT 59

Installation of amenities like AM/FM cassette stereos, power equipment and rear window defrosters continues to rise.

MANUFACTURERS 71

A list of overseas vehicle makers and their addresses, along with 1985 financial highlights for the U.S. Big Three.

DEALERS 75

The number of new-car retail outlets in the U.S. rose last year — but that's because the import-dealer population exploded.

SUPPLIERS 79

The U.S. motor vehicle and parts manufacturing industry last year operated at its highest capacity since 1978.

DIRECTORIES 83

Who's who in the auto industry ■ Roster of auto firms and executives ■ 1986 dealer buyers' guide.

ET CETERA 203

Import model count ■ Auto industry advertising data ■ Car and truck scrappage ■ Domestic and import car inventories.

INDEX 208

A handy guide to what's inside the 1986 Market Data Book Issue, by subject.

Automotive News (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 1400 Woodbridge Ave., Detroit, Michigan 48207. Second-class postage is paid at Detroit, MI, and at additional mailing offices.

Postmaster: Send address changes to Automotive News, Circulation Dept., 740 Rush St., Chicago, IL 60611.

PRODUCTION

All points of the globe saw increases in car production for 1985. Especially noticeable were increases in countries down under and in the Far East.

Australia posted the biggest gain of 1985 with a 72-percent increase from the previous year. In the Far East, South Korea wasn't far behind Australia's performance.

Although Korea's 1985 volume was a small 378,162 units compared with the world's biggest producers, it increased 58.35 percent from 1984. Korea has made steady gains since the mid-'60s.

North America production climbed 6.3 percent in 1985 with Canada reaching an all-time high 1,936,511. The U.S. had a strong showing with 11,671,475 units manufactured in 1985, second only to Japan's 12,271,083 units.

Most of Western Europe showed increases in 1985. Of six Western European countries, four posted gains. France and Italy lost ground to the others. After a slow year in 1984, Spain rebounded in 1985 for a 35-percent increase.

Among the leading manufacturers worldwide, Renault fell behind as Chrysler and Volkswagen moved ahead in 1985. Honda dropped behind Mazda while General Motors, Ford and Toyota continued to command the top three positions. ■

①Includes all Renault and PSA production in Spain. Renault also includes U.S. Encores and Alliances. PSA also includes all Talbot U.K. except for Arrow kits for Iran.
②Includes cars recorded as Kombis; excludes commercial vehicles recorded as Kombis. VW includes VWs assembled by Seat in Spain.
③Estimates.
Totals will not add due to double counting.

PRODUCTION

The 1985 calendar-year production of 8,186,040 units was the highest since 1979.

The total showed an increased of 5.25 percent over 1984's total.

General Motors gained the most U.S. auto output with 477,867, followed by Volkswagen, 21,673; Chrysler Corp., 13,852; and Honda of America, 6,759.

New United Motor Mfg. Inc. started full production line-speeds of the Nova in 1985 bringing its increase to 64,581. First-year U.S. production of the Sentra was started by Nissan Motor Mfg. Co. U.S.A., totaling 43,810.

Ford Motor Co.'s output decreased by 139,165 and American Motors by 81,058.

U.S. CAR OUTPUT BY CALENDAR YEAR

1985	8,186,040
1984	7,777,721
1983	7,112,352

1961	5,522,004
1960	6,703,086
1959	5,599,471

Model-year U.S. auto production in 1985 was 7,975,390, or 1.57 percent below the 1984 model-run total.

Two domestic makers showed an increase in production during the model year: Chrysler Corp. by 139,182 and Honda of America Mfg. Co., 37,902.

New United Motor Mfg. Inc. began output of the Nova and Nissan Motor Mfg. Co. U.S.A., began production of the Sentra.

The other U.S. makers cut auto output: General Motors by 191,594; Ford Motor Co., 77,741; American Motors, 58,435; Volkswagen of America, 21,504.

The 1984 model-run production had been the highest since 1979.

PRODUCTION

Production of autos in Canada rose 2.71 percent in the 1985 calendar year.

Canadian output of cars totaled 1,090,983 in 1985 — the highest production year since 1979.

The 1985 total compared with the 1,062,183 completed in 1984.

The record for Canadian produced cars remains at 1.14 million built in 1976.

Ford Motor Co. was the only company to show an outstanding increase in production of Canadian cars.

The company's increase of 7.05 percent brought Ford's total output to 495,955 compared to last year's 463,296.

General Motors increased production by 1.46 percent to 573,687 in 1985 compared with 1984's total of 565,457.

American Motors reported a 50.80-percent decrease at 11,311 cars in 1985 compared to last year's 22,992.

Volvo also showed a decrease of 3.91 percent, bringing the 1985 total to 10,030 compared to the 10,438 units completed last year.

SALES / REGISTRATIONS

1985: A year of incentives, a year of record-setting imported-car sales, a year of staggered new-car introductions, a year of record truck sales, a year of front-wheel-drive and four-wheel-drive, a year of extraordinary competition in the marketplace.

Total car-truck sales reached a staggering 15,723,116, up 8.55 percent from 14,484,168 in 1984 and erasing the previous record of 15,407,105 set in 1978.

Record truck sales included increasing numbers of light trucks doubling as passenger cars. The truck total was 4,680,458, up 14.39 percent from 4,092,803 in 1984. The former record was 4,103,196 in 1978.

Total new-car sales pushed over the 11-million mark for the first time since 1978 and were the fourth highest ever. Domestics topped their 1984 number by a quarter of a million units.

Import sales, on the strength of eight consecutive months of record totals, hit a new high in 1985 and gained more than two percentage points in the share of the U.S. market.

Car sales in the 1985 calendar year numbered 11,042,658, up 6.27 percent from 10,391,365 in 1984. It was the highest total since 11,308,498 in 1978. The record is 11,446,589 in 1973.

The 1985 grand total included 8,204,542 domestics, up 3.18 percent from 7,951,517, and 2,838,116 imports, up 16.32 percent from 2,439,848.

Domestic sales, characterized by sluggish months punctuated by incentive-induced records, were the best in six years. But their 3.18-percent growth was only a shadow of the 17.01-percent gain made in 1984.

Imports included record sales for several Japanese and European makes. Japanese imports passed the 2-million mark for the first time (reaching 2,217,860) and accounted for 78.15 percent of the import total.

Domestics, now seven companies strong, included sales increases for all except American Motors.

The biggest gained the least: General Motors reported domestic sales of 4,607,458, up 0.43 percent from 4,587,508 in 1984.

Ford Motor Co. sales were up 4.60 percent to 2,070,392 from 1,979,317. Chrysler had the best showing of the Big Three with a 15.50-percent increase, breaking through the 1-million-unit barrier to 1,139,936 domestic sales from 986,998 in 1984.

AMC slipped from fourth place to fifth with a 35.11-percent sales drop, to 123,449 from 190,255. Honda, up 5.01 percent to 145,976 from 133,601, became the number four domestic auto maker in terms of sales.

Volkswagen finished the year with sales of 77,976 U.S.-built Golfs, up 5.01 percent from 73,838 in 1984. Nissan dealers retailed 39,794 U.S.-built Sentras. ■

* Became Kaiser-Willys in 1953. **Became Studebaker-Packard in 1955.

SALES/REGISTRATIONS

New-car registrations in the U.S. in 1985 climbed to their best total in seven years and entered the books as third-highest behind 1973 and 1978.

Figures from R.L. Polk & Co., which gathers registrations from 49 states and sales information from Oklahoma, showed 1985 U.S. new-car registrations at 10,888,608, up 7.50 percent from a year earlier, and up 22.01 percent from the 1983 total of 8,924,186.

Record registrations of 11,350,995 were reported back in 1973, with the 10,946,104 of 1978 second best.

Domestic registration in 1985 totaled 7,877,476, up 3.59 percent from 7,604,755. Imports, which expanded to 27.65 percent of the market from 24.92 percent, were up nearly 500,000 units, to 3,011,132 from 2,523,974.

SALES/REGISTRATIONS

RV SHIPMENTS BY TYPE, 1971-1985

1985**
(Total Shipments—359,200)

Travel trailers	82,900
Truck campers	6,900
Camping trailers	35,900
Motor homes	68,700
Van conversions	164,800

1984
(Total Shipments—398,200)

Travel trailers	92,400
Truck campers	7,600
Folding camper trailers	40,900
Motor homes	82,000
Van conversions	175,300

1983**
(Total Shipments—358,000)

Travel trailers	90,000
Truck campers	6,800
Folding campers	37,500
Motor homes	69,500
Van conversions	154,200

1982**
(Total Shipments—258,000)

Travel trailers	65,500
Truck campers	5,700
Folding camping trailers	34,300
Motor homes	41,200
Van conversions	111,300

1981**
(Total Shipments—239,100)

Travel trailers	63,800
Truck campers	5,100
Fold-down camping trailers	35,000
Motor homes	35,400
Van conversions	99,800

1980**
(Total Shipments—181,400)

Travel trailers	51,900
Truck campers	5,000
Fold-down camping trailers	24,500
Motor homes	28,600
Van conversions	71,400

1979**
(Total Shipments—303,300)

Travel trailers	90,200
Truck campers	13,800
Fold-down camping trailers	31,100
Motor homes	64,100
Van conversions	104,100

1978**
(Total Shipments—526,300)

Travel trailers	159,800
Truck campers	48,200
Fold-down camping trailers	48,200
Motor homes	157,200
Van conversions	136,400

1977
(Total Shipments—745,600)

Travel trailers	167,900
Truck campers	31,900
Fold-down camping trailers	53,900
Motor homes	280,200
Pickup covers	211,700

1976
(Total Shipments—456,300)

Travel trailers	189,700
Truck campers	42,000
Camping trailers	53,300
Motor homes	156,100
Pickup covers	215,200

1975
(Total Shipments—552,100)

Travel trailers	150,600
Truck campers	44,300
Camping trailers	48,100
Motor homes	96,600
Pickup covers	212,500

1974
(Total Shipments—529,200)

Travel trailers	126,300
Truck campers	45,400
Camping trailers	55,200
Motor homes*	68,900
Pickup covers	233,400

1973
(Total Shipments—752,500)

Travel trailers	212,300
Truck campers	89,800
Camping trailers	97,700
Motor homes*	129,000
Pickup covers	223,700

1972
(Total Shipments—747,500)

Travel trailers	250,800
Truck campers	105,100
Camping trailers	110,200
Motor homes*	116,800
Pickup covers	164,600

1971
(Total Shipments—549,400)

Travel trailers	190,800
Truck campers	107,200
Camping trailers	95,800
Motor homes	57,200
Pickup covers	98,400

**Pickup covers no longer included in RVIA shipments.
*Imports of Volkswagen Campmobile motor home included only in 1972-'74 totals.

1986-model domestic car body family designations

The *Automotive News* annual survey of car-body family designations reveals some additions, deletions and changes for the 1986 model year.

General Motors for '86 has 17 body-family categories, Chrysler Corp. has nine and Ford Motor Co. has seven. Added to the GM family in '86 is the H-body (front-wheel-drive Oldsmobile Delta 88 and Buick LeSabre models).

Also included in GM's family fo '86 are the M-body (Chevrolet Sprint made by Suzuki Motor Co., Japan); R-body (Chevrolet Spectrum made by Isuzu Motors Ltd., Japan); and S-body (Chevrolet Nova built by New United Motors Manufacturing Inc., Fremont, Calif.).

In another move by GM, Chevrolet has dropped the Impala name from its B-body lineup for '86. GM's only B-cars in '86 are the rear-wheel-drive Chevrolet Caprice, Pontiac Parisienne, Oldsmobile Custom Cruiser wagon and Buick Estate wagon.

Buick's Skylark sedan joins its Somerset coupe as part of GM's N-body group for '86 (Somerset Regal has been dropped). Along with Chevrolet Citation, Skylark vacates the now non-existent X-car family.

Ford has added a new body name (Taurus) for '86. The front-drive Taurus family (Ford Taurus and Mercury Sable) takes the place of the rear-drive L-body (Ford LTD and Mercury Marquis).

The only model added to Chrysler's chart for '86 is the Shelby Charger, which joins Plymouth Horizon and Turismo, and Dodge Omni and Charger, in the corporation's L-body group.

The Big Three are the only auto makers whose products have body-family designations.

PRICES

Retail prices, 1986 U.S. models

This table shows the prices of 1986 U.S.-built models as of March 15, 1986. All prices are Manufacturers' Suggested Retail Prices. They do not include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the buyer. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard equipment radio is a delete option.

Comparison of selected 1986 and 1985 domestic models by market class. Prices are Manufacturers' Suggested Retail Prices in effect on March 25 of each year.

No adjustment has been made for year-to-year equipment changes of dealer discount changes or for standard-equipment variations among competing models. If there is no entry in the 1985 column, it means that the 1986 model is new or had no direct counterpart in 1985.

Manual transmission models are 5-speed unless otherwise indicated.

Prices include dealer prep fee.

TVR

280i—Convertible, $23,546; coupe, $25,252. **4-speed transmission, power disk brakes, radio** are standard. **Power steering or air conditioning** also standard. **Automatic transmission** is $840.

VOLKSWAGEN

GOLF—2-door hatchback (diesel), $7,150; 2-door hatchback (gasoline), $7,190; 4-door hatchback (diesel), $7,200; 4-door hatchback (gasoline), $7,400. **Power disk brakes** standard on all models. **Automatic transmission** is $435 on gasoline-engne models.

GTI—2-door hatchback, $9,350. **Power disk brakes** are standard.

Golf and GTI models are built in the U.S.

CABRIOLET—Convertible, $11,995. **Power disk brakes, radio** are standard. **Automatic transmission** is $435.

JETTA—2-door sedan (diesel), $7,950; 2-door sedan (gasoline), $8,150; 4-door sedan (diesel), $8,170; 4-door sedan (gasoline), $8,370; GL 4-door sedan (turbodiesel), $9,670; 4-door sedan (gasoline), $8,670; GLI 4-door sedan (gasoline), $10,190. **Power disk brakes** standard on all models. **Power steering** standard on GLI. **Automatic transmission** is $435 on gasoline-engine models.

SCIROCCO—Coupe, $9,980. **Power disk brakes** are standard. **Automatic transmission** is $435.

QUANTUM—GL 4-door sedan, $13,595. **Power steering, power disk brakes, radio** are standard. **Automatic transmission** is $450.

VANAGON—7-seater, $12,540; 9-seater, $12,590; GL 7-seater, $13,140; GL Syncro 7-seater (4-wheel-drive), $15,315; Camper $14,700; Camper Syncro (4WD), $16,875; GL Camper, $17,190; GL Camper Syncro (4WD), $19,335. **Power disk brakes** standard on all models. **Power steering** standard on GL and Syncro models. **Automatic transmission** is $450, not available on Syncro models.

Manual transmission is 4-speed on Vanagon models, 5-speed on all other models.

Prices do not include dealer prep fee of $35.

VOLVO

240 SERIES—DL 4-door sedan, $14,615; DL 5-door wagon, $15,105; GL 4-door sedan, $16,695; GL 5-door wagon, $17,280. **Power steering, power disk brakes, air conditioning** standard on all models. **Automatic transmission** is $455.

740 SERIES—GLE 4-door sedan, $18,525; GLE 4-door sedan (automatic), $18,980; GLE 5-door wagon, $19,750; GLE 5-door wagon (automatic), $20,205; GLE TD 4-door sedan (automatic), $20,095; GLE TD 5-door wagon (automatic), $21,320; Turbo 4-door sedan, $20,505; Turbo 4-door sedan (automatic), $20,960; Turbo 5-door wagon, $20,995; Turbo 5-door wagon (automatic), $21,450. **Power steering, power disk brakes, radio, air conditioning** standard on all models. GLE Turbodiesel sedan and wagon are not available in California.

760 SERIES—GLE 4-door sedan (automatic), $23,625; GLE Turbo 4-door sedan, $24,480; GLE Turbo 4-door sedan (automatic), $24,935; GLE Turbo 5-door wagon (automatic), $25,425. **Power steering, power disk brakes, radio, air conditioning** standard on all models.

Manual transmission models are 5-speed.

Prices include dealer prep fee.

YUGO

YUGO—3-door hatchback, $3,990. **Power disk brakes** are standard.

Price does not include dealer prep fee of $90. ■

OPTIONS / EQUIPMENT

Comfort installation options in cars continue to increase with AM/FM cassette stereos, power windows, rear window defrosters and air conditioning options leading the list.

Not too surprisingly, interest in AM radios, once comprising 35 percent of installations in 1977, has dropped. Only 701,210 AM radios were ordered in 1985, an 8.74 percent rate. FM mono radios, never very popular, have dropped to an almost non-existent 1.73 percent at 138,225. AM/FM stereo sets have been steady sellers, hovering around 30 percent of the market until the '80s when they rose to 40 percent.

The biggest jump has been in AM/FM stereo cassette units. In 1977 they comprised less than 15 percent. Since then they have steadily grown to capture nearly 35 percent, slightly trailing AM/FM stereo sets in recent years.

In the engine and powertrain category, diesel engines continue to fall out of favor while four-cylinder gas engines have steadily increased their share from a negligible amount in the '70s to about 45 percent in 1985. V-8 engines, after taking a plunge in the '70s, have leveled out to about 25 percent in the '80s. Four-cylinder engines now lead the pack.

Turbocharging gained slightly from less than 2 percent in '84 to more than 3 percent in '85 to 255,864 units. Fuel injection is in more than 50 percent of the cars, increasing 10 percentage points from 1985.

Power equipment such as brakes and steering are in a clear majority of cars with both options in the 90- to 95-percent range. Power window units have doubled in the last nine years from 23 percent in 1976 to almost 45 percent in 1985. Rear window defroster installations have also doubled in the last nine years to about 65 percent in 1985.

While automatic transmission options are still in better than 85 percent of the models, five-speed options gained ground over four-speeds in 1985.

Radial tires are the prime tire in cars with steel-belted versions leading the list. After taking a plunge in 1984, whitewall tires have risen back to prominence with a 66.1-percent share.

Note: Figures in this chapter refer to model-year production of North American-built cars sold in the U.S. Honda figures are estimated. Nissan figures were not available.

Notes: (1) Includes cars, trucks and buses, but excludes KD sets of 159,197 units, up 1.5 percent. Also excludes industrial vehicles and houses. (2) Includes all motor vehicles. Excludes KD sets. (3) Includes passenger cars only. Excludes power products and motorcycles. (4) Includes 170,182 KD sets. (5) Includes passenger cars, trucks and buses. (6) Includes cars, trucks and buses. Excludes 20,780 KD sets. (7) Parent company of Subaru of America. (8) Includes passenger cars only. Dollar figures translated at average exchange rate during particular fiscal period.

MANUFACTURERS

LANCIA, v. Vincenzo Lancia 27, Turin, Italy. Products: Automobiles.

LAWIL S.p.A., Costruzioni Meccaniche Automobilistiche, v. Maretti 29, Varzi (Pavia), Italy. Products: Automobiles.

LEDL GmbH, Automobilerzeugung, Kunststoffverarbeitung, Pottendorferstrabe 73-75, A-2523 Tattendorf, Austria. Phone: 0-22-53/81-401. Products: Automobiles, crash helmets, car styling products.

LENHAM MOTOR CO., 47 West St., Harnetsham, Kent ME17 1HX, Great Britain. Products: Sports cars.

LOGICAR AS, Otto Werk Design, Bymarkasvej 4, Stevnstrop, DK 8870 Langaa, Denmark. Products: Automobiles, prototypes.

LYNX ENGINEERING LTD., 8, Castleham Rd., Castleham Industrial Estate, St. Leonard-on-the-Sea, East Sussex, TN 38 9NR, Great Britain. Phone: (0) 424-51277. Products: Automobile prototypes, convertible prototypes, low-volume convertible conversions, low-volume performance cars.

MARCOS SALES LTD., 153 West Wilts Trading Estate, Westbury, Wiltshire, Great Britain BA13 4JN. Phone: 0373-864097. Telex: 444883 SPEMAR G. Products: Automobiles.

MASERATI, OFFICINE ALFIERI, S.p.A., v. Ciro Menotti 322, Modena, Italy. Products: GT and racing cars.

MAZDA MOTOR CORP., 3-1, Shinchi, Fuchu-cho, Aki-gun, Hiroshima 730-91, Japan. P.O. Box 18. Phone: (082) 282-1111. Telex: 652333 MAZDA J. Products: Mazda cars, trucks.

MAZDA MOTORS OF NEW ZEALAND LTD., P.O. Box 22-472 Otahuhu, Auckland, New Zealand. Phone: 579-019. Telex: N.Z. 21152. Products: Mazda cars, trucks.

MERCEDES-BENZ ARGENTINA, S.A., Casilla Correo 3890, (1000) Correo Central, Buenos Aires, Argentina. Phone: (00541) 8 01 70 61/68. Products: Trucks, buses.

MERCEDES-BENZ AUSTRALIA PTY LTD., P.O. Box 214, Mulgrave-Melbourne, Australia. Phone: (00613) 5 66 92 66. Telex: 31735 merstar aa. Products: Assembly of trucks and buses.

MERCEDES-BENZ do BRASIL, S.A., Av. Alfred Jurzykowski, 562, Sao Bernardo do Campo/S.P. Brazil. Phone: (005511) 455 66 11. Telex: 114157 BENZBR. Products: Trucks, bus chassis.

MERCEDES-BENZ OF SOUTH AFRICA (PTY) LTD., P.O. Box 1717 Pretoria 0001, Republic of South Africa. Phone: (00271?) 214 2911. Telex: 321361 SA. Products: Assembly of cars, trucks, buses, chassis.

MICHELOTTI, (Studio Tecnica Design Carrozzeria), strada dei Boschi 8, 10092 Beinasco, Turin, Italy. Products: Coaches for custom-made cars.

MIDAS CARS LTD., St. Lukes Rd. Corby, Northants, NNI8 8 AJ, England. Phone: 0536-60044. Products: Automobiles.

MITSUBISHI MOTORS CORP., 33-8, Shiba 5-chome, Minato-ku, Tokyo, Japan. Phone: (03) 456-1111. Telex: J26639 (MISHIJIKO). Products: Motor vehicles ranging from mini vehicles to large-size trucks and buses.

MORGAN MOTOR CO. LTD., Pickersleigh Rd., Malvern Link, Worcs. WR14 2LL, Great Britain. Products: Automobiles, parts.

MOTOR IBERICA S.A., Edifi'cio Barcinovaa, Gran Vi'a Carlos III, 140-142, Barcelona-34, Spain. Products: Nissan 4wd Patrol vehicle.

MUGEN COMPANY LTD., 2-15-11 Hazaore machi, Asaka shi., Saitama ken. 351, Japan. Products: Coaches.

NATIONAL AUTOMOBILE INDUSTRY CO. LTD., P.O. Box 5938, Jeddah, Saudi Arabia. Phone: (009662) 6 82 20 00. Telex: 400099 NAICAR S.J. Products: Assembly of trucks.

NISSAN AUSTRALIA PTY. LTD., 250 Frankston Rd., Dandenong, Victoria, Australia. Products: Automobiles.

NISSAN DIESEL MOTOR CO. LTD., Sunshine 60 Building, 3-1-1, Higashi Ikebukuro, Toshima-ku, Tokyo. Telex: NIDEKO J24111. Products: Heavy- and medium-duty diesel trucks, buses, industrial and marine diesel engines.

NISSAN MEXICANA, S.V. de C.V., Piso del, Mexico 19 D.F., Mexico. Products: Nissan Sunny and Silvia pickup and trucks.

NISSAN MOTOR CO. LTD., 17-1, Ginza 6-chome, Chuo-ku, Tokyo 104, Japan. Telex: NISMO J22503. Products: Nissan cars, trucks.

NISSAN MOTOR del PERU S.A., Av. Tomas Valle No. 601, San Martin de Porres, P.O. Box 4265, Lima, Peru. Products: Manufacturer and distributor in Peru.

NISSAN SHATAI CO. LTD., Hiratsuka, Kanagawa, Japan. Phone: 579-019. Telex: NZ 21152. Products: Passenger cars, trucks.

NOVA SPORTS CARS LTD., Bridge Garage, Huddersfield Rd., Mirfield Yorks, Great Britain. Products: Automobiles.

OB&D DESIGN ASSOCIATES LTD., 67 Woodside, Ashby de la Zouch, Leics, LE6 5NU, Great Britain. Products: Automobiles.

OGLE DESIGN LTD., Birds Hill, Letch-

DEALERS

Dealer totals declined for the domestic makers last year and increased significantly (with an asterisk) for the imports. The net result was a gain of 380 retail new-car outlets.

On Jan. 1 of this year, there were 25,104 new-car dealerships in the U.S., compared with 24,724 at the beginning of 1985. The 1986 total consisted of 20,673 establishments that handle domestic cars and 4,431 that stock only imports.

There are 17,966 places to buy an imported car, but 13,535 of them also handle domestic makes and are counted in the aforementioned 20,673.

Stated another way, there are 7,138 dealerships handling only domestic autos, 4,431 handling only imports and 13,535 handling both domestics and imports.

If that isn't enough numbers, 65.5 percent of the domestic outlets also carry imported cars — either a captive or an independent line.

As noted, the annual *Automotive News* census found 20,673 dealerships handling domestic makes of cars on Jan. 1, 1986. That was down 229 from the 20,902 counted a year earlier.

The decline followed increases of 42 in 1983 and 61 in 1984. Those were the only gains since 1955.

Four of the five manufacturers in the domestic category suffered declines last year. Chrysler Corp., up 15, was the sole exception.

There were dips of 135 outlets for General Motors, 47 for Ford Motor Co., 44 for American Motors-Renault and 22 for Volkswagen. The combined loss of 233 was reduced to 229 by a change in the number of intercorporate duals.

The import-outlet population exploded to an all-time high of 17,966 on Jan. 1, up from 12,427 a year earlier. But, as mentioned, there's an asterisk: The bulk of the gain came from the Chevrolet and Lincoln-Mercury captives.

All 5,050 Chevrolet dealers now handle the Japanese-built Suzuki Sprint and Isuzu Spectrum. Only 2,077 had those captives at the beginning of 1985. And 783 L-M outlets are stocking the German Merkur vs. none a year earlier.

But there were substantial gains in the noncaptive categories, too. An additional 609 dealerships are handling only imports, and there was an increase of 1,159 in the number of domestic outlets that stock an independent foreign make. ■

* Retail outlets include dealerships, distributorships and factory-owned outlets.
** Plymouth trucks are compact Voyager vans.
*** White includes Autocar.
**** Estimate.
+ Revised.

The number of new-truck dealer outlets in the U.S. fell by 39 during 1985, bringing the Jan. 1, 1986, truck-dealer population to 19,624.

Five makers increased their dealer totals; nine showed declines; two were unchanged.

This year, dealer figures for Hino, Isuzu, Mitsubishi Fuso, Nissan Diesel and Scania trucks were added. These new figures replace those previously tabulated in the Miscellaneous category.

The U.S. motor vehicle and parts manufacturing industry used 84.0 percent of its capacity in 1985, highest rate since 1978 (89.0) and nearly 30 points above 1982's historic measured low (54.3).

As a result, employment in the U.S. parts and equipment manufacturing industry climbed for the fourth straight year in 1985 to 388,800, up from 387,300 in 1984 and the highest figure since 1979 (441,100).

Another result was increased shipments of parts, equipment, tools and materials to motor vehicle manufacturers by a number of supplier segments in 1985.

Preliminary figures indicate U.S. steel producers shipped 72,698,305 net tons of steel last year, 17.6 percent of it (12,759,310 tons) going to motor vehicle and automotive component manufacturers. Steel remained the nation's fourth-largest industry in 1985 with sales of $53.6 billion, according to the American Iron and Steel Institute.

While 1985 shipments of aluminum have not yet been released by the Aluminum Assn. Inc., it is expected that shipments to the motor vehicle industry will show increased volume over 1984 (2,939 million pounds), which was 25.6 percent higher than 1983.

Aluminum pounds-per-car averaged an all-time high of 139 pounds in the '85 model year.

Shipments of reinforced plastics/composites to the motor vehicle industry in 1985 totaled 563 million pounds, 4.2 percent above 1984. The North American automobile market consumed 188.1 million pounds of composite laminate in 1985 compared to 169.9 million pounds in 1984. The truck market consumed 120.9 million pounds in 1985 compared to 119.4 million pounds in 1984.

The weighted amount of zinc die castings fell to an estimated 20.2 pounds in the typical U.S.-built automobile, according to the Zinc Institute, continuing an annual decline that began in 1980.

Machine tool shipments in 1985 totaled $2.54 billion compared to $2.29 billion in 1984, according to the National Machine Tool Builders' Assn.

The U.S. market for laser machine tools reached an estimated $188 million sales level in 1985, according to Strategic Research Center.

Sales of manufacturing automation equipment in the U.S. totaled an estimated $25 billion in 1985, according to Honeywell Inc. ■

While the average weight of a U.S.-made passenger car dropped to 3,082 pounds in the '85 model year, the amount of aluminum on a pounds-per-car basis to an all-time high 139 pounds in '85, continuing an annual climb that has been under way since the '71 model year. The percent of aluminum in the typical U.S.-produced car also reached a record level of 4.5 percent in '85.

Meantime, latest annual figures for shipments of aluminum to the motor vehicle industry show 1,414 million pounds went to the passenger car and parts market; 466 million pounds to truck, bus and van market; and 415 million pounds to the trailer and semi-trailer market.

Estimated Amount of Aluminum in U.S. Passenger Cars, 1967-'85

The U.S. steel industry shipped 12,759,310 net tons of steel products to the automotive industry (vehicle manufacturers, trailer manufacturers, independent parts and accessories suppliers, independent forgers) in 1985, according to preliminary figures of the American Iron and Steel Institute. The automotive market accounted for 17.6 percent of total shipments by the domestic steel industry in 1985.

Shipments of Steel Products to Auto Industry Net Tons 1985 (Preliminary)

Type Steel	Vehicle Manufacturers	Trailer Manufacturers	Independent Suppliers of Parts & Accessories	Independent Forgers	Industry Total
Ingots, blooms, slabs, billets	73,000	—	2,095	30,418	105,513

SOURCE: American Iron and Steel Institute

The weight of zinc die castings in the typical 1985 model U.S.-built automobile was an estimated 20.2 pounds — 1.5 pounds and 7 percent below the '84 figure of 21.7 pounds. Since 1980 the weighted amount of zinc die castings used in American-made cars has declined an average of a pound a year. Among factors contributing to the decline are continued car downsizing and the used of thinner-wall castings by the automobile industry.

In terms of car size, the average '85 model small car used 14.9 pounds of zinc die cast components; the typical intermediate contained 21.6 pounds; and standard models had 29.8 pounds. In '84 the figures were: 15.4 pounds, small; 23.5, intermediate; 32.1, standard. The 2.3-pound drop in standard cars indicates the auto makers' efforts to slim down their large cars.

As was the case for the past three years, General Motors led the U.S. auto industry in use of zinc die castings with a per-car estimate of 21.3 pounds compared to Ford's 19.1 pounds, Chrysler's 18.5 pounds and AMC's 13.7 pounds.

Zinc Die Castings Content (Pounds Per Car)

Model year	Average car	Small car	Intermediate	Standard car
1985	20.2	14.9	21.6	29.8
1984	21.7	15.4	23.5	32.1
1983	22.6	15.1	23.4	33.6
1982	23.1	19.2	23.5	33.7

Production of 233,900 metric tons of magnesium in five world zones in 1985 was second only to 1980's record of 236,000 tons, and nearly 1 percent above 1984's 232,100 tons, according to the International Magnesium Assn. Shipment of 224,800 metric tons in 1985 was the second best year since 1979's record 229,000 tons. However, production of magnesium in the U.S. and Canada declined to 142,000 tons in 1985 from 152,800 tons in 1984, and shipments in the U.S. and Canada dropped to 102,400 tons in 1985 from 110,100 tons in 1984.

Shipments of reinforced plastics/composites hit a record 2.21 billion pounds in 1985, topping 1984 (2.15 billion pounds) by nearly 3 percent. The Society of the Plastics Industry Inc.'s Reinforced Plastics/Composites Institute projects 1986 shipments will increase 3.1 percent to nearly 2.3 billion pounds for another record.

Shipments to the motor vehicle (land transportation) market in 1985 totaled 563 million pounds, a 4.2 percent increase over 1984 (540 million pounds). SPI projects shipments will rise 2.8 percent to 579 million pounds in 1986.

The average composite content per vehicle in 1986 is approximately 42 pounds, according to SPI which projects that will increase to 61 pounds by 1990 as more functional parts in cars and trucks are made with reinforced composites.

SUPPLIERS

Passenger-car tire imports in the U.S. climbed 8.8 percent in 1985 to a record 32.7 million, according to the U.S. Department of Commerce. Japan was the No. 1 exporter of tires to the U.S., increasing shipments 24.8 percent in 1985. Imported tires accounted for 23.2 percent of the passenger-car tire replacement market in the U.S. in 1985 compared to 20.8 percent in 1984.

U.S. exports of passenger-car tires in 1985 fell 19.4 percent to 3.8 million units from 4.7 million in 1984. U.S. exports of light-truck tires and truck and bus tires improved in 1985.

*—Adjusted to reflect transfer of 1,310,918 window vans from passenger total.
(1)—Each year many trucks are issued passenger car license plates due to their intended usage or local state laws. Beginning in 1966 VIN prefixes were used to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.
(2)—Each year vehicles registered in one state to an address in a different state have been excluded from the count of vehicles in operation. Beginning in 1971 approximately 181,000 passenger cars registered to fleets at out-of-state addresses have been included.
Adjustments for the absence of Oklahoma and other states have been made where applicable.

*-Adjusted to reflect transfer of 1,310,918 window vans from passenger car total to truck total.
(1)—Each year many trucks are issued passenger car license plates due to their intented usage or local states laws. Beginning in 1966 VIN prefixes were used to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the esitmated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.
Note: Adjustments for the absence of Oklahoma and other states have been made where applicable.

Makers use warranties as sales tool

By Arthur Flax
Service Editor

When the Acura line was introduced this year, it featured a 3-year/36,000-mile warranty with coverage more like that of BMW than Toyota or even of parent Honda.

With 30 or so manufacturers competing for a piece of the new-car pie, all players are hunting for an edge. And warranties are proving to be quite a broadsword in the collection of weapons.

Led by the makers of European sedans, there is a trend throughout the industry toward longer and more complete warranties. Manufacturers see the warranty as a competitive tool, a marketing device and a value-added package as well as a means to protect customers against the bugs that slip into even the best automobiles.

The price, positioning, reputation and quality of their cars as well as the cost of the warranty are the guidelines under which manufacturers make warranty decisions.

Manufacturers say they can afford to offer longer warranties because their cars are higher in quality and reliability.

In the face of stiff competition, some manufacturers may not be able to pay the price of offering a shorter warranty.

However, manufacturers indicate that in most cases, claims decline as the time limit is lengthened. In the case of extended powertrain warranties, the components covered are usually items such as engine blocks and transmission cases that seldom fail but involve considerable cost in the event of a malfunction.

Among manufacturers of upscale European sedans, multi-year warranties covering the complete car have become the rule during the past several years, and the warranty periods on new European cars continue to increase.

Last year, for example, Jaguar, Porsche and Saab increased their warranty coverage and during the past five years, Audi, BMW, Mercedes-Benz, Peugeot, Volkswagen and Volvo have increased their coverage significantly.

Chrysler is certainly the most agressive warranty marketer in the industry. In 1983, it introduced its 5-year/50,000-mile extended powertrain warranty in a wave of advertising hype. Ford and General Motors were relatively silent on warranties until the 1986 model year when they increased their multi-year coverage on powertrain and selected components.

And higher-priced domestic cars, notably Lincoln and Cadillac, received multi-year warranties on major components which

What's the answer, Mr. Cappy?

After American Motors' annual shareholders meeting, Joseph Cappy, the firm's president and chief executive officer, fields reporters' queries about the possibility of Chrysler Corp. assembling cars at one of AMC's plants. Stories on Page 56.

Honda leaves new ad giant

By Jenny L. King
Detroit Reporter

In the wake of the largest advertising merger in history, Honda's $135 million account will stay with its two top admen, who are starting their own shop, and Dodge and Volkswagen will remain with the merged conglomerate.

The merger brought together three firms big in the automotive ad world—BBDO International, which has the $130-million Dodge account; Doyle Dane Bernbach, Volkswagen's longtime agency, and Needham Harper Worldwide, which represented Honda.

The merger was part of an increasing trend toward consolidation in the ad world.

When it was announced a week ago that the three giant advertising agencies were pooling their $5 billion in aggregate billings, storm clouds quickly appeared on the horizon.

Because each member of the new and as yet unnamed family had a major automotive account, some observers said it wouldn't be feasible for them to get too cozy.

Colossal ad agency operations are more and more common as the need grows to serve clients on a global basis. The former biggest conglomerate, Interpublic Group of Cos., numbers Buick, GMC, Chevrolet, Mercedes-Benz and Toyota among its automotive customers.

By mid-week, the Needham Harper dilemma had been resolved. Two top executives of the agency's Los Angeles office, Gerrold Rubin and Larry Postaer, purchased the L.A. operation, taking its major clients, including Honda, in the package.

Bucking the mega-merger trend, the newly formed Rubin, Postaer and Associates will be headquartered in Los Angeles with offices in San Diego and Sacramento. Major accounts include American Honda, which was with Needham Harper for 12 years; California Lottery; Home Federal of San Diego, and

Japanese make big gains in Europe

By Richard Feast
European Editor

LONDON—Japan's auto makers continued their steady progress into Western Europe's new-car market in the first quarter of this year.

Their sales totaled 327,800 for the period, a 21 percent increase over 1985, and they captured a record 11.2 percent of the market.

Toyota moved ahead of Nissan for the first time as the leading Japanese retailer on the continent. The development, long sought by Toyota, resulted from the resurgence in demand in the largest national market, West Germany.

Total new-car sales in Western Europe for the first quarter were 2,916,000 up 5.6 percent over last year's 2,760,100.

Fiat Auto was Europe's top seller at the end of March, followed by 1985's full-year champion, the Volkswagen-Audi Group. Market shares were 13.1 percent for Fiat and 12.9 percent for VW.

Renault's share sank to the lowest point in recent history (9.4 percent) as it continued to lose share in a flat French market. The three other leading contenders—Ford, General Motors (Opel-Vauxhall) and PSA (Peugeot-Citroen)—were tightly bunched but some distance from Fiat and VW.

European new-car sales were 2,-

Meyers tells tale of crises

By Al Fleming
Industry Editor

WEST BLOOMFIELD, Mich.—Crisis isn't his middle name, but it well might be.

Gerald C. (for Carl) Meyers earned the equivalent of a black belt in battling off tough times in an automotive career that spanned 32 years.

It ended abruptly four years ago when, at age 53, he exited troubled American Motors as chairman and chief executive officer.

Seated at his desk in a modest office in this suburb northwest of Detroit, the tall, rugged-looking ex-auto monarch reflected on a stormy past: "As I look back at my business career, it was just a lifetime of crisis."

So it seems. Meyers entered the auto world at Ford Motor Co. in 1950, as the company was just starting to emerge from its legendary post-World War II management struggles.

In 1954, he went to Chrysler Corp., which was in the midst of a serious sales slide. He spent eight

Ford moves to speed cars to the market

By Richard Johnson
Detroit Reporter

A major reorganization of Ford Motor Co.'s North American product planning operations is expected to cut development time on all-new cars to less than three years in the 1990s.

The "program management" approach to car development at Ford began April 1 with an ambitious set of objectives.

"We want to take at least 12 months out of our programs at the start and then whittle on that," said Stuart Frey, Ford vice president—Car Product Development, in an interview.

Ford spent more than five years taking its new Taurus/Sable

Workers try to save Ford plant

By Mary Connelly
Detroit Reporter

UAW workers at Ford Motor Co.'s Green Island (N.Y.) manufacturing plant will carry their campaign to carve a future for the threatened plant to the company's annual shareholders' meeting.

The meeting is scheduled for Thursday (May 8) at Ford Auditorium in Detroit.

UAW Local 930, which represents the 425 unionized workers at the plant, has also asked each of the 69 Ford UAW locals to send a representative to the meeting to show support for the Green Island employes.

"What is unique is that the union is going to the stockholders and saying we need your help," said Local 930 President James Roti Roti.

The Green Island plant manufactures copper and brass radiators and heater cores.

Ford has announced that it plans to consolidate operations as it shifts increasingly to use of aluminum for the parts, and the company has not identified any future product at the plant. The phase-in to aluminum, which Ford said is being done for efficiency and durability, is expected to be completed by 1988.

Much of the work at Green Island is expected to be transferred to Ford's Sheldon Road (Mich.) plant, the company said. In the past two years, 111 former Green Island employes have transferred to Michigan, and Ford anticipates additional transfers. Ford also said many Green Island workers will be eligible for retirement by 1988.

However, the UAW's Roti Roti said workers deserve a future at the Green Island plant because Local 930 was among the first in the country in 1982 to advocate reopening the national labor agreement when auto manufacturers were seeking cost-saving concessions.

"We sacrificed and now we're asking the corporation to give us a break and give us a new product for our plant," Roti Roti said.

The union president said if future product is not scheduled at the plant, the union is advocating that all Green Island employes, regardless of age, be offered special early retirement benefits.

"We're asking for something special beyond the contract," he said.

Roti Roti said the Green Island plant is profitable. Ford said, however, that the plant will not be able to sustain itself economically as the shift to aluminum continues.

Automatic guided vehicles are used to transport engines and powertrains

Buick City: Problems, gains

By Michelle Krebs
Financial Editor

FLINT—General Motors officials said the start-up of its Buick City complex is on schedule and has been no slower than startups at other GM plants.

Nevertheless, reports of production, quality and labor relations problems persist.

GM acknowledges that there have been problems --problems that were anticipated—because of what has been hailed as a radical departure from the traditional way of building cars, both in terms of the assembly process and the labor arrangement.

Buick City, a 1.8-million-square-foot facility, is a combination of a former Buick assembly plant and a former Fisher Body plant. The complex has more automation than most GM plants.

Workers from the two plants that make up Buick City were combined into one workforce. The plant is operated under an entirely new labor agreement, considered innovative in the industry. Workers have less management supervision and have a voice in decision making.

Edward D. DuCharme, manufacturing manager for the Buick-Oldsmobile-Cadillac Group's Flint Product Team, said the Buick City acceleration schedule is proceeding as planned.

At a news conference and media tour of Buick City last week, DuCharme displayed a graph charting the acceleration of Buick City compared with accelerations of other GM plants. According to the chart, Buick City lags slightly behind GM's Orion plant but is well ahead of NUMMI, GM's joint-venture plant with Toyota.

Assembly is made easier with doors off

DuCharme admitted that Buick City's acceleration has not been as smooth as the acceleration at GM's Willow Run (Mich.) plant, which assembles

Raider loses at Fruehauf: will return

By Michelle Krebs
Financial Editor

SOUTHFIELD, Mich.—New York corporate raider Asher B. Edelman apparently lost his proxy fight to place his 11 people on the board of Fruehauf Corp. last week. But he vowed to return.

Edelman and his group hold 2 million shares—or 9.5 percent—of Fruehauf's common stock, making him the largest single shareholder of the truck-trailer manufacturer. He increased his bid for the rest of Fruehauf's stock to $42 a share.

Fruehauf's board has rejected the bid as inadequate and conditional. The company said the conditions would allow Edelman to revise or abandon his proposal.

"Even if the price was right, and we don't believe it is," Chairman Robert D. Rowan told shareholders, "we have little confidence that Mr. Edelman could complete his proposal."

At the annual meeting last week, it appeared that Fruehauf management's slate of nominees for the board of directors was overwhelmingly elected over Edelman's rival slate. The final results, following a count by independent inspectors, will be announced May 15.

Nonetheless, following the annual meeting, Edelman said his bid still stands. He also announced he had demanded a seat on the Fruehauf board. The board had 12 spots until the morning of the annual meeting when one member, who had reached mandatory retirement age, resigned.

Edelman argues that technically a 12th board seat remains, and the board must allow him to have it.

Fruehauf management, however, contends that—in accordance with the company's bylaws and Michigan law—the size of the board was reduced when the 12th member resigned.

Rowan said Edelman was not welcome on the board. "The obligation of the board of directors is to work for all of the shareholders," he said. "Asher Edelman's real interest in Fruehauf is only in making money for himself."

Edelman would not say if he intended to file a lawsuit if he did not receive the board seat, though he didn't expect to win it. He also could not comment on whether he intended to initiate a tender offer for the rest of Fruehauf's stock.

Edelman said that with a seat on the board, he would act as the company's conscience by entertaining purchase offers by the Edelman groups as well as other interested buyers.

Edelman asked if Fruehauf is talking about its availability with Eaton Corp. or unnamed tire companies. Rowan responded that those were rumors which have absolutely no validity.

Big Four profits decline 9 pct.

By Michelle Krebs
Financial Editor

Combined earnings for the Big Four auto makers were off 9 percent in the first quarter while sales were up 10 percent, setting an any-quarter record.

General Motors, Ford Motor Co., Chrysler Corp. and American Motors earned a combined total of $2.1 billion, down 9 percent from $2.3 billion in the first quarter of 1985.

Sales for the four companies amounted to $48.3 billion, up 10 percent from $43.8 billion in the year-ago quarter. Sales were the highest of any quarter in U.S. auto history.

GM profits amounted to $1.06 billion, down one percent from $1.07 billion last year. It was GM's third best first quarter. GM sales set a new quarterly record at $28.8 billion, up 11 percent from $24.2 billion, even though factory sales of vehicles were off.

AUTO MAKERS' SALES, PROFITS
(In millions)
FIRST QUARTER

	1986 Sales	1986 Profit (Loss)	1985 Sales	1985 Profit (Loss)
American Motors	$ 918.2	($ 18.9)	$ 919.4	($ 29.0)
Chrysler Corp.	5,777.8	356.9	5,408.1	507.6
Ford Motor Co.	14,795.1	728.3	13,246.2	783.3
General Motors	26,820.1	1,063.8	24,182.5	1,071.7
TOTAL	$ 48,301.2	$2,130.1	$ 43,756.2	$2,333.6

Ford reported first-quarter profits $728 million, down 7 percent from 1985's $783 million. It also was Ford's third-best first quarter. Sales were $14.8 billion, up 12 percent from 1985's 13.2 billion for a new quarterly sales record.

Chrysler reported profits of $357 million, down 30 percent from 1985's first-quarter earnings of $506 million. It still was Chrysler's third-best first quarter in history.

Chrysler sales were $5.8 billion, up 7 percent from 1985's $5.4 billion. It was Chrysler's best first quarter for sales and its second best sales for any quarter.

AMC had a loss of $19 million on sales of $918 million. That compares with a loss of $29-million on sales of $919 million in 1985.

Big EDS job for Alberthal

DALLAS—Lester M. Alberthal Jr. has been appointed president of Electronic Data Systems, General Motors' computer services subsidiary.

Alberthal, an 18-year EDS veteran, formerly was senior vice president in charge of EDS' North American Business Operations. He replaces Morton H. Meyerson, who was named to the new position of vice chairman. Company founder H. Ross Perot remains chairman.

Lester M. Alberthal Jr.

Meyerson, a close associate and friend of Perot, had requested a new job. Meyerson will work on joint ventures and acquisitions, the growth of EDS' non-GM business and the marketing of computer service products developed for GM.

EDS also announced the appointment of J. Davis Hamlin, previously vice president of finance and administration, as chief financial officer. He succeeds J. Thomas Walter Jr. who, as a senior vice president, will work with Meyerson.

Gary Fernandes, senior vice president, was named chairman of EDS International, Ltd. Kennard Hill remains vice president in charge of the company's GM operations.

GM and union talk in California, but Van Nuys' future is uncertain

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES—What was billed by a union official as a major announcement regarding the future of General Motors' Van Nuys assembly plant turned out to be considerably less.

It resulted in a vague commitment on the part of GM and the union to keep talking about work rule changes to make the plant more competitive.

The Van Nuys plant assembles the Chevrolet Camaro and the Pontiac Firebird.

The press conference was called on the eve of a rally planned by militant union members to pressure GM to make a 10-year commitment to keep the plant open.

There was speculation that the press conference was a move to blunt the rally. It also drew attention to the differences within UAW Local 645 on the best strategy to keep the plant operating.

The only item of substance that came out of the press conference was the fact that the state of California will commit $20 million to help retrain plant employes if GM commits to keeping the facility open.

However, plant manager Ernest Schaefer told the news conference that GM currently has no new-product plans for the facility beyond the 1988 model year, and he confirmed that the scheduled indefinite layoff of the 2,000-worker second shift will go ahead as planned June 9.

According to Robert Thierry, chairman of the California Employment Training Panel, the state would provide the money to help GM shift from a traditional assembly-line production system to a labor-management team concept.

Bruce Lee, director of the UAW Western region which helped negotiate the labor agreement between the union and New United Motor Mfg., Inc., said GM and the union have agreed to continue talks on a new contract that would "put Van Nuys at the top of the list for one or more new products."

Lee said the union also "will work to set up a free enterprise zone" in an effort to attract components suppliers to the area. Lee said the concept of flex production—having the capability to build two or more products on the same assembly line—is one of the keys to keeping the plant open.

Schaefer said GM will continue to negotiate to keep the plant open because "we have a significant asset in having an assembly plant in one of the largest and more important car markets in the U.S."

However, he said that no new product has been selected for Van Nuys. "There is no commitment (to keep the plant open) at this time," he said. He added that a new labor agreement at the plant is integral to any decision to keep the plant open.

Although both Lee and Schaefer hailed company-union cooperation in reaching such an agreement, it was clear that the decision to keep the plant open rests in Detroit.

Also participating in the press conference was Ray Ruiz, who is chairman of Local 645's shop committee and who is leading the negotiations with GM. Lee is backing his efforts.

Observing the proceedings, but not participating, was Peter Beltran, the local's president. Beltran favors taking a harder line with GM and supports a drive organized several years ago by a faction within the union that is seeking a 10-year commitment from GM to keep the plant open. If GM closes the plant, that faction is threatening a boycott of GM products in California.

Eric Mann, Local 645 member and coordinator of the drive, said he felt that what came out of the press conference fell far short of what the workers want in terms of assurances.

"What was announced here is positive," Mann said, "but we want a commitment, a 10-year commitment. The first step toward cooperation is job security."

Mann said his group intends to keep the pressure on GM. The rally and march went on as as scheduled the day after the press conference.

Queen's Award goes to Jaguar and Cosworth

LONDON—Cosworth Engineering, Ltd., and Jaguar plc have received Queen's Awards for Export Achievement, and Cosworth Research and Development has received the Queen's Award for Technological Achievement.

Jaguar, honored for the third consecutive year, is Britain's leading car exporter. The company said it increased its production to 10,606 cars during the first quarter of 1986.

It said worldwide sales were up for the period, as were sales in the U.S., its largest single market.

Cosworth's engineering group said its exports were almost 2½ times higher in 1985 than in 1983. The company designs and produces racing engines and engines and components for high-performance makes such as the Ford RS Cosworth Sierra and the Mercedes 190E.

The technological award is for development of the Cosworth Process, an advanced system for casting aluminum alloy engine components.

Wholesalers elect

PHOENIX—The Automotive Wholesalers of Arizona elected Jim Shaw president, Saul Bart vice president and Bill Block executive secretary.

Baseball and autos are in Schott empire

By Jenny L. King
Detroit Reporter

Jenny L. King

Margaret Schott

She didn't seem to have an opinion on the American League designated-hitter rule, but she's a promotions wizard and knows how to run a car dealership.

Baseball is Margaret Schott's latest adventure. She's a general partner of the Cincinnati Reds.

Schott started aiming for the top when she found herself heading business interests with which she had little experience. At age 38, she inherited a brick company and Schott Buick, Inc., when her husband died.

Now the Buick and Chevrolet dealer (Marge Schott Chevrolet) is also into real estate, leasing, insurance, concrete and a landfill project.

Speaking before a recent meeting of the Women's Economic Club in Detroit, Schott touched on baseball, punchbowls and women in business. She dubbed her talk "Lady, what are you doing here?" because that's what she has been asked so many times during the unsheltered years of her life.

"When my husband was alive, I was a busy little housewife," she said. "When he died suddenly at 42, I found myself the owner of several businesses and I knew nothing about running them."

She learned quickly. At the Buick outlet, there was an imminent power struggle which she resolved by firing several of the top managers. Once she had eliminated them and the expense-account living that had been popular, the place began to make money.

"General Motors wouldn't recognize me as the dealer for 2½ years," she said. "Finally, when we had the best sales in the whole area, I got a call from Detroit. They said I could come up and sign the papers.

"I told them they could come down and I'd sign the papers," she told her audience.

That's where the punchbowl fitted into the narrative. She said she scurried around when the GM officials came down, getting out her best tea service and a punchbowl.

She was the first female member of the Cincinnati Chamber of Commerce. She also knows how to keep her player-manager Pete Rose in line and how to keep dealership personnel on their toes.

Sales of Japanese cars rise 21 pct. in Europe

Continued from Page 1

916,000 for the quarter up 5.6 percent over last year's 2,760,100. If the trend continues, it will certainly produce a sales record for the region by the year's end.

Eleven of the 16 national markets reported sales increases, led by the 16.4 percent (93,500 units) advance in West Germany. Of the other influential markets, Italy gained 3.8 percent, France was steady and there were declines for the U.K. (0.8 percent) and Spain (9.4 percent), according to preliminary and unofficial statistics.

While Fiat Auto seems set to retain European leadership during the next few months, analysts believe that by the end of the year the VW group will have moved ahead. In the first quarter, VW's increase was 12.5 percent, compared with Fiat's 7.6 percent.

Each company has been swept along by its key domestic market, West Germany for VW and Italy for Fiat. But while German sales are picking up after a long period of uncharacteristically weak demand, Italian sales have continued to increase and must be nearing the cyclical turning point.

Besides, when VW's purchase of Spain's Seat goes through in the middle of the year, their combined share will be greater than Fiat's. At the end of March, the consolidated VW-Audi-Seat share was 14.3 percent.

It is an illustration of the changing fortunes of Europe's big auto makers in the 1980s. When the decade began, Renault was market leader with 14.7 percent and VW had 12.1 percent. Now, Renault's share is down a third, and VW is on the verge of a one-fifth increase in its slice.

Ford, GM and PSA each recorded numerical gains in the first quarter compared with a year earlier, but none was as great as the overall market improvement, thus each lost penetration.

The Peugeot Group's sales gain resulted from improvements outside France, where it retained market leadership but with reduced numbers. In France, the real gains were made by importers like Fiat, VW, GM and even the Japanese.

For the Japanese who did so well in the opening quarter, Europe represents a particularly diversified target. Japan faces very strict limits in the important Italian, French and Spanish markets. In the U.K., the so-called gentlemen's agreement between industry associations—recently renewed—restricts Japanese sales to around 11 percent of total.

Historically, Nissan has held about half of that 11 percent in the U.K., leaving all other Japanese importers to share the remainder. It was that large chunk of an important national market which provided Nissan with its overall European advantage over Toyota and the others.

Thus, for Toyota to pull ahead of Nissan in Europe—as it did in the first quarter with 82,400 sales to 79,500—required an allout effort in West Germany, the one large and free region open to the Japanese.

Toyota went into action. It supported that effort with greater sales gains than Nissan in Belgium, Netherlands, Switzerland and Austria.

Over the longer term, that Toyota reversal is unlikely to last. Nissan has pioneered Japanese auto making in Europe and is now starting pilot assembly of Bluebird (Auste) models at Washington, England. Those initial models (24,000 annually) will be regarded as Japanese and thus subject to sales constraints in much of Europe.

But while Nissan appears set to move to the second phase and production of 100,000 units a year, Toyota has made no known moves toward European manufacturing. The European content of the second-phase Nissans will make them eligible for export to the Common Market, and should restore the company's advantage over Toyota.

Toyota's first-quarter sales increase was about 28 percent, compared with Nissan's 16.5 percent. Mazda, the next most important Japanese company in Europe, rose by 18.5 percent to 61,800.

Among other European makers, there were gains in sales and market share by Daimler-Benz (108,700), BMW (78,000) and Seat (41,100). Sales increased for Volvo (71,800), Austin Rover (111,400) and Alfa Romeo (46,700), but market share declined.

Reagan's product-liability proposal appears doomed this time around

By Helen Kahn
Washington Bureau Chief

WASHINGTON—The Reagan Administration's federal product-liability proposal, put forth with great hoopla last week by Attorney General Edwin Meese and Commerce Secretary Malcolm Baldrige, is not expected to become law this Congress.

Even if it were to make it through the Senate, it could never make its way through the much more troubled waters of House Energy and Commerce Subcommittee and full committee, much less to the House floor.

It will be a victory of sorts if the measure wins approval by the more sympathetic Republican-controlled Senate.

Even though Senator Robert Kasten, Wisconsin Republican, introduced the bill promptly and with some reservations, Senator John Danforth, Missouri Republican and chairman of the Senate Commerce Committee, has some strong objections.

If differences between Danforth's own bill and the Administration bill can be settled, the bill could make it to the Senate floor. But opposition from the American Trial Lawyers Assn. and the Ralph Nader groups will be strong.

On the other hand, the Administration bill has the endorsement of the Coalition for Uniform Product Liability Law—a business group that includes the auto companies. Senate Commerce Committee hearings will occur this month.

The Administration bill, which would override segments of state laws, would require liability to be based on fault, whether negligence or strict liability.

Another section of interest to the auto industry is a cap of $100,000 to be placed on non-economic damages, such as pain and suffering, as well as punitive damages.

Future economic damages in excess of $100,000 could be paid in installments. Judgments could be reduced by compensation received from other sources (veterans benefits, employer-financed health benefits, etc.). Attorneys' contingency fees would be scheduled to decrease.

Finally, the bill encourages developing alternative dispute resolution mechanisms.

The Administration believes the inability to obtain product-liability insurance at an affordable price or even sometimes to obtain insurance at any price has "reached crisis proportion."

Baldrige added that this "has a very detrimental effect on U.S. productivity and competitiveness."

He said that those costs eventually mean higher unit prices and make U.S. products less attractive in both foreign and domestic markets.

Fast-paced adventure for moms in fast lane

BEVERLY HILLS, Calif.—Here's a Mother's Day gift for mothers who live in the fast lane—a $9,000 race package that culminates in a trip for two to France for the LeMans races.

Beverly Hills Motoring Accessories is offering a package which includes a three-day class at the Jim Russell British School of Motor Racing, a fireproof racing suit and first-class round-trip airfare for two to France.

Production

Auto production dips to 164,359

By Kathy Boyer
Detroit Reporter

Last week's domestic output of 164,359 cars was down 1.08 percent from the previous week's 166,146 and was 9.51 percent below the year-ago week's 181,624.

Due to production cuts, the year's build of 2,933,249 cars has fallen farther behind (3.91 percent) the 3,052,599 completed last year at this point.

Last week's scheduled production was divided this way: General Motors, 55.96 percent; Ford Motor Co., 24.40 percent; Chrysler Corp., 14.24 percent; Honda of America Mfg. Co., 2.31 percent; New United Motor Mfg., Inc., 1.87 percent, and Volkswagen of America, 1.22 percent.

American Motors closed its Kenosha plant for inventory adjustment last week.

The plant, which builds the Renault Alliance and Encore, has been down 10 times this year to trim inventory.

It is scheduled to resume production today (May 5).

Nissan's car line in Smyrna, Tenn., remains down for changeover to the new four-door Sentra.

GM announced it will close its Norwood (Ohio) plant for two weeks and its Lakewood (Ga.) plant for one week beginning today (May 5) for inventory adjustment.

The Norwood plant assembles the Pontiac Firebird and Chevrolet Camaro, and the Lakewood facility builds the Chevrolet Chevette and Pontiac 1000.

As a result of the shutdowns, 6,600 employes will be temporarily laid off.

Ford slated Saturday (May 3) overtime at its Wayne (Mich.) plant.

Chrysler scheduled daily overtime this week at its Belvidere (Ill.) plant.

1,150 jobs to be eliminated at GM Rochester Products

By Mary Connelly
Detroit Reporter

In the next 90 days, General Motors will eliminate approximately 1,150 hourly jobs at two New York plants of its Rochester Products Division.

It will eliminate 400 of those jobs today (May 5). An additional 750 job losses are anticipated in June and July, the company said. There are 4,000 UAW workers at the two plants.

The job losses are blamed on production cutbacks at GM assembly plants due to high inventories and on the industry shift from carburetion to fuel injection technology. The two plants in Rochester, N.Y., supply fuel systems, primarily carburetors, and emission control devices.

GM said last week that it has 15,000 workers on indefinite layoff throughout the company.

The majority of the affected unionized employes in New York will not be laid off but will move into the so-called job banks.

Negotiated in the 1984 national agreement between GM and the UAW, the job bank provision stipulates that no UAW member with more than one year seniority can be laid off because of the introduction of new technology, outsourcing, negotiated productivity improvements or transfers or consolidation of work among GM locations.

The majority of the anticipated Rochester Products Division job losses are deemed technology-related.

There are now 200 people in the Rochester job banks, GM said. An additional 150 workers will move into the bank today 5 when the 400 job cutbacks are effected. Another 200 employes will be placed on indefinite layoff and the remaining 50 workers will temporarily replace employes on leave, the company said. The jobs of those 50 are among the 400 that have been eliminated.

Employes in the job bank receive full wages and benefits. While temporarily in the bank, employes may be trained for new jobs, replace other employes who are in training, accept non-traditional assignments within or outside the bargaining unit or transfer to another plant.

GM has pledged $1 billion to the job bank program for six years or until the money is exhausted. The program is administered jointly by the company and the UAW.

GM and UAW Local 1097, whichrepresents workers at the plants, are also negotiating a new local labor agreement designed to cut operating costs and make the plants more competitive.

Union and company officials are also seeking new business for the Rochester operations because excess plant capacity is anticipated at the end of the year as technology shifts to fuel injection.

Venezuela builds Toyota Corolla

TOYOTA CITY, Japan—Toyota Motor Corp. has begun assembling complete-knockdown kits of its Corolla model in Venezuela at an annual rate of 10,000 units.

Toyota said it started to assemble the cars on April 1 and will put them on sale in May.

The annual build of its four-wheel-drive Land Cruiser in Venzuela is also 10,000 units, Toyota said.

Auto output here in 1984 was approximately 110,000 units, 80,000 of which were built by Ford Motor Co. and General Motors.

Truck output climbs to 75,272

Targeted U.S. production of 75,272 trucks last week was 2.41 percent more than the previous week's 73,501 and 2.79 percent better than the year-ago week's 73,229.

Year-to-date, 1,252,164 trucks have been assembled, 4.59 percent more than the 1,197,190 completed last year at this point.

General Motors announced it will recall 400 workers laid off from its bus plant in Pontiac.

GM received an order for 300 buses from the New York City Transit Authority. Employes are expected to return to work by late June.

The plant has been down since March because of slow sales.

GM scheduled Saturday (May 3) overtime at its Baltimore and Detroit plants.

Ford slated Saturday overtime at its Norfolk and Twin Cities plants.

Canadian autos pass 400,000

Canadian auto makers assembled their 400,000th car last Friday (May 2), 16 days ahead of 1985.

Scheduled output of 25,670 cars last week was about the same as (up 0.98 percent) the previous week's 25,422 and 7.09 percent more than the year-ago week's 23,971.

Truck makers' scheduled production of 19,123 units last week was a bit below (0.78 percent) the previous week's 19,273 and a little more than (0.24 percent) the year-ago week's 19,077.

A reflective moment for HF II

Attending Ford's annual meeting last week were, from left: Henry Ford II; Philip E. Benton Jr., executive vice president, Ford International Automotive Operations, and Kenneth H. Olson, a Ford director who is president of Digital Equipment Corp., Maynard, Mass. Story on Page 78.

AMC incentives are for dealers

By Jenny L. King
Detroit Reporter

American Motors last week adopted a wide-ranging program of rebates to dealers and invoice price cuts as its answer to the current round of incentives in the industry.

Instead of offering cash to customers or low interest rates on loans, AMC is paying rebates to dealers on AMC, Jeep and Renault vehicles sold to retail customers in May and June, and it has cut invoice prices on cars ordered through the end of the 1986 model run.

Rebates for sales range from $300 to $1,500 per car, and the invoice cuts run from $200 to $800.

Combining the two phases, a dealer can realize as much as $700 on Alliance/Encore models and as much as $2,300 on a Jeep Grand Wagoneer.

Factory-to-dealer awards "give dealers money to work with," an AMC spokesman said. "They can offer low-rate financing or rebates or they can give the customer a better price. Grand Wagoneer customers who pay cash, for example, may not need financing."

The amount of the sales rebate depends on the specific vehicle sold, AMC said. In each instance, AMC said, the dealer can earn incentives equal to or greater than the amount of savings available with the low-interest financing offered by the other domestic makers.

Here's how the three-tiered program works. The steps are sales of 1-2 units, 3-5 units and 6-and-over units.

For Alliance/Encore, the rebate to the dealer is $300 per unit at the first level, $400 for 3-5 units and $500 each for sales of six or more.

For Cherokee/Wagoneer sales, the rebates are $500, $600 and $700 at the three levels. Comanche sales earn $300, $400 and $600 apiece.

Grand Wagoneer returns are $750, $1,000 and $1,500; pickups bring $750, $1,000 and $1,200, and Eagle rebates are $500, $750 and $1,000.

The program applies to all 1985 and 1986 Renault Alliance, Encore and Sportwagon models;

Japan agrees to talk about auto parts

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO—Japan has agreed to add transportation equipment—including auto parts—to the agenda for its as-yet-unscheduled trade talks with the U.S.

Japan's auto makers and the Ministry of International Trade and Industry had opposed opening the issue of auto parts at the so-called Market-Oriented, Sector-Specific (MOSS) talks.

The decision came at a meeting of officials of the ministries of Foreign Affairs, International Trade and Industry, and Transportation. Japanese press reported the decision was conveyed to President Reagan and other U.S. officials before they left Japan last week.

Still to be decided are details such as which automotive items will be covered in the talks. The negotiations are expected to cover transportation issues such as the use of high-cube containers for inland transportation and Japan's compulsory automobile checkup system for cars in use.

U.S. parts makers complain the inspections keep them out of Japan's domestic market because original-equipment parts are required to pass the inspection.

In Washington, Commerce Undersecretary for Trade Bruce Smart—who will head the U.S. negotiating team—said auto parts

Dealer total declines 25 for quarter

By John K. Teahen Jr.
Senior Editor

Sales were less than spectacular and there were problems galore, but the domestic dealership total held up amazingly well during the first three months of 1986.

The quarterly Automotive News census found 20,648 dealerships handling domestic makes of passenger cars on April 1, down 25 from the 20,673 in business on Jan. 1.

Last year, the industry lost 38 outlets in the first quarter.

Chrysler Corp. showed a gain of two establishments in the opening period of this year, and Volkswagen reported no change. There were dips of one outlet for American Motors-Renault, five for General Motors and 16 for Ford Motor Co.

The net drop for the domestic industry was 25 after factoring in a change in the number of intercorporate duals.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individ-

GM hails tax plan; NADA finds flaws

By Geoff Sundstrom
Wahington Reporter

WASHINGTON—The sweeping tax changes approved last week by the Senate Finance Committee—and then backed by President Reagan—are being hailed by General Motors as "true tax reform."

NADA, on the other hand, said auto dealers would oppose the plan because of a provision disallowing the deductibility of interest paid on consumer loans.

Other auto makers and industry groups are uncertain of the bill's affect. Most have suspended judgment until they can take a closer look at the plan. At press time, UAW Spokesman Alan Reuther said the union was "still running numbers."

GM said, "The Finance Committee and its chairman (Oregon Republican Robert Packwood) deserve applause all around. While important details have not yet been clarified, they have come up with a package that looks like true tax reform. It has momentum and should move through the Senate and into conference as quickly as possible."

Neither Chrysler Corp. nor American Motors would comment on the tax package. However, a spokesman said that Chrysler previously has said Congress should be concentrating on solving the deficit problem rather than "wasting time" on tax reform.

Ford Motor Co. said it had not completed its analysis of the bill and that it is "a little too early" to assess the tax impact of the eventual outcome of the legislation.

Senate aides said the bill will be taken up by the full Senate in June. If signed into law, major provisions would become effective Jan. 1, 1987.

The bill sets a top corporate tax rate of 33 percent, more generous than either the House or Administration proposals which called for 38 percent and 35 percent rate, respectively. Also proposed is a

Domestic sales drop

By Jenny L. King
Detroit Reporter

The consumer incentives offered by the domestic auto makers in April failed to jolt the market into a spring selling boom.

In fact, domestics finished the month some 68,000 units behind their year-ago total, while imports, with no showroom balloons and whistles, set an April record.

April sales of domestic new cars totaled 719,563, down 8.72 percent from 788,281 last year and up 10.81 percent from 649,351 in March.

Import sales were up 26.69 percent April to April, rising to a record 252,609 from 199,386 a year earlier. They captured 25.98 percent of the total new-car market compared with 20.19 in 1985.

Industrywide sales were 972,172 in April, down 1.57 percent from from 987,667 in April, 1985.

Year-to-date domestic sales were off 7.51 percent, to 2,617,450 from 2,830,089 in 1985. Imports pushed close to the one-million mark and were up 19.39 percent year-to-date to 957,005 from 801,567. The combined figure of 3,574,455 was off 1.58 percent from 3,631,656.

Despite major consumer-incentive programs, the Big Three were unable to match year-ago sales. General Motors reported a sales decline of 8.78 percent in April. GM sales totaled 411,067, down from 450,608 in 1985.

Ford Motor Co. was down 7.85 percent, to 176,291 from 191,311. Chrysler Motors was off 10.08 percent for the month, to 101,270 from 112,621.

Honda sales of 15,003 were up 6.65 percent from 14,067 a year earlier. Volkswagen was up 2.19 percent, to 6,729 from 6,585. American Motors plunged 55.60 percent, to 5,202 from 11,622, while Nissan tripled its first-year sales to 4,001 from 1,267.

The record import sales included a smattering of individual records and a number of year-to-year increases.

BMW and Saab reported any-month sales records in April.

Third-period domestic sales were up 5.60 percent in a straight numbers comparison—298,487 versus 282,683—but they had the advantage of an extra selling day this year. The daily rate of 33,165 was down 6.13 percent from 35,332 in 1985.

Car supply is 70 days; 6-month low

By Kathy Boyer
Detroit Reporter

Inventories of domestic cars on May 1 fell to a 70-day level, the lowest in six months, but they were up considerably from the year-ago figure of 52 days.

Not since the 65 days' supply of November was the total so low.

The unit count on May 1, however, rose from last month's 1,906,998 to 1,945,048. A year ago the count was 1,315,026.

On April 1, the days' supply stood at 76 days.

Sales were up during April; production was up, too. But the number of selling days during the month increased considerably from the holiday-ridden March. The result was a sharply higher daily selling rate during April. Because the days-supply figure is based on the daily selling rate, the May 1 days' supply dropped despite the apparent contradiction of the higher unit count.

The inventory shares: General Motors, 60.79 percent; Ford Motor Co., 20.38 percent; Chrysler Corp., 15.76 percent; American Motors, 1.70 percent; Volkswagen of America, 1.03 percent; Honda, 0.27 percent, and Nissan, 0.07 percent.

On April 1, it was GM, 61.06 percent; Ford, 19.36 percent; Chrysler, 16.25 percent; AMC, 1.81 percent; VWoA, 1.00 percent; Nissan, 0.28 percent, and Honda, 0.24 percent.

On May 1 the shares by size class were subcompact, 17.26 percent; compact, 22.01 percent; intermediate, 38.23 percent; standard, 12.88 percent, and luxury, 9.62 percent.

The April 1 split: Subcompact, 17.01 percent; compact, 22.08 percent; intermediate, 38.08 percent; standard, 13.04 percent, and luxury, 9.79 percent.

There was a 68-day supply of subcompacts on May 1. Days' supply by nameplates: Sentra, 9; Accord, 9; Horizon, 55; Escort, 55; Omni, 58; Lynx, 63; Chevette, 71; Golf/GTI, 78; Pontiac 1000, 86; Turismo, 91; Daytona, 92; Charger, 93; Fiero, 105; Nova, 109; Laser, 133; Alliance 134, and Encore, 303.

Compacts and their days' supply were Mustang, 56; Tempo, 57; Firebird, 61; Reliant, 66; Topaz, 71; Cavalier, 71; LeBaron, 74; Camaro, 79; Sunbird, 82; Aries, 82; Cimarron, 83; Skyhawk, 102; Firenza, 122; Capri, 127, and Eagle, 153.

Intermediates and their days' supply: Grand Am, 24; Sable, 40; Taurus, 44; LTD, 59; Marquis, 66; Cutlass Ciera, 67; Citation, 68; Celebrity, 70; Cougar XR-7, 72; Caravelle, 75; Calais, 79; Cutlass Supreme, 83; Pontiac 6000, 84; LeBaron GTS, 85; Century, 87; Monte Carlo, 88; Dodge 600, 84; Somerset Regal, 89; New Yorker, 89; Thunderbird, 92; Lancer, 95; Bonneville, 106; Regal, 107, and Grand Prix, 118.

A 69-day average was reported for standard-size cars: Diplomat, 45; Parisienne, 49; Plymouth, 53; Grand Marquis, 55; Crown Victoria, 57; LeSabre, 58; Oldsmobile 88, 84, and Chevrolet, 87.

Standard-size cars and their days' supplies: Oldsmobile 98, 42; Cadillac, 53; Lincoln, 58; Mark VII, 65; Continental, 70; Corvette, 71; Toronado, 73; Electra, 76; Seville, 81; Eldorado, 81; Fifth Avenue, 89, and Riviera, 124.

Iowa bans incentives to rental firms

DES MOINES—At the eleventh hour, the state legislature passed a bill banning fleet incentives to rental car companies in Iowa.

Passage of the bill climaxed a long battle that pitted the Iowa Automobile Dealers Assn. against representatives from various auto manufacturers and the MVMA.

The measure was passed by both the state Senate and the House of Representatives late on the last day of the legislative session. The Senate vote was 34-9 with seven not voting. In the House, it was 61-33 with six not voting.

Gary Thomas, IADA executive vice president, called the measure "national precedent legislation" on the state level 10.

Michael Stanton, an MVMA representative, disagreed. Stanton, who has been on the scene since February, claimed it would affect only 10 or 11 companies.

The bill has gone to Gov. Terry Branstad, and his office last week gave no indication on whether he would sign it. If Branstad does not act by June 1, the bill dies. It cannot be returned to the legislature for an override vote because the legislative session has ended. The only hope would be a special session.

Thomas said last week that IADA is "cautiously optimistic" that the governor will sign it.

The bill has two key provisions. The first effectively bans incentives by stating, "A manufacturer shall not knowingly discriminate in price against Iowa purchasers or lessees of motor vehicles by selling or leasing a new motor vehicle to any dealer at a price lower than the lowest price at which the manufacturer offers to sell or lease any new motor vehicle of the same make and model similarly equipped to any other dealer."

Another section specifically addresses rental companies and states that "if the manufacturer makes any incentive available to a rental company, the same or equivalent incentive must be made available to dealers for resale to retail buyers.

Thomas told Automotive News that compromises had to be made. The measure does not apply to cars sold to fleet buyers who use the vehicles in their businesses unless they are in the primary business of renting, leasing or selling motor vehicles.

The law does not apply to dealer-affiliated renting and leasing companies, he said.

That was one of MVMA's key arguments. Stanton said it would affect only 10 or 11 of the 190 to 200 rental outlets in Iowa because the remainder, including Hertz and Avis outlets, are dealer-affiliated.

Thomas disagreed. He said that with the exception of rentals to service customers, most dealers would not put the rental company under the corporate umbrella of the dealership for liability insurance reasons.

Another key provision stipulates that the state attorney general will be responsible for enforcing the law.

The battle over this legislation began early this year. As reported in the March 10 issue of Automotive News, the measure was the target of intense lobbying by manufacturers and dealers. In addition, the dealers faced lobbying efforts by organized labor and citizens' groups.

During that period, the MVMA asserted that passage of the bill could eliminate all types of incentives, including interest-rate incentives offered to the public.

Stanton, in a reversal of that position, said last week that the bill would probably have little effect with one exception. That exception would be any direct-mail incentives offered to consumers, skipping the dealer in the promotion.

Thomas disagreed. He said buyers are not affected.

The Iowa dealer association considered the passage of the bill a significant victory. "We've pioneered the territory," Thomas said. "The legislation strikes at the heart of the two-tier (pricing) problem."

Asked why the bill was focused so sharply on rental companies, Thomas said Iowa dealers see that as the major problem.

The major leasing companies usually buy their cars outside the state, which is not forbidden under this compromise measure. Consequently, there has been little impact on Iowa dealers.

However, the dealers did compromise on that point. Under the original bill, there was a provision dealing with out-of-state sales. The compromise, according to IADA, solved the problems of constitutionality that had been voiced by the attorney general. Now, the measure applies only to Iowa.

But, Thomas said, there was never any intention of compromising on the rental companies because they "have a quick turnaround" of vehicles and those cars end up on the used-car market.

Michigan Gov. Blanchard, Iacocca and UAW's Bieber celebrate Dakota launch

Dodge Dakota goal: 150,000

By Mary Connelly
Detroit Reporter

Chrysler Corp. hopes its new midsize Dodge Dakota pickup has minivan magic.

The company is aiming for 150,000 annual sales of the 1987 Dakota and is trying to create a new market segment, repeating the success of its hot-selling Voyagers and Caravans which pioneered the minivan market.

"The Dakota is smaller than conventional pickups but bigger than the mini trucks offered by Ford, GM and the Japanese," said Chrysler Chairman Lee A. Iacocca at production launch ceremonies at the Dodge City truck manufacturing complex Thursday.

"It's the industry's first midsize pickup. We think it's going to do for us what the minivan did—create a brand new segment that the others will have to rush to compete in."

The company is considering ways to augment the two wheelbases and three price classes which will be available when the Dakota reaches dealer showrooms Oct. 2.

Chrysler Motors Chairman Gerald Greenwald said last week that a four-wheel-drive version of the Dakota will go into production in October.

Asked if the company is also considering an extended cab on the vehicle, Greenwald said, "It could represent a good possibility for us."

The Dakota is Chrysler's first new domestically-built pickup since 1972 and the company views it as a potent salvo in the competitive truck market where 20 companies are wooing buyers.

Iacocca said pickups now represent 23 percent of all Dodge sales and 17 percent of all vehicles sold in the U.S. Chrysler in 1981 sold one truck for every five cars. Today it sells one truck for every two cars and Iacocca forecast mounting truck sales through the end of the decade.

"It scares me to think about it but back in the dark days four to five years ago we actually considered pulling out of the truck business," Iacocca said.

Iacocca said the Dakota is targeted at a broad range of buyers because "just as many people want trucks for personal use these days as they do for commercial purposes."

Greenwald said the truck market has been stimulated by the introduction of the minivan as well as the fact that pickups are now available with the range of comfort features found in passenger cars.

Speaking at the ceremonies Thursday marking Chrysler's $500 million renovation of the truck assembly plant, UAW President Owen Bieber remarked, "When it comes to product innovation and targeting the market, Lee and his team are hard to beat."

Chrysler is billing the renovated Dodge City complex as the "world's largest and most advanced high technology truck assembly plant." The complex includes the Warren Truck Assembly Plant, the adjacent Warren Stamping Plant, and the Mound Road Engine Plant, which produces both the new V-6 midsize truck engine and the V-8s used in conventional pickups.

The assembly plant will produce both the Dakota and the conventional Dodge Ram pickups. When it reaches full production in August, Dodge City will build 57 units per hour and is scheduled to produce about 250,000 trucks in the 1987 model year. About 3,700 people are employed at the plant.

Planning for the renovation began in 1984 and has resulted in a complex of 2.8 million square feet.

Iacocca said the plant is Chrysler's most technologically sophisticated.

Use of robots has jumped from two to 157. More than 100 are in the body shop where 99.6 percent of the welds on the Dakota are performed automatically.

A new 759,000-square-foot paint facility uses 44 robots.

Stabilization program helps Brazil; banner year for autos predicted

By John deDenghy
Staff Correspondent

SAO PAULO, Brazil—After a month's experience with Brazil's Economic Stabilization Plan, some economists were predicting that the nation's automotive industry will have one of its best years ever.

Since the plan went into effect Feb. 28, all prices and wages have been frozen. The cruzado has strengthened, and inflation has been controlled.

President Jose Sarney announced a deflation or negative inflation of 1.48 percent for March, 1986. Inflation has been as high as 15 percent a month.

The 1.48 percent refers to price decreases in Sao Paulo and Rio de Janeiro, which together account for about 50 percent of the nation's economic and industrial activity. It is estimated that there was zero inflation for all of Brazil in March.

Automotive production, domestic sales and exports all rose in March. There was a brief market slowdown early in the month, but demand is increasing. General Motors dealers, for example, have a 20-25 days backlog of orders.

Used-car prices sagged in early March and have not recuperated so far, but there are signs that the demand for used cars will return. This is because many potential customers now are able to buy. They were not able to do so in the days of high inflation.

Production in March was 98,964 units, up 16.6 percent from February's 84,901. It was up 17.3 percent over 84,406 units assembled in March, 1985. Cumulative production for the first quarter was 264,136 units, up 13 percent from a year ago.

Domestic sales tallied 80,837 units during March, up 7.1 percent from February's 75,461 units. The March total was 18.5 percent ahead of the year-ago month's 68,245. Domestic sales for the first quarter were 214,872 units, up 13.9 percent from 188,635 in 1985.

During March, Brazil exported 20,149 autos, up 91 percent over 10,551 exported during February, and up 10.5 percent from 18,229 units in the year-ago month. Cumulative exports for the first quarter were 39,674, down 12.2 percent from 45,177 during the comparable 1985 period.

The effect of the Economic Stabilization Plan on the automobile industry was twofold.

First, the relation between cost and final sales price was in some cases negative, due to the fact that the industry already was under rigid government price controls. Less severe controls were also affecting some component industries.

Second, when inflation was 15 percent or more per month, a component supplier had to include in his credit price calculation the monthly inflation rate for deliveries in 30 days.

With zero inflation, the auto manufacturers expected a substantial price reduction on credit sales. It would have been a reduction from the Feb. 27 frozen component prices, which already included an inflationary cost element.

With zero inflation, credit costs fell to 2-3 percent per month. The majority of component manufacturers argued that prices were "frozen" and were unwilling to give a credit price discount.

At one point, component deliveries were suspended, but eventually the auto manufacturers and the majority of the suppliers negotiated "deflator indices" between 5 and 7 percent, thus eliminating the early-March shortages of components which affected Volkswagen, General Motors, Ford and Fiat.

Originally, the component industry negotiated as one group with the Automotive Manufacturers Assn.

At present, the government is encouraging individual or sectional negotiations by and between industries to reach agreements.

If no agreements are reached, government mediation will begin. If that does not work, official deflator indexes will be set by the government.

The Economic Stabilization Plan also has affected the strategy of the labor organizations.

Comparative domestic sales by manufacturer for the period January-March 1986 vs. January-March 1985 are as follows:

	1986	1985
Agrale	325	140
Fiat	22,295	16,823
Ford	49,022	44,564
General Motors	55,140	47,753
Gurgel	379	259
Mercedes-Benz	8,473	6,300
Saab-Scania	1,143	805
Toyota	789	692
Volkswagen	76,676	68,875
Volvo	519	541
Others	34	83

Ford plant in Mexico gets customs break

MEXICO CITY—Ford Motor Co.'s engine plant in Chihuahua has been authorized to operate under the "industrial deposit" regime.

That means it can operate as a bond plant without customs supervision. Ford said this should simplify export operations.

Reversing the flow

Ford Australia pulls switch; sells Fairlanes to Japanese

By Pedr Davis
Special Correspondent

BRISBANE, Australia—Ford Australia has reversed the flow and is selling new motor vehicles to Japan.

The initial shipment is only 10 cars—but it could mean a new opportunity.

Ford sold 700 Falcon taxis to Japan from 1966 to 1974 but had to halt exports when Japan switched to unleaded fuel. At the time, Ford Australia didn't have the technology to build engines using unleaded gas.

Now that unleaded is mandatory for new vehicles here, Ford hopes to revive its business with Japan and do something to reverse the flow of vehicles.

The export Fairlanes will be used as VIP limousines by Kinetsu Co., a Japanese travel organization.

Kinetsu has been importing vehicles from the U.S., but currency changes have made buying Australian vehicles more attractive.

In its 1985 annual report, Ford Australia announced record sales of $2 billion and an after-tax profit of $102.5 billion. At current exchange rates, that would be about $1.5 billion in sales and $75 million in profits in U.S. dollars.

The company's share of a record Australian market grew to 24.3 percent—its highest.

Last year, the Falcon maintained its position as Australia's most popular car, with sales of 76,818.

The Laser—a combined Ford-Mazda product—also kept its lead in the small-car segment, with 28,407 new registrations.

Ford raised its share of the commercial-vehicle market to 13.8 percent, from 11.2 percent in 1984.

Ford Australia has also announced a $426 million project to produce an all-new family car to replace the Falcon and a separate project to build a new sports car for export to the U.S.

The sport model is being developed in cooperation with ItalDesign, Turin, Italy.

Terex plant in Ohio books orders through end of '86

CLEVELAND—In the midst of bankruptcy proceedings, Terex Corp. reported that orders for its earthmoving equipment will keep its Hudson (Ohio) plant operating through the end of the year.

The plant employs 600 people.

Judge Harold White is scheduled to receive Terex's reorganization plans by June 10. The plans must be approved by creditors, including the UAW and General Motors.

GM is said to be holding the biggest portion of claims, which could total $35 million.

Terex also disclosed that it has reached an agreement in a dispute with First Wisconsin National Bank of Milwaukee.

The settlement calls for First Wisconsin to forward $2 million to Terex and drop its claims for $3 million. In turn, Terex drops a $5 million claim.

In the final reorganization plans, GM is expected to back a program that will pay 25 cents for every dollar owed.

Since the bankruptcy three years ago of West Germany's IBH Holding A.G.—which had purchased Terex from GM—the auto maker has said it is moving out of heavy-equipment production.

GM now owns Terex, Ltd., in Scotland, which is expected to take over the American Terex's production. But GM is reportedly planning to phase out its Scotland plant as well.

The Hudson facility will become the engineering, sales and distribution center for Terex, Ltd.

Terex's reorganization plans had to include agreements with its UAW employes, who took a pay cut when the company entered Chapter 11.

When GM owned the company, Terex employed more than 2,500 workers.

A real auto supermarket for U.K.

LONDON—One of the U.K.'s leading supermarket chains—ASDA—will sell new cars, beginning in June.

ASDA drive centers will initially be established at six sites, but the long-term plan is to sell cars through the chain's 104 centers.

At first, each site will deal only in one make, said Alan Dowling, ASDA corporate planning director. The plan, he said, is to fill manufacturers' open dealer points.

The company will take cars in trade and will sell them through auctions.

Complete service, with menu-style pricing, will also be offered.

THE CARVE-OUT TRUST*

- You can now establish a new Carve-Out Retirement Trust limited to only a small group of employees (e.g., salary and clerical)!
- You can shelter an annual amount up to your salary and bonus — tax free!
- You can enjoy over 85% to 90% of the annual tax-free contribution.
- We can convert your present plan(s) to a Carve-Out. *A tax-exempt trust

Jerry Orefice has addressed national conventions, associations, "Twenty Groups," published articles in national magazines and also appeared on T.V. as a commentator on dealer tax planning and the Carve-Out Trust. Our firm has its own in-house legal counsel and a reputation for working with the top dealers in the country.

Prices are negotiable at or below invoice on all other cars and trucks.
205-271-2330
DIVERSIFIED VEHICLE MANAGEMENT CORPORATION

Dealer total off 25

Continued from Page 1

ual corporations and car lines and for the industry as a whole.

About two-thirds of the domestic dealers also handle an imported line. Nearly 10,000 Chevrolet, Chysler Corp. and Lincoln-Mercury dealers have a captive import, and some 3,500 others carry an independent import.

Chrysler Corp. kept alive its string of 14 consecutive quarters without a decline. The streak began in the fourth quarter of 1982, and the company has added 376 dealers since then.

By comparison, in the 14 quarters before the upturn began, Chrysler suffered a loss of 1,110 outlets.

Franchise totals were steady or rising for most makes. Of the 14 makes included in the domestic census, seven showed gains for the quarter and four were unchanged.

Oldsmobile, up 10, added the most franchises. Also advancing were Lincoln, up seven; Dodge, six; Pontiac, five; Plymouth, four; Chrysler, two, and Mercury, one. AMC, Buick, Chevrolet and Volkswagen reported no change for the quarter.

There were declines of 20 for Ford, five for Cadillac and one for Renault.

Chrysler Corp. had 4,005 car dealers on April 1, up two from the beginning of the year. Chrysler climbed above 4,000 in the fourth quarter of 1985, the first time it had achieved that total since mid-1980.

Franchise counts at the beginning of April were: Chrysler, 3,051; Plymouth, 3,013, and Dodge car, 2,933.

Chrysler Corp. has three dealerships that handle only Dodge trucks. They are not included in the corporation's car-dealership total or in the Dodge car-franchise figure.

Ford Motor Co. had 5,501 car outlets on April 1, compared with 5,517 at the beginning of the year. The dip of 16 was about the same as the decline of 11 in the first quarter of 1985.

The April franchise numbers were 4,662 for Ford, 2,748 for Mercury and 1,605 for Lincoln. Lincoln's total is only five less than Cadillac's. A year ago, Lincoln was 24 behind GM's luxury-car division.

Not counted in the Ford Motor Co. dealership total or the Ford Division car-franchise total are 116 dealerships that handle only Ford heavy-duty trucks.

GM's car-dealership figure was 9,825 on April 1, just five below the Jan. 1 number.

Franchise counts also were steady, as noted above. The April 1 totals were: Chevrolet, 5,050; Oldsmobile, 3,200; Pontiac, 2,985; Buick, 2,960, and Cadillac, 1,610.

GM's dealership total is 10,405 including GMC truck dealers that do not handle any of the company's car lines.

The dealership count for AMC-Renault was 1,420 on April 1, only one less than at the beginning of the year. The first-quarter steadiness followed a gain of six in the final three months of 1985.

Latest franchise totals were 1,368 for AMC and 1,317 for Renault.

The AMC-Renault dealer organization is made up primarily of outlets that handle both makes—1,266 of the 1,420 stores, or 89 percent, stock both lines of cars.

AMC has 731 duals with Big Three car lines and Renault is included in 90 percent of them. Another 72 AMC dealers have VW, and Renault is involved in about half of those combinations.

Volkswagen had 877 dealers on April 1; its total was unchanged for the second consecutive quarter. VW has about 150 duals with other makes of U.S. cars, unchanged from Jan. 1.

Looking back a year, the 20,648 domestic-car dealerships is down 216 from 20,864 on April 1, 1985. Chrysler, up 16, shows the only increase.

There were dips of 17 for VW, 42 for AMC-Renault, 52 for Ford Motor and 120 for GM. A one-outlet change in the number of intercorporate duals brought the decline for the industry to 216.

obituaries

Robert Roethlisberger

DALLAS—Robert Roethlisberger, 40, co-owner of European Auto Group, died April 23. Late last year, Mr. Roethlisberger spent $5 million to purchase 85 Rolls-Royces owned by Bhagwan Shree Rajneesh, leader of a religious cult, who was forced to leave the U.S. because of immigration law violations. More than half of the cars have been sold for prices ranging from $85,000 to $100,000.

Verne Johnson

COLORADO SPRINGS—Verne Johnson, 76, founder of Johnson Pontiac, Inc., and past president of the Colorado Automobile Dealers Assn., died April 13. Mr. Johnson began working in the auto industry in the early 1930s. He was with General Motors before opening his dealership in 1952. His son Steve took over the business in 1976.

Charles Landis Bricker

BIRMINGHAM, Mich.—Charles Landis Bricker, chairman of Landis Manufacturing Co., Ferndale, died April 22. He was 73. He founded the auto parts manufacturing firm in 1941.

Robert H. Savage

BRIDGEPORT, Conn.—Robert H. Savage, 89, a former director of investor relations for Chrysler Corp., died April 30. He had been with Chrysler from 1955 to 1964. He also was a reporter and editor for the Wall Street Journal and a vice president and director of investor relations for ITT Corp.

April car output lowest since '77

By Kathy Boyer
Detroit Reporter

Domestic auto production in April totaled 739,881 units, the lowest build for that month since the 549,322 built in April, 1977.

The month's output was 10.88 more than the 667,262 assembled in March but 2.36 percent below the year-ago month's 757,752.

The makers assembled their three-millionth car last Wednesday (May 7), five days behind 1985.

So far this year, 3,092,940 units have been built, 4.20 percent below the 3,228,572 completed last year at this time.

Last week's scheduled build of 159,740 cars was the lowest production for any full work week so far this year.

The week's output was 2.78 percent below the previous week's 164,310 and 10.23 percent below the year-ago week's 177,935.

Companies split last week's estimated production as follows: General Motors, 54.30 percent; Ford Motor Co., 24.42 percent; Chrysler Corp., 13.96 percent; Honda of America Mfg. Co., 2.57 percent; New United Motor Mfg., Inc., 2.25 percent; American Motors, 1.25 percent, and Volkswagen of America, 1.25 percent.

American Motors' Kenosha plant resumed production last week after being idle for inventory adjustment.

Nissan's car line in Smyrna, Tenn., remains down to prepare for production of the Sentra four-door.

Due to a parts shortage, the Capri line at Ford's Dearborn plant was down last week.

GM announced it will add 3,000 Fleetwood Broughams to production at its Clark Avenue (Detroit) plant during the rest of the 1986 model run.

GM's Lakewood (Ga.) plant resumes output today (May 12). The plant was down for one week to adjust inventory.

Neither GM nor Ford scheduled overtime Saturday (May 10). Chrysler slated Saturday overtime at its Belvidere (Ill.) plant.

Belvidere and the Newark (Del). plant are scheduled for daily overtime this week (May 12).

April truck production sets record

Domestic production of 326,282 trucks during April was the highest output ever for that month.

The previous record was set in April, 1978, when 315,994 trucks were built.

Last month's total was 12.90 percent more than the 289,001 assembled in March and 8.73 percent more than the year-ago month's 300,091.

Last week's estimated output of 71,806 units was 2.50 percent below the previous week's 73,645 and 6.27 percent below the year-earlier 76,609.

Year-to-date, 1,322,343 trucks have been built, 3.58 percent more than the 1,276,591 completed last year at this point.

Ford Motor Co. slated Saturday (May 10) overtime at its Twin Cities plant.

Chrysler Corp.'s Warren (Mich.) plant is scheduled for daily overtime this week (May 12).

Canadian trucks reach peak output

Building 85,661 trucks in April, Canadian makers reached their highest month's output ever.

It topped the previous record of 80,245, set in November, 1985.

Last month's production was 7.86 percent more than the 79,419 assembled a month earlier and 10.66 percent more than the 77,412 built a year earlier.

Last week's targeted output of 19,172 trucks was 0.77 percent more than the previous week's 19,025, but 0.18 percent below the year-ago week's 19,206.

Year-to-date, 350,615 units have been built, 3.92 percent more than the 337,394 assembled last year at this point.

April production of 110,351 cars was the highest for that month since 1977, when 113,993 cars were assembled.

April's auto output was also the highest for any month since November, 1984, when 115,428 units were produced.

The estimated build of 25,668 cars last week was the highest week's production since the 26,733 units built the week of Dec. 14, 1985.

Last week's production was 4.74 percent more than the previous week's 24,507 and 3.65 percent more than the year-ago week's 24,763.

So far this year, 425,829 cars have been assembled, 12.05 percent more than the 380,031 completed last year at this time.

Suzuki's India venture tops output goal for '85

TOKYO—Suzuki Motor Co. said Maruti Udyog, Ltd., its vehicle-production joint venture with the Indian Government, more than doubled its production in fiscal 1985 to 51,569 units, surpassing the target of 40,000.

Maruti, which began production in December, 1983, is expanding facilities to boost its annual output capacity to 100,000 units by fiscal 1987.

Cadillac adds 3,000 rwd cars to 1986 model run

DETROIT—Cadillac has added 3,000 Fleetwood Brougham models to its production schedule for the 1986 model year. The cars will be built by July 30.

The rear-wheel-drive car is assembled at General Motors' Clark Avenue plant here.

Cadillac previously added 6,900 front-wheel-drive DeVille and Fleetwood models, built at GM's Orion Township (Mich.) plant to its schedule.

Cadillac General Manager John O. Grettenberger said the production increases reflect strong customer acceptance of both car lines.

Cadillac said Fleetwood Brougham sales were 17,870 units from Jan. 1 to April 20, up 29 percent from 13,805 in the same period last year. DeVille and fwd Fleetwood sales were 52,205, up 44 percent from a year ago.

Japanese output sets a record for fiscal year

TOKYO—Total vehicle production by Japanese manufacturers in fiscal 1985, which ended March 31, was a record 12,416,741 units, according to the Japan Automobile Manufacturers Assn. The former record, according to JAMA, was 11,589,202 in fiscal 1984. Car production in 1985 totaled a record 7,760,576 units, an increase of 8.6 percent from the previous year. JAMA said truck production also set a record with 4,568,420 units, up 5.1 percent, while production of buses dipped 16.4 percent for the year to 67,745 units.

Domestic shipment of vehicles during the year totaled 5,573,546, also a record, surpassing the previous mark of 5,484,068 set in fiscal 1984, JAMA said.

Exports increased an estimated 12 percent to a record of nearly6,850,000 million units, topping the old mark of 6,152,108 established in fiscal 1980, JAMA said.

Iacocca: Chrysler looking ahead

Chrysler Corp. Chairman Lee Iacocca told shareholders attending the company's annual meeting in New York last week that the company can finally begin planning for the decades ahead. Stories on Page 77.

Chrysler talking deals in Europe and Japan

Joint marketing plan discussed with Fiat

By Richard Feast
European Editor

Fiat Auto S.p.A. confirmed last week it has entered discussions with Chrysler Corp. that could result in the firms marketing each other's cars.

Fiat said its executives met with Chrysler officials during the April auto show in Turin, Italy, to discuss a wide range of topics, including proposals to purchase components and distribute vehicles.

Chrysler declined to comment on the talks.

At the heart of negotiations is a plan whereby Chrysler would sell Fiats in the U.S. and Fiat would distribute Chrysler models in Europe. According to one report, they already have begun discussing marketing plans for specific models.

Chrysler is said to be impressed with the Fiat T4 (Lancia Thema and Fiat Croma), but that model is not designed to meet U.S. standards.

Fiat is in search of a passenger van to compete with the likes of the Renault Espace and Volkswagen Vanagon in Europe, according to a Fiat source.

Chrysler's U.S.-built T-115 front-drive passenger vans or even the smaller Colt Vista, made by Mitsubishi Motors Corp. in Japan and sold by Chrysler in the U.S., could prove attractive to the Italian firm.

Fiat bowed out of the U.S. market in 1983 in order to concentrate on strengthening its European operations.

Now, with its health restored, Fiat is once again eying the U.S. market. In Detroit last October, Fiat Chairman Giovanni Agnelli said the company was interested in selling one or more Lancia models in the U.S.

But even if a deal is struck between Fiat and Chrysler, it likely would be several years before Fiat would have products ready for the U.S. market. Like the T4, most Fiats are recent introductions—and none are engineered to meet U.S. requirements.

Fiat's next new model, the Type 2, will replace the Ritmo/Strada in the fall of 1987.

If nothing else, deliberations involving the two companies were significant in that they marked the first time executives of Chrysler and Fiat's car making division, Fiat Auto, have met.

Nissan 1,000-cc car for U.S. is reported

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO—Nissan Motor Co. and Chrysler Corp. are reportedly talking about Chrysler selling Nissan's one-liter March model in the U.S. Nissan has denied the reports, and Chrysler has no comment.

Nikkan Kogyo, a manufacturing publication here, reported that Nissan is considering manufacturing the car at its Taiwan affiliate, Yue Loong Motor Co., and that Chrysler is expected to sell it under its own brand name.

A Chrysler official in Japan declined to comment on the published report. A Chrysler spokesman in the U.S. also declined comment on "speculative reports or rumors."

The publication also quoted Chrysler as estimating the annual demand for 1,000-cc cars in the U.S. at about 300,000 units.

Chrysler has a 24 percent equity in Mitsubishi Motors Corp. and sells several Mitsubishi models in the U.S. However, Mitsubishi does not build a car with a 1,000-cc engine.

In its statement denying the Chrysler negotiations, Nissan said Yue Loong "is currently studying the possibility of producing Nissan's one-liter cars in view of the future trend of the Taiwanese car market, but has not reached a decision."

It added, "Nissan tends to nurture Yue Loong so that the Taiwanese firm will acquire the technology capability to produce high-quality cars for export in the future. No decision regarding exports has been made at the present time. Nissan's objective is to strengthen Yue Loong, but Nissan has no intentions of taking advantage of that relationship to circumvent the voluntary quota system."

Nissan said it currently exports the March, with a 1.2-liter engine, to Europe. It also exports the Micra, with a one-liter engine, to Canada.

The Taiwanese firm, which accounts for about 40 percent of the Taiwanese market, is currently building Nissan Sunny, Stanza, Bluebird and Cedric cars and the Sunny truck, Vanette, TeleVan, Atlas and Nissan pickup.

Liability coverage slashed by Ford

By Richard Johnson
Detroit Reporter

Ford Motor Co. is operating in 1986 with "little or no" product liability insurance to protect the company from large damage awards stemming from litigation.

According to Ford's annual Form 10-K filing with the Securities and Exchange Commission, the auto maker is proceeding with minimal protection because of rising premiums in the crisis-ridden commercial insurance industry.

The report said, "The company, like many other manufacturers, has little or no product liability insurance for incidents that might occur in 1986 because of the limited availability of such insurance at reasonable premiums in the insurance market generally."

A combination of self-funding and purchased insurance has become a more frequent option for major corporations in an era of dwindling insurance capacity among carriers and rising premiums.

"We really don't elaborate on our insurance strategy or the way we handle the business," said a Ford spokesman. "But we don't have as broad a coverage as we had before, so I guess someone could conclude that we're doing more of our own."

Many large companies have long used a combination of self-insurance and purchased coverage to underwrite risk exposure.

"The insurance industry is much worse from the standpoint of getting coverage at reasonable rates," said the spokesman. "That side of the business hasn't been one that we have talked about and we don't want to start now."

The 10K includes a review of several product cases pending against the manufacturer involving various car lines over several model years.

As of Jan. 21, 1986, the total actual and punitive damages sought in complaints alleging fuel system defects totaled approximately $1.5 billion.

In pending cases alleging faulty design of automatic transmissions and or shift/selector mechanisms damages sought amounted to about $1.2.

Damages totaling approximately $1.1 billion were specified in suits alleging failure to provide an air bag or other passive restraint, and $121 million in various actions for injuries allegedly resulting from contact with certain Ford products and parts con-

Goodyear relies on youth at Indy

By Arthur Flax
Automotive News Staff

INDIANAPOLIS—When Americans switch on their TV sets next Sunday (May 25) for the first live telecast of the Indy 500, the Goodyear name will appear on every car, every driver and every tire at the Indianapolis Motor Speedway.

The team entrusted with the lives of those drivers and their precision machinery are not veteran tire

Europeans deeply involved in Indy . . . Page 76

engineers, but five young mechanical and chemical engineers not long out of school. The senior member of the team is 28.

By race time, the Goodyear engineers will have spent a month at the Speedway, working 13-hour days. Since last fall, they have been hard at work designing and testing the tires that will carry 33 men, encased in projectiles of aerospace alloy and plastic, around the narrow 2.5-mile circuit at speeds nearing 220 MPH.

The five engineers provide technical support at

AMC warns of a June 30 Toledo closing

By Mary Connelly
Detroit Reporter

American Motors has told the UAW it will begin phase-out of its Toledo Jeep plant June 30 unless the union agrees to a concessionary contract by that date.

UAW employes at the plant received a letter from AMC Thursday stating that the company wants a labor agreement competitive with those at the Big Three.

"We do not think our requests are unreasonable," AMC told employes. "We do not intend to operate any facility with an uncompetitive labor agreement. If we do not receive these commitments by June 30, we will notify the state and local governments and proceed with the phase-out process which will ultimately result in the

Home loans from GMAC in Michigan

By Michelle Krebs
Financial Editor

General Motors will offer mortgages to its car-loan customers in Michigan on an experimental basis within the next few months.

GMAC Mortgage Corp., the mortgage subsidiary of General Motors Acceptance Corp. formed when GMAC purchased two mortgage businesses last year, has launched a three-pronged approach to expand its business by cross-selling to car-loan customers.

Within the next few months, GMAC Mortgage will begin a direct-mail campaign that will offer mortgages to GMAC customers in Michigan who are considered good credit risks.

Second, GMAC Mortgage will open additional offices in Michigan. The first will be at GM's Technical Center in Warren, where 20,000 GM employes work. The second location has not been selected yet.

Third, GMAC Mortgage has opened an office at GM corporate headquarters for GM employes. About 2,600 salaried GM employes work at corporate headquarters. It was first opened to serve GM employes who had been relocated. The office now originates new mortgages and offers refinancing.

The mortgage program is a pilot program in Michigan. It may eventually be expanded nationwide.

A GMAC spokesman said that if the program has even limited success—if only 5 percent of the 8 million GMAC customers take advantage of the mortgage service—GMAC Mortgage would double its portfolio of 375,000 customers.

GMAC has offered homeowners insurance to GM employes for the past two years. It is another financial service that probably will be expanded to other mortgage customers in the future.

GMAC also has said it may eventually offer health and life insurance on mortgages.

In a recent interview with Automotive News, GMAC Chairman Robert F. Murphy said that in the future, the mortgage business will become a more and more important part of GMAC.

Murphy estimated that the mortgage business eventually will account for 10 to 25 percent of GMAC's volume. GMAC reported a profit of $1 billion for 1985. Receivables reached $76 billion, making GMAC by far the world's largest finance company.

Last year, GM became the second largest mortgage provider, after Lomas & Nettleton of Texas, by acquiring two mortgage businesses. GM bought the Colonial Mortgage Group from CoreStates Financial Corp., Philadelphia, for $190 million. It also purchased the mortgage servicing portfolio and servicing facilities of Norwest Corp., Minneapolis, for an undisclosed price.

The operations were combined into GMAC Mortgage, with about 70 offices in the U.S. servicing 375,000 residential and commercial mortgages totaling about $22 billion.

Murphy said GMAC is likely to purchase another financial services company. However, it probably would not be a mortgage business since GMAC Mortgage already has excess capacity.

Students display projects in auto design

Warm May breezes drifting through the white canvas tent added to a sense of expectation during the final hours before the patron reception and opening of the annual student works exhibition. Center for Creative Studies students wandered the compact campus in suits and dresses, their more colorful, comfortable studio clothes abandoned for a few days.

CCS, at the edge of Detroit's Cultural Center, is a training ground for artists. Among them are students of automotive design, a select field that demands long hours and singular dedication.

This past weekend the annual display of student exhibition opened to the public following a gala reception-under-marquis for benefactors and guests. Upper-class automotive design students work on specific 15-week projects sponsored by the auto makers. There were sketches, renderings, clay models and even full-size interior sections for "new" AMC Jeeps and Ford Broncos.

Students attending their displays aggressively promoted themselves, especially those who still looking for summer positions or post-graduation jobs. Recruiters from auto companies were being squired through his students' accomplishments by Homer LaGassey, section chairman, transportation design.

This is no place for the faint-hearted, said one junior, who because he must also work for a living had fallen behind his graduating classmates. His class started with close to 40; seven have finished.

Incentives work; sales rise

By Jenny L. King
Detroit Reporter

Incentives for new-car buyers had the intended effect on the market in early May as sales surpassed the comparable 1985 figure by some 10,000 units.

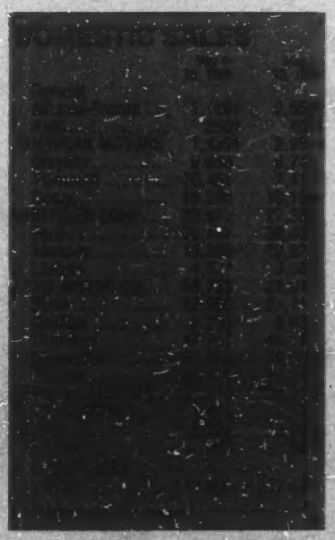
The largest domestic auto makers, all of which have low-interest-rate financing programs at the retail level, finished the May 1-10 period with healthy increases. The smaller companies didn't fare as well.

Domestic sales for the period totaled 237,809, up 9.13 percent from 217,895 in 1985. Two years ago, the total was 238,240.

With nine selling days in the period each year, the daily averages were 26,422 vs. 24,211.

Chrysler Motors had the strongest gain for the period, up 23.07 percent to 33,672 from 27,359. Ford Motor Co. was up 11.02 percent, to 58,753 from 52,919. General Motors reported sales of 138,870 domestic passenger cars, up 7.47 percent from 129,212 a year ago. Honda sales were up 1.00 percent, to 3,234 from 3,202.

American Motors plunged 51.36 percent, to 1,435 from 2,950. Volkswagen was off 14.56 percent, to 1,444 from 1,690, and Nissan dropped 30.50 percent to 392 from 564.



Chrysler and Ford were the only companies to increase their shares of the market. Chrysler was up to 14.16 percent from 12.57 percent last year, while Ford moved to 24.71 percent from 24.30 percent.

GM was down nearly one percentage point, to 58.40 percent from 59.34 percent. AMC had 0.60 percent, compared with 1.35 percent a year earlier. Honda had 1.36 percent, down from 1.47 percent; VW had 0.61 percent, compared with 0.78 percent in 1985, and Nissan slipped to 0.16 percent from 0.19 percent.

The 11 makes built by the Big Three all reported sales increases the first 10 days of the month. At Chrysler Corp., Plymouth sales were up 41.00 percent; Dodge, 30.22 percent, and Chrysler, 1.96 percent. Ford Motor Co.'s Mercury sales were up 17.45 percent; Ford, 7.55 percent, and Lincoln, 1.82 percent.

Oldsmobile was up 14.45 percent from year-earlier sales; Pontiac, 10.69 percent; Chevrolet, 5.87 percent; Cadillac, 4.73 percent, and Buick, 1.59 percent.

AMC was up an estimated 37.50 percent and Honda gained 1.00 percent. VW dropped 14.56 percent; Nissan, 30.50 percent, and Renault, an estimated 53.53 percent.

Calendar-year sales through May 10 were off 6.32 percent to 2,855,250 from 3,047,985.

Chevrolet Celebrity was the most popular nameplate in the first May period with sales of 12,605. Ford Escort/EXP was second at 11,690, followed by Chevrolet Cavalier, 10,739; Oldsmobile Cutlass Ciera, 10,363, and Oldsmobile 88, 8,907.

China brass tune in on AMC project

By Richard Johnson
Detroit Reporter

American Motors' problem-plagued venture in China is now getting special attention from Chinese leaders.

U.S. Treasury Secretary James Baker presented an update at a news conference following the sixth annual meeting of the U.S.-China Joint Economic Conference in Beijing.

Baker said the AMC issue was raised by the Chinese during official discussions and also in his meeting with Premier Zhao Ziyang.

AMC, in partnership with the People's Republic of China, builds a CJ-style Jeep in Beijing. Last fall, it began assembling Cherokee kits. But a shortage of foreign exchange with which to import components will cause production to cease in mid-June for at least two months and may delay plans to expand the product line.

The historic Beijing Jeep agreement, signed in 1983, is a showpiece for the Chinese Government. Failure of the high-profile project would be a severe blow to the country's ambitious industrialization plans.

At a press conference in Beijing, Baker said the AMC issue appeared to be of pressing importance to Zhao.

"That matter surfaced in my bilateral meeting with Premier Zhao and it was brought up by the premier himself," said Baker. "He said that they understood there were problems . . . and they wanted to work toward a resolution of those problems."

AMC has a $16-million investment in the company, including $8 million in cash and $8 million in equity for technology and expertise. The company's current stake in the $51-million venture is 31.3 percent. By reinvesting profits, AMC plans eventually to assume 49-percent ownership of the project.

Beijing Jeep has produced about 300 Cherokees since production began early last fall. That is well below the original volume target.

The company has obtained a license to import 1,000 Cherokee kits for Chinese assembly. But depleted reserves have caused the government to restrict use of convertible currency. Furthermore, the Chinese have refused to allow payment of a portion of the Cherokee purchase price in foreign exchange, as had been agreed upon.

AMC is seeking to develop a low-cost source of components and eventually built-up vehicles for export from China. But AMC has to develop a healthy supply source in the country to make exports profitable.

Several AMC executives, led by Tod O. Clare, vice president—International Operations, were in Beijing last week to discuss the faltering venture with Chinese officials. However, an AMC spokesman had no immediate word on the outcome of talks.

But Baker expressed optimism for the future of the AMC venture.

"This was a matter that was brought up, interestingly, by the Chinese side," he said. "Therefore, I feel confident that there will be ultimately a resolution of the problem."

Auto accounts galore in Saatchi-Bates merger

By Jenny L. King
Detroit Reporter

For the second time in three weeks, there is a new "world's largest" international advertising agency.

The new leader faces the same problems confronting other merging agencies: Competing clients within the family, including prominent automotive accounts.

Last week, Saatchi & Saatchi Co. plc, London, agreed to buy Ted Bates Worldwide, upstaging the BBDO/Doyle Dane Bernbach/Needham-Harper megamerger announced late last month.

The resulting advertising giant, largest of its kind in the world, will have more than $7.6 billion in international billings, with $4.7 billion in the U.S. alone.

Saatchi reportedly is paying $450 million for its newest acquisition. The relatively young Saatchi operation, which has been in a buying mood for most of its 16 years, now will have 12,000 employes in 50 countries.

It also will have several automotive accounts, in the U.S. and abroad. Saatchi & Saatchi Compton handles American Motors advertising for AMC, Renault and Jeep vehicles.

Saatchi & Saatchi Compton includes a number of formerly independent agencies, some with automotive accounts. McCaffrey & McCall handles Mercedes-Benz of North America. Dancer Fitzgerald Sample represents Toyota. Backer & Spielvogel is the agency of record for Hyundai Motor America.

Ted Bates Worldwide has Honda in Germany and owns just over half of Scholz & Friends, which represents BMW in Germany. Saatchi & Saatchi has Jaguar at home in Great Britain.

In the U.S., Bates' William Esty Co. has the Nissan Motor Corp. business.

Automotive accounts aren't the only potential conflicts. Others are tobacco, financial services, beer, consumer electronics, candy, insurance, fast-food and computer retailing, according to Advertising Age.

The questions of confidentiality and effectiveness of service on behalf of all clients affected by these megamergers are yet to be answered.

Those who defend the bigger-than-life worldwide agencies say they can better attend to the needs of customers when they have such networks of resources. Critics say advertising efforts in recent years have been nothing to brag about and that increasing the size and complexity of agencies will not enhance creativity.

Chapin quits AMC to join ad agency

By Richard Johnson
Detroit Reporter

William Chapin, the scion of one of Detroit's most prominent automotive families, is leaving American Motors, the company his father once ran and his grandfather indirectly helped to found.

Chapin, 37, AMC's director of international marketing, will join A.R. Brasch Advertising, Southfield, Mich., this Tuesday (May 20) after 14 years in executive positions at AMC. He will serve as a senior account executive and director of marketing.

Chapin's father, Roy Chapin Jr., now 70, was AMC's chairman from 1967 until 1978. He is still a director. Roy Chapin Sr. was a founder of Hudson Motor Co. in 1909. Hudson merged with Nash-Kelvinator in 1954 to form American Motors.

"It got to a point where I wanted to get into more of an entrepreneurial environment," William Chapin explained. "I wanted a little more control over the bottom line and my own bottom line."

Chapin is not deserting Detroit or the auto business. Brasch is an automotive marketing services company, with Volkswagen, Volvo, Ford Division and Rolls-Royce among its clients. It has worked with AMC, especially on the Alliance launch.

Chapin joined AMC in its Boston zone office. He served as a strategic planner at Renault in Paris and top marketing planning executive for Jeep and Renault in the U.S. He was instrumental in the Jeep Comanche and Wrangler launches.

Kline Chevrolet participated in a sale at a baseball stadium over Chevy's reported protest

Off-site sale stirs Chevy flap

NORFOLK—A Chevrolet dealership here reaped the benefits from a sale at a baseball stadium although the manufacturer reportedly refused to permit the dealership to participate.

Kline Chevrolet, located in neighboring Chesapeake, Va., won the bidding contest to take part in an off-site sale sponsored by a Norfolk credit union and held in the parking lot of Metropolitan Stadium.

Kline Chevrolet reportedly was denied permission to participate in the sale by Chevrolet Motor Division.

According to the Chevrolet dealer franchise agreement, any undertaking directly or indirectly held away from a dealership's premises must be approved by the manufacturer. If such approval is not obtained, Chevrolet has grounds for termination of the franchise agreement.

Despite the lack of approval from Chevrolet, Kline Chevrolet set up a sales booth, complete with a band and clowns, on the first day of the four-day sale.

By late afternoon, Chevrolet zone representatives showed up and negotiated a compromise with Kline Chevrolet.

Chevrolet apparently agreed to let the dealership have a sign and booth on the sales site, but no cars. Instead, Kline Chevrolet salesmen were allowed to chauffeur people from just outside the sales site to their showroom five miles away.

An alternate Chevrolet dealership was not allowed by the sale managers, so there were no Chevrolet models on the sales site.

Chevrolet refused to comment on the situation, saying any business discussions with a dealer are treated as confidential. James Kline, Kline Chevrolet, also refused to comment.

Mercedes and Honda hike prices

By Matt DeLorenzo and John K. Teahen Jr.
Automotive News Staff

Honda today (May 19) will announce a price increase of 2.3 percent on the cars it sells in the U.S. The boost averages $238 on Honda cars and $344 on the new Acura Integra and Legend.

Honda's action is the first salvo in a new round of Japanese boosts. Toyota is expected to follow suit soon. These will be the fourth increases of the 1986 model year for most Japanese makes.

The Japanese attribute the hikes to the strengthening of the yen against the dollar.

Also last week, Mercedes-Benz hiked its prices, and Nissan priced its 1987 Stanza models. Automotive News estimates that the Mercedes boost averages $1,557 on a sales-weighted basis.

The Mercedes-Benz increase took effect May 15, but cars ordered by customers by May 14 and delivered by July 15 will carry the old prices. For that reason, Mercedes-Benz said it was unable to give an average dollar figure for the increase.

Mercedes-Benz said the increases "were made necessary by higher costs.

The hikes range from $380 on the 190-D (gasoline) and 190-D (diesel) four-door sedans with manual transmission to $2,790 on the 560-SEC coupe. The 190 sedans are $25,480 and the 560-SEC is $54,900.

The range was $2,180 to $2,790 on the top-line 420 and 560 models.

Automotive News estimates that Mercedes-Benz prices have climbed an average of $6,265, or 15.6 percent, on comparable models since the 1986 cars were introduced.

Nissan said last week that its 1987 Stanza models will be priced 7.2 percent higher than the 1986 versions. Model-to-model price hikes are difficult to figure because of equipment revisions and changes in model designations.

Prices start at $9,999 for the Stanza E four-door sedan.

Service Index moves up again

By Arthur Flax
Service Editor

Service and parts business at new-car dealerships increased in March and the first quarter of 1986.

According to the Automotive News Service Index, shop business at dealerships in March amounted to 102.8 percent of the volume recorded in March, 1985.

In February, service volume dipped to 99.6 percent of business in February, 1985.

In the first quarter of 1986, service and parts volume showed a gain of 3.3 percent over the like period a year ago.

Indicators for March and for the quarter showed mixed results.

In March, total labor sales (customer-paid and warranty) showed the biggest gain, up 8.3 percent over the year-earlier month.

Gross profit on all labor, parts and accessories sales was up 6.8 percent and shop parts sales (customer-paid and warranty) gained 2.6 percent.

Indicators which showed declines in March as compared with the year-earlier month were sales of all parts and accessories, down 2.8 percent, and repair orders written, down 0.9 percent.

In addition, parts and accessories sales to off-premises customers were down 7.1 percent in March.

Gross profit on all labor, parts and accessories sales registered the biggest gain in the first three months of 1986, climbing 9.2 percent over the period in the previous year. Other indicators showing gains for the first quarter were total labor sales, up 9.0 percent, and shop parts sales, up 2.5 percent.

Registering declines for the three-month period were repair orders written, down 2.6 percent, and sales of all parts and accessories, down 1.4 percent.

Parts and accessories sales to off-premises customers were down 4.5 percent in the first quarter of this year.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealerships.

Hammes elected a VP of Chrysler Motors

NEW YORK—Michael N. Hammes has been elected Chrysler Motors vice president of international operations by the Chrysler Corp. board of directors.

Hammes joined Chrysler Motors earlier this month as general manager of the company's new international operations organization. He formerly was vice president—truck operations at Ford of Europe.

Senate approves wide-ranging safety measure

By Helen Kahn
Washington Bureau Chief

WASHINGTON—A catch-all safety bill passed by the Senate late last week affects gray-market cars, crashworthiness ratings, side-impact protection and air-bag information.

The bill, which has been shelved for more than a year, authorizes funds but does not actually appropriate them for NHTSA for fiscal 1987. At the last minute, all references to fiscal 1986 were replaced by fiscal 1987.

The House NHTSA authorization bill, a companion but dissimilar measure, is not on a fast track, either. It also has a number of safety provisions (defect treatment by dealers and lessors, tire registration, periodic vehicle inspection and gray market), as well as one requiring labeling of vehicles for bumper effectiveness.

It has not even been reported by the full Energy and Commerce Committee, chaired by Rep. John Dingell, Michigan Democrat. Dingell further muddied the water by adding his own amendment to require Japan to accord imported American vehicles the same safety self-certification the U.S. offers importers here.

The gray-market provision of the Senate bill is a compromise worked out by Senator Warren Rudman, New Hampshire Republican, and Senator Daniel Inouye, Hawaii Democrat. Eventually, it even won the essential support of Senator John Danforth, Missouri Republican and chairman of the Senate Commerce Committee.

It is perfectly legal for independent distributors to import cars not made for the American market so long as the cars are brought into compliance with safety and environmental regulations. As Rudman explained, a gray market for many products usually exists when "foreign manufacturers implement discriminatory pricing strategies whereby American consumers are charged a higher price for a product than is charged for the same or comparable item sold overseas."

The example he used is a Mercedes-Benz that costs $20,000 more here than in West Germany. In that instance, the direct importer can offer consumers better prices and greater choice.

The gray market amendment sets up various procedures—bonding and certification—to be sure gray-market cars meet standards and the cost is borne by the direct imports and/or individuals ordering such cars.

The Transportation Department would determine whether a model can be modified to meet standards; if so, the importers can bring in more and follow approved procedures to modify them. The importer has to post bond and provide certification after modifications. Release from bond and approval or rejection of certification has to come from the government within 30 days. The government can inspect and test gray-market vehicles and the facilities used to make changes to the imports.

Direct importers have to keep records, pay gas-guzzler taxes and comply with CAFE requirements. The direct importers are treated like manufacturers for CAFE and for gas-guzzler taxes, and they are not allowed the small-volume-manufacturer exemption.

Benjamin R. Jackson, executive director of the Automobile Importers Compliance Assn. and former head of enforcement for EPA, has no objection to most of the gray-market provisions since they merely put into law what direct importers would have to do anyway in accordance with regulations already proposed.

But Jackson feels that making direct importers subject to CAFE standards and penalties is unfair since the law was intended for producers and could put gray marketers out of business.

Direct importers are subject to gas-guzzler taxes and they fear that making their taxes retroactive may put some marginal importers out of business.

The Senate bill also authorizes NHTSA to reprogram $20 million of existing funds and to use the money for an education program on seat-belt use and for passive-restraint data. But the Senate intends that half of that money be spent to educate the public about air bags and at least half of that be used to show the effectiveness of air-bag technology, especially low-cost air bags as evidenced in Romeo Kojyo's retrofit program and Breed's mechanical sensor.

The bill also requires NHTSA to start the process toward a side-impact-protection standard within 60 days of enactment. Within one year of enactment, NHTSA would have to set performance standards and to issue an advanced notice to extend applicability to light trucks, vans, and multipurpose vehicles.

The bill also requires NHTSA to arrange for the National Academy of Sciences to make a study to find out how to calculate a uniform numerical rating to enable consumers to compare the crashworthiness of different car models.

Within 18 months of enactment, NAS is to report to Congress and to NHTSA, which is then to decide whether such a system can be established. If the answer is yes, NHTSA is to promulgate such a rule within three years requiring auto dealers to make crashworthiness data available to prospective buyers.

DDA disassembles diesel engine Jim Wilsmore

Detroit Diesel Allison set out to prove the reliability of its 6.2-liter diesel engine by disassembling an engine that had worked for 300,000 miles in a three-year-old airport limousine and comparing its parts with specifications for those of a new engine. The engine showed little wear. Here, a worker peers through a piston cylinder.

Inventory of imports highest in 39 months

By Kathy Boyer
Detroit Reporter

The stockpile of unsold imported cars in the U.S. on May 1 stood at the highest point in 39 months.

The inventory count was 346,487 cars, according to Automotive News estimates. Not since the 355,603 in stock on Feb. 1, 1983, had the total been so high.

The figure was 338,084 on April 1 and 262,444 on May 1, 1985.

The May 1 supply was calculated to be good for 38 days of selling, highest since the 40-day stock recorded for May 1, 1983. Days' supply had been 37 a month earlier and 34 on May 1, 1985.

The inventory of new imported trucks hit a 45-month high on May 1. The total of 156,930 was the highest recorded since the 170,969 reported on Aug. 1, 1982.

The truck stockpile had been 137,012 a month earlier and 90,286 a year earlier.

Truck inventories represented a 48-day supply on May 1, compared with 40 a month earlier and 32 a year earlier.

Combining car and truck stockpiles brings the total May 1 import total to 503,417, the highest count since the 540,812 units reported on Sept. 1, 1982.

The car-truck inventory compares with a month-earlier total of 475,096 and 362,730 on May 1, 1985.

Days' supply of the combined car-truck total stood at 40 on May 1, compared with a days-supply level of 38 a month earlier and 34 a year earlier.

On May 1, import-car inventories were divided this way: Japan, 63.20 percent; West Germany, 24.41 percent, and other countries, 12.39 percent.

A month ago, the shares were: Japan, 58.90 percent; West Germany, 29.59 percent, and other countries, 12.41 percent.

All inventory figures in this article include dealer and port inventories and vehicles in transit.

These are the May 1 days-supply figures for imported cars by country of origin: Japan—Honda, 8; Toyota, 13; Acura, 15; Subaru, 28; Mazda, 28; Mitsubishi, 27; Nissan, 44; Chrysler Corp., 66; Isuzu, 84; Chevrolet, 93 (including 65 for the Suzuki-built Sprint and 114 for the Isuzu built-built Spectrum).

West Germany—Mercedes-Benz, 18; BMW, 34; Porsche, 50; Volkswagen, 70; Audi, 92, and Merkur, 105.

Other countries—Jaguar, 26; Alfa Romeo, 37; Yugo, 45; Saab, 48; Volvo, 62; Peugeot, 69, and Renault, 112.

Light trucks and their days' supplies were: Suzuki, 20; Mitsubishi, 23; Mazda, 32; Toyota, 39; Nissan 64; Isuzu, 66, and Chrysler, 80.

All import-truck figures include Nissan's U.S. built models.

Jeep targets Europe for Wrangler

By Richard Johnson
Detroit Reporter

American Motors is making long-range plans to sell its just-introduced small utility vehicle, the Jeep Wrangler, through Renault dealerships in Europe.

The new Jeep model, built in Brampton, Ont., is a replacement for the venerable Jeep CJ, the World War II-vintage model which has long had an international presence.

With AMC expanding its Jeep marketing effort in Europe, the Wrangler is shaping up as a natural for the Continent.

"We're working on that right now," said Jim Murphy, director of product planning at AMC. "The dollar-to-franc, dollar-to-deutschemark and dollar-to-pound relationships are such that it is very attractive for us to look at. So we're strongly considering that."

In recent years, AMC has become a more aggressive retailer of Jeeps in the European market, selling its Cherokee and CJ models through a combination of Renault dealers and independent distributors. Sales on the Continent totaled 2,024 last year, and AMC officials expect that number to increase substantially in 1986. Jeep sales in Europe for the first quarter of 1986 totaled 693, well above the 1985 figure.

Since the latest versions of Cherokee and Wagoneer were introduced in 1983, AMC has sought to centralize its European distribution through the Renault dealer network. AMC still uses independent distributors for Jeep products in some European countries.

"We're looking at ways to expand Jeep exports in Europe," said former AMC President Jose Dedeurwaerder at the recent AMC shareholders meeting.

Dedeurwaerder now is an executive vice president of Renault in charge of the French company's worldwide sales and marketing effort and its manufacturing operations outside of France and Belgium. In his new position, he is expected to help boost AMC's stature as an exporter of its four-wheel-drive products.

1987 Jeep Wrangler Jim Wilsmore

Dedeurwaerder told company stockholders that the falling dollar "promises to make Jeep much more attractive to buyers" in Europe.

Generally, AMC executives in Detroit are hoping that Dedeurwaerder's worldwide marketing responsibilities for Renault will enable AMC to make inroads in other new markets.

Last year, AMC sold 40,000 vehicles overseas and is the leading U.S. exporter of four-wheel-drive vehicles.

At a news conference introducing Wrangler to the Detroit automotive press last week, Murphy also discussed a new AMC-designed 4.0-liter in-line 6-cylinder engine that will be available this fall on Cherokee, Wagoneer, Comanche and Grand Wagoneer.

Official horsepower and torque ratings have not been announced, but Murphy said the new fuel-injected power plant registers horsepower in the 170 range.

Mack plant to be state-of-the-art

Mack Trucks, Inc., has broken ground for its new Winnsboro (S.C.) assembly plant on which a great deal of the company's future rides.

The $80-million plant, shown in the accompanying artist's rendering, is due to be completed in mid-1987. It will be a 70-truck-a-day facility and will produce Mack's new conventional CH model.

In the 539,000-square-foot facility, major vehicle-producing operations will occur simultaneously rather than in one continuous line sequence.

The plant will also use a "modular" concept in which teams of trained technicians complete major sections of the truck.

The plant can be expanded if necessary, and it is designed to accommodate new technologies as they become available.

Statistical process control and computer integration will be used in production and will drive all operations, as well as examine everything from incoming parts and materials to operations in the module and main assembly areas.

Such increased capabilities will facilitate quality monitoring and adjustments before and during production.

Material handling and distribution will be extensively automated. Just-in-time inventory will be used for incoming parts and the subassemblies produced in-house.

Considerable emphasis will be placed on the quality of paint and finish coatings, with more than 20 percent of the floor area and nearly 30 percent of the total investment devoted to those functions.

Ford hammers heavy truck sales

By Joseph Bohn
Truck Editor

SAN FRANCISCO—Ford Truck Operations' heavy-truck orders are up, and it is continuing to hammer the market with special incentives and marketing programs like its Work-Ready truck concept.

Officials at the International Truck Show here also previewed some of the cab and powertrain improvements due on 1987 models.

John Merrifield, heavy-truck sales manager, said first-quarter orders were up 30 units a day over those in the first quarter of 1985.

"We build 236 trucks a day. So, anytime you get more than a 10 percent shift in the market, it's pretty significant," Merrifield said.

Ford officials are fairly happy with the way their Class 8 business is going, but they continue to push it with incentives.

Ford currently has several such incentives on heavy trucks.

An April 1-June 30 program covers all new and unused 1985-86 9000 series heavy trucks in company or dealer inventory or ordered from the Kentucky truck plant by July 7 or ordered by then and financed by Dec. 31, 1986 (in case of late delivery). It provides 12.5-percent annual-percentage-rate APR financing through Ford Credit up to 60 months.

A special "Work-Ready" blitz program covers CL, CLT, LL and LTL models in the 9000 series only.

It runs from April 16 to June 30.

The program covers Work-Ready models for fleet or retail orders.

In addition to 12.5-percent financing, it offers Work-Ready specs, 45-day delivery (except for models with sleeper cabs) and a free three-year/300,000-mile extended service contract with retail value of $7,150.

Ford sent letters to 170,000 small fleets and independent operators highlighting the savings and enclosing a directory of its dealer locations.

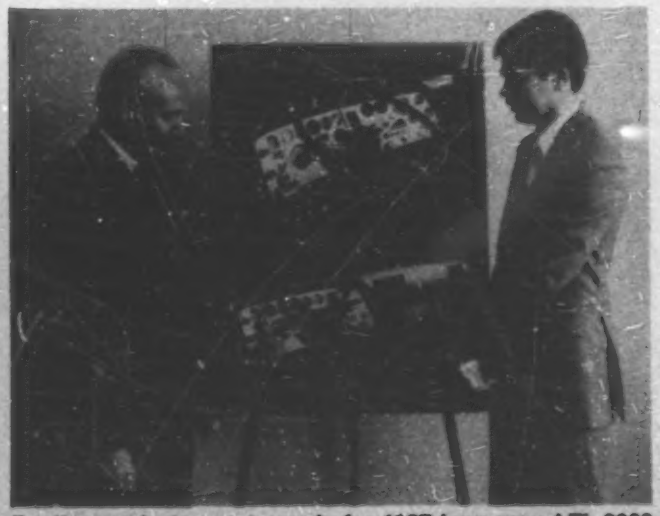
Eligible fleet buyers can get 10.5-percent APR financing for 48 months and 11-percent financing for 60 months, with 45-day delivery and easy ordering process, with specially provided phone number.

Ford's Work-Ready program is becoming increasingly popular, according to Kenneth F. Smith, heavy-truck general operations manager.

It covers a wide selection of medium and heavy-duty trucks with specifically designed packages and specs for specific work situations.

In the 1985 model year, 150 truck selections were offered

Please turn to Page 20, Col. 3



Ford's new instrument panels for 1987 long-nose LTL-9000 and LL-9000 conventionals are reviewed by John Merrifield, left, heavy-truck general sales manager, and Paul Shields, chief program evaluation analyst for heavy-truck product planning.

truck industry news

Truck sales rise, set April record

By Joseph Bohn
Truck Editor

After softening for a few months, truck sales roared back in April to set a record for the month.

The upsurge is largely attributable to low-interest financing and other kinds of special merchandising and incentive programs.

Sales increases for light and medium-duty trucks offset a decline in Class 8 heavy-truck deliveries, propelling the industry to an April total of 418,066. Sales were up 6.5 percent from 392,618 in 1985, the previous April record.

Tables on Page 20

Light-duty sales of 393,333 were up 7.3 percent from last year's 366,409.

Within the light segment, all manufacturers, except Chrysler, had sales increases.

Chrysler's sales of 52,066 were off 5.7 percent for the month.

American Motors and the imports, as has been their fashion the past several months, led the light-duty uptick.

Import sales of 79,041 were up 18.4 percent from last year.

Jeep sales of 14,744 also showed an 18.4 percent increase over April, 1985.

Ford's light-duty sales of 111,312 were up 9.1 percent from last year.

In total, Ford retailed 116,448 light, medium and heavy trucks, up from 108,606 a year ago.

Chevrolet's 110,019 light-duty sales were up 5.2 percent from 104,637 a year earlier.

In total, Chevrolet retailed 111,687 medium and light trucks, up from 105,745 in 1985.

GMC managed a modest increase in light-duty sales: 26,151 vs. 25,531 last year.

GMC's total light, medium and heavy sales of 30,263 were up 4.6 percent from a year earlier.

Medium-duty retail deliveries of 4,051 were up substantially from 3,460 in like 1985, according to preliminary MVMA reports.

Within the medium segment, Class 5 sales of 255 were up from 146 last year, while Class 6 sales of 3,796 were up from 3,314 a year earlier. No Class 4 sales were reported.

The heavy segment's sales of 20,682 were off from 22,749 a year ago.

Within the heavy segment, Class 7 sales of 10,193 were up from 9,664, while Class 8 sales of 10,489 were off from 13,085, according to MVMA.

During the first four months, the industry retailed 1,512,611 trucks, down from 1,543,815 in like 1985.

Light duty sales of 1,427,811 were off from 1,450,604 a year earlier.

Medium-duty sales of 14,960 were off from 17,737 last year.

Within the medium segment, Class 5 sales of 1,366 were up from 919, while Class 6 sales of 13,594 were down from 16,818. No Class 4 were reported.

Heavy-duty sales of 69,840 were off from 75,474 last year.

Within the heavy segment, Class 7 sales of 33,522 were up from 29,430; while Class 8 sales of 36,318 were off from 46,044.

Cummins shows high-output engine

SAN FRANCISCO—Cummins Engine Co., Inc., introduced a new high-performance 444-HP diesel engine here, aimed at owner operators and small fleets.

Some 21.9 percent of the company's 1985 engine shipments were 400-HP engines, up from 20.7 percent the previous year, according to George Fauerbach, vice president—North American marketing.

Also, Cummins' records show that 1985 registrations by customers who bought fewer than than five trucks were 38 percent of total truck registrations, up from 33.5 percent the previous year.

Thus, the trends indicate continuing strong demand for high-horsepower engines. And owner-operators and small fleets continue to make up a large portion of Cummins' business.

Cummins now offers operators three high-horsepower options—the Cummins 444, the NTC-400 and the Formula 400—to help them maintain flexibility in responding to customers' changing needs.

The Cummins 444 combines various innovations with proven NT engine technology in becoming the new performance leader in its 855-cubic-inch engine line.

It is rated at 444 HP at 2,100 RPM and produces 1400 pounds-feet of peak torque at 1,500 RPM.

Fauerbach stressed that the 444 is not a tuned version of a current engine, but features various new-to-Cummins technological changes.

It has a new advanced HT Series turbo with a new compressor, turbine wheel and dual entry design to maximize fuel economy and throttle response.

It also has a new hydraulically actuated step-timing system which improves cold starting and provides strong white smoke control.

The step-timing control enabled Cummins to to design its high-performance engine while still meeting stringent durability standards, Fauerbach added.

The engine also has high-strength pistons. A new wear insert is cast into the high-strength, aluminum alloy piston around the top two rings to extend piston and ring life. It includes a raised piston to improve economy.

Additionally, it features an advanced camshaft with redesigned injector lobes to accommodate the new Step-Timing Control system.

A streamlined water manifold design provides easier access to the mounting cap screws for serviceability.

The 444 also includes earlier advancements in Cummins' Big Cam IV products, including a simplified one-piece unitized aftercooler, a new head gasket and crowned rollers.

The rollers lengthen camshaft life three to four times by providing better load distribution on the camshaft lobe surface.

The Cummins 444 also has a matched Optimized Aftercooling system to handle increased heat loads from running the engine at high horsepower levels.

And it has a special black paint job, custom-polished aluminum valve covers, a chrome intake crossover and a special 444 logo.

Other standards of the engine include the new compression brake introduced by Cummins earlier this year and factory-installed Compuchek fittings to permit the engine to be tested using the advanced Compuchek diagnostics service tool, exclusive from Cummins.

Cummins' Compuchek system and the Compuchek extended warranty have grown in popularity during the past several years.

More than 20,000 Cummins engines have been covered by the four-year, 400,000-mile plan, and more than 250 Compuchek units have been installed in Cummins distributor and dealer locations and truck fleet service shops.

The Compuchek warranty is available for $550 on all Cummins LT and L10 series engines. Coverage can be purchased at any time up to 80,000 miles.

The plan protects truck owners from repair costs resulting from possible defects in workmanship and materials on all engine components through 200,000 miles. Many components are covered through 400,000 miles.

THE CARVE-OUT TRUST*

- You can now establish a new Carve-Out Retirement Trust limited to only a small group of employees (e.g., salary and clerical)!
- You can shelter an annual amount up to your salary and bonus — tax free!
- You can enjoy over 85% to 90% of the annual tax-free contribution.
- We can convert your present plan(s) to a Carve-Out. *A tax-exempt trust

Jerry Orefice has addressed national conventions, associations, "Twenty Groups," published articles in national magazines and also appeared on T.V. as a commentator on dealer tax planning and the Carve-Out Trust. Our firm has its own in-house legal counsel and a reputation for working with the top dealers in the country.

Ford hammers heavy truck sales

Continued from Page 12

under the Work-Ready program, which doubled to 300 in the 1986 model year.

Ford's Louisville truck plant produced about 3,400 Work-Ready trucks, equal to 5 percent of its total output, in the 1985 model year. With sales of nearly 10,000 of those trucks expected in the 1986 model year, they could account for 20 percent of Ford's total this year, Smith said.

The Work-Ready truck concept simplifies the traditionally complex ordering process, giving dealers and customers the benefit of expert advice in equipping their vehicles for specific job requirements. It also helps speed delivery of customer orders.

Work-Ready trucks also offer, at no extra cost, extended service coverage for up to three years or 300,000 miles, depending on the model.

Ford offers Work-Ready trucks with specific designs in five basic categories—van platforms, construction, tractors, refuse hauling and just-introduced beverage delivery.

Each selection has a catalog number, designed to make it easier for dealers to complete an order, Smith said.

Merrifield said that Ford's Class 8 long-nose conventional trucks—the LTL-9000 and LL-9000—will have major improvements in the 1987 model year, including a new ergonomic instrument panel and a new line of premium diesel engines.

Ford will offer its Brazilian-built diesel engines in F, B and L series medium and heavy trucks in 1987.

The Ford-designed-and-built turbocharged 6-cylinder diesel line, developed by Ford Tractor, includes six versions with horsepower ratings ranging from 160 to 240.

The first of those diesels were introduced on the Cargo which entered the North American Class 7 market in late 1985.

Like other engines in the series, that 165-HP power plant features a direct-injection combustion engine, a Garrett turbocharger and a Bosch direct high-pressure injection fuel system. It is also rebuildable.

In 1987, Ford diesel engines will be available in F and B-600/700 and the F-800, the FT-900 and the entire L-8000 series, including tandem and set-back front axle models.

Six horsepower ratings will be offered—160, 170, 185, 210, 225 (California) and 240. Governed engine speed is 2,600 RPM (2,400 RPM for the 225-HP California engine).

The 170-HP Ford diesel will be standard in the 1987 Cargo CF-6000 and CF-7000 series, upgrading this year's standard horsepower rating.

The 185-HP engine will be standard in all L, LS and LN-8000 models. The 210-HP turbocharged aftercooled Ford diesel will be standard in the FT-900 and all LT, LTS and LNT-8000 series trucks.

The 160-HP engine will be available only in F and B-600 models and will be priced to compete effectively against medium trucks with lighter-duty diesel engines. Only the 170-HP and 225-HP engines will be offered in California.

Merrifield scotched the rumor that Ford might abandon gasoline engines for its medium/heavy models, pointing out they still account for 25-30 percent of its Class 4-8 business.

Cummins shows high-output engine

Continued from Page 13

Owners must have the engine Compuchek-inspected every 80,000 miles as part of the coverage agreement.

Cummins has been improving its Compuchek system. Recently, it began using floppy disk drives that allow tests to be completed faster and new software that upgrades testing capabilities and expands its data base to include specifications for all its engines.

Cummins Cash & Information Services, Inc., Arlington, Tex., also has been expanding.

It offers the trucking industry an electronic fund-transfer system. More than 600 trucking companies are using it to allow drivers to buy fuel and oil on credit and still get cash prices, to pay for emergency repairs and to receive cash settlements and advances.

The CCIS system also can be tailored to company needs.

The CCIS electronic network connects 3,500 truck stops and 4,500 Cummins dealers and distributors with its Dallas Service Center which are manned around the clock.

Champion lays off 125 at Michigan, Ohio plants

TOLEDO—Champion Spark Plug Co. announced the indefinite layoff of 125 workers at two of its production facilities.

Affected were 65 employes at the Detroit plant and 60 at the Toledo facility. A Champion spokesman blamed the layoffs on "a production adjustment to reflect current sales projections."

*Repair costs are rounded to the nearest dollar. Estimates were prepared in April, 1986, by two independent damage appraisers using ADP Collision Estimating Services with a labor rate of $20 per hour. Criteria for bumper face bar damage were adapted from the U.S. Department of Transportation Part 581 Bumper Standard in effect 9/1/79 - 7/5/82.

SOURCE: Insurance Institute for Highway Safety

Crash costs listed

WASHINGTON—Only nine of the 23 small cars tested by the Insurance Institute for Highway Safety in 5-MPH crashes received no damage in front and rear flat-barrier tests.

IIHS said all 23 were damaged —some extensively—in two other 5-MPH tests, front-angle-barrier and rear-pole.

The strength of the bumpers cannot be ascertained from the price of the 1986 cars, IIHS said.

All 23 were popular small two-door models with base sticker prices of less than $10,000. But IIHS found no relationship between sticker prices and the amount of damage from the test.

The base price of the Ford Escort is in the $6,000 range, yet it sustained the least damage ($361) in the four tests.

In contrast, IIHS said, three of the 12 cars with more than $1,000 damage (Mazda 626, Chrysler Laser and Nissan 200-SX) cost more than $9,000.

Owner touches off Toyota recall

MONTPELIER, Vt.—A Vermont motorist's complaint last year that the left rear wheel of her 1982 Tercel had buckled under the car has triggered a voluntary recall of some 144,000 vehicles by Toyota Motor Sales U.S.A., Inc.

The motorist, Jo Ann Troiano, executive director of the Montpelier Housing Authority, was so pleased with the way Toyota handled the problem, she bought another Toyota.

The recalled Tercels will be checked for corrosion problems in the rear suspension arms, which will be repaired or replaced as necessary. The recall covers 20 states and the District of Columbia, where salt is used to clear roads in winter.

The recall covers 1980-82 Tercels. The car was redesigned in 1983. Similar suspension systems are not used in other Tercels or in other Toyota models.

States covered by the recall are Connecticut, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Vermont, West Virginia and Wisconsin and the District of Columbia. Two Canadian provinces also are covered.

Owners living in other states who may have driven their Tercels in the salt belt during winter may bring in their cars.

Troiano's accident occurred in October, 1985. She had her car towed to a garage and called her local Toyota dealer, who contacted Toyota Motor Sales.

She paid $500 to have her car repaired and was told she would be reimbursed in two months.

"Being a bureaucrat," she said, "after two months I wrote to my dealership and sent the attorney general a copy of my letter.

"A week after I sent the letter, the assistant attorney general—who is an acquaintance of mine—called the dealer and was told the check was in the mail. I got it just before New Year's," she said.

Troiano said she then bought another Toyota—a second-hand Starlet. "I'll keep buying them," she said. "I've owned six of them. I think Toyota did a great job—they didn't have to be coerced or hauled into court.

"The attorney general was very pleased with the way they handled it. The Highway Transportation people (NHTSA) said it wasn't a problem. They said it was a rust problem, not a safety problem," she said.

Toyota Auto Body is new name of plant

LONG BEACH—Toyota's truck-bed manufacturing and assembly plant here, formerly known as Toyota Motor Mfg., has been renamed Toyota Auto Body (TAB), Inc., of California.

Toyota Auto Body began operations in 1972 and has since built more than one million truck beds. Annual production averages more than 125,000 units.

NHTSA finds Gazelle belts below standard

WASHINGTON—NHTSA has made an initial finding that the seat-belt systems in vehicles made by Vintage Reproductions, Inc., North Miami, Fla., do not meet the federal safety standard.

NHTSA said all Gazelles built by Vintage between Oct. 1, 1983, and Nov. 1, 1985, are not equipped with lap belts that adjust with emergency-locking or automatic-locking retractors. About 265 cars are involved.

In 1982, Vintage was given a temporary, one-year exemption on condition it would bring the cars into compliance by Oct. 1, 1983. A NHTSA inspection found that had not been done.

The safety agency denied a petition for a further waiver and also rejected a request that the noncompliance be found inconsequential. A public hearing has been set for June 3.

Nissan to cancel pact with Fuji on auto output

TOKYO—Nissan Motor Co. plans to cancel an agreement with Fuji Heavy Industries, Ltd., for the production of 60,000 Nissan cars annually at Fuji facilities here.

A Nissan spokesman said the move is due to pinched production capacity at Fuji facilities and unused capacity at Nissan plants, because of increased production overseas.

Analysts said the action reflects Nissan's sluggish domestic sales.

The two firms are expected to reach a final decision this summer. Nissan plans to move the production to its plant in Tochigi, Japan.

Fuji produced some 60,000 of Nissan's 1,500-cc Pulsar models in the fiscal year ended March 31. The cars accounted for 10 percent of Fuji's total production and almost 5 percent of sales.

Auction adopts tough stance on odometer tricks

FREDERICKSBURG, Va.—Fredericksburg Auto Auction has taken steps to help eliminate odometer tampering.

It said it will:

1. Suspend any dealer guilty of selling cars with doctored odometers if the dealer has knowledge of the tampering.

2. Require any dealer—either guilty or innocent—who sells a car where odometer tampering can be confirmed to repurchase the vehicle, reimburse the buyer for reasonable handling expenses and pay a penalty of $100, which will be given to the buyer to defray other expenses.

3. Investigate the chain of ownership on suspected problem titles or cars. If odometer irregularity is confirmed, the seller will be required to repurchase the vehicle and pay reasonable handling expenses plus a penalty fee of $100 to the buyer.

4. Check all titles closely for alterations or erasures.

Production

Auto output inches up to 165,628

By Kathy Boyer
Detroit Reporter

Domestic auto production was pegged at 165,628 units last week, 3.77 percent more than the previous week's 159,604.

The prior week's build was the lowest output for any full work week this year.

Last week's production was 8.99 percent below the year-ago week's 181,995.

So far this year, 3,258,432 cars have been assembled, 4.51 percent below the 3,412,160 completed last year at this point.

Companies shared last week's targeted production as follows: General Motors, 54.42 percent; Ford Motor Co., 23.90 percent; Chrysler Corp., 14.61 percent; Honda of America Mfg. Co., 2.48 percent; New United Motor Mfg., Inc., 2.17 percent; American Motors, 1.21 percent, and Volkswagen of America, 1.21 percent.

Nissan's car line in Smyrna, Tenn., remains idle for model changeover.

After being down for two weeks for inventory adjustment, GM's Norwood (Ohio) plant resumes production today (May 19).

Chrysler's Sterling Heights (Mich.) plant resumes production today. It had been idle since mid-March for facility changes to prepare for the new Dodge Sundance and Plymouth Shadow.

The plant builds the Chrysler LeBaron GTS and Dodge Lancer. The Sundance and Shadow will not be produced until the 1987 model year.

GM increased its indefinite layoffs by 1,000, bringing the total to 16,000.

A GM spokesperson said the new layoffs, at several component plants, are due to the previously announced adjustments at assembly plants.

Ford's Capri line at its Dearborn plant remained down last week due to a parts shortage.

All Ford plants except Atlanta are slated for daily overtime this week.

Saturday (May 17) overtime was scheduled at Chrysler's Belvidere (Ill.) plant. Belvidere and the Newark (Del.) facility are slated for daily overtime this week.

Truck production is highest of year

Targeted domestic output of 76,061 trucks last week was the highest since the week of Dec. 14, 1985, when 83,892 trucks were built.

Last week's estimated output was 4.33 percent more than the previous week's 72,901 and 0.40 percent more than the year-ago week's 75,760.

Year-to-date, 1,399,499 trucks have been assembled, 3.56 percent more than the 1,351,342 completed last year at this point.

General Motors slated Saturday (May 17) overtime at its Baltimore and Detroit plants.

Ford Motor Co. scheduled overtime Saturday at its Norfolk and St. Louis plants.

All Ford plants are slated for daily overtime this week (May 19).

Car, truck output slows in Canada

Production of cars and trucks in Canada slowed last week.

General Motors' Oshawa (Ont.) plant was down Friday (May 16) for a postponed Easter holiday, and Saturday overtime was suspended at Chrysler's Pilette Road plant in Windsor.

Last week's estimated auto output of 23,668 units was down 6.21 percent from the previous week's 25,234 but was 8.52 percent more than the year-ago week's 21,809.

So far this year, 449,063 cars have been assembled, 11.84 percent more than the 401,510 completed last year at this time.

Canadian truck makers scheduled output of 16,881 units last week, 12.14 percent below the previous week's 19,213 but 6.03 percent above the year-ago week's 15,921.

Year-to-date, 367,537 trucks have been built, 3.82 percent more than the 354,029 assembled last year at this point.

All Canadian plants are closed today (May 19) for Victoria Day.

22 are 'Dealers of Distinction'

WASHINGTON—Twenty-two imported-car dealers have been named 1986 AIADA-Sports Illustrated Dealers of Distinction.

The dealers were cited for representing excellence in dealership performance and service to the industry, the community and the nation. Winners were honored at the awards banquet of the American International Automobile Dealers Assn.'s ninth annual American International Automotive Congress.

Henry A. Kissinger, former secretary of state, was the keynote speaker.

Award winners are: Kjell Bergh, Borton Volvo, Inc., Minneapolis; Bill Blume, Blume-Bellevue Volkswagen, Bellevue, Wash.; James Carnes, BMW Center, San Antonio; Russell M. Darrow, Russ Darrow-Madison, Inc., Madison, Wis.; Victor (Gene) Fisher, Overseas Motor Corp. of Fort Worth, Fort Worth; Thomas Freeman, Freeman Toyota, Santa Rosa, Calif., and Robert L. Germain, Germain Toyota, Inc., Columbus, Ohio.

Also: Siegfried Grimm, Siggi Grimm Motors, Inc., Tulsa; Marvin D. Hartwig, MHI Autocenter, Iowa City, Ia.; Michael R. Houx, Camelback Automotive Corp., Phoenix; Bruce Wallace, Scott Toyota, Scottsdale, Ariz.; E.D. (Sunny) King Jr., King Motor Co., Inc., Anniston, Ala.; Peter T. Mastro, Mastro Subaru Alfa Romeo, Tampa; David McDavid, David McDavid Nissan, Inc., Houston, and Dan McKinney, Dan McKinney Nissan, Inc., Jackson, Mich.

Additionally: Gary N. Olin, Qua Imports, Inc., Bedford, Ohio; Donald E. Reichert, Reichert Nissan, Inc., Wenatchee, Wash.; William Smythe, Smythe European, San Jose, Calif.; Horace K. Sowles Jr., Morong Falmouth, Falmouth, Me.; J.P. Thibodeaux, J.P. Thibodeaux, Inc., New Iberia, La.; Jim Vagim, Tall Man Subaru, Porterville, Calif., and Hal Watkins, Hal Watkins BMW, Carmarillo, Calif.

Hyundai exports soar 215 pct.

SEOUL, South Korea—Hyundai Motor Co. exported 86,826 vehicles during the first four months of 1986, a 215-percent increase over 27,547 during the same period in 1985.

Hyundai said its vehicle exports to the U.S., which began in January, totaled approximately 40,000 units during the four-month period. Exports to the U.S. are expected to reach 100,000 by the end of the year, the firm said.

Hyundai said it plans to ship some 200,000 cars this year. It said its plants, which have an annual capacity of 300,000 units, have been producing at maximum.

Mack, Ford form longer supplier ties

By Joseph Bohn
Truck Editor

Truck manufacturers like Mack and Ford are giving new meaning to the concept of "long-term supplier relationships."

They have singled out specific suppliers for high-volume, exclusive contracts for periods of five to 10 years.

Mack's new contract with Dana, for example, will award more than $2 billion worth of business to Dana during a 10-year period.

Ford's contracts, although on a smaller scale, are equally important to the companies involved.

Eaton-Clark's five-year contract is worth an estimated $285 million, double the amount the two companies supplied to Ford as independent entities.

Similarly, Rockwell's five-year contract will more than double its previous Ford business to an estimated $325 to $350 million.

Meanwhile, Ed Mabley, heavy-truck product development manager, Ford Truck Operations, said the only way for a heavy-truck manufacturer to make any "margins" or money in that cutthroat market is to reduce costs.

"You have to do it better and do it for less," Mabley said.

"Our objective with these people (suppliers) is 'cut your costs by 30 percent,'" Mabley added, the idea being for suppliers to keep a third of their savings and pass the other two-thirds along to Ford and its customers.

Ford expects 40 percent of the dollar value of its Kentucky-built trucks to come from worldwide sourcing by 1990.

That's up from "just a trace," or less than 5 percent currently, Mabley said.

Big numbers at GM

GM Chairman Roger B. Smith told shareholders at the company's annual meeting that 1986 sales and revenues will exceed the "magic" number of $100 billion. Story on Page 3.

Chrysler America is a 'hidden' asset

By Mary Connelly
Detroit Reporter

Chrysler Corp.'s new lower-priced America models are off to a strange start.

Some dealers, spooked with more expensive 1986 Omnis and Horizons, are "hiding" the Americas. But customers are tracking down the new models and asking for them.

However, the measures being taken by some dealers may be unnecessary because a Chrysler spokesman said last week that dealers will be rebated the wholesale price difference between the 1986 and 1987 subcompact models as of June 1.

However, some dealers contacted by Automotive News said they had not been notified of the rebate plan and reported using larger tradein allowances, extra sales commissions and increased incentives along with downplaying the America to move 1986 inventories.

Some reported reduced profits or no profits from sales of 1986 Omnis and Horizons since the May 15 introduction of the $5,499 Omni and Horizon America, which are 1987 models.

"We're obligated to do it," a Chrysler spokesman said, referring to the rebate for 1986 models. "In the dealer agreement, it says we have to do it."

Asked when dealers were notified, the spokesman said, "Whether a letter went out last week or this week is a moot point.

Major benefits seen for Ford in Alfa Romeo tie

By Richard Johnson and Richard Feast
Automotive News Staff

Ford Motor Co. and Alfa Romeo have begun negotiating a deal that could give Ford a majority interest in the struggling Italian manufacturer.

The two auto makers have agreed to launch a joint study—lasting at least two months—to review "major benefits" the companies believe would result from an association.

In the U.S., last week's announcement was viewed largely as Ford's move to link with a prestigious European nameplate and a possible source of low-volume, upscale sports cars and design expertise.

Such associations have become trendy in Detroit. General Motors in January bought a majority interest in Lotus, the British specialty-car company, and will build a luxury two-seater convertible with Italy's Pininfarina. Chrysler has a partnership with Maserati that will yield a luxury convertible next year.

Statements released by the two companies last week stressed the importance of "preserving Alfa Romeo's unique Italian identity."

A brief statement from Ford last week cited its "interest in acquiring substantial equity in Alfa Romeo that could lead to a majority position if the study confirms the anticipated benefits."

According to the Ford announcement, "the vision of both companies includes preserving Alfa Romeo's unique Italian identity."

Alfa Romeo has lost money for 13 consecutive years and offers little in the way of financial or marketing muscle. It held only 1.5 percent of the European car market in 1985.

Outlook rosy for global auto market

By Michelle Krebs
Financial Editor

Collapsed oil prices, low interest rates and the U.S. dollar's decline have resulted in the most optimistic outlook for the world auto market in some time.

The forecast for car and truck sales in North America and Western Europe has been upgraded substantially, according to the Automotive News World Outlook.

The World Outlook is a service of Automotive News and Data Resources, Inc. The most recent forecast was published in January.

The latest World Outlook puts 1986 U.S. car sales at 10.9 million, an increase of 100,000 units since the last forecast. U.S. car sales have been upgraded by about a half-million units annually for the subsequent three years because of low oil prices and lower-than-expected interest rates.

That's good news for U.S. car makers, who will share in the expanded car sales, said DRI's U.S.-

Slow Start

Problems hamper GM's Hamtramck plant

By Michelle Krebs
Financial Editor

General Motors officials admit the new Detroit-Hamtramck plant may be a case of biting off more than the auto maker could chew.

"The task is greater than we thought," said Jan E. Tannehill, manager of the Buick-Oldsmobile-Cadillac product team responsible for the Detroit-Hamtramck plant. "We underestimated the job we had to do to bring up a new plant for a new complex product using complicated processes."

The plant, which makes the all-new Buick Riviera, Oldsmobile Tornado and Cadillac Seville and Eldorado, is producing 40 cars per hour on its two shifts. Full-line speed is 60 cars per hour. The plant started assembling cars last fall.

Tannehill admitted the plant is not on schedule based on the original projections. "We had hoped to be at 60 cars an hour in March, but that was way too aggressive," he said.

He denied that top GM management has pushed for volume at the expense of quality.

Lynn Minger took over as plant manager in February from Earl Harper who went on indefinite medical leave, after which he will retire. Minger is confident the plant will reach full production by the third week in July, after which the plant will be down during August for model changeover.

GM officials say the problems at the plant have been a combination of a new facility, a new product, new people and advanced technology.

The plant has more automation than most car plants. The plant boasts 2,000 computer-controlled

'We've been able to make some spending reductions in GM10'

'As to the right number of robots . . . we're constantly reassessing'

Bob Schultz

GM to stand pat on plants through 1990

By Michelle Krebs
Financial Editor

Before 1990, General Motors will put no more assembly plants into its GM10 mid-size car program than those already announced.

Robert J. Schultz, GM vice president in charge of the Chevrolet-Pontiac-Canada Group, said the four plants already designated will supply all of the GM10, or W-body, cars GM needs through 1990.

Those plants are Fairfax, Kans.; Doraville, Ga., and two in Oshawa, Ont. Originally, GM10 had aimed for seven plants.

"It is not seven plants for this timeframe," Schultz said. "We have alternatives we're looking at beyond 1989. We would expect that it could very well expand because of the expectations our marketing divisions have for these cars. But that would be beyond 1990."

Further, it appears that GM10, GM's largest new-car program ever, will not be a $7-billion project with each plant costing about $1 billion.

"It's not a $7-billion program today," Schultz said. "In every new program, we try to see if money is being spent wisely and appropriately, and we've been able to make some spending reductions in GM10."

Schultz acknowledged that some automation plans have been scrapped, but he called them modest cutbacks. GM has canceled some contracts for automation equipment, and suppliers expect there will be more cancellations.

"We feel that technology is essential to be competitive," Schultz said. "As to what is the right number of robots for 1986 and 1987, we're constantly reassessing that to look at the benefits and the rate at which we should introduce that technology."

Schultz said CPC likely will install only automation that has been proven in existing plants. New automation will go through trial runs before being phased in after the assembly line is running.

"What we're trying to avoid is bringing a lot of new technologies into a new assembly plant and compounding those risks all at one time," Schultz said.

The GM10 program has undergone a re-evaluation in recent months for a number of reasons. GM has been rethinking what divisions will sell what models and the timeframe for introduction of each model.

GM is trying to cut down the number of models it sells by not having every division sell every model of a specific line of cars.

Those plans have been finalized, Schultz said, though he refused to give details.

The first GM10 cars will be sold through Pontiac, Oldsmobile and Buick as 1988 models. They will replace the rear-wheel-drive G-bodies—Buick Regal, Chevrolet Monte Carlo, Oldsmobile Cutlass Supreme and Pontiac Grand Prix and Bonneville. Those models will be discontinued in 1988.

Eventually, the GM10 cars were to replace the A-body cars—the Chevrolet Celebrity, Buick Century, Oldsmobile Cutlass Ciera and Pontiac 6000.

However, those cars have sold well, another reason for GM to re-evaluate the GM10 program.

Schultz suggested the A-car will be around for some time and may receive a facelift.

"I think as long as we keep the A-car fresh it can last for some time," he said. "The A-car is an unbelievably strong car for us and a very important market."

Schultz said GM10 also has been re-evaluated because GM does not want several plants down for conversion at the same time.

"We've got to be careful that we don't wind up with dealers short of cars for some period of time," he said.

GM expects $100 billion in '86 sales

By Michelle Krebs
Financial Editor

General Motors Chairman Roger B. Smith said the auto maker will exceed "the magic" $100 billion mark for sales and revenues this year.

Smith made the prediction at the 78th annual shareholders meeting held in Detroit last Friday (May 23).

GM earned $4 billion in profits on $96 billion in sales and revenues in 1985.

Smith also predicted that the U.S. motor-vehicle industry will have sales of 15.5 million units this year.

He told shareholders that GM's major acquisitions and the majority of expense involved in GM's rebuilding are history. GM has spent more than $58 billion for new products and facilities in the last decade. GM's capital spending will amount to about $9 billion this year. Smith said capital spending will decrease in the future but will remain at substantial levels.

The subject of sales to the South African Government was raised in a shareholder's proposal. Smith said GM is discussing with the government the cessation of vehicle sales to the military and police.

GM opposed the shareholder proposal, but GM director Dr. Leon H. Sullivan, pastor of Zion Baptist Church of Philadelphia, favored it.

The shareholder proposal was defeated by a margin of 91 percent to 9 percent.

GM's request to lower taxes in local communities mainly in Michigan again was a hot issue at the meeting.

Smith responded to one shareholder by asking: "Did you add an extra $100 dollars to your income tax bill just because you like the federal government? We only want to pay our fair share and nothing more."

Smith defended GM's April price increase of 2.9 percent. He said that Honda has increased prices considerably more.

"That gives us a very big margin," he said, "We are not just in business for today; were in business for the long term."

In response to a shareholder's question about executive bonuses, Smith hinted that the formula may be revamped during the year to be based on more long-term goals, as Ford Motor Co. has done. The compensation system will be reviewed this year and may come up for shareholder approval at the next annual meeting.

Smith defended the hiring practices of its computer services subsidiary, Electronic Data Systems Corp. A shareholder accused EDS of discrimination in hiring based on a person's weight, age, medical history and past and present union affiliations.

Smith said, he would look into the accusations.

Smith said GM spent $978 million in advertising in 1985, up from $892 million a year earlier. Of the total, $672 million was in media spending, compared with $658 million in 1984.

Smith said air bags will be optional equipment on some 1988 Cadillacs. GM announced in February that air bags would be offered in 1988, but this was the first mention of a specific car.

Nissan's new Pulsar offers restyling, 4WD

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO—Nissan Motor Co. has introduced a new version of its Pulsar series that offers Japan's first viscous-coupling four-wheel-drive system as an option.

The car will be available in the U.S. this fall.

The optional 4WD system is said to offer "ease of operation and excellent traction even on low-friction surfaces."

This is the first full model changeover for Pulsar in four years. The cars feature a restyled exterior in three body styles, a redesigned and sporty interior and an engineering package that includes a new suspension and a 1.6-liter double overhead cam 16-valve engine.

Nissan has targeted 6,000 units a month for the domestic market, 11,400 for Europe and 4,500 knockdown kits for Australia, New Zealand and Greece.

The 4x4 system uses a viscous coupling to transfer torque to the rear wheels with a front-to-rear torque split designed to match operating and road surface conditions, to provide optimal traction, stability and ease of handling.

In explaining the advantages of the viscous-coupling automatic system, Nissan engineers said that, in operation, the rates of rotation of the front and rear wheels are constantly changing, in accordance with operating and road conditions.

Nissan Pulsar: Available with viscous coupling automatic 4WD

While turning—and even while traveling at a fixed speed on a dry road—a radial difference, or drive slip, occurs between the front and rear wheels and the rate of rotation of the front wheels is greater than that of the rear wheels, Nissan explained.

With the viscous coupling, torque is automatically transmitted to the rear wheels for a smooth and progressive split of the engine's output torque.

Nissan said that an advantage of the automatic, full-time system's simple construction is that the viscous coupling mechanism eliminates the braking phenomenon that occurs during tight cornering with part-time 4WD systems.

The viscous-coupling automatic full-time 4WD system was introduced last fall by Volkswagen at the Frankfurt Motor Show in West Germany.

The 4WD system is being supplied to Nissan by Viscodrive Japan, a subsidiary of Viscodrive of West Germany.

Month's registrations 2nd highest

By Jenny L. King
Detroit Reporter

New-car registrations in the U.S. in February were the second highest in history and climbed 5.33 percent above the year-ago level.

Imports, with continued strong sales, gained more than three percentage points, moving up to 28.76 percent from 25.60 percent in 1985.

February registrations compiled by R.L. Polk & Co. totaled 822,143, up more than 40,000 units from 780,509 a year earlier and second only to 842,857 recorded in 1973.

The February total consisted of 585,666 domestics and 236,477. Domestics were up 0.86 percent from last year, and imports were up 18.35 percent.

Chrysler was down to 9.38 percent of the total from 11.98 percent in February, 1985. Ford Motor Co. was down 1.51 percentage points, and American Motors dropped 0.65 percentage points while General Motors gained 1.61 percentage points.

Second to the imports' 28.76-percent share in February were U.S. intermediates at 28.26 percent, followed by compacts at 16.82 percent, subcompacts at 10.72 percent, luxury cars at 8.53 percent and standard-sized models at 6.91 percent.

Excluding imports, the February market class breakout included 39.66 percent intermediates, 23.61 percent compacts, 15.05 percent subcompacts, 11.98 percent luxury cars and 9.70 percent standard-sized models.

New-car registrations at the end of two months totaled 1,734,787, up 11.08 percent from 1,561,715 a year earlier, and up 13.42 percent from 1,529,558 in 1984. Domestics were up 5.59 percent this year to 1,220,905 from 1,156,277 after two months of 1985. Imports rose 26.74 percent to 513,882 from 405,438.

The imports and GM were the only segments to expand their shares of the market at the end of two months.

Imports gained 3.66 percentage points, growing to 29.62 percent from 25.96 percent of the total U.S. market. GM's increase was more modest, up 0.39 percentage points, while Ford dropped 1.45 percentage points, Chrysler fell 1.93 percentage points and AMC was down 0.67 percentage points.

Newest truck models

New Iveco Z-450T

Iveco's new Class 6 Z-450T TurboDiesel has a 22,800-pound GVW. It comes in 126.0-inch, 149.6-inch and 173.2-inch wheelbases for maneuverability. Payload body allowance is 15,000 pounds. Its 6-cylinder engine has 150 brake HP at 2,700 RPM. Maximum torque is 339 pounds-feet at 1,600 RPM. It has 245/70x19.5 tires.

M.A.N. readying new truck line

German truck builder M.A.N.'s forthcoming new truck line for European and world markets features a flatter roof, narrower front grille and square window. The new models begin at the 12-ton range. Either an Eaton-designed semi-automatic manual transmission or a computerized automatic, based on a ZF Ecosplit 16-speed, may be offered.

Western's tower of power

Western Star's latest creation is this Premium Blue 444, named after its distinctive six-color paint job and Cummins' NTC 444-HP engine. Only 87 Premium Blues, aimed at owner-operators who favor its kind of power, will be built.

Isuzu, Grumman team up

Isuzu Truck and Grumman-Olson teamed up to produce a fuel-efficient, competitively priced multi-delivery truck. It features Isuzu's NPR chassis, is powered by a 3.9-liter turbocharged diesel and has Grumman's body design.

truck industry news

Heavy-truck downturn eases a bit

By Joseph Bohn
Truck Editor

Sales of Class 7 and 8 heavy trucks did a bit of a flip-flop in April, with Class 8 showing some improvement while Class 7 slowed from its earlier pace.

Table on Page 22

Generally, a shift in buying patterns has seen Class 8 customers moving down into 7. That has buoyed Class 7 and eroded the heaviest end of the market.

But in April, Class 8 retail deliveries of 10,424 were off 20.3 percent from 13,085 last year. That slowed the rate of loss that had been 21.3 percent in the first four months.

Manufacturers retailed 36,?53 Class 8s in the first four months against 46,044 in like 1985, according to the MVMA.

Meanwhile, Class 7 sales of 10,-202 in April were up 5.6 percent over 9,664 in like 1985.

That was a slowdown from the 7.2-percent increase for the first four months. Manufacturers retailed 33,531 Class 7s in the first four months, compared with 31,-284 a year ago.

Overall, Class 7 and Class 8 were off 9.3 percent in April, a bit less than the 9.8-percent decline recorded for the first four months of this year.

Among Class 7 manufacturers, GMC had 2,813 deliveries and Chevrolet, 1,078, giving General Motors a total of 3,891. That was up substantially from 2,302 last year.

The company began breaking out Chevrolet and GMC heavy-truck sales this year.

Mercedes-Benz had 147 sales, up from 94.

Ford declined to 2,837 from 3,-874 a year ago. Navistar retailed 3,055 Class 7s in April, off slightly from 3,083 last year.

Mack retailed 178, off from 198, and White, 94. off from 113 last year.

In Class 8, Volvo-White showed the only year-to-year gain in

Rockwell highlights new axles, computer

SAN FRANCISCO—Rockwell International has introduced a new line of single-speed and two-speed single-drive rear axles, a new Tripmaster Plus on-board computer system and an expanded line of remanufactured axle carriers.

In February, Rockwell introduced new RS-23-160 and RS-23-180 axles as its initial entries in the single-drive-axle world market for Class 8 on-highway trucks and tractors.

Four additional single-speed drive axles with gross-axle-weight ratings of 13,000 to 20,000 pounds and four two-speed axles with GAWRs of 15,000 to 23,000 pounds were introduced at the International Trucking Show here.

The previously announced RS-23-160 and RS-23-180 are slated to be available in North America in July.

The remaining single-speed and two-speed axles, introduced at ITS, become available Sept. 1 for 1987 models.

Incorporating worldwide engineering and design, the RS-23-160 and the RS-23-180 axles offer fleets a wide range of 14 gear ratios, superior pulling power and optional driver-controlled, full-locking main differential for maximum tractive capability.

The entire axle family originates from a unique modular design and manufacturing concept that integrates common housings, carriers and gear sets as much as possible.

Maximizing parts commonality produces economies of scale and subsequent cost-effectiveness for end-users, Rockwell officials said.

The RS-23-160 axle is targeted for inter-city pickup and delivery and line-haul applications, where GCWs typically remain at 80,000-100,000 pounds. Like the RS-23-180, this axle provides a wide range of 14 gear ratios.

The RS-23-180 is produced particularly for line-haul or on/off-highway vehicles with larger GCWs up to 120,000 pounds.

The RS-23-180, rigorously tested in Europe, also showed no disabling mechanical failure in 200 million miles of North American road testing.

Newly introduced axle models include the RS-13-120, RS-15-125, RS-17-140, RS-20-145 single speeds and the RS-15-210, RS-17-220, RS-20-230 and RS-23-240 two-speeds.

Ring-gear sizes range from 13.25 inches for the smallest model, the RS-13-120, to 19.62 inches for the largest model, the RS-23-180.

Truck applications for the new axles range from pickup and delivery and commercial service

Rockwell buys brake business

TROY, Mich.—Rockwell International has purchased Goodyear Aerospace's dry-disk-brake business.

Rockwell Automotive's Off-Highway Products and Driveline Division is transferring the technology and related production equipment to manufacture off-highway dry disk brakes from Goodyear's Berea (Ky.) plant to its York (S.C.) plant.

Rockwell will be able to produce dry disk brakes for construction, agricultural, mining, material handling, logging and other applications.

It also will be able to manufacture non-asbestos brake linings for highway and off-highway vehicles.

Three importers gain ground with big fleet orders

Isuzu Truck, Iveco Trucks and Saab-Scania of America have picked up sizeable fleet orders.

Scania delivered 24 transit buses, a $3.25-million order, to Madison, Wis.

Isuzu Truck will sell up to 200 NPR Class 3 diesel trucks to Budget Rent a Car Co., its first sizeable fleet order.

Budget will buy the trucks for its daily rental fleet.

Roadway Package System bought 101 Iveco rail chassis for the construction of multi-stop delivery vans to use in its growing package delivery business in Pittsburgh.

RPS also bought 34 Iveco rail chassis last year.

truck personnel

Isuzu Truck names Sannomiya president

Isuzu Truck of America, South El Monte, Calif., appointed **Shin Sannomiya** president and chief executive officer.

He succeeds **Shinichi Yamayoshi** who was promoted to assistant executive director of domestic sales operations for Isuzu Motors, Ltd., Tokyo, Isuzu Truck's parent company.

Sannomiya oversees all U.S. distribution, sales, marketing and financial activities for the company.

Most recently, he was manager of the North American department of Isuzu Motors, Ltd., North American Operations, primarily responsible for export sales. He has spent 27 years with the company.

Yukihiko Furukawa has been named vice president of engineering for Isuzu Truck. He directs and coordinates the company's engineering and product areas.

A 21-year veteran of Isuzu, Furukawa previously served Isuzu Motors, Ltd., as an experimental engineering manager and most recently as manager for product planning for heavy-duty trucks and buses.

Shin Sannomiya

Y. Furukawa

Robert Saastamoinen was named district sales manager for Isuzu's Western region.

He handles dealer sales in Washington, Oregon, Idaho and Montana.

He is a 20-year veteran of the trucking business.

Iveco names Hunter director of operations

Charles W. Hunter has been named director of operations for Iveco Trucks, Blue Bell, Pa.

He manages Iveco's operations department and its vehicle preparation center in Long Beach.

Hunter came to Iveco from Pocono Foundry, Inc., Stroudsburg, Pa.

New axles, computer for Rockwell

Continued from Page 20

trucks on straight truck chassis to short-haul, intracity Class 7 tractors.

All members of the new axle family are applicable to a variety of transmissions and gas or diesel engines and are designed in metric for worldwide applicability.

Product features and benefits of the new single-speed axle lineup include:

1. A wide range for gear ratios: The 120/125 offers 4.30 to 7.17 ratios; the 140/145 offers 3.91 to 7.17, and the 160/180 provides 3.07 to 7.17 ratios.

Those ratios meet evolving vehicle requirements resulting from the use of lower-RPM diesel engines and low-profile tires.

2. Hypoid-Generoid gearing that provides increased gear life at virtually all road speeds and loading conditions.

3. Precision-forged differential gearing for higher strength, longer life and greater resistance to shock loads.

4. Extended Life pinion seals that keep road contaminants out of critical axle components and virtually eliminate lubricant leakage.

5. An axle housing design that accommodates a wide range of wheel and suspension designs.

Nearly all brakes and hubs currently available fit the new axle housings.

A key option for all single-speed models is the new driver-controlled, full-locking main differential. It permits a driver to gain maximum tractive power under poor road conditions in which a wheel could slip.

The locking differential is controlled by a driver through a dash-mounted switch. A panel indicator light and/or audible signal alerts the driver when the locking differential engages.

The option can be engaged or disengaged when the vehicle is standing still or moving at speeds under 25 MPH.

Rockwell's remanufactured-carrier program has been expanded with five additional axle model series offered to OEM dealers and truck operators.

The program now provides customers with 10 axle carriers, supported nationwide with warranties from every major truck OE manufacturer in the U.S.

The five additional axle series are the R-155 single rear axle and the SLHD, SL-100, SL-100P and SQ-100P tandem rear axles.

The program continues to cover the R-170 single rear and the SQHD, SQ-100, SQHP and SSHD tandems.

In an upgrade of its remanufacturing standards, Rockwell is guaranteeing new ring-gear and pinion replacement in every carrier to assure smooth-fitting gearing and optimum performance.

Also, the inspection of the carrier core being exchanged by the dealer and truck operator has been simplified by using a faster, one-step surface evaluation for visible housing cracks or obvious abuses.

Rockwell's new on-board vehicle computer recording system, Tripmaster Plus, was designed to give truck operators and fleet management access to more detailed vehicle performance and operation for more cost-efficient management.

The Tripmaster Plus features event recording, which monitors critical vehicle data, and a hand-held driver keypad/display.

It also features expanded memory for up to 180 vehicle trips, seven-day data retention when disconnected from vehicle power, two switch-input channels that monitor the status of any on-off function a user defines and a compact size for out-of-the-way installation.

The entire system has a modular design to permit future driver input expansion without changing or upgrading the Trip Recorder. Its modular design also allows it to be installed with or without driver input options, which can be simply "plugged in" at a more convenient time.

Decline eases in deliveries of heavy trucks

Continued from Page 20

April with 1,128, up from 830. Navistar retailed 2,452 trucks in April, off from 2,761 a year earlier.

Freightliner, which edged Mack for second place in the first quarter, held its position with 1,649 retail sales in April, off from 1,711 last year. Mack had 1,638, off from 2,494; Ford, 1,052, against 1,714; Peterbilt, 864, against 1,207, and Kenworth, 870, off from 1,167.

GMC retailed 616 and Chevrolet 40, giving General Motors a 656 total. That was off from 1,105 last year when MVMA didn't have breakouts for the two divisions' sales.

A miscellaneous category of "other domestic" Class 8 trucks recorded 115 retail deliveries against 96 last year.

During the first four months, as compared with last year, Class 7 sales showed Navistar, 9,910, up from 9,403; General Motors, 12,373 (GMC, 8,948 and Chevrolet, 3,425), up from 8,902; Ford, 9,748, down from 11,306; Mack, 672, down from 680; Mercedes-Benz, 456, off from 536, and White, 372, down from 457.

Volvo White alone reported Class 8 gains in the first four months, rising to 3,561 from 3,194.

Class 8 losses for the period were: Navistar, 8,288, off from 9,807 last year; Freightliner, 5,609, down from 6,645; Mack, 5,485, off from 8,880; Ford, 4,225, down from 5,191; Kenworth, 3,051, off from 3,831, and Peterbilt, 2,939, off from 4,122.

GMC retailed 2,476 Class 8s and Chevrolet 234 for a corporate total of 2,710. That was off from 4,078 last year.

The total for other domestic trucks was 385, up from 296 for the first four months of 1985.

Yugo docks in Texas

HOUSTON—Yugo America, Inc., has opened its second Yugo port of entry here.

VW de Mexico plans to expand export output

MEXICO CITY—Volkswagen de Mexico has confirmed that it plans to invest 50 billion pesos (approximately $107.5 million) beginning this year for plant expansion. The program is aimed at increasing exports to the U.S., Brazil and Germany.

The company said its exports in 1985 came to 40 billion pesos, a 30-percent increase over 1984.

Before the expansion projects begin, Volkswagen must have authorization from the Mexican Ministry of Commerce and Industrial Development. No hitch is expected since the firm has indicated it will comply with official regulations.

The project will also create more jobs, a key factor in Mexico's drive to pull out of its long economic crisis.

You work hard to make a sale. We work hard to keep it sold.

No deal is complete until the financing is nailed down. That's why it makes sense to call The Associates first for the financing your customers need. And the expertise that makes more of your deals stick.

We've financed more trucks and trailers than any other independent finance company. Because we work harder, and smarter. We know how to use your customer's current trucks to buy new ones. When to recommend leasing. And how to handle any deal, from a single truck to a fleet of hundreds. Better still, we move fast. So you and your customer get the answer you need. In as little as 24 hours from the time you talk to our representative.

Call The Associates today. And let us help you close your next deal.

THE ASSOCIATES® A GULF + WESTERN COMPANY

We listen. We respond.

Nissan, Mitsubishi deny import plans

TOKYO—Nissan Motor Co. emphatically denied a Japanese newspaper report that it has decided to import cars from its Taiwanese affiliate, Yue Loong Motor Co., starting in 1987.

A similar report that Mitsubishi Motors Corp. will re-import completed cars from its Australian subsidiary in large numbers also was denied—but not as emphatically as Nissan's denial—although MMC said it "brought in five or six cars . . . for trial purposes."

Nihon Keizai, a business publication, said Nissan would import 1,800-cc X101 models assembled in Taiwan with parts supplied by Nissan.

The report said Nissan initially would import several hundred units annually from Yue Loong, in which it acquired a 25 percent equity last July.

A Nissan spokesman said the company has "no plans, in any form, for exports from Yue Loong."

"When Nissan acquired its 25-percent equity in Yue Loong, the Taiwanese Government required that part of the future production be exported," he said.

"However, no plans for exports have been devised for Yue Loong," he emphasized. "That includes export destination, the car involved and the quantity."

Nihon Keizai said Mitsubishi will import 2,600-cc Galant Sigma models manufactured by Mitsubishi Motors Australia, Ltd. The publication said MMC plans to import "about 50 of the cars this month."

An MMC spokesman said the company has no plans to import the cars "because it's very expensive and time-consuming to install emission controls and bring the cars up to government standards."

"MMC has imported five or six of the cars, which were Magna models, for trial purposes," he said. "The Australian Embassy bought two of the cars."

The MMC spokesman said the Magnas are equipped with 2.6-liter engines and are wider than the Galant Sigma.

The newspaper said the plans of Nissan and MMC "to re-import cars assembled abroad with parts supplied by them have been necessitated by the yen's sharp appreciation against the dollar."

A factor that could lead to MMC importing cars from Australia is that its subsidiary there has not met that government's requirement that foreign manufacturers have a local-content ratio of 85 percent. However, if the foreign auto makers export vehicles, the local-content ratio decreases according to the export value.

Briggs-Stratton, Daihatsu team up

TOKYO—Daihatsu Motor Co. said it has signed an agreement to establish a joint venture with Briggs & Stratton Corp., Milwaukee, to produce general-use engines in Japan.

The new firm will be owned equally by the two companies.

The new plant will be built in Shiga, Western Japan, and will begin production in August, 1987. It will produce 480-cc, 14-HP air-cooled engines for use with lawn mowers, power generators and pumps. Initial production is targeted at 5,000 units a month.

The engines will be marketed overseas through Briggs & Stratton's dealer network.

Domestic road called rocky

By Jenny L. King
Detroit Reporter

Market researcher J.D. Power III believes the domestic auto industry won't begin to make up ground lost to the growing import market until early in the next decade. And by then, imports may account for 44 percent of the U.S. new-car market.

Power heads J.D. Power & Associates, Westlake Village, Calif. Based on results of the surveys which are his stock in trade, he suggested that total imported-car sales could top 40 percent of the U.S. market by the early 1990s.

J.D. Power III

His automotive marketing studies are watched closely by auto makers and car buyers alike, and his conclusions always spark discussion.

"Ford Motor Co. is beginning to attract higher-income, better-educated customers," Power told a recent gathering of the Detroit Auto Writers Group. "The new Sable and Taurus are helping Ford make inroads into GM's share of the market."

The Asian piece of U.S. new-car sales will be about 36 percent by 1990, he said, with European products accounting for another 8 percent. Korean-built vehicles may reach 800,000 units a year by the next decade, which is their goal, he continued.

With his fingers directly on the pulses of some 26,000 new-car buyers, Power claims to know how they feel about their new cars and what they'd like to buy—"BMW, Mercedes, Audi 5000."

He also stressed what today's shoppers are looking for: "Quality and reliability are first, followed by the price, which means good value for the money spent."

He added, "Loyalty to cars built in the U.S. is not very strong.

"Our customer satisfaction survey indicates that it's the nitty-gritty nuisance-type problems that drive people crazy," he said. And Japanese cars have a reputation for running trouble-free for the first couple of years, he said.

"Squeaking brakes, radio static, fit and finish, a rattle in the dashboard are the kinds of things that are sometimes hard to find and fix, and they really bother customers," Power said.

Not only are Americans generally unpatriotic in their car-buying habits, they are not loyal to particular makes, Power said. Only one buyer in five returns to the same dealer he or she most recently patronized, he reported.

Power offered the opinion that Honda should not have started a new, separate division with its upscale Acura line. Toyota and Nissan will be bringing in greater numbers of luxury models in the future though probably not in the new-division fashion Honda chose, he said. That method can require the franchiseholder to invest up to $3.5 million in a new facility, he said.

"The Europeans aren't taking the Japanese seriously," said Power. He indicated that the unobtrusive entry of upscale Acura imports into the U.S. market will be taking sales away from the European makes.

Honda has a reputation of building a car "that doesn't need a mechanic to keep it running," he said.

European imports will be forced upmarket and their builders will have to be more innovative to continue to compete with the Japanese, Power said.

The conversation-prompting observations kept coming.

"Captive imports have always been treated as stepchildren by the domestics," Power continued, noting that, for one thing, they could be more price-competitive than they are. Staff assigned to captives all along the line tend to treat them like they are "second-class," he said.

Mitsubishi models sold by Chrysler dealers aren't perceived to be as satisfactory as the same cars delivered by Mitsubishi dealers, he said.

Quality will remain the primary interest of new-car buyers for the next few years, he predicted. And the increased sharing of technology and equalization of products will make segmented marketing efforts of utmost importance, Power concluded.

Arveco wins $1 billion pact for U.S. military trucks

ANN ARBOR, Mich.—Arveco, Inc., formerly a joint venture between the BMY division of Harsco Corp. and General Automotive Corp. here, won a multi-year $1 billion contract to produce M-939 5-ton trucks for the U.S. Armed Forces.

Arveco was originally set up to develop and produce 5-ton military trucks.

On Feb. 1, 1986, GAC sold its joint-venture interest in Arveco to BMY in return for royalty payments extending over the life the of the 5-ton-truck contract and other considerations.

GAC retained other development and manufacturing assets and rights held by its Government Products Division, including commercial chassis designs, U.S. Postal Service vehicle designs and specialty military truck development programs.

Having leased its Government Products Division facilities here to BMY, GAC is relocating its Government Products activities to a new facility in the Ann Arbor area.

Mark J. Obert, president of GAC, said his firm planned to work together with Arveco as it develops its manufacturing location and brings the new military truck into production.

He cited GAC's continuing interest in military and commercial vehicle development and product and its pursuit of those markets with new products.

Huizenga named president of warranty company

HARBOR CITY, Calif.—Walter E. Huizenga has been promoted to president of General Risk Management Corp., which works with national automotive accounts and OE manufacturers to create customized vehicle service agreement programs

Huizenga formerly was senior vice president and general counsel of the General Group of Cos., General Risk Management's parent company. Before that, he was NADA chief counsel and executive director of legal and regulatory affairs for 10 years.

Toyota Celica fares best in NHTSA tests

By Helen Kahn
Washington Bureau Chief

WASHINGTON—The Toyota Celica coupe has come out best to date among the 1986 vehicles crashed for NHTSA in its 35-MPH assessment program.

In addition, NHTSA announced crash results for a Saab 9000 four-door hatchback, a Honda Accord DX four-door sedan, a Volkswagen Scirocco two-door hatchback and an American Motors Jeep Comanche pickup. The Comanche fared the poorest of the five models.

The 35-MPH crash into a barrier is 5 MPH or one-third more stringent than the test speed for any vehicle safety standard. The instrumented dummies are belted. The results are meant to provide the degree of relative safety within the same class of vehicle.

However, only one model is crashed and additional tests could show different results depending upon the way vehicles are manufactured and because of slight variances in test conditions.

The important numbers are the Head Injury Criterion and chest deceleration. An HIC of 1000 and chest deceleration of 60 Gs are considered thresholds of survival without very serious injury. NHTSA still considers the program experimental although it has been in operation since 1979.

The Toyota Celica had HIC levels of 627 and 430 and chest deceleration Gs of 42 and 40 for driver and passenger, respectively.

The Honda Accord DX four-door sedan also did very well with driver and passenger HICs—909 and 712—and with the chest deceleration for the passenger dummy—33 Gs—but no data was recorded during the crash for the driver chest Gs.

The Jeep Comanche pickup had HIC levels of 1147 and 1636 for driver and passenger and a chest G reading of 50 for the driver, but no data was available for the passenger.

An AMC spokesman said that all Jeeps, including the Comanche pickup, comply with all applicable safety standards.

The Saab 9000 four-door hatchback had an acceptable driver HIC of 773 but a very high G level for the chest—71 Gs. The passenger dummy HIC was 1443 and the chest deceleration reading was 46 Gs.

Asked about those extremely unusual head-and-chest mixed results, Saab-Scania of America dubbed them "unrepresentative and inappropriate" since post-crash inspection revealed the driver's seat was not securely latched.

The company said unexpected movement caused abnormal behavior in the driver dummy and directly or indirectly significantly affected the reaction of the passenger dummy. Saab-Scania added it expects its new model to exceed the excellent safety record of the Saab 900, which was rated best in its class on personal injury claims by the Highway Loss Data Institute.

The VW Scirocco recorded a driver HIC level of 887 and a chest G reading of 52, but the passenger dummy recorded a slightly high HIC of 1070 and failed to record any data for the chest Gs.

Outlook rosy for global car market

Continued from Page 1

based economist, John Hammond. "It's narrowed the competitive edge of the foreign competitors," he said.

"The competition will remain intense," he added, "but demand will be at least as strong as it has been."

Nevertheless, the rosier forecast doesn't change the story of the World Outlooks of the past year.

Competition will remain stiff throughout the decade with more companies entering the North American market. U.S. auto makers will continue to lose market share to the imports over the long haul. And North America is headed toward an overcapacity situation similar to that in Europe.

While U.S. car makers win a reprieve for the next 18 months, Hammond warned that clouds will begin forming on the horizon after 1987. The clouds include problems resulting from tax reform (which shifts incentives away from consumer spending on durable goods), deficit-reduction efforts, a possible tax increase and a general dip in the economy.

Also, the Japanese and South Korean auto makers will begin producing cars in North America in full force later in the decade. Those companies eventually will produce 1.5 million vehicles a year in North America.

Western Europe shines as a bright spot in the World Outlook as economic factors have an even greater impact on European nations than on North America.

The World Outlook shows Western European countries enjoying higher growth and lower inflation than they have seen since the start of the decade. Those factors and higher wages, have heightened consumer confidence.

In addition, Western Europe has received a boost from the decline in the U.S. dollar and lower oil prices, which are denominated in U.S. dollars.

"Economic gravity will prevail," said John Lawson, DRI's London-based economist.

The Western European car market will benefit from the good economic news. The World Outlook upgrades Western European car sales to close to 11 million units for this year, compared with 10.6 million in 1985, and to 11.5 million by 1990. Production will rise to 11.4 million cars this year. By 1990, Western Europe will reach production of 12 million cars per year (see accompanying table).

Lawson said there will be no letup in competition, which has been intense with a half-dozen car companies in a close race for the top sales spot. The impact will be seen in the bottom line of European vehicle manufacturers which, collectively, have lost money for the past five years.

The makers have reaped the harvests of their cost-cutting efforts. In the U.K., Ford doubled its year-ago profits in its most recent fiscal period. So did Fiat. Peugeot will report a profit, its first in six years.

"We will still see some black spots," said Lawson, "namely Renault."

The prestige manufacturers also will see a difference in their bottom lines, but for the worse, Lawson said. Those companies have made record profits through record sales in the U.S. market while the U.S. dollar peaked.

"For the short run," Lawson said, "it won't be too serious, but eventually it will dig into their profits."

He said the dollar would have to fall even farther to force them to re-think their U.S. strategy but marketing problems already have arisen. The prestige makers are faced with raising prices, and they may decide to ship cars with less equipment. During the days of the strong U.S. dollar, prestige makers shipped heavily equipped vehicles.

The Japanese makers present no major threat in the next two years or until they avoid trade restraints through local production, Lawson said. Nevertheless, some new faces may appear on the Western European scene, including U.S. makers that have been blocked out of Europe by the strong dollar.

Ford will ship U.S.-made engines to its European subsidiaries. American Motors said it will sell its new Jeep Wrangler in Europe.

There has been speculation that Chrysler Corp., on its own or through a joint venture with Fiat, will sell its minivan, its new Maserati-designed luxury coupe or its new U.S.-made Dakota pickup truck along with a four-wheel-drive in Europe. Chrysler refuses to confirm the speculation.

Cadillac has said it may sell its Pininfarina-designed luxury Allante in Europe, but Lawson views the move more as an image booster than added sales volume.

"If they sell well in Switzerland or West Germany, you can bet you will see that in their U.S. advertising," he said.

Hammond said U.S. makers will approach the European market cautiously and in low volume because their European subsidiaries already have more capacity than they need.

Other new faces on the European scene may be makers from South Korea and Taiwan. Currencies of those countries follow the direction of the U.S. dollar. A fall in their currencies means they can be more competitive than before against the Japanese and Europeans, said Lawson.

"It means the South Koreans can think of selling in Western Europe because of more favorable exchange rates," he said.

While the next 18 months will be spent sorting out their U.S. strategies, the South Koreans also will be "casing" Europe, Lawson said. "They may be more ready to divert vehicles to Western Europe if the U.S. market is not as attractive or as amenable to their products as they anticipate."

Japan will continue to churn out cars for foreign markets while sales at home will fall even farther. The latest World Outlook downgrades car sales in the Japanese market because of only modest growth projections for Japan during the next three years. Meanwhile, Japanese vehicle production plans continue to climb.

The rapid change in the yen-dollar exchange rate has put pressure on Japanese car pricing. Japanese makers to date have increased prices an average of 10 percent in the U.S. The invincibility of the Japanese also is in question because of the new South Korean, Taiwanese and Brazilian entries into North America.

In addition, some concern has been shown as to whether Japanese makers can fulfill their import plans for the U.S. and also sell out all of their U.S. production capacity in the future.

Despite the questions, Hammond noted that the price increases so far have not turned buyers away from Japanese vehicles. He does see the North American industry headed for a fierce price war later in the decade.

"The question is who will win that battle," Hammond said. "And I wouldn't bet against the Japanese."

$18,000 spiff

DENVER—Johnny Haas Lincoln-Mercury is advertising what may be the ultimate freebie: An $18,000 Merkur with the purchase of any Zimmer Classic, priced at $67,900.

But Noce Cadillac, Pittsburgh, is hot on its heels: During May, Noce will give away a Cadillac Cimarron with the purchase of a Zimmer Classic.

A spokesman at the Denver deal said he sold the Merkurs, but still has the Zimmers.

"They were '85 Merkurs. We had a factory incentive on them and figured this might be a good way to sell them."

The giveaway idea brought people into Johnny Haas, where Zimmer sales run 8-10 units a year. But buyers chose the Merkur over the much more expensive Zimmer.

Noce Cadillac reported a similar experience, with a twist: The one Zimmer customer opted for a discount worth the cost of the "free" Cimarron.

"We'll probably extend the offer past the end of the month," a dealership spokesman said. "We still have six Zimmers in stock."

Auto output pegged at 166,877

By Kathy Boyer
Detroit Reporter

U.S. auto makers scheduled 166,877 cars for production last week, 1.42 percent more than the previous week's 164,546 but 2.36 percent below the year-ago week's 170,902.

So far this year, 3,424,227 cars have been assembled, 4.32 percent fewer than the 3,578,873 completed last year at this point.

Last week's targeted production was split this way: General Motors, 56.16 percent; Ford Motor Co., 24.10 percent; Chrysler Corp., 13.76 percent; Honda of America Mfg. Co., 2.62 percent; New United Motor Mfg., Inc., 2.16 percent, and Volkswagen of America, 1.20 percent.

American Motors' Kenosha plant was down last week for inventory adjustment.

The plant is expected to resume production tomorrow (May 27).

Nissan's car line in Smyrna, Tenn., remains down for model changeover and is not expected to resume output until August.

Ford's Capri line resumed production last week (May 19) after being idle for two weeks due to a parts shortage.

Ford slated overtime this Saturday (May 31) at its Wayne, Mich. plant.

Daily overtime was scheduled at Chrysler plants in Belvidere, Ill.; St. Louis (No. 2), and Newark, Del.

No overtime was scheduled Saturday (May 24) because of the holiday weekend. All plants are closed today (May 26) in observance of Memorial Day.

Truck output slips from 1986 peak

With no overtime scheduled Saturday (May 24) because of the holiday weekend, domestic truck production was 74,201 last week, 4.89 percent below the previous week's 78,013.

The prior week's output was the highest of any week this year.

Last week's scheduled build was 3.45 percent more than the year-ago week's 71,725.

Year-to-date, 1,475,652 trucks have been assembled, 3.77 percent more than the 1,422,069 completed last year at this point.

All plants are closed today.

Canadian production cut by holiday

Last week's car and truck production in Canada dipped slightly due to plant closings on Victoria Day (May 19).

The short work week reduced scheduled auto production to 20,325. It was 12.33 percent below the previous week's 23,184 and was about even with (0.18 percent below) the year-ago week's 20,361.

So far this year, 468,904 cars have been built, 11.32 percent more than the 421,221 completed at this time last year.

Canadian truck makers targeted production of 16,416 units last week, 3.45 percent below the previous week's 17,003 and 3.79 percent below the year-ago week's 17,062.

Year-to-date, 384,075 trucks have been assembled, 4.06 percent more than the 369,094 built last year at this point.

'Radical' GM plan stunned supplier

By A.S. Plotkin
Staff Correspondent

FRAMINGHAM, Mass.—General Motors' proposal to build a plant to produce plastic body parts next door to its assembly plant here was "so radical" that management officials of DiversiTech General at first resisted the idea.

DiversiTech will lease the plant, which will make body panels for GM's minivan.

Al Schmeiser, president of DiversiTech's Reinforced Plastics Division, said the company "did a lot of thinking about whether we wanted to make that kind of investment" (about $90 million for equipment).

The firm had "a consulting study done to see whether it was the best and cheapest way of meeting the challenge.

Schmeiser told a town meeting that DiversiTech, which originally thought it would supply only half the panels for the projected 200,000 front-wheel-drive minivans for the 1990 model year, finally agreed to GM's proposal.

Schmeiser and James Westby, manager of GM's minivan program—codenamed GM200—both stressed the urgency of securing Framingham's OK, since the schedule contemplates groundbreaking in July and completion of the $50-million plant in two years.

Westby recounted some of the reasons for selecting Framingham. The unemployment rate is less than 3 percent. The assembly plant, which turns out the Chevrolet Celebrity and Oldsmobile Cutlass Ciera, now employs 4,000 on two shifts.

"We decided Framingham would be a good location based on its A-car platform production and a minimum investment to retool," he said. He also mentioned the quality of the product and "union cooperation."

Another factor, he said, is the construction, now under way, of a $250-million automated paint plant adjacent to the assembly facility.

"Without that paint shop, we would not be able to assemble the GM200 in Framingham," Westby added. "It will offer a state-of-the-art process for base-coat and clear-coat painting."

While there were questions and calls for clarification from some citizens at the hastily called town meeting, there did not appear to be much of the anger and resentment that has boiled up at previous presentations involving GM.

The most recent one came when GM announced its plan to build the paint plant. It required more land but town officials were reluctant to give in. Gov. Michael Dukakis, who had long held a reputation as a liberal frequently jousting with big business, stepped in.

With the help of the legislature, 35 acres of state-owned land which the town had assumed it was promised, was turned over to GM.

The plastics parts proposal—it would mean 1,000 new jobs on three shifts—has the blessing of the UAW. UAW Regional Director E.W. Barrett said it would "secure the future of the Framingham plant."

Schmeiser said one advantage of locating the plastics facility next to the GM unit would be reducing the number of incoming trailer trucks to 15 daily. If located elsewhere, 40 trucks would be required.

Should the town reject the new plant, Schmeiser said, his company would seek a site 30 to 40 miles away. DiversiTech has a research facility in Salem, N.H., and a source indicated that a New Hampshire site would be possible.

New axles, computer for Rockwell

Continued from Page 20

trucks on straight truck chassis to short-haul, intracity Class 7 tractors.

All members of the new axle family are applicable to a variety of transmissions and gas or diesel engines and are designed in metric for worldwide applicability.

Product features and benefits of the new single-speed axle lineup include:

1. A wide range for gear ratios: The 120/125 offers 4.30 to 7.17 ratios; the 140/145 offers 3.91 to 7.17, and the 160/180 provides 3.07 to 7.17 ratios.

Those ratios meet evolving vehicle requirements resulting from the use of lower-RPM diesel engines and low-profile tires.

2. Hypoid-Generoid gearing that provides increased gear life at virtually all road speeds and loading conditions.

3. Precision-forged differential gearing for higher strength, longer life and greater resistance to shock loads.

4. Extended Life pinion seals that keep road contaminants out of critical axle components and virtually eliminate lubricant leakage.

5. An axle housing design that accommodates a wide range of wheel and suspension designs.

Nearly all brakes and hubs currently available fit the new axle housings.

A key option for all single-speed models is the new driver-controlled, full-locking main differential. It permits a driver to gain maximum tractive power under poor road conditions in which a wheel could slip.

The locking differential is controlled by a driver through a dash-mounted switch. A panel indicator light and/or audible signal alerts the driver when the locking differential engages.

The option can be engaged or disengaged when the vehicle is standing still or moving at speeds under 25 MPH.

Rockwell's remanufactured-carrier program has been expanded with five additional axle model series offered to OEM dealers and truck operators.

The program now provides customers with 10 axle carriers, supported nationwide with warranties from every major truck OE manufacturer in the U.S.

The five additional axle series are the R-155 single rear axle and the SLHD, SL-100, SL-100P and SQ-100P tandem rear axles.

The program continues to cover the R-170 single rear and the SQHD, SQ-100, SQHP and SSHD tandems.

In an upgrade of its remanufacturing standards, Rockwell is guaranteeing new ring-gear and pinion replacement in every carrier to assure smooth-fitting gearing and optimum performance.

Also, the inspection of the carrier core being exchanged by the dealer and truck operator has been simplified by using a faster, one-step surface evaluation for visible housing cracks or obvious abuses.

Rockwell's new on-board vehicle computer recording system, Tripmaster Plus, was designed to give truck operators and fleet management access to more detailed vehicle performance and operation for more cost-efficient management.

The Tripmaster Plus features event recording, which monitors critical vehicle data, and a hand-held driver keypad/display.

It also features expanded memory for up to 180 vehicle trips, seven-day data retention when disconnected from vehicle power, two switch-input channels that monitor the status of any on-off function a user defines and a compact size for out-of-the-way installation.

The entire system has a modular design to permit future driver input expansion without changing or upgrading the Trip Recorder. Its modular design also allows it to be installed with or without driver input options, which can be simply "plugged in" at a more convenient time.

VW de Mexico plans to expand export output

MEXICO CITY—Volkswagen de Mexico has confirmed that it plans to invest 50 billion pesos (approximately $107.5 million) beginning this year for plant expansion. The program is aimed at increasing exports to the U.S., Brazil and Germany.

The company said its exports in 1985 came to 40 billion pesos, a 30-percent increase over 1984.

Before the expansion projects begin, Volkswagen must have authorization from the Mexican Ministry of Commerce and Industrial Development. No hitch is expected since the firm has indicated it will comply with official regulations.

The project will also create more jobs, a key factor in Mexico's drive to pull out of its long economic crisis.

Decline eases in deliveries of heavy trucks

Continued from Page 20

April with 1,128, up from 830. Navistar retailed 2,452 trucks in April, off from 2,761 a year earlier.

Freightliner, which edged Mack for second place in the first quarter, held its position with 1,649 retail sales in April, off from 1,711 last year. Mack had 1,638, off from 2,494; Ford, 1,052, against 1,714; Peterbilt, 864, against 1,207, and Kenworth, 870, off from 1,167.

GMC retailed 616 and Chevrolet 40, giving General Motors a 656 total. That was off from 1,105 last year when MVMA didn't have breakouts for the two divisions' sales.

A miscellaneous category of "other domestic" Class 8 trucks recorded 115 retail deliveries against 96 last year.

During the first four months, as compared with last year, Class 7 sales showed Navistar, 9,910, up from 9,403; General Motors, 12,373 (GMC, 8,948 and Chevrolet, 3,425), up from 8,902; Ford, 9,748, down from 11,306; Mack, 672, down from 680; Mercedes-Benz, 456, off from 536, and White, 372, down from 457.

Volvo White alone reported Class 8 gains in the first four months, rising to 3,561 from 3,194.

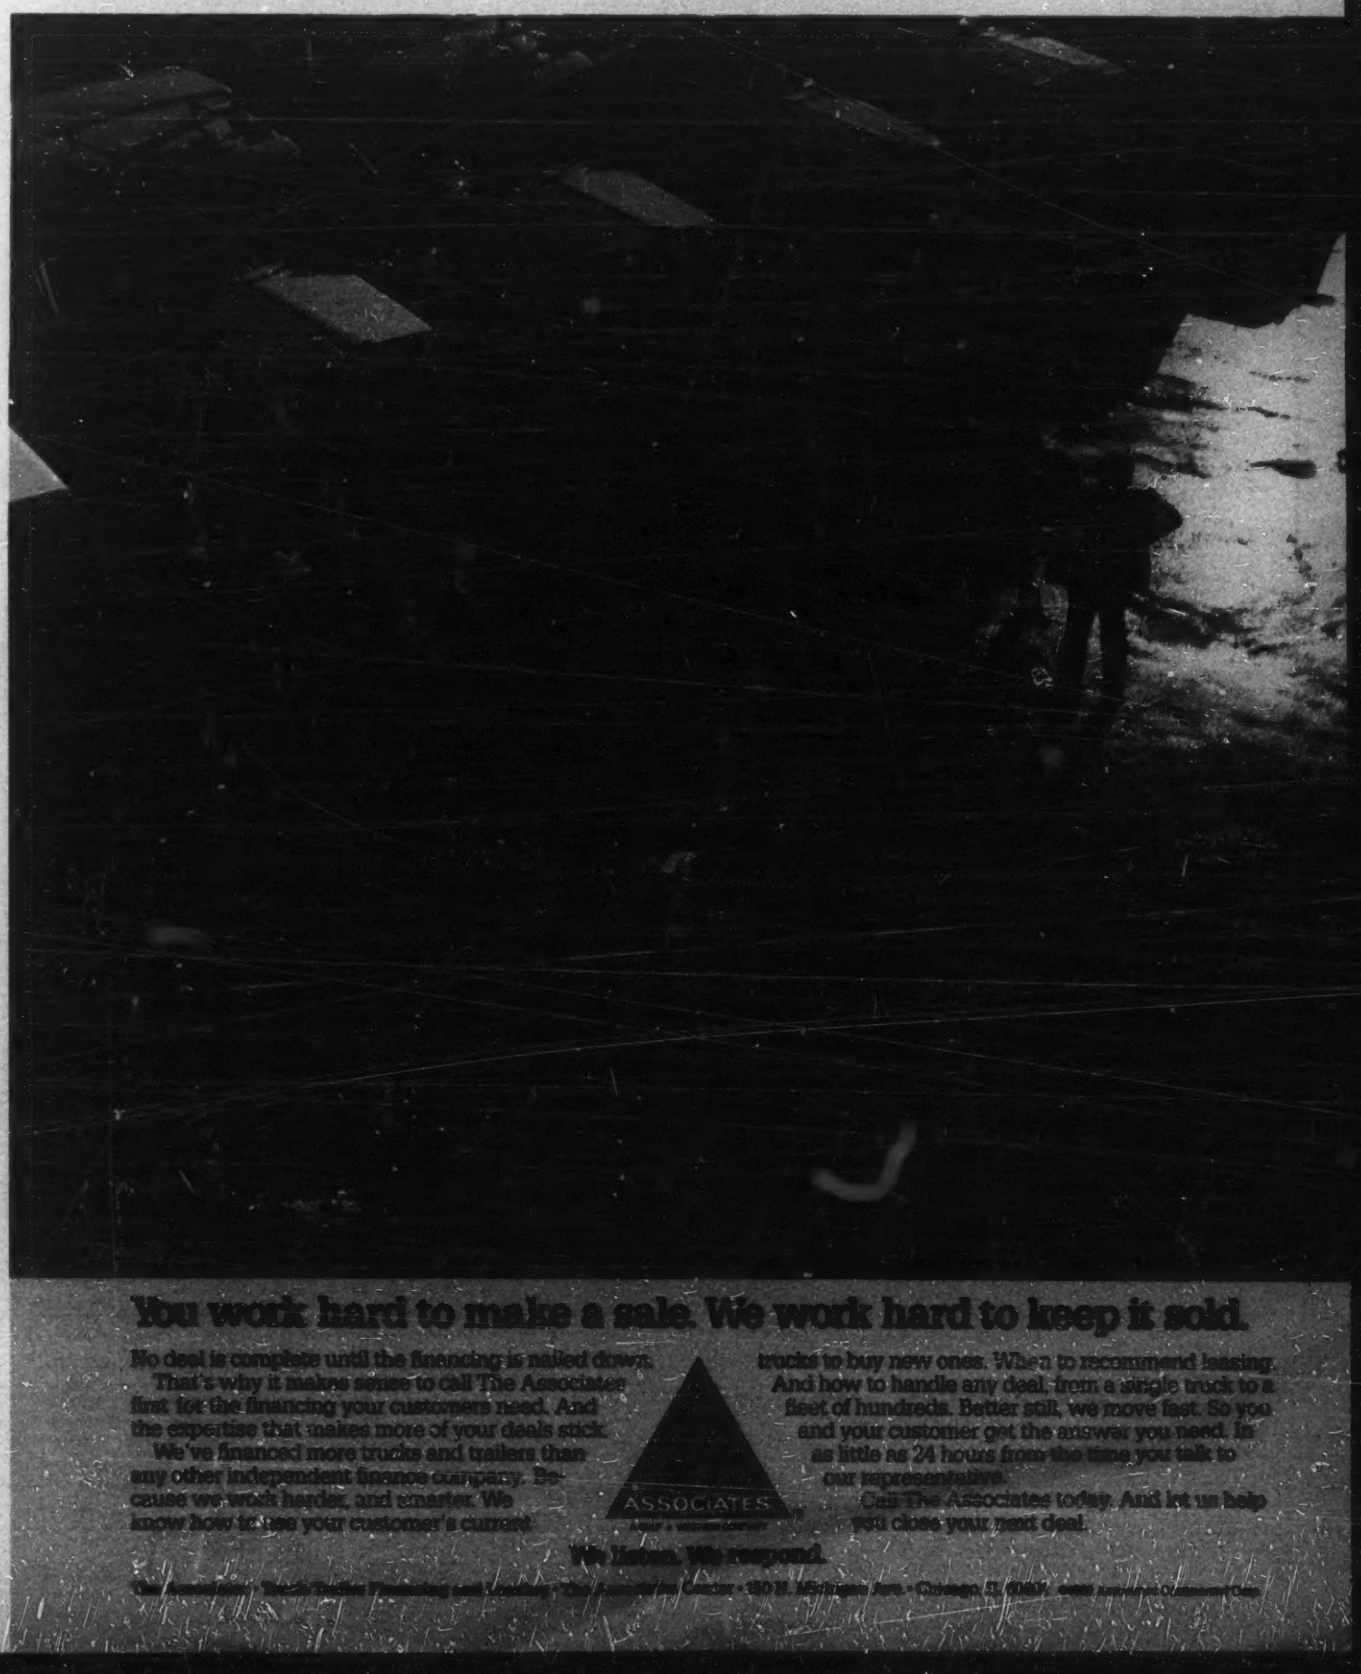
Class 8 losses for the period were: Navistar, 8,288, off from 9,807 last year; Freightliner, 5,609, down from 6,645; Mack, 5,485, off from 8,880; Ford, 4,225, down from 5,191; Kenworth, 3,051, off from 3,831, and Peterbilt, 2,939, off from 4,122.

GMC retailed 2,476 Class 8s and Chevrolet 234 for a corporate total of 2,710. That was off from 4,078 last year.

The total for other domestic trucks was 385, up from 296 for the first four months of 1985.

Yugo docks in Texas

HOUSTON—Yugo America, Inc., has opened its second Yugo port of entry here.



You work hard to make a sale. We work hard to keep it sold.
No deal is complete until the financing is nailed down.
That's why it makes sense to call The Associates first for the financing your customers need. And the expertise that makes more of your deals stick.
We've financed more trucks and trailers than any other independent finance company. Because we work harder, and smarter. We know how to use your customer's current trucks to buy new ones. When to recommend leasing. And how to handle any deal, from a single truck to a fleet of hundreds. Better still, we move fast. So you and your customer get the answer you need. In as little as 24 hours from the time you talk to our representative.
Call The Associates today. And let us help you close your next deal.

We listen. We respond.

Nissan, Mitsubishi deny import plans

TOKYO—Nissan Motor Co. emphatically denied a Japanese newspaper report that it has decided to import cars from its Taiwanese affiliate, Yue Loong Motor Co., starting in 1987.

A similar report that Mitsubishi Motors Corp. will re-import completed cars from its Australian subsidiary in large numbers also was denied—but not as emphatically as Nissan's denial—although MMC said it "brought in five or six cars . . . for trial purposes."

Nihon Keizai, a business publication, said Nissan would import 1,800-cc X101 models assembled in Taiwan with parts supplied by Nissan.

The report said Nissan initially would import several hundred units annually from Yue Loong, in which it acquired a 25 percent equity last July.

A Nissan spokesman said the company has "no plans, in any form, for exports from Yue Loong."

"When Nissan acquired its 25-percent equity in Yue Loong, the Taiwanese Government required that part of the future production be exported," he said.

"However, no plans for exports have been devised for Yue Loong," he emphasized. "That includes export destination, the car involved and the quantity."

Nihon Keizai said Mitsubishi will import 2,600-cc Galant Sigma models manufactured by Mitsubishi Motors Australia, Ltd. The publication said MMC plans to import "about 50 of the cars this month."

An MMC spokesman said the company has no plans to import the cars "because it's very expensive and time-consuming to install emission controls and bring the cars up to government standards."

"MMC has imported five or six of the cars, which were Magna models, for trial purposes," he said. "The Australian Embassy bought two of the cars."

The MMC spokesman said the Magnas are equipped with 2.6-liter engines and are wider than the Galant Sigma.

The newspaper said the plans of Nissan and MMC "to re-import cars assembled abroad with parts supplied by them have been necessitated by the yen's sharp appreciation against the dollar."

A factor that could lead to MMC importing cars from Australia is that its subsidiary there has not met that government's requirement that foreign manufacturers have a local-content ratio of 85 percent. However, if the foreign auto makers export vehicles, the local-content ratio decreases according to the export value.

Briggs-Stratton, Daihatsu team up

TOKYO—Daihatsu Motor Co. said it has signed an agreement to establish a joint venture with Briggs & Stratton Corp., Milwaukee, to produce general-use engines in Japan.

The new firm will be owned equally by the two companies.

The new plant will be built in Shiga, Western Japan, and will begin production in August, 1987. It will produce 480-cc, 14-HP air-cooled engines for use with lawn mowers, power generators and pumps. Initial production is targeted at 5,000 units a month.

The engines will be marketed overseas through Briggs & Stratton's dealer network.

Domestic road called rocky

By Jenny L. King
Detroit Reporter

Market researcher J.D. Power III believes the domestic auto industry won't begin to make up ground lost to the growing import market until early in the next decade. And by then, imports may account for 44 percent of the U.S. new-car market.

Power heads J.D. Power & Associates, Westlake Village, Calif. Based on results of the surveys which are his stock in trade, he suggested that total imported-car sales could top 40 percent of the U.S. market by the early 1990s.

J.D. Power III

His automotive marketing studies are watched closely by auto makers and car buyers alike, and his conclusions always spark discussion.

"Ford Motor Co. is beginning to attract higher-income, better-educated customers," Power told a recent gathering of the Detroit Auto Writers Group. "The new Sable and Taurus are helping Ford make inroads into GM's share of the market."

The Asian piece of U.S. new-car sales will be about 36 percent by 1990, he said, with European products accounting for another 8 percent. Korean-built vehicles may reach 800,000 units a year by the next decade, which is their goal, he continued.

With his fingers directly on the pulses of some 26,000 new-car buyers, Power claims to know how they feel about their new cars and what they'd like to buy—"BMW, Mercedes, Audi 5000."

He also stressed what today's shoppers are looking for: "Quality and reliability are first, followed by the price, which means good value for the money spent."

He added, "Loyalty to cars built in the U.S. is not very strong.

"Our customer satisfaction survey indicates that it's the nitty-gritty nuisance-type problems that drive people crazy," he said. And Japanese cars have a reputation for running trouble-free for the first couple of years, he said.

"Squeaking brakes, radio static, fit and finish, a rattle in the dashboard are the kinds of things that are sometimes hard to find and fix, and they really bother customers," Power said.

Not only are Americans generally unpatriotic in their car-buying habits, they are not loyal to particular makes, Power said. Only one buyer in five returns to the same dealer he or she most recently patronized, he reported.

Power offered the opinion that Honda should not have started a new, separate division with its upscale Acura line. Toyota and Nissan will be bringing in greater numbers of luxury models in the future though probably not in the new-division fashion Honda chose, he said. That method can require the franchiseholder to invest up to $3.5 million in a new facility, he said.

"The Europeans aren't taking the Japanese seriously," said Power. He indicated that the unobtrusive entry of upscale Acura imports into the U.S. market will be taking sales away from the European makes.

Honda has a reputation of building a car "that doesn't need a mechanic to keep it running," he said.

European imports will be forced upmarket and their builders will have to be more innovative to continue to compete with the Japanese, Power said.

The conversation-prompting observations kept coming.

"Captive imports have always been treated as stepchildren by the domestics," Power continued, noting that, for one thing, they could be more price-competitive than they are. Staff assigned to captives all along the line tend to treat them like they are "second-class," he said.

Mitsubishi models sold by Chrysler dealers aren't perceived to be as satisfactory as the same cars delivered by Mitsubishi dealers, he said.

Quality will remain the primary interest of new-car buyers for the next few years, he predicted. And the increased sharing of technology and equalization of products will make segmented marketing efforts of utmost importance, Power concluded.

Arveco wins $1 billion pact for U.S. military trucks

ANN ARBOR, Mich.—Arveco, Inc., formerly a joint venture between the BMY division of Harsco Corp. and General Automotive Corp. here, won a multi-year $1 billion contract to produce M-939 5-ton trucks for the U.S. Armed Forces.

Arveco was originally set up to develop and produce 5-ton military trucks.

On Feb. 1, 1986, GAC sold its joint-venture interest in Arveco to BMY in return for royalty payments extending over the life the of the 5-ton-truck contract and other considerations.

GAC retained other development and manufacturing assets and rights held by its Government Products Division, including commercial chassis designs, U.S. Postal Service vehicle designs and specialty military truck development programs.

Having leased its Government Products Division facilities here to BMY, GAC is relocating its Government Products activities to a new facility in the Ann Arbor area.

Mark J. Obert, president of GAC, said his firm planned to work together with Arveco as it develops its manufacturing location and brings the new military truck into production.

He cited GAC's continuing interest in military and commercial vehicle development and product and its pursuit of those markets with new products.

Huizenga named president of warranty company

HARBOR CITY, Calif.—Walter E. Huizenga has been promoted to president of General Risk Management Corp., which works with national automotive accounts and OE manufacturers to create customized vehicle service agreement programs

Huizenga formerly was senior vice president and general counsel of the General Group of Cos., General Risk Management's parent company. Before that, he was NADA chief counsel and executive director of legal and regulatory affairs for 10 years.

Toyota Celica fares best in NHTSA tests

By Helen Kahn
Washington Bureau Chief

WASHINGTON—The Toyota Celica coupe has come out best to date among the 1986 vehicles crashed for NHTSA in its 35-MPH assessment program.

In addition, NHTSA announced crash results for a Saab 9000 four-door hatchback, a Honda Accord DX four-door sedan, a Volkswagen Scirocco two-door hatchback and an American Motors Jeep Comanche pickup. The Comanche fared the poorest of the five models.

The 35-MPH crash into a barrier is 5 MPH or one-third more stringent than the test speed for any vehicle safety standard. The instrumented dummies are belted. The results are meant to provide the degree of relative safety within the same class of vehicle.

However, only one model is crashed and additional tests could show different results depending upon the way vehicles are manufactured and because of slight variances in test conditions.

The important numbers are the Head Injury Criterion and chest deceleration. An HIC of 1000 and chest deceleration of 60 Gs are considered thresholds of survival without very serious injury. NHTSA still considers the program experimental although it has been in operation since 1979.

The Toyota Celica had HIC levels of 627 and 430 and chest deceleration Gs of 42 and 40 for driver and passenger, respectively.

The Honda Accord DX four-door sedan also did very well with driver and passenger HICs—909 and 712—and with the chest deceleration for the passenger dummy—33 Gs—but no data was recorded during the crash for the driver chest Gs.

The Jeep Comanche pickup had HIC levels of 1147 and 1636 for driver and passenger and a chest G reading of 50 for the driver, but no data was available for the passenger.

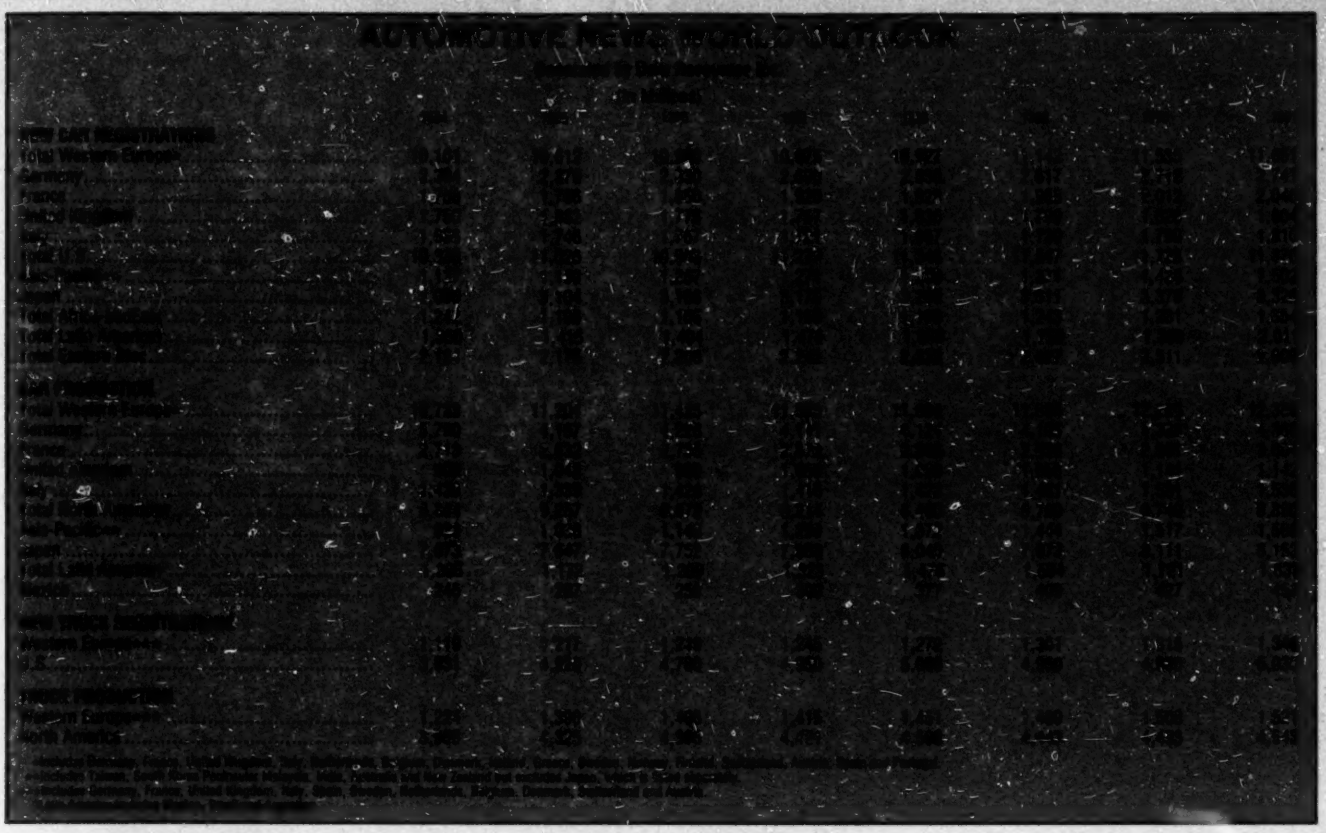
An AMC spokesman said that all Jeeps, including the Comanche pickup, comply with all applicable safety standards.

The Saab 9000 four-door hatchback had an acceptable driver HIC of 773 but a very high G level for the chest—71 Gs. The passenger dummy HIC was 1443 and the chest deceleration reading was 46 Gs.

Asked about those extremely unusual head-and-chest mixed results, Saab-Scania of America dubbed them "unrepresentative and inappropriate" since post-crash inspection revealed the driver's seat was not securely latched.

The company said unexpected movement caused abnormal behavior in the driver dummy and directly or indirectly significantly affected the reaction of the passenger dummy. Saab-Scania added it expects its new model to exceed the excellent safety record of the Saab 900, which was rated best in its class on personal injury claims by the Highway Loss Data Institute.

The VW Scirocco recorded a driver HIC level of 887 and a chest G reading of 52, but the passenger dummy recorded a slightly high HIC of 1070 and failed to record any data for the chest Gs.



Outlook rosy for global car market

Continued from Page 1

based economist, John Hammond. "It's narrowed the competitive edge of the foreign competitors," he said.

"The competition will remain intense," he added, "but demand will be at least as strong as it has been."

Nevertheless, the rosier forecast doesn't change the story of the World Outlooks of the past year.

Competition will remain stiff throughout the decade with more companies entering the North American market. U.S. auto makers will continue to lose market share to the imports over the long haul. And North America is headed toward an overcapacity situation similar to that in Europe.

While U.S. car makers win a reprieve for the next 18 months, Hammond warned that clouds will begin forming on the horizon after 1987. The clouds include problems resulting from tax reform (which shifts incentives away from consumer spending on durable goods), deficit-reduction efforts, a possible tax increase and a general dip in the economy.

Also, the Japanese and South Korean auto makers will begin producing cars in North America in full force later in the decade. Those companies eventually will produce 1.5 million vehicles a year in North America.

Western Europe shines as a bright spot in the World Outlook as economic factors have an even greater impact on European nations than on North America.

The World Outlook shows Western European countries enjoying higher growth and lower inflation than they have seen since the start of the decade. Those factors and higher wages, have heightened consumer confidence.

In addition, Western Europe has received a boost from the decline in the U.S. dollar and lower oil prices, which are denominated in U.S. dollars.

"Economic gravity will prevail," said John Lawson, DRI's London-based economist.

The Western European car market will benefit from the good economic news. The World Outlook upgrades Western European car sales to close to 11 million units for this year, compared with 10.6 million in 1985, and to 11.5 million by 1990. Production will rise to 11.4 million cars this year. By 1990, Western Europe will reach production of 12 million cars per year (see accompanying table).

Lawson said there will be no letup in competition, which has been intense with a half-dozen car companies in a close race for the top sales spot. The impact will be seen in the bottom line of European vehicle manufacturers which, collectively, have lost money for the past five years.

The makers have reaped the harvests of their cost-cutting efforts. In the U.K., Ford doubled its year-ago profits in its most recent fiscal period. So did Fiat. Peugeot will report a profit, its first in six years.

"We will still see some black spots," said Lawson, "namely Renault."

The prestige manufacturers also will see a difference in their bottom lines, but for the worse, Lawson said. Those companies have made record profits through record sales in the U.S. market while the U.S. dollar peaked.

"For the short run," Lawson said, "it won't be too serious, but eventually it will dig into their profits."

He said the dollar would have to fall even farther to force them to re-think their U.S. strategy but marketing problems already have arisen. The prestige makers are faced with raising prices, and they may decide to ship cars with less equipment. During the days of the strong U.S. dollar, prestige makers shipped heavily equipped vehicles.

The Japanese makers present no major threat in the next two years or until they avoid trade restraints through local production, Lawson said. Nevertheless, some new faces may appear on the Western European scene, including U.S. makers that have been blocked out of Europe by the strong dollar.

Ford will ship U.S.-made engines to its European subsidiaries. American Motors said it will sell its new Jeep Wrangler in Europe.

There has been speculation that Chrysler Corp., on its own or through a joint venture with Fiat, will sell its minivan, its new Maserati-designed luxury coupe or its new U.S.-made Dakota pickup truck along with a four-wheel-drive in Europe. Chrysler refuses to confirm the speculation.

Cadillac has said it may sell its Pininfarina-designed luxury Allante in Europe, but Lawson views the move more as an image booster than added sales volume.

"If they sell well in Switzerland or West Germany, you can bet you will see that in their U.S. advertising," he said.

Hammond said U.S. makers will approach the European market cautiously and in low volume because their European subsidiaries already have more capacity than they need.

Other new faces on the European scene may be makers from South Korea and Taiwan. Currencies of those countries follow the direction of the U.S. dollar. A fall in their currencies means they can be more competitive than before against the Japanese and Europeans, said Lawson.

"It means the South Koreans can think of selling in Western Europe because of more favorable exchange rates," he said.

While the next 18 months will be spent sorting out their U.S. strategies, the South Koreans also will be "casing" Europe, Lawson said. "They may be more ready to divert vehicles to Western Europe if the U.S. market is not as attractive or as amenable to their products as they anticipate."

Japan will continue to churn out cars for foreign markets while sales at home will fall even farther. The latest World Outlook downgrades car sales in the Japanese market because of only modest growth projections for Japan during the next three years. Meanwhile, Japanese vehicle production plans continue to climb.

The rapid change in the yen-dollar exchange rate has put pressure on Japanese car pricing. Japanese makers to date have increased prices an average of 10 percent in the U.S. The invincibility of the Japanese also is in question because of the new South Korean, Taiwanese and Brazilian entries into North America.

In addition, some concern has been shown as to whether Japanese makers can fulfill their import plans for the U.S. and also sell out all of their U.S. production capacity in the future.

Despite the questions, Hammond noted that the price increases so far have not turned buyers away from Japanese vehicles. He does see the North American industry headed for a fierce price war later in the decade.

"The question is who will win that battle," Hammond said. "And I wouldn't bet against the Japanese."

$18,000 spiff

DENVER—Johnny Haas Lincoln-Mercury is advertising what may be the ultimate freebie: An $18,000 Merkur with the purchase of any Zimmer Classic, priced at $67,900.

But Noce Cadillac, Pittsburgh, is hot on its heels: During May, Noce will give away a Cadillac Cimarron with the purchase of a Zimmer Classic.

A spokesman at the Denver deal said he sold the Merkurs, but still has the Zimmers.

"They were '85 Merkurs. We had a factory incentive on them and figured this might be a good way to sell them."

The giveaway idea brought people into Johnny Haas, where Zimmer sales run 8-10 units a year. But buyers chose the Merkur over the much more expensive Zimmer.

Noce Cadillac reported a similar experience, with a twist: The one Zimmer customer opted for a discount worth the cost of the "free" Cimarron.

"We'll probably extend the offer past the end of the month," a dealership spokesman said. "We still have six Zimmers in stock."

Auto output pegged at 166,877

By Kathy Boyer
Detroit Reporter

U.S. auto makers scheduled 166,877 cars for production last week, 1.42 percent more than the previous week's 164,546 but 2.36 percent below the year-ago week's 170,902.

So far this year, 3,424,227 cars have been assembled, 4.32 percent fewer than the 3,578,873 completed last year at this point.

Last week's targeted production was split this way: General Motors, 56.16 percent; Ford Motor Co., 24.10 percent; Chrysler Corp., 13.76 percent; Honda of America Mfg. Co., 2.62 percent; New United Motor Mfg., Inc., 2.16 percent, and Volkswagen of America, 1.20 percent.

American Motors' Kenosha plant was down last week for inventory adjustment.

The plant is expected to resume production tomorrow (May 27).

Nissan's car line in Smyrna, Tenn., remains down for model changeover and is not expected to resume output until August.

Ford's Capri line resumed production last week (May 19) after being idle for two weeks due to a parts shortage.

Ford slated overtime this Saturday (May 31) at its Wayne, Mich. plant.

Daily overtime was scheduled at Chrysler plants in Belvidere, Ill.; St. Louis (No. 2), and Newark, Del.

No overtime was scheduled Saturday (May 24) because of the holiday weekend. All plants are closed today (May 26) in observance of Memorial Day.

Truck output slips from 1986 peak

With no overtime scheduled Saturday (May 24) because of the holiday weekend, domestic truck production was 74,201 last week, 4.89 percent below the previous week's 78,013.

The prior week's output was the highest of any week this year.

Last week's scheduled build was 3.45 percent more than the year-ago week's 71,725.

Year-to-date, 1,475,652 trucks have been assembled, 3.77 percent more than the 1,422,069 completed last year at this point.

All plants are closed today.

Canadian production cut by holiday

Last week's car and truck production in Canada dipped slightly due to plant closings on Victoria Day (May 19).

The short work week reduced scheduled auto production to 20,325. It was 12.33 percent below the previous week's 23,184 and was about even with (0.18 percent below) the year-ago week's 20,361.

So far this year, 468,904 cars have been built, 11.32 percent more than the 421,221 completed at this time last year.

Canadian truck makers targeted production of 16,416 units last week, 3.45 percent below the previous week's 17,003 and 3.79 percent below the year-ago week's 17,062.

Year-to-date, 384,075 trucks have been assembled, 4.06 percent more than the 369,094 built last year at this point.

'Radical' GM plan stunned supplier

By A.S. Plotkin
Staff Correspondent

FRAMINGHAM, Mass.—General Motors' proposal to build a plant to produce plastic body parts next door to its assembly plant here was "so radical" that management officials of DiversiTech General at first resisted the idea.

DiversiTech will lease the plant, which will make body panels for GM's minivan.

Al Schmeiser, president of DiversiTech's Reinforced Plastics Division, said the company "did a lot of thinking about whether we wanted to make that kind of investment" (about $90 million for equipment).

The firm had "a consulting study done to see whether it was the best and cheapest" way of meeting the challenge.

Schmeiser told a town meeting that DiversiTech, which originally thought it would supply only half the panels for the projected 200,000 front-wheel-drive minivans for the 1990 model year, finally agreed to GM's proposal.

Schmeiser and James Westby, manager of GM's minivan program—codenamed GM200—both stressed the urgency of securing Framingham's OK, since the schedule contemplates groundbreaking in July and completion of the $50-million plant in two years.

Westby recounted some of the reasons for selecting Framingham. The unemployment rate is less than 3 percent. The assembly plant, which turns out the Chevrolet Celebrity and Oldsmobile Cutlass Ciera, now employs 4,000 on two shifts.

"We decided Framingham would be a good location based on its A-car platform production and a minimum investment to retool," he said. He also mentioned the quality of the product and "union cooperation."

Another factor, he said, is the construction, now under way, of a $250-million automated paint plant adjacent to the assembly facility.

"Without that paint shop, we would not be able to assemble the GM200 in Framingham," Westby added. "It will offer a state-of-the-art process for base-coat and clear-coat painting."

While there were questions and calls for clarification from some citizens at the hastily called town meeting, there did not appear to be much of the anger and resentment that has boiled up at previous presentations involving GM.

The most recent one came when GM announced its plan to build the paint plant. It required more land but town officials were reluctant to give in. Gov. Michael Dukakis, who had long held a reputation as a liberal frequently jousting with big business, stepped in.

With the help of the legislature, 35 acres of state-owned land which the town had assumed it was promised, was turned over to GM.

The plastics parts proposal—it would mean 1,000 new jobs on three shifts—has the blessing of the UAW. UAW Regional Director E.W. Barrett said it would "secure the future of the Framingham plant."

Schmeiser said one advantage of locating the plastics facility next to the GM unit would be reducing the number of incoming trailer trucks to 15 daily. If located elsewhere, 40 trucks would be required.

Should the town reject the new plant, Schmeiser said, his company would seek a site 30 to 40 miles away. DiversiTech has a research facility in Salem, N.H., and a source indicated that a New Hampshire site would be possible.

Sunny future for cars seen in Thailand

By Andrew Tank
Staff Correspondent

BANGKOK, Thailand.—The motor-vehicle industry in Thailand is facing a painful period of transition.

By the 1990s, it could be the most self-reliant automotive manufacturing center in South Asia, exporting components to the U.S., Japan and Europe. But a combination of economic setbacks have prompted a severe recession.

The Thai Government is anxious to use this period of adversity to restructure the industry and promote more efficient scales of production. It seems likely that this effort will be only partially successful.

Industry executives and government officials agree that Thailand might achieve considerable success as an exporter of automotive components. But no one expects it to emulate Japan or South Korea as an exporter of finished vehicles.

Said Chackchai Panichapat, assistant secretary general of the Board of Investment, the state promotional agency, "I'm not very proud of the auto industry in Thailand. We are too free, with so many makes and models and a very small market. But there is an opportunity to export parts."

The Thai motor industry grew strongly in the early 1980s, buoyed by Thailand's fast economic growth which averaged 7 percent per year in real terms between 1970 and 1984.

That was reflected in annual production in both 1983 and 1984 of about 35,000 cars, 75,000 commercial vehicles and 320,000 motorcycles.

Demand collapsed in 1985. Falling international commodity and food prices cut purchasing power and trimmed economic growth to 4 percent—the lowest for decades. As a result, production of cars and commercial vehicles fell 26 percent from 111,037 in 1984 to 82,106 in 1985. Motorcycles production dipped from 317,485 to little over 200,000.

Further sharp declines are expected during 1986. The appreciation of the Japanese currency has already pushed up vehicle prices by 10 percent. The economic outlook has darkened due to a U.S. law that could cut sales of rice, Thailand's biggest export.

Vehicle sales in the first four months of 1986 were 26,037, down 10.6 percent from the 1985 period.

Employment at the major assembly firms has been cut about 10 percent, and further job losses are likely if demand stays depressed.

The result is intense competition to maintain market share.

Said Simon E. Bonython, acting

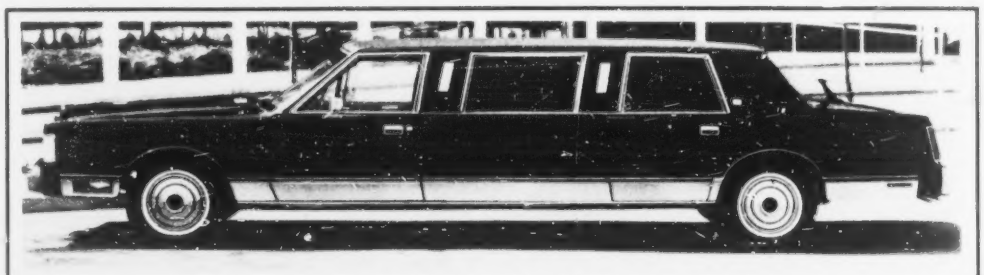
VW may build Jetta in U.S. plant



Limousine Werks stretches Lincoln Town Car 54 inches

Limousine market softens

By Al Fleming
Industry Editor

Following two years of rising production and sales, limousine producers are scaling down their market expectations for 1986.

Among the reasons: A supply-demand imbalance resulting from a rapid rise in the number of limo customizers that entered the business during the recent boom times.

As customizers do battle, so do their vehicle sources. Indications are Lincoln has wrested limo leadership from Cadillac, and will take close to 70

Production could begin early in '87

By Dave Zoia
Detroit Reporter

Volkswagen of America is studying a plan that would add production of 26,000 Jetta models annually to its U.S. operations beginning early next year.

VWoA officials wouldn't confirm details of the study, but a source close to the Westmoreland (Pa.) assembly operation said a report was expected to be completed late last week.

"We've studied many things over the years," a VWoA spokesman said. "It's an ongoing procedure to see how we can best utilize the existing capacity at Westmoreland."

The proposal calls for VWoA to begin producing Jettas at Westmoreland as early as February at a rate of 100 units per day (about 26,000 per year), according to one source.

The amount of the investment required to add Jetta to Westmoreland and the percentage of the plant's 1,800 laid-off hourly and salaried workers that would be affected by the move have yet to be determined.

When VWoA retooled the Westmoreland plant in late 1984 to produce the Golf model, the company designed in the flexibility to add Jetta assembly quickly.

However, if the project is approved, tooling for the Jetta would take 12 to 18 months, according to a VWoA spokesman, making the proposed February,

1987 intros begin Sept. 18

By Jenny L. King
Detroit Reporter

Chrysler Motors kicks off the 1987 model year shortly after Labor Day with the Sept. 18 introduction of its Plymouth Sundance and Dodge Shadow.

General Motors said Sept. 25 is the date currently on the calendar for introduction of most of its 1987 models, followed in November by the Cadillac Allante convertible.

Ford Motor Co. said introductions of Ford Division's cars and light trucks begin Oct. 2. A Lincoln-Mercury spokesman said Oct. 3 is the probable date of its 1987 lineup debut. The Ford intros continue through November, with the new Bronco and F Series models bringing up the rear on or about Nov. 28.

Chrysler carryover models will bow Oct. 2 in conjunction with their official advertising campaign, according to a spokesman, followed by a Christmastime or first-of-the-year introduction for Chrysler's new J-body LeBaron coupe.

A convertible version of the LeBaron joins the Chrysler product line in the spring, the spokesman said, and the long-wheelbase minivans are expected to be available by mid-model-year.

American Motors said its 1987 line will probably debut during the week of Oct. 5.

Chevrolet will bring out Beretta and Corsica, its X-car replacements, around Jan. 1. Pontiac said its all-new front-wheel-drive family sedan, Bonneville, and the "ultimate" Trans Am go onstream at the end of September.

Ford carryover light trucks, including Bronco II, Ranger and Aerostar, are expected to be available by Oct 2.

Innocenti keys Chrysler deal

By Mary Connelly
Detroit Reporter

The key to Chrysler Corp.'s anticipated financial takeover of Maserati S.p.A. appears to be the Italian manufacturer's Innocenti manufacturing plant.

The plant will permit Maserati to meet Chrysler's production demands in addition to lending its name to the vehicles and engines developed by the two companies.

"That was the key—mating the Maserati name with a production facility with the capacity Chrysler wanted to buy," said Howard E. Chase, secretary of DeTomaso Industries which has a 66 percent indirect equity interest in Maserati.

"That's what made it possible. If we had owned only Maserati and not Innocenti, it would not be possible."

Maserati and the Milan-based Innocenti were merged at the end of 1984.

Production capacity for the jointly developed Chrysler-Maserati cars will be 24,000 units an-

Congress taps top leaders

This year's Automotive News World Congress features top leaders from the auto industry, related fields and government.

Among the auto company chiefs addressing the July 27-30 international gathering will be keynoter Roger B. Smith, General Motors chairman; G. Glenn Gardner, chairman, Diamond-Star Motors, and Max Jamiesson, executive vice president, Hyundai Motor America. In addition, executive vice presidents Lloyd Reuss of GM and Allan Gilmour of Ford are on the program.

Other top auto executives at the Congress will be Peter E. Rupp, president, Freightliner Corp.; Peter Schutz, chairman and CEO, Porsche AG; M.J. Closs, president and CEO, Chrysler Canada, Ltd.,

Ad revenues were washed out with Indy race

By Dave Zoia
Detroit Reporter

The rain that delayed by a week the running of the 70th Indianapolis 500 also may have dampened profits for the ABC television network.

Because of the rainout, advertisers whose commercials ran on May 25—the scheduled race day—were not charged for the time, an ABC source said. Commentators filled the time with interviews and film.

Not all the commercials scheduled for the original race date were broadcast during the expanded coverage of nearly six hours, but a significant number were, a spokesman said.

ABC was charging an average of $100,000 per 30-second spot, according to one source. The loss in revenues could total several million dollars. The network was scheduled to run 100 30-second commercials during its five-hour broadcast of the rescheduled race on May 31.

Add to that the estimated $5 million cost to broadcast—including purchasing television rights and the projected $160,000-per-day tab to keep crew and equipment at the track—and the Indy 500 payoff for ABC in 1986 appears to diminish.

"It's going to be expensive," said one industry observer. "There's no way they can recoup everything they lost during the first broadcast."

ABC wouldn't comment officially on its handling of commercial time for the race or whether the network lost money on the telecast.

But a spokesman for Goodyear Tire & Rubber Co. confirmed that the company was not charged for its seven 30-second spots shown by ABC May 25.

Despite the rain—it marked the first time an Indy 500 was postponed without even a start—the May 25 ABC broadcast enjoyed good ratings.

The overnights gave ABC's Indy coverage a 6.6 rating and a 22 share. The rating figure means 5.7 million of the 85.9 million U.S. households with television sets were viewing ABC. The share total is the percentage of all households which had televisions turned on and tuned into ABC.

Manheim bid for AAAA is $75 million

By Richard Feast
European Editor

LONDON—The Manheim/Cox offer to buy the 12 U.S. sites operated by Anglo American Auto Auctions was one that British Car Auctions, the parent firm of AAAA, found impossible to ignore.

The Manheim/Cox bid is about $75 million.

It is thought that BCA is preparing for an important takeover bid later this year. The London-based company has a cash hoard from recent sales of a number of holdings. Combined with its potential for borrowing, BCA is in a position to offer at least $150 million if it were to take over another concern.

The recent BCA disposals have prompted plenty of rumors in London over just which organization BCA has its eye on. One of the most consistent is that the target is Christie's, the world-famous art auction house.

An Anglo American spokesman in Nashville said BCA itself is an excellent takeover target.

"Because they don't pay their sellers until the buyers' checks have cleared, they are in a positive cash-flow situation," he said.

"I don't see any of this as a danger to the current (Manheim/Cox) activities," he said. "We're still under the impression the sale is proceeding."

"Let's put it like this: They made us an offer we couldn't refuse," said BCA Finance Director Peter G. Warman.

Detailed negotiations on the Manheim/Cox offer are still taking place, in anticipation of a formal agreement Aug. 4. As noted, BCA expects to realize around $75 million from the sale.

The proposals must be acceptable to all shareholders and must not violate U.S. antitrust regulations. The proposed merger would bring the number of Manheim-operated auctions in North America to 29.

The pending sale of AAAA is part of a more general disposal of BCA assets and investments in recent months. It has sold its holdings in Attwoods, Group Lotus and Midepsa and has realized more cash through the sale of the valuable Frimley auction site southwest of London.

Frimley brought a reported $12 million; it cost BCA almost nothing 25 years ago.

The $75 million BCA expects to realize from the Manheim/Cox deal compares with a total U.S. investment of just over $40 million since BCA opened its first U.S. auction in Nashville in May 1982.

CPC's David Campbell: No cutbacks in technology for GM10

GM's highest tech for GM10

By Dave Zoia
Detroit Reporter

General Motors is committed to using all its new manufacturing technology in its multibillion-dollar GM10 car program.

But the application of such state-of-the-art equipment might take longer and have a more limited scope than originally thought, the company admits.

"There really haven't been any cutbacks in technology," said David D. Campbell, GM vice president and director of operations for the Chevrolet-Pontiac-Canada Group.

"We've had some stretching out of the program, but there's not one single piece of technology where we've decided we're not going to do that.

"With some of it, we've said maybe we'd be smarter to put it in only one plant, but we have not backed off the technology. We are still being very aggressive."

But because certain technology no longer will be applied at all GM10 plants at startup, GM has asked suppliers what it would take to pull back on some of its tooling orders, Campbell conceded.

"Sure, we've looked into what it would cost to cancel certain things," he said. "But we always do that. If the price isn't right, we'll buy the equipment and store it until we're ready to phase it in."

Several factors are forcing GM to reexamine the extent to which it will introduce untried technology through the GM10 program, Campbell said.

"Part of it is just generating enough capital to buy the equipment," he said. "Even though we still have a $35 billion spending program over the next four years, this stuff is expensive. You just can't choke it down all at one time."

Other factors include the shortage of people available to program the new machinery and the burden new assembly techniques create in training workers, Campbell said.

"So there's a balancing act between how much money you can spend and how fast you can get the equipment into the plant and assimilate it," he said.

In some cases, suppliers have been unable to meet demand for certain equipment, Campbell added. A shortage of presses is one of the reasons full operation of the metal stamping plant at the GM10 facility in Fairfax, Kans., will be delayed some 18

Please turn to Page 51, Col. 3

GM may shift full-size rwd output

DETROIT—General Motors reportedly is considering shifting production of its full-size, rear-wheel-drive models from its Clark Avenue plant here to its plant in Arlington, Tex., as early as next December.

The Detroit plant currently produces the Chevrolet Caprice sedans and wagons, the Oldsmobile Custom Cruiser wagon and the Cadillac Fleetwood Brougham sedan.

The Arlington plant now assembles the mid-sized, rear-wheel-drive Chevrolet Monte Carlo and Oldsmobile Cutlass Supreme, which will be discontinued beginning in the 1988 model year when the GM10 cars arrive.

It had been thought that Arlington would produce the GM10 models. However, GM announced earlier this year that the plant would not be included in the GM10 program.

The whole situation may depend on obtaining agreements with the local unions. GM would probably guarantee production at either of the plants if the local unions would agree to concessions.

A GM spokesman said the company plans to begin producing 1987 models at Clark Avenue following a month-long model changeover ending July 29, but no product plans have been announced for the 65-year-old plant beyond the 1987 model year.

GM had announced last summer that it would keep the Clark Avenue plant and the neighboring Fleetwood plant running through the late 1980s because of continued demand for the larger, rear-drive models. Earlier, GM had planned to close the Clark Avenue plant after the 1986 model year.

Budd seeks duties against Brazil wheels

By Geoff Sundstrom
Washington Reporter

WASHINGTON—Brazilian makers of medium- and heavy-truck wheels are dumping their products on the U.S. market, Budd Co.'s Wheel and Brake Division told the U.S. International Trade Commission.

In a petition filed with the ITC last month, Budd asked the commission to impose anti-dumping duties on Brazilian tubeless steel disk wheels.

If the duties are imposed, the amount would equal the difference between the selling price in Brazil and the selling price in this country. The money would be paid to the U.S. Treasury.

Budd said it filed its petition on behalf of all steel disk wheel makers in the U.S. Firestone Steel Products Division and Goodyear Tire and Rubber Co.'s subsidiary, Motor Wheel Corp., are the only other U.S. manufacturers of tubeless steel disk wheels.

The wheels are used on Class 6, 7 and 8 trucks, including tractors and semi-trailers.

Brazilian manufacturers named in the Budd Co. petition are Borlem S.A. Empreedimentos Industriais and FNV-Veiculos E Equipamentos S.A. A third exporter expected to join the list is Fumagalli, a division of Rockwell International. Budd said the Brazilian wheels are distributed in the U.S. by Prudential Supply Corp., New York; Gamma Enterprises, Woodland Hills, Calif., and Reliable Transportation Components, Dallas.

Budd estimated dumping margins of up to 160 percent on the wheels, based on price comparisons between Brazilian-made wheels sold in Brazil and Brazilian-made wheels sold in the U.S.

The ITC has 45 days to act on the petition.

Steel vault stores cash

Cash register deters theft

ANAHEIM, Calif.—A cash-handling system controlled by a microprocessor and designed to eliminate opportunity for employe theft is in production.

Called the Cash-Guardian 100, the system, in effect, eliminates the open cash register drawer and denies employes and robbers easy access to cash on hand.

The heart of the new system is a cash-handling unit that retains "working" cash in a 450-pound steel vault and automatically produces exact change by recycling stored cash.

An audit tape inside the locked vault provides management with a printout record of all transactions by sales amount, currency received, change dispensed, employe, date and time. The system also accepts and records transactions involving checks, credit cards and coupons.

Cash-Guardian 100 was developed by Commercial Guardian and its parent company, Baskin Robbins Ice Cream Co., a subsidiary of Allied-Lyons, England.

Production

Memorial Day cuts auto output

By Kathy Boyer
Detroit Reporter

Scheduled domestic auto production dropped to 137,996 units last week because of plant closings on Memorial Day.

Last week's output was the lowest since the week before Easter, when 132,138 cars were assembled.

Targeted production last week was 18.02 percent below the previous week's 168,337 and 3.01 percent below the year-ago week's 142,273.

So far this year, 3,563,683 cars have been assembled, 4.37 percent fewer than the 3,726,384 completed last year at this point.

Companies split last week's estimated output as follows: General Motors, 54.48 percent; Ford Motor Co., 23.41 percent; Chrysler Corp., 14.64 percent; New United Motor Mfg., Inc., 2.61 percent; Honda of America Mfg. Co., 2.54 percent; Volkswagen of America, 1.16 percent, and American Motors, 1.16 percent.

As previously reported, Nissan Motor Mfg. Co.'s car line in Smyrna, Tenn., remains idle for model changeover.

American Motors' Kenosha plant resumed output last week after being down for one week for inventory adjustment.

GM scheduled no overtime at its car plants Saturday (May 31). Ford slated Saturday overtime at its Wayne (Mich.) plant.

All Ford plants are scheduled for daily overtime this week (June 2).

Chrysler slated Saturday overtime at its plants in Newark, Del.; Belvidere, Ill., and St. Louis (No. 2).

Belvidere and St. Louis (No. 2) are scheduled for daily overtime this week.

Holiday trims truck output in U.S.

With plants closed last Monday (May 26) for Memorial Day, targeted production of domestic trucks was cut to 64,700.

Last week's scheduled output was 14.34 percent below the previous week's 75,528 but 5.11 percent more than the year-ago week's 61,555.

Year-to-date, 1,541,679 trucks have been built, 3.84 percent more than the 1,484,613 completed last year at this time.

General Motors slated Saturday (May 31) overtime at its Detroit plant.

Ford's Norfolk, Twin Cities and St. Louis plants were scheduled for Saturday overtime.

All Ford plants are slated for daily overtime this week (June 2).

Canadian trucks outrun '85 pace

Canadian truck production passed the 400,000 mark last Friday (May 30), five days earlier than in 1985.

Year-to-date, 400,865 units have been built, 2.83 percent more than the 389,823 assembled last year at this point.

Last week's truck output of 16,752 was up 1.81 percent from the prior week's 16,454 but was 3.69 percent below the year-ago week's 17,393.

Production of 25,550 cars in Canada last week was 28.62 percent more than the previous week's 19,865—a holiday week—but was 0.50 percent below the year-ago week's 25,678.

So far this year, 493,994 cars have been assembled, 10.58 percent more than the 446,728 completed last year at this time.

Chrysler Corp.'s Windsor (Ont.) plant was down last week for inventory adjustment.

The plant is expected to resume production today (June 2).

Production of the 1986 Eagle at American Motors' Brampton (Ont.) plant has ended for the model year.

Nissan schedules Mexican hiatus

MEXICO CITY—Plagued by a steep decline in sales in the first four months of this year, Nissan Mexicana has decided to halt production for two months later this year.

Plants will be shut down nine days in September and 14 in December, said Arturo Patino Munoz, the firm's industrial relations manager.

Patino Munoz said automotive sector sales have slumped 40 percent in the first four months of 1986, according to his personal estimate.

Nissan has 5,000 vehicles stored because dealers have been unable to clear out stocks. Patino Munoz said the firm has not resorted to layoffs as yet, but that management has had talks with union officials.

Layoffs and dismissals will not be confined to Nissan, Patino Munoz said, with this drastic measure inevitable throughout the industry if conditions do not improve.

Patino Munoz added that if the sales slump continues, Nissan might cease operations altogether in Mexico. He said he hoped this step would not be necessary.

At General Motors, Mario Campo, director of public relations, pointed out that the current "paralyzation of sales" is not confined to Mexico, but is worldwide to a greater or lesser degree.

Despite current setbacks, the industry as a whole in Mexico foresees "a promising future," Campo said. GM has had capital losses due to the abnormal market, but the firm has other resources, he said. The Parts Division, for example, is registering growing demand as car owners recondition vehicles instead of buying new models.

Campo said that GM has 2,000 cars stored in Mexico because of sluggish sales. But he said the firm will go ahead with approved expansion plans and additions to the work force will be made next year.

Japanese output for April falls 1.7 pct. from '85

TOKYO—Japanese vehicle production in April declined from the same month a year ago for the first year-to-year dip in 19 months, according to the Japan Automobile Manufacturers Assn.

JAMA listed production for the month at 1,967,572 units, down 1.7 percent from a year ago, due to sluggish domestic sales and a slowdown in export growth. April's dip followed a 1.3-percent year-to-year increase in March.

JAMA said in its preliminary report that exports were expected to grow 4 percent in April, compared with 7.8 percent in January, 13.8 percent in February and 2.2 percent in March.

The report said April's production included 677,846 cars, up 2.9 percent; 386,176 trucks, down 7.7 percent, and 3,550 buses, off 57.8 percent.

The combined January-April production increased 3.2 percent at 4,171,203 units, including 2,630,389 cars, up 5.3 percent; 1,525,452 trucks, an increase of 0.8 percent, and 15,362 buses, down 52.1 percent.

Luxury cars born in '36 in U.S.S.R.

By Glen A. Lundqvist
SPECIAL CORRESPONDENT

The Soviet carmakers are promising a real challenge to the West this month as a brand new little Lada, called Samara, bows in Europe.

Designed with considerable input from Porsche, the car not only meets Western emission and safety standards, but carries a price tag matched only by the Yugo. Since the 1970s, various Lada models have outsold every other Russian car by far.

But the Russians also build large luxury models seldom seen on roads outside Eastern Europe.

The manufacture of prestige cars has quite a long tradition in the U.S.S.R.

The first limousines were built by ZIS (*Moskovsky avtozavod imeni Stalina* — The Automobile Factory of Moscow, named after Stalin) in 1936. Since 1950, exclusive seven-seaters have also been built by GAZ (*Gorkovsky automobilnyi zavod* — The Automobile Factory of Gorky).

Westerners got their first glimpse of a Russian luxury car at the 1937 World's Fair in Paris, where a ZIS-101 limousine was exhibited. And some found their way to Eastern Europe, notably to consulates. By the time war broke out between Germany and the So-

GM to settle transmission lawsuits

By Helen Kahn
WASHINGTON BUREAU CHIEF

WASHINGTON — A national settlement of all remaining federal class-action suits against General Motors involving allegedly faulty transmissions is expected soon.

A document marked "Settlement," obtained by Automotive News, shows some 4 million 1976-80 GM vehicles are involved.

All the cases involve alleged problems with the THM-200 automatic transmission in vehicles larger than the Chevette. It was claimed that the transmission was poorly adapted for such vehicles and that mechanical and hydraulic problems led to premature failure.

The national settlement would require GM to deposit $17 million in escrow to cover repair costs. It would also make another $2.5 million available if more claimants than expected come forth.

The anticipated national settlement in Chicago upstages last week's settlement of a New York state class action against GM involving the THM-200 and THM-325 transmissions.

The THM-325 transmission, for front-wheel-drive vehicles, is also alleged to have problems that cause premature failure.

The New York agreement allows owners with complaints an opportunity for Better Business Bureau arbitration, thus paralleling a 1983 settlement GM made with the Federal Trade Commission on engine and transmission repairs.

In all the cases, GM denies the existence of any defect and says it is settling to avoid further costs of litigation.

The settlement in Chicago would wrap up three class actions filed in U.S. District Court for the Northern District of Illinois, Eastern Division: Skelton vs. GM; Newton vs. GM; and Fritz vs. GM.

The Chicago settlement would also resolve other cases pending in various courts: Attard vs. GM; Morgan vs. GM; and Haskins vs. GM, which had been consolidated with Groupe vs. GM.

Those cases involve some 5,000 named plaintiffs — far more than the 100 required for each

Hyundai Sonata goes on sales in Korea next month and is slated for eventual export

KNUT MOBERG

Hyundai to hike output for N. America

By Knut Moberg
SPECIAL CORRESPONDENT

SEOUL, South Korea — Hyundai Motor Co. is once again making a major production increase: from 450,000 this year to 600,000 next year. Most of the increase will go to the United States and Canada.

This year, Hyundai will build 300,000 Excels and 150,000 Stellars.

Until now, Hyundai's European exports have been limited mainly to England, Italy and the Benelux nations. But it plans to expand aggressively into Europe — when it adds even more capacity. Company officials said they have received numerous proposals from European firms seeking to import the cars.

Next month, Hyundai will introduce a new large car, Sonata, in its home market. It is slated for eventual export, although timing is undecided, according to Hyundai.

Sonata will have a 2.0-liter engine producing 110 horsepower; in addition, a 1.8-liter, 89-hp domestic version will be offered.

The new Sonata is 180 inches long, compared to the 161-inch Excel already marketed in the United States. Hyundai sells Excel and the slightly larger Stellar in Canada.

Supplier falters; NUMMI steps in

By Michelle Krebs
FINANCIAL EDITOR

General Motors has intervened in the bankruptcy proceedings of one of the vital suppliers to its joint venture with Toyota Motor Corp.

The court has given GM permission to take over the supplier's equipment and make essential parts if the bankruptcy proceedings threaten to halt production at the New United Motor Manufacturing Inc. plant in Fremont, Calif.

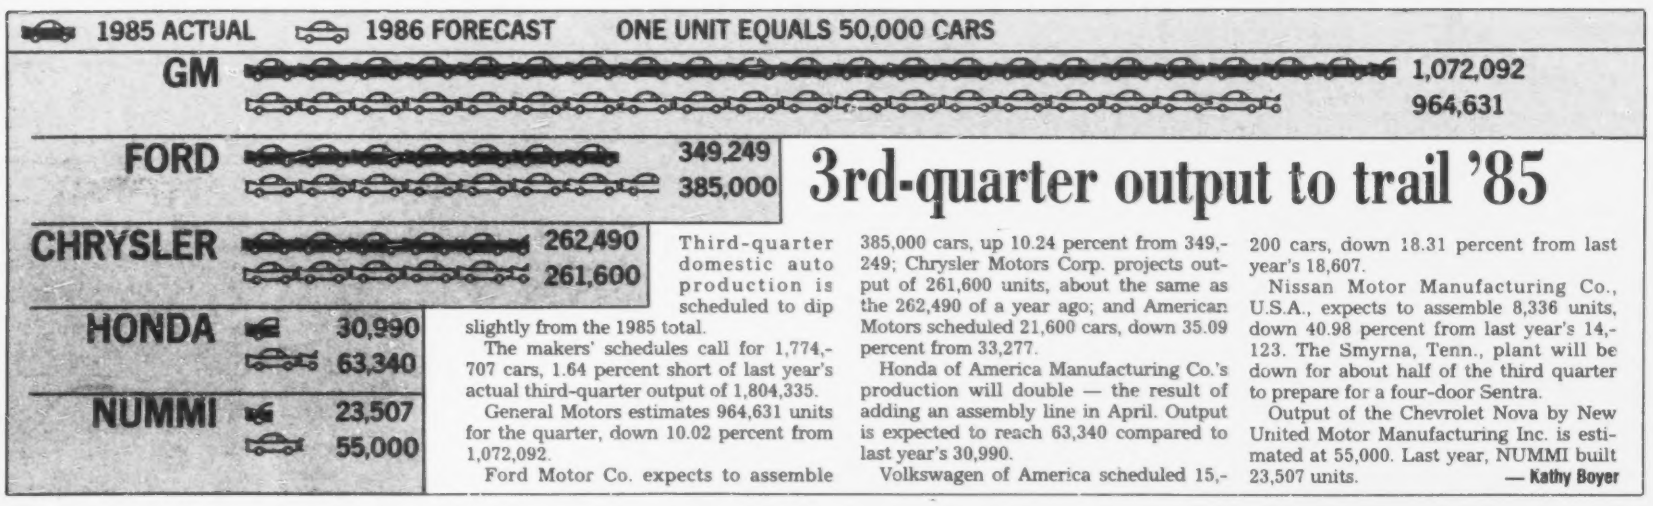
Bilcor Plastics Inc., a Hillsdale, Mich., company that manufactures and assembles plastic injection molds mainly for GM, supplies plastic interior moldings for the Chevrolet Nova.

Bilcor Plastics is embroiled in a battle between its two major shareholders and has entered into Chapter 11 protection from its creditors while it reorganizes under federal bankruptcy laws.

In court records filed in Detroit, NUMMI said if Bilcor Plastics fails to meet its daily obligation of components under the just-in-time inventory system, the NUMMI assembly line will halt within one to five days, costing NUMMI $6 million a day.

Since NUMMI's contract with the UAW contains "one of the strongest job security clauses in the American automobile industry," NUMMI would have to pay its unionized workers $360,000 a day.

The bankruptcy judge ruled in NUMMI's favor, allowing NUMMI to confiscate Bilcor Plastics' tooling used for production of the NUMMI components should the company fail to meet its daily delivery obligation.



3rd-quarter output to trail '85

Third-quarter domestic auto production is scheduled to dip slightly from the 1985 total.

The makers' schedules call for 1,774,707 cars, 1.64 percent short of last year's actual third-quarter output of 1,804,335.

General Motors estimates 964,631 units for the quarter, down 10.02 percent from 1,072,092.

Ford Motor Co. expects to assemble 385,000 cars, up 10.24 percent from 349,249; Chrysler Motors Corp. projects output of 261,600 units, about the same as the 262,490 of a year ago; and American Motors scheduled 21,600 cars, down 35.09 percent from 33,277.

Honda of America Manufacturing Co.'s production will double — the result of adding an assembly line in April. Output is expected to reach 63,340 compared to last year's 30,990.

Volkswagen of America scheduled 15,200 cars, down 18.31 percent from last year's 18,607.

Nissan Motor Manufacturing Co., U.S.A., expects to assemble 8,336 units, down 40.98 percent from last year's 14,123. The Smyrna, Tenn., plant will be down for about half of the third quarter to prepare for a four-door Sentra.

Output of the Chevrolet Nova by New United Motor Manufacturing Inc. is estimated at 55,000. Last year, NUMMI built 23,507 units.

Pontiac's LeMans model for 1988 is based on the Opel Kadett, here as an 18i

AUTOMOTIVE NEWS/JENNY L. KING

Pontiac expects LeMans to sell out

By Michelle Krebs
FINANCIAL EDITOR

Pontiac Motor Division believes it can sell more LeMans models than it will receive from General Motors' Korean partner, Daewoo Motor Co.

The subcompact debuts as a 1988 model in about a year. It was designed and engineered by Adam Opel AG, GM's operation in West Germany.

"We've always felt that we're probably going to be capacity constrained," said Pontiac General Manager J. Michael Losh. Pontiac will receive 85,000 units annually from the Daewoo plant's 150,000-unit capacity.

Losh predicted that the LeMans will be a roaring success. He said the car will not be an econobox and will fit in well with Pontiac's youthful, sporty image.

"It's not a me-too car," he said. "It's different from the Japanese offerings and any other GM offering."

It will be Pontiac's only subcompact entry so buyers won't have several subcompact lines to choose from at Pontiac dealerships. Losh also said the economics will be right. If the car were introduced today, it would be priced midway between Pontiac 1000, which the LeMans will replace, and the more upscale Sunbird.

In addition, Losh said, it will be sold as a Pontiac and will wear a Pontiac nameplate.

Pontiac's Grand Am is another chapter of Pontiac's success story, Losh noted. As of April, Pontiac share of GM's N-body production was increased from 28 percent to 50 percent. Grand Am production now takes up one entire plant in Lansing while Buick Somerset Regal and Oldsmobile Calais share another plant.

Losh said Pontiac doesn't expect to dip into production at the second plant but will be able to fulfill its needs in the future by adding overtime.

"But the Grand Am continues to be a little stronger than we expected," he said. Inventory levels for the Grand Am have been as low as a 13-day supply despite the production increase.

Losh said Pontiac has revised its sales forecast for the 1986 model year. The division had been shooting for 900,000 sales, which would have been a record, but has lowered its prediction to 850,000, which would not be a record. The division is still aiming for a record 900,000 for the calendar year.

J. Michael Losh

AUTOMOTIVE NEWS/JOE WILSSENS

Losh also said his division has increased its Customer Satisfaction Index. Two years ago, Pontiac ranked last among the GM divisions, but today it is running about even with the other divisions.

The Pontiac buyer, whose demographics tend to more closely resemble the demographics of the import buyer, tends to be more demanding than buyers of other GM cars, Losh said.

He said Pontiac receives lower CSI grades on its older-design models, with the 1000 receiving the lowest CSI rating. The Firebird also has a weak CSI rating because a Firebird buyer is a young, aggressive driver with high expectations for the car. The Pontiac STE has the highest CSI rating in GM.

The rating is lower for Pontiac dealerships that also handle competing GM makes, Losh noted. The CSI rating on a Pontiac 6000 usually is lower than the CSI rating on its sister cars, the Buick Century and Oldsmobile Cutlass Ciera, if the Pontiac is sold from the same dealership as the other GM models.

Move to Chrysler puts Lutz in line for chairman's job

By Mary Connelly
DETROIT REPORTER

The move by Robert A. Lutz from Ford Motor Co. to Chrysler Corp. puts another man in the running to succeed Chairman Lee A. Iacocca.

Lutz last week resigned from Ford, where he had been a director since 1982 and executive vice president — Truck Operations since March.

Lutz becomes an executive vice president of Chrysler Motors, the corporation's vehicle-making subsidiary, where he will oversee international, truck and component business operations.

Iacocca has called those areas Chrysler's top three growth priorities. Lutz is likely to oversee a widening international operation, which was slashed during Chrysler's hard times in the late 1970s.

Iacocca said Lutz will be nominated for a seat on the Chrysler Corp. board of directors.

In the interim, top duties at Ford Truck will be divided between Daniel L. Rivard, executive director — light truck product development, and Kenneth F. Smith, heavy-duty truck operations manager.

Lutz, 54, who at one time was considered a candidate for the Ford presidency, may now be be a contender for the Chrysler chairmanship when Iacocca, 61, retires.

Lutz will report to Chrysler Motors Chairman Gerald Greenwald, 50, also considered a potential successor to Iacocca. Lutz's chances for promotion are enhanced by the fact that he will be reporting directly to Greenwald instead of to Chrysler Motors President Harold K. Sperlich, 56, the unit's president.

Lutz's move also means that all of Chrysler Corp.'s chief operations are now run by former Ford executives. Chrysler's raid of Ford personnel began after Henry Ford II fired Iacocca as president of Ford Motor Co. in 1978.

Robert S. Miller, 44, Chrysler Corp. vice chairman, is chairman of the growing Chrysler Financial Corp. and, like Greenwald and Sperlich, is among those mentioned to succeed Iacocca.

Bennett E. Bidwell, 58, also a vice chairman, is responsible for Washington affairs; personnel and organization; public affairs; and corporate planning and marketing strategies.

All had previous careers at Ford and, with Iacocca, compose the five-member Corporate Executive Committee that has responsibility for Chrysler's overall activities.

With Lutz on board, Richard E. Dauch, 43, is the only member of Chrysler's top echelon who has not drawn a paycheck at the Glass House. Dauch, executive vice president — manufacturing at Chrysler Motors, is considered a rising star within the corporation.

Lutz will head a newly revamped truck operation at Chrysler. The new structure and personnel assignments are expected to be announced later this month. It is likely Chrysler will name a vice president for trucks, a position not now on the organizational chart.

Reporting to Lutz will be Michael Hammes, vice president of International Operations, who joined Chrysler last month. Hammes, too, is a former Ford executive and most recently was vice president — truck operations at Ford of Europe.

Lutz's recently formed international operation at Chrysler will include the Diamond-Star Motors Corp. task force; Japan operations; the Maserati liaison; worldwide procurement planning; international business development and strategy; export sales; and export parts and service sales.

Component business operations consist of 21 electronics, machining and diversified plants with combined sales of $2.7 billion in 1985 and 21,500 employees. Leroy H. Runk, vice president — component business operations, will report to Lutz.

Lutz said his move from Ford, which he joined in 1974, was sparked by the opportunity at Chrysler; it was not because he was disgruntled with Ford, he said.

In March, Ford shuffled its top international and North American Truck Operations management and changed Lutz's job from Ford of Europe chairman to executive vice president — truck operations, recalling him to Dearborn.

At the time, there was speculation that the new assignment could be read as a demotion. Lutz no longer reported to President Harold A. Poling. Lutz had held the job of executive vice president — Ford International Automotive Operations before returning to Europe in June, 1984, as Ford of Europe chairman.

The dual moves fueled speculation that Lutz was paying a price for a messy shakeup in top European management in 1984 and a personal style which, some said, clashed with Ford's new emphasis on familial corporate culture.

The publicity arising from the March reassignment apparently led to Chrysler's overtures to Lutz.

Robert Lutz

Automotive News

60th year—No. 5131

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 965 E. Jefferson, Detroit, MI 48207.

Automotive News names Feast, Johnson

Two major Automotive News promotions — affecting both sides of the Atlantic — were announced by Editor Andrew R. McGill.

European Editor Richard Feast, 41, was named International Editor; he will move from London to Automotive News headquarters in Detroit.

Feast will be succeeded as European Editor by Detroit Reporter Richard Johnson, 32, who will establish an Automotive News office in Frankfurt, West Germany.

"These well-earned promotions will strengthen our coverage of the increasingly important international industry," McGill said. "Richard Feast's extensive knowledge of and experience in the international arena will be an important addition to our Detroit operations.

"Rick Johnson, one of our finest reporters, will continue the outstanding reporting traditions established for Automotive News in Europe by Feast. And by moving Johnson to Frankfurt instead of London, we'll be that much closer to where most of the European auto industry action is today."

The transfers will take effect this September, McGill said.

As International Editor, Feast will direct news gathering operations overseas, as well as oversee Automotive News bureaus in Washington, New York and Los Angeles. Feast joined Automotive News on a full-time basis in 1980, after two years as a correspondent for the newspaper.

As European Editor, Johnson will cover European manufacturers in Germany, France, Italy, Great Britain and Sweden, as well as coordinate the efforts of a half-dozen Automotive News correspondents in Europe. Johnson joined Automotive News in February 1984 and has primarily covered Ford Motor Co. and American Motors.

Asian firms seen growing in American plastics sales

MARBLEHEAD, Mass. — The two million passenger cars and light trucks which could be manufactured annually in North America by Japanese and Korean companies by the early 1990s will have major impact on the plastics and auto-parts industries.

This means that the purchasing power for almost 400 million pounds of plastic resin and 140 million pounds of elastomer will be held by a new group of participants, said Phillip Townsend Associates Inc.

A study by the company profiles the Japanese parts suppliers establishing operations in North America and documents their locations, types of parts being fabricated and plastics and elastomers likely to be used. Structures of joint ventures and parent company affiliations are also diagrammed.

Townsend noted that Japanese auto manufacturers and suppliers have increased their commitment to North American manufacturing facilities concentrated around new manufacturing hubs in Kentucky, Ohio, Tennessee, Illinois and Southern Canada.

Robert Eller, of Townsend, said, "A high degree of loyalty characterizes the auto original-equipment-manufacturer/supplier relationship in Japan. It is probable that Japanese auto OEMs will prefer working with suppliers with the same cultural tradition with whom they have done business for decades.

"This preference creates a circle of events which results in investment by Japanese auto-parts suppliers and resin companies in North America."

The Townsend firm said that the pressure exerted by Japanese auto companies on their parts and materials suppliers strongly encourages investment in North American facilities. In effect, Townsend said, the auto OEM says that if you wish to supply in Japan and Taiwan, you must supply in North America as well.

Japanese suppliers are likely to introduce new materials technologies, especially for polypropylene compounds, Townsend said.

Japanese elastomeric parts fabricators are also establishing manufacturing operations in North America. The pattern is somewhat different, the study said, since major Japanese elastomer fabricators have had sales and distribution offices in North America for years and tend to be more independent than auto plastics fabricators.

February import registrations climb; market share tops 1985

By Jenny L. King
DETROIT REPORTER

Registrations of new imported cars in February were up 18.35 percent over last year's total.

Their penetration of the U.S. market was 28.76 percent, down from January's 30.39 percent, but more than three percentage points above the 25.60 percent in February 1985.

Import registrations compiled by R.L. Polk & Co. showed a total of 236,477 in February compared with 199,817 for the same month a year earlier.

Honda, whose numbers include imported and U.S.-built passenger cars, remained the top importer in new-vehicle registrations, both for February and for the year to date. Dodge Colt/Vista replaced Audi as the 10-place import in February and for the two months.

Import penetration at the end of two months was 29.62 percent, up dramatically from 25.96 percent for the same period of 1985. Registrations totaled 513,883, up 26.75 percent from 405,438 last year.

Japanese cars represented 70.09 percent of February's registrations, down from 71.46 percent in 1985. West German products cornered 13.07 percent, off from 13.32 percent and U.S.-assembled imports (Nissan Sentra, Honda Accord and Volkswagen Golf) climbed to 9.94 percent from 8.12 percent.

Totals by countries of origin were:

	Feb. 1986	Feb. 1985
Japan	165,741	142,784
West Germany	30,905	26,623
United States	23,501	16,235
Sweden	11,007	10,416
Yugoslavia	2,029	0
Great Britain	1,379	1,320
France	1,268	1,937
Italy	513	502
Korea	134	0
TOTAL	236,477	199,817

At the end of two months, 71.37 percent of the total import registrations came from Japan. West Germany sourced 12.88 percent and 9.06 percent were U.S.-assembled. Two-month numbers are as follows:

	2 Mos., 1986	2 Mos., 1985
Japan	366,752	290,912
West Germany	66,179	54,384
United States	46,569	31,211
Sweden	22,976	21,120
Yugoslavia	4,304	0
Great Britain	3,300	2,882
France	2,706	3,999
Italy	962	930
Korea	134	0
TOTAL	513,882	405,438

Imported-truck registrations dropped 3.00 percent in February, to 72,251 from 74,487. It was the first decline for trucks in several years. For example, Nissan, which includes U.S. and imported trucks, plunged 35.50 percent year to year. The top importers and their numbers were:

	Feb. 1986	Feb. 1985
Toyota	28,158	26,470
Nissan	15,302	23,725
Mazda	8,748	8,496
Isuzu	6,721	—
Dodge Ram 50	—	6,116
Others	13,322	9,680
TOTAL	72,251	74,487

Year-to-date truck registrations of 150,677 were up 3.66 percent from 145,360 in 1985. Numbers for the major makers were as follows:

	2 Mos., 1986	2 Mos., 1985
Toyota	61,644	53,471
Nissan	30,086	44,245
Mazda	18,793	16,948
Isuzu	13,693	—
Dodge Ram 50	—	11,237
Others	26,461	19,459
TOTAL	150,677	145,360

Pistilli 1st woman dealer for Ford in New Jersey

PARAMUS, N.J. — A Bergen County woman is the first female Ford dealer in New Jersey.

Carol Pistilli, Pistilli Ford, succeeded her late husband in managing the dealership that has been family-owned for 24 years.

"At first, I was pressured to sell the business because 'no one ever heard of a lady car dealer,'" Pistilli said. "But anyone who knows me realizes that if someone says, 'You can't do it,' then I'll do it."

"Carol Pistilli has surpassed the performance expected of all new-car dealers," said Robert Lusko, Ford's New York district sales manager. "Pistilli's sales of both new cars and trucks have increased due to the outstanding leadership in sales and service."

Pistilli Ford has been awarded the Ford Distinguished Service Award for the past eight years.

Pistilli realizes she faces challenges as a woman car dealer.

"Some people find it hard to deal with a woman when shopping for a car, but today women are becoming more involved in the car-buying process," Pistilli said. "Women also have a different way of treating both customers and employes.

"I think we can be more compassionate and sometimes we're even nicer to get along with."

Pistilli plans major renovations for the 3½-acre dealership, including a remodeled showroom, increased office space and a computerized telephone system.

"We're very pleased with Pistilli Ford and its new dealer," said Lusko. "Carol brings to the dealership a greater sensitivity to the buying public as well as her employees."

Volvo Netherlands reports '85 profit

HELMOND, The Netherlands — Volvo Car BV showed a profit for 1985 — but just barely. Its after-tax income was $714,000 on sales of $786 million.

The company said, "Whereas sales, manpower levels, production volume and sales volume showed a steady upward trend, there was, on the other hand, a strong increase in investments and development costs."

The company — 30 percent owned by Volvo Car Corp. — has just launched the 480-ES coupe, the first of a new generation of products from the Dutch company.

Retail sales rose 4 percent to 110,302 units last year. The company is increasing its production capacity to 150,000. Employment at the end of 1985 year was 6,842, up 8 percent.

24' tall, colorful, durable High Rider Balloons get attention. On top of your showroom, at sponsored sport events, or at charity fundraisers, they give your dealership the recognition and high visibility it needs.

High Riders are easy to use and come complete with everything you need, including internal lighting. They are built to last, for high returns on your advertising dollar.

March registrations trail '85 by 8 pct.

By Jenny L. King
DETROIT REPORTER

New-car registrations in March were up more than 20,000 units from February but were almost 80,000 below the total for March, 1985, total. Imports gained 6.68 percentage points in market penetration.

March registrations of 848,088 were off 8.50 percent from 926,902 the preceding year, according to figures compiled by R.L. Polk & Co. They were up 3.16 percent from February's total of 822,143.

Record high for the month was 998,369 in 1973.

Domestics plunged to 588,601 in March, down 16.53 percent from 705,203 in 1986, when sales of U.S.-built cars were still on an upward trend.

March import registrations were 259,487, up 17.04 percent from 221,699 last year. Their share of the total market exploded to 30.60 percent from 23.92 percent a year earlier.

Imports also claimed the largest single portion of the market-class divisions. U.S. intermediates were second at 26.59 percent, followed at some distance by compacts at 15.67 percent, subcompacts at 10.46 percent, standards at 8.73 percent and luxury models at 7.95 percent.

The domestics-only market included 38.31 percent intermediates, 22.59 percent compacts, 15.08 percent subcompacts, 12.57 percent standards and 11.45 percent luxury models.

Total first-quarter of 2,582,875 were up 3.79 percent from 2,488,617 in 1985. Domestics were off 2.79 percent, to 1,809,506 from 1,861,480.

Imports were up 23.32 percent, to 773,369 from 627,137. Their share of the three-month market moved up to 29.94 percent from 25.20 percent.

Imports were the only segment to gain market share. The four major domestic makers all lost ground: General Motors dipped 0.01 percentage points, Ford Motor Co. was down 2.08 percentage points, Chrysler Motors dropped 1.99 percentage points and American Motors was off 0.66 percent points.

Samcor's Ford Laser Sport JEREMY SINEX

Samcor adds three models for South African market

JOHANNESBURG, South Africa — Samcor, South Africa's second-largest automaker, took another major step forward with the recent launch of the Ford Laser hatchback, the Meteor sedan and the Courier one-ton pickup.

The two new Ford cars are essentially re-badged versions of the Mazda 323 (GLC), though the Laser hatchback is completely re-skinned.

The other half of the Samcor partnership introduced the Mazda 323 here last fall.

The Courier is pure Mazda B-Series, differently badged.

Following trend-bucking price reductions on the revamped Ford Sierra range, the new small sedans are also attractively priced.

So are the comparable Mazdas, though they have been indifferent sales performers thus far despite substantial orders from Hertz and Avis.

Soviet Union car-export value climbs 16 pct. for '85

MOSCOW — The value of the Soviet Union's total car exports in 1985 grew by 16 percent over the previous year, according to Avtoexport, the U.S.S.R.'s foreign trade organization.

About 80 percent of the cars exported were delivered to Western Europe, the agency said. Negotiations reportedly were held with firms in several developing countries with the aim of producing Soviet cars there under license.

AUCTION DATES

American Motors

June 10 — High Point Auto Auction, High Point, N.C.

June 11 — Columbus Fair Auto Auction, Columbus, Ohio

Profits increase 24 pct. in 1985 for Australia's JRA

SYDNEY, Australia — JRA Ltd., Austin Rover's wholly owned subsidiary here, reported an operating profit of $19.9 million for 1985, an increase of 24 percent over the previous year.

Sales revenues were up 18 percent to $182 million. The figures are in U.S. dollars.

The result makes JRA the country's second most profitable auto company after Ford. It may also hasten the company's move to go private, which is the general policy of the parent BL Group and its sole effective shareholder, the British government.

Following the successful separation of Jaguar from BL, there have been well-publicized setbacks in Austin Rover, Land Rover, Leyland and Unipart going private.

Although JRA is relatively small, its sale — a management buy-out is rumored — could keep alive the move to go private.

JRA, formerly Leyland Australia, sells Jaguar, Range Rover, Peugeot and Leyland and Hino commercial vehicles.

13 for Taurus

LOS ANGELES — Ford Taurus received Auto Expo's "Design of the Year" award, the 13th award it has received since its introduction last December.

Imports at peak; domestics slip

By Jenny L. King
DETROIT REPORTER

New-car sales in May continued the months-long trend of growth for imports and no growth for domestics.

Imports set an any-month sales record in May.

Consumer incentives offered by domestic dealers did not produce the volume anticipated. Sales declined in two of the three May reporting periods and were off 2.64 percent for the month.

Sales of domestic cars totaled 786,268, off 2.64 percent from 807,590 last year. Third-period domestic sales were down 10.96 percent, following a mid-month decline and an early-May increase.

With 26 selling days both years, the daily rate was off 2.64 percent, to 30,241 from 31,061.

Import sales climbed 6.96 percent, to 286,194 from 267,582 in 1985. It was both a record for the month and an all-time high for imported cars. The May 1985 total was the previous any-month peak.

Import penetration of the U.S. market was 26.69 percent, up from 24.52 percent the preceding year and up from 25.98 percent in April.

The industry total for the month was 1,072,462, down 0.25 percent from 1,075,172 last year.

Year-to-date domestic sales totaled 3,403,718, off 6.43 percent from 3,637,733 in 1985. Imports soared to 1,243,447, 16.24 percent ahead of the year-ago 1,069,737.

The industry total at the end of five months was 4,647,165, down 1.28 percent from 4,707,470.

Chrysler Motors and Honda were the only domestic automakers whose May sales were above their 1985 totals. Chrysler was up 10.09 percent, to 107,867 from 97,981. Honda was up 6.86 percent, to 16,132 from 15,096.

Toyota prices climb $348; Mazda, $220

By John K. Teahen Jr.
SENIOR EDITOR

Toyota and Mazda jumped back into the price cauldron last week by posting the fourth increases on their U.S. models since the beginning of the 1986 model year.

Toyota cars went up an average of $348, or 3.2 percent. Mazda cars rose an average of $220, or 1.9 percent.

Both companies attributed the increases to the appreciation of the Japanese yen against the dollar.

For Mazda, the four hikes on 1986 models have totaled $1,408 per car, or 15.62 percent, according to an Automotive News analysis. Toyota's cumulative boosts also are estimated to be in the $1,400 range, although an exact tabulation was not available at presstime.

Toyota and Mazda continued the new round of Japanese price hikes that began with Honda on May 19. American Honda Motor Co. boosted stickers an average of $238 on Honda and $344 on Acura. It was the fourth increase on '86 Honda models and the first on Acura. Acura entered the U.S. market in March.

Toyota's hike, which was announced last Friday, had been expected on almost a day-to-day basis in recent weeks. Toyota executives in Japan have talked of declining profits.

At midweek, Toyota President Shoichiro Toyoda said that pre-tax earnings for the year ending June 30 "will be far less than projected in February." He mentioned an expected dip of about 22 percent.

Toyota and Mazda also raised truck prices last week. Toyota's truck hike averaged $184, or 2.1 percent. Toyota said its combined car-truck increase averaged $284, or 2.8 percent.

Mazda's boosted trucks an average of $78, or one percent. Its combined car-truck figure is $163, or 1.6 percent.

Toyota's lowest-priced car, the base Tercel hatchback, is unchanged at $5,798. Also, there were no changes in the prices of the Supra sport hatchbacks, which start at $17,990.

Toyota increases ranged from $100 on the Tercel Deluxe three-door hatchback to $800 on the Cressida four-door sedan and five-door wagon. The Tercel Deluxe now is $7,038, and the Cressida sedan is $18,280.

Toyota's base two-wheel pickup truck was not increased last week. It stays at $6,298. The Cargo Van also was spared an increase.

Last week's Mazda boosts ranged from $100 to $400 on cars. By series, the 323 models rose $100 to $200, the 626 line went up $100 to $300 and there were hikes of $400 on the base RX-7 sports car and on the RX-7 2.2.

The 323 base two-door hatchback now is $5,895 and the 323 Deluxe models are $7,545 for the hatchback and $8,095 for the four-door sedan. Starting prices in the 626 series are $9,595 for the sedan and $9,645 for the coupe. The RX-7 is priced from $13,995.

The top model in the Mazda lineup, the RX-7 Turbo coupe is unchanged at $20,195.

Truck prices were increased $100 on the base and SE models, both short bed and long bed, and on the base Cab Plus. There were no changes in the prices of the LX trucks. Mazda pickups now start at $6,395.

PRODUCTION

May output dips 10 pct.

Kathy Boyer
DETROIT REPORTER

Production of 695,116 cars in the United States during May plunged 10.51 percent below the 776,881 built in May 1985.

The year-ago total was the best May output since 1979.

Last month's production, 6.05 percent below April's, was the lowest of any month this year and also was the lowest May output since 1983.

Contributing to the decrease were production cuts; model changeover at Chrysler Motors and Nissan Motor Manufacturing Co. U.S.A.; and Memorial Day.

Last week's scheduled output of 170,114 cars was 23.89 percent more than the previous week's 137,316 (a holiday week) but was 3.77 percent below the year-ago week's 176,787.

So far this year, 3,733,117 cars have been built, 4.19 percent below the 3,896,395 completed last year at this point.

Companies shared last week's estimated production as follows: General Motors, 54.96 percent; Ford Motor Co., 23.41 percent; Chrysler, 14.58 percent; Honda of America Manufacturing Co., 2.57 percent; New United Motor Manufacturing Inc., 2.12 percent; Volkswagen of America, 1.18 percent; and American Motors, 1.18 percent.

Nissan's car line at its Smyrna, Tenn., plant remains down for model changeover.

GM's Van Nuys, Calif., plant will be down this week (June 9) for inventory adjustment.

The plant assembles the Chevrolet Camaro and Pontiac Firebird.

Ford has scheduled daily overtime this week at all of its plants.

Saturday (June 7) overtime is scheduled at Chrysler's St. Louis (No. 2) and Belvidere, Ill., plants.

The same facilities, along with Chrysler's Newark, Del., plant are slated for daily overtime this week.

May truck build matches '85

Domestic truck production of 319,659 units during May was 2.02 percent below April's 326,282 — the record build for that month.

Last month's output was 0.99 percent below the 322,881 assembled in May 1985.

Last week's scheduled output of 75,305 trucks was 3.09 percent more than the previous week's 73,050 (a holiday week), but it was 2.31 percent below the year-ago week's 77,086.

So far this year, 1,625,334 trucks have been assembled, 3.99 percent more than the 1,562,936 built last year at this time.

Navistar International ended production of its Cargo Star last week.

A company spokesperson said it now has two replacement trucks that are built on contract by Nissan Diesel for Navistar.

Canada's 500,000th is 'early'

Canadian automakers assembled their 500,000th car of the year June 3, two weeks ahead of 1985.

So far this year, 516,200 cars have been built, 9.17 percent more than the 472,833 produced last year at this time.

Last month's output was 9.56 percent below April's 110,351 and 7.29 percent below the year-ago month's 107,648.

May production of 99,792 cars was the lowest for that month since 1982.

Last week's estimated production of 25,550 cars was 15.06 percent more than the previous week's 22,206 but 1.00 percent below the year-ago week's 25,809.

Canadian truck production of 77,301 units during May dipped 9.75 percent from April's 85,661 and was 3.26 percent below the year-ago month's 79,911.

Scheduled production of 19,172 trucks last week was 15.02 percent more than the previous week's 16,668 and was almost identical to the year-ago week's 19,166.

Toyota affiliate slates output of Stirling engine

TOKYO — Aisin Seiki Co. said it has developed a Stirling engine and will start commercial production in 1988.

Aisin Seiki is part of the Toyota Motor Corp. group. It said that initial production of the external combustion engine, called the "next generation engine," will be for heat-pump air conditioning systems.

In addition to petroleum, the Stirling engine can burn a variety of fuels including gas and coal. The engine also could be be used for automobiles and construction and industrial machinery in the future, the firm said.

The company said it has achieved output of 30 kilowatts or 40 horsepower, thermal efficiency of 35 percent and life of 10 years or 30,000 hours.

Aisin is owned 20.9 percent by Toyota and 5.2 percent by Toyoda Automatic Loom Works Ltd., (which is 23.1 percent owned by Toyota). Aisin recently announced that it will build a plant in the United States to supply Toyota's new assembly plants in Georgetown, Ky., and Cambridge, Ontario, with automotive components.

Seventy percent of Aisin's output here is supplied to Toyota. The firm's main products are transmissions, clutches, brakes, chassis parts and other high-function components.

Toyota calls sales unhurt by hikes

TOKYO — Toyota Motor Corp. has experienced no adverse sales effects from this year's price increases in the United States and its dealers are complaining of short supplies, according to Kaneyoshi Kusunoki, Toyota vice president.

Meanwhile, Eiji Toyoda, Toyota chairman, once again expressed his opposition to the current voluntary restraints on exports to the United States, aimed at reducing Japan's trade surplus with the United States.

Kusunoki, who has been appointed head of Toyota's new production operations in the United States and Canada, said Toyota plans to "slightly increase" its U.S. sales network, which now numbers 1,100 dealerships.

Kusunoki also said the company's first U.S.-produced car carrying the Toyota nameplate will go on sale in September and will serve as a test for Toyota's future North American operations. The car, based on the Toyota Corolla, will be built by New Motor Manufacturing Inc., the company's joint venture with General Motors in Fremont, Calif.

Crain Communications names 3 vice presidents

CHICAGO — Crain Communications Inc., publisher of Automotive News and 25 other publications, has named three new vice presidents.

They are Robert C. Adams, corporate production director; David Persson, publisher of Electronic Media; and Bryan Todd, managing director, London.

MITI would curb exports to Europe

By Francis J. Gawronski
TOKYO BUREAU CHIEF

TOKYO — The Ministry of International Trade and Industry plans to instruct Japanese automobile manufacturers to curtail car exports to Common Market countries in an effort to head off possible friction over automotive trade.

Japanese auto exports to the Common Market have been increasing since September because the yen's appreciation against European currencies has been slower than against the U.S. dollar.

Because of the increase in shipments to the Common Market, especially since the beginning of this year, MITI said it will make the request for the restriction in the near future.

According to MITI officials, car shipments to the Common Market in January-April of this year totaled some 387,000 units, an increase of 36 percent

1986 hikes by Japanese are $1,331

By John K. Teahen Jr.
SENIOR EDITOR

A steady procession of increases on 1986 models has boosted U.S. prices of the leading Japanese cars an average of $1,331, or 13.87 percent since last fall, an Automotive News analysis discloses.

The study involved Toyota, Nissan, Honda and Mazda. Each has raised prices four times since the end of the 1985 model year. Stickers went up at introduction time last September. They rose again in December and in March. Honda started the latest round in May and the others followed in June.

Here are the increases for Japan's Big Four:

Toyota, $1,358, or 14.13 percent.
Nissan, $1,339, or 12.49 percent.
Honda, $1,199, or 14.49 percent.
Mazda, $1,408, or 15.62 percent.

Those figures are based on an arithmetical comparison of current prices and those of corresponding models at the end of the 1985 season. There was no allowance for equipment additions.

The Japanese boost of $1,331 is far higher than the Automotive News estimate of $726 for domestic cars since the end of the 1985 model year. General Motors is responsible for much of the domestic boost. Automotive News estimates that GM has raised its prices an average of $950 on 1986 cars.

Estimates for the other domestics are: Ford Motor Co., $375; Chrysler Corp., $320; and American Motors, $208. Ford, Chrysler and AMC did not play follow-the-leader when GM hiked prices in April. GM's April bump averaged about $400.

The Japanese blame their price increases on the appreciation of the yen against the dollar. The exchange rate was about 240 yen to the dollar last summer. It was 166 last Wednesday.

Nissan completed the June round of price hikes for Japan's Big Four last week by adding an average of $313, or 2.8 percent, to its car prices. Truck prices went up $147, or 1.7 percent, and the combined car-truck average was $267, or 2.5 percent.

Increases ranged from $50 to $200 on Sentra, $300 to $350 on Stanza wagons and $500 to $550 on Maxima. The sporty models showed hikes of $100 for the 300-ZX, $400 for the Pulsar and $400 to $500 for the 200-SX.

The Stanza E four-wheel-drive wagon and the recently introduced 1987 Stanza sedans were unchanged.

Elsewhere, Suzuki added an average of 4.9 percent to the prices of its Samurai 4wd sport/utility vehicles. The base model went up $200, to $6,895, and the hardtop unit rose $235, to $7,100.

ANALYSIS

Ford, Volkswagen discuss cooperation in Brazil, Argentina

By Rik Turner
and Dave Zeis
AUTOMOTIVE NEWS STAFF

Ford Motor Co. and Volkswagen AG announced last week that they have entered discussions that could lead to some consolidation of the two companies' subsidiaries in Brazil and Argentina.

Such an agreement likely would center around the exchange of the idle capacity in each of the two subsidiaries' car and truck manufacturing operations. But discussions also involve the possibility of Ford supplying truck engines to Volkswagen in exchange

see BRAZIL, page 67

GM cancels automation contracts

By Michelle Krebs
FINANCIAL EDITOR

General Motors has canceled contracts for automation equipment for its upcoming GM10 program.

The cancellations apparently are part of a general capital budget reduction being implemented by the automaker.

Robotic Vision Systems Inc. said last week it had received cancellation notices from GM for two vision-guided welding systems.

The equipment had been ordered in March for the massive GM10 program in a contract worth $2.4 million.

RVSI said it understood that GM canceled the contract because of GM's general cutback in its capital spending budget. The cancellations are not related to the performance of RVSI or its equipment, the company said.

Automatix Inc., of Billerica, Mass., also received contract cancellation notices from GM for $1.3 million worth of automation equipment used in glass inspection and glass loading.

Automatix also said the cancellation was the result of a reduction in capital spending.

GM owns 18 percent of RVSI and has an option for a minority position in Automatix.

The stock prices of both companies plunged sharply after the cancellations were announced.

GM officials have denied repeatedly in recent weeks that GM is scaling back its aggressive automation plans. Industry observers have said GM was cutting back on automation, partly because of the problems it was encountering with automation equipment at its Buick City and Detroit-Hamtramck plants.

GM President F. James McDonald told members of the Detroit Auto Writers Group last week that GM was not backing off from its automation plans.

In an interview with Automotive News a week earlier, David Campbell, vice president and director of manufacturing for the Chevrolet-Pontiac-GM of Canada Group, said no cuts in technology have been made. He said the automation would be phased in.

Malaysian auto is caught between success, failure

By Mariane Gualden
SPECIAL CORRESPONDENT

KUALA LUMPUR, Malaysia — One year ago, Malaysian Prime Minister Mahathir Mohamad pushed a button to start the assembly line for the country's first car, the Proton Saga.

He told an audience of 2,000 that the duck-tailed car bearing the country's emblem must sell in large volume or "suffer a big loss."

Today, industry observers say, Mahathir's warning is beginning to sound grimly prophetic. The Proton Saga is caught somewhere between success and failure, causing concern for government planners who hoped its production would be a major first step toward industrialization for this small, developing country.

The car project is a joint venture among the government-run Heavy Industries Corp. of Malaysia, which owns 70 percent, Mitsubishi Motors Corp. and Mitsubishi Corp., the Japanese company's trading section.

—If Malaysia wins its gamble in producing the car, it hopes to follow Japanese, Korean and other carmakers into First-World markets. But economists, auto industry executives and other governments are watching the production of the Proton Saga, fearing it will bury Malaysia in a mountain of foreign debt from which it cannot extricate itself.

Estimates of the ultimate total cost of the car, including reduced duties and taxes plus construction

AMC delays plant decision until autumn

By Richard Johnson
and Mary Connelly
AUTOMOTIVE NEWS STAFF

American Motors' overdue decision on whether and where to build a new North American assembly plant — an issue once expected to be settled in early spring — has been delayed until fall.

The revised timetable likely means AMC will continue Alliance/Encore production in Kenosha, Wis., beyond the planned 1989 buildout.

A plant decision has been set back primarily by negotiations with Chrysler Corp. to build rear-drive standard-sized cars in the under-utilized Kenosha facility.

Negotiations aimed at reducing the 168 production classifications at Kenosha were held last week between AMC and UAW Local 72.

AMC is seeking 35 classifications as part of its effort to gain the Chrysler production. An AMC spokesman said the UAW counter-proposal calls for 46 classifications.

Officials close to various state industrial development proposals made to AMC say they've been told to expect an autumn decision from the company regarding a new plant.

An AMC spokesman said last week that a delay until fall is "possible," but added that a decision "could come sooner."

AMC officials initially said an early-spring decision was necessary in order to set 1990 product plans.

But several factors have upset that timing, including the potential Chrysler manufacturing agreement; a threatened phase-out of the Jeep operation in Toledo, Ohio, unless the union agrees to a concessionary contract by June 30; reported resistance at Renault in France to a new AMC plant in North America; mixed clinic results on possible product successors to Alliance/Encore; and the possibility of a sourcing agreement with an Asian manufacturer.

Though Alliance/Encore was set to be phased out after the conclusion of the 1989 model year, AMC President Joseph Cappy has said the car's life could be extended.

Its successor could be a Jeep rather than a car and could be built at a new plant in Kenosha, Toledo or another state.

AMC could also decide to close all or parts of the Kenosha or Toledo Jeep plants or both, upgrade portions of the facilities or import an Alliance/Encore successor.

UAW says Chrysler Liberty violates pact

By Mary Connelly
DETROIT REPORTER

UAW Local 412 has charged that Chrysler Corp. is violating the national labor contract by excluding the union from the Liberty Project.

The union said 300 people are now working on the innovative project at Liberty's Oakland County, Mich., headquarters but no employees are members of the UAW.

Chrysler has called Liberty its most advanced product development program.

Local 412 charged Chrysler with violating a letter of agreement signed in November as part of national contract bargaining in which the company pledged to involve the UAW in Liberty.

Representatives of the international UAW and Chrysler met last week to discuss the dispute.

Liberty is to Chrysler what Saturn is to General Motors and Alpha is to Ford — a laboratory to test new approaches to design, production, technology, quality and cost management.

Chrysler officials have described Liberty as a "process" but it is expected to result in a new small car and ensure domestic production of those vehicles.

A Chrysler spokesman confirmed last week that discussions are being held with the UAW regarding the "entire situation."

"We don't believe we're in violation of any provision of the contract," Chrysler said.

"There is some bargaining unit involvement in Liberty. Not everything involved with Liberty is out at the Liberty Center," the company added.

Chrysler opened a Liberty Center office in Oakland County at the end of last year.

Dennis Turner, president of the 4,000-member UAW Local 412, which represents 2,300 salaried UAW workers at Chrysler, said the Oakland County Liberty office is staffed by 150 Chrysler management employees and 150 people hired from the Detroit-based engineering firm Creative Industries.

The use of so-called "job shoppers" hired from outside contractors has angered salaried UAW members working at Chrysler's Highland Park, Mich., headquarters, Turner said. Turner said Local 412 represents an estimated 1,800 salaried workers employed on Chrysler's engineering, design and development staffs who are available for the Liberty project.

"We were supposed to be involved in the advanced planning stages of Liberty," Turner said. "Having roughly 300 employees out there is well beyond the planning stages.

"The job shoppers do the same work we do in the design center at Highland Park. That's why we're so mad," Turner said.

"They've taken some of our designers from Highland Park, promoted them to management jobs and put them out at Liberty. They are doing the same job out there they used to do in the union." He declined to specify how many union employees had been promoted.

"We want all the people out there doing the work to be in the union," Turner said. "We are very concerned about the quality of the product. We don't feel job-shoppers are dedicated to quality like the seniority people at Chrysler."

Representatives of the international UAW and Chrysler have met two to three times in the last two months to discuss the dispute, Turner said.

"We invite the UAW's participation in planning a new concept small-car project seeking innovative approaches to product design, engineering and manufacturing — the Liberty Project," says the agreement signed by Chrysler and approved by the UAW.

"To this end, we will explore ways in which the union's role can be expanded beyond its current levels of involvement in all aspects of the project, including future development work."

Turner, who was the national negotiator for Chrysler salaried employees in the 1985 contract talks, also expressed concern that what is happening at Liberty could occur to a greater degree when Chrysler completes its planned new technical center.

CHRYSLER CORPORATION

Insignias: old and new

Chrysler Corp. has changed the graphics and colors used to identify its business operations.

The change is designed to distinguish Chrysler Corp. and its various operating groups and subsidiaries and follows the company reorganization, which became effective June 1.

The Pentastar remains the corporate symbol. The old insignia is shown above; the new one is below. Chrysler Corp. will use gold; Chrysler Motors Corp. will use blue; and Chrysler Financial Corp. and its subsidiaries will use green.

Gulfstream Aerospace will not use the Pentastar but will add the phrase, "A Chrysler Company."

The signatures for the parent company and subsidiaries have been redesigned to give greater emphasis to the names of the subsidiaries.

CHRYSLER CORPORATION

Chrysler, UAW slate talks on Jefferson fate

By Mary Connelly
DETROIT REPORTER

Chrysler Motors and the UAW will begin bargaining a new local labor agreement June 24 aimed at keeping open the aging Jefferson Avenue assembly plant in Detroit.

Chrysler announced last week that it has developed a product plan for the plant but declined to specify the new vehicle.

Speculation has centered on use of Jefferson for truck assembly after the 1987 model year. The plant now builds Plymouth Reliant and Dodge Aries models.

Earlier this spring, Richard E. Dauch, Chrysler executive vice president — manufacturing, cited the need for increased truck assembly capacity because the company's sales ratio of trucks to cars is increasing.

Chrysler said it is seeking a "modern, progressive labor agreement for Jefferson."

Chrysler has sought such agreements at its other plants in exchange for scheduling future product.

Negotiations on a new local agreement will not involve wages and benefits established in the national contract but will center on work rules and job classifications. Chrysler and other automakers are seeking more streamlined manufacturing practices to boost productivity, gain flexibility and save money.

On Jan. 26, members of UAW Local 7 at Jefferson Avenue authorized the union to negotiate a new local agreement in an attempt to save jobs. Any such agreement will have to be voted on by the local membership. Employment at the plant is 4,800.

Keeping Jefferson in operation "depends on the facility becoming more competitive through cooperation among management, labor, local and state governments," Chrysler said.

The UAW and the company are also expected to begin negotiating a new local agreement at Chrysler's Trenton, Mich., engine plant on June 25. Chrysler has said it will build its new V-6 engine at the plant if it can reach a "progressive" pact with the union.

Auto firms find promotion gold in Detroit Grand Prix

By Edward Lapham
MARKETING EDITOR

The international flavor of Formula One racing comes to the home of the domestic auto industry once again next weekend in the form of Detroit Grand Prix V.

And once again, it will be primarily the same group of businesses supporting the June 20-22 event and using it for promotional purposes.

Repeating as major race sponsors are Allied Automotive, Goodyear Tire & Rubber Co., Ford Motor Co., American Motors/Renault and Stroh Brewing Co.

"Support for the event has remained strong," said Robert E. McCabe, president of Detroit Renaissance Grand Prix Inc.

The promotional aspects of the race, which will be seen by 80 million television viewers worldwide, are important to the companies involved, the city of Detroit and the state of Michigan.

Among the auto companies, Ford Motor Co., with a world view of marketing, is again the most active supporter. Lincoln-Mercury Division is sponsoring the Merkur Motor City 100, a Trans Am event, with assistance from Ford corporate and Motorcraft budgets.

AUTOMOTIVE NEWS/JOE WILSEDS

Robert E. McCabe, president, Detroit Renaissance Grand Prix Inc.

The Merkur XR4Ti is pace car for the event and L-M is using a couple of clever tie-ins.

The 16 Detroit-area dealers have been registering customers for the "Merkur Motor City 100 Sweepstakes" to win one of 16 demonstration "hot" laps around the course with Jackie Stewart, Ford consultant and former race driver.

The pace car for the Formula One race is a Ford Mustang GT convertible, so Ford Division is once again an active sponsor. Ford is using a trip to the Detroit Grand Prix as a prize for 100 dealers in a national incentive contest.

Again this year, Chevrolet Motor Division will sponsor the Media Center, display its Performance Center at the Expo and sponsor a lavish pre-race party.

Dodge, carrying the flag for Chrysler Motors, will for the second year sponsor three computer-controlled electronic scoring towers.

AMC/Renault will sponsor the Sports Renault preliminary race.

Volkswagen of America is a sponsor of the Bosch-Volkswagen Super Vee Championship race.

Supplier Goodyear, in addition to being a race sponsor and providing the Goodyear blimp for overhead TV coverage for the CBS telecast, also is running a local ad campaign and special tire sale in conjunction with the event.

Some of the traditional supporters apparently were not quite as gung-ho this year.

"There was some consideration given to dropping sponsorship of the Trans Am race," said an L-M official. "In fact, the decision was all but made at one point.

"I'm glad we didn't though, because it is a natural for the Merkur market."

Our classic lines are great for your bottom line.

When you can give your customers the kind of classic features they demand you have the "Dealer's Advantage." Giving customers what they want is what keeps them coming back—again and again. That's profitable for you.

We're E & G Classics Inc., home of the "Dealer's Advantage." For 13 years, our simulated convertible tops, classic grilles, high profit classic continental kits, restyled vinyl roof designs and stylish deck straps have added to dealer profits. Your customers will keep coming back for classic quality and styling—the kinds of classic lines that are great for your bottom line.

So call E & G today for profit's sake and the distributor nearest you. We'll give you the "Dealer's Advantage."

TRUCK INDUSTRY NEWS

Light trucks lead May sales to record

By Joseph Bohn
TRUCK EDITOR

Led by the light-duty segment, domestic truck sales are back on track toward another calendar-year record.

May sales set a record, the second in a row. They brought the industry's five-month total to within a few thousand units of last year's all-time high.

Light-duty sales provided all the momentum. They set a record for both May and the first five months of the year.

Medium and heavy trucks were off for the month and they year-to-date period.

The industry retailed 435,200 light-duty trucks in May, up 9.1 percent over 398,759 in like 1985, according to manufacturers' reports.

Ford, GMC, Jeep and the imports led the upsurge. Chevrolet and Chrysler sales were off for the month, though not by much.

Ford sales of 127,384 light-duty vehicles in May were up 22.8 percent over last year.

GMC's light duty sales of 29,080 were up 4.3 percent

Jeep sales of 15,978 were up 18.4 percent.

And import sales of 83,887 were up 16.9 percent.

Chevrolet sales of 123,950 were off 1.8 percent.

Chrysler sales of 54,921 were off 1.5 percent.

Ford retailed a total of 131,740 light, medium and heavy trucks in May, up 20.8 percent from a year earlier.

Chevrolet retailed a total of 125,829 trucks, off 2.1 percent.

And GMC retailed a total of 32,572 vehicles, up 4.7 percent.

Manufacturers retailed 3,761 medium-duty trucks in May, down 8.6 percent from 4,113 in like 1985, according to the Motor Vehicle Manufacturers Association.

Within the medium segment, Class 5 sales of 185 were off from 479 last year. Class 6 sales of 3,576 were off from 3,634 last year. No Class 4 sales were reported.

Heavy-truck sales of 18,155 were off 13.5 percent from 20,981 last year.

Within that segment, Class 7 sales of 8,346 were off from 9,117 last year, and Class 8 sales of 9,809 were off from 11,864.

For the five-month period, the industry retailed 1,968,561 trucks, off 1.3 percent from 1,971,081 a year earlier.

Year-to-date light-duty sales of 1,861,901 were up 4.9 percent from 1,852,776 a year earlier, according to manufacturers' reports.

Ford, Jeep and the imports are running ahead of last year in the light-duty segment. Chevrolet, Dodge and GMC are trailing 1985.

Five-month medium-duty sales of 18,721 were off from 19,996 last year.

Within the medium segment, Class 5 sales of 1,551 were up from 1,398; while Class 6 sales of 17,170 were off from 18,598 a year earlier, according to MVMA.

No Class 4 sales were reported.

Year-to-date heavy-truck sales of 87,939 were off from 98,309.

Within that segment, Class 7 sales of 41,877 were up from 40,401 last year; while Class 8 sales of 46,062 were off from 57,908.

Imports take peak 30 pct. of registrations in March

By Jenny L. King
DETROIT REPORTER

In March, imports claimed their largest share of total U.S. registrations so far this year, adding 6.58 percentage points to their year-ago market penetration.

The imports' share of 30.60 percent was a record for March and the best for 1986.

Figures from R.L. Polk & Co. showed import registrations climbing 17.04 percent year to year, to 259,487 from 221,699 in 1985. The imports' market share expanded to 30.60 percent from 23.92 percent as registrations of domestic cars failed to increase.

The top 10 imports for March dropped to 81.83 percent of the import total from 87.81 percent a year earlier. Chevrolet Spectrum moved into the top 10, displacing Audi.

First-quarter import registrations were up 23.32 percent, to 773,369 from 627,137 last year. Their market share increased to 29.94 percent from 25.20 percent.

Honda, whose total includes U.S.-built and imported cars, remained the top make.

Japanese-built cars were off year to year in March, slipping to 67.39 percent of the total from 70.00 percent last year. West German cars represented 13.20 percent, U.S.-assembled imports were 10.53 percent and Swedish cars had 4.89 percent of the month's total. The breakout by country of origin included:

	March, 1986	March, 1985
Japan	174,858	155,196
West Germany	34,265	30,739
United States	27,329	19,568
Sweden	12,694	11,591
Korea	4,787	0
Great Britain	1,848	1,613
Yugoslavia	1,709	0
France	1,379	2,417
Italy	618	575
TOTAL	259,487	221,699

For the first quarter, Japanese penetration of the import total dipped to 70.03 percent from 71.13 percent a year ago. West German products were down to 12.99 percent from 13.57 percent and U.S. products grew to 9.56 percent from 9.10 percent. R.L. Polk considers Honda, Nissan and Volkswagen cars built in this country as imports.

	3 Mos., 1986	3 Mos., 1985
Japan	541,610	446,106
West Germany	100,444	85,123
United States	73,898	50,779
Sweden	35,670	32,711
Yugoslavia	6,013	0
Great Britain	5,148	4,495
Korea	4,921	0
France	4,085	6,416
Italy	1,580	1,505
TOTAL	773,369	627,137

Imported-truck registrations were up 3.41 percent March to March. This year's total was 81,878 compared with 79,178 in 1985. A breakout for the major truck importers follows:

	March, 1986	March, 1985
Toyota	31,071	29,436
Nissan	18,773	22,864
Mazda	10,550	9,063
Isuzu	7,752	--
Dodge Ram 50	--	6,441
Others	13,732	11,374
TOTAL	81,878	79,178

Truck registrations during the first quarter of the calendar year climbed 3.57 percent, to 232,555 from 224,538. Individual numbers included:

	3 Mos., 1986	3 Mos., 1985
Toyota	92,715	82,907
Nissan	48,859	67,109
Mazda	29,343	26,011
Isuzu	21,445	--
Dodge Ram 50	--	17,678
Others	40,193	30,833
TOTAL	232,555	224,538

Chrysler seeks tariff break for Syracuse

By Geoff Sundstrom
WASHINGTON REPORTER

WASHINGTON — Chrysler Corp. wants special tariff treatment for its transmission manufacturing plant near Syracuse, N.Y., according to the Commerce Department's Foreign-Trade Zones Board.

The board is expected to approve Chrysler's request.

Chrysler said lower tariffs on foreign parts used at the plant would improve the company's international competitiveness. The Chrysler plant manufactures and distributes manual transmissions. It employs 3,000 persons.

Chrysler asked the Foreign-Trade Zones Board to create a special foreign-trade subzone for the transmission plant, operated by Chrysler's New Process Gear Division.

Foreign-trade subzone status allows manufacturers to pay lower tariffs on imported components if they are assembled into finished goods within the zone. If the finished product is exported, the manufacturer pays no duty.

The duty rate for transmission components ranges from 3 percent to 11 percent. The duty rate for finished autos is 2.6 percent.

Chrysler said approximately "1 to 2 percent of the components used are purchased abroad, including cases, bearings, gears and synchromesh rings." Some complete transmissions and transaxles are also imported, Chrysler said.

Transmissions shipped to Chrysler's U.S. car plants would be subject to the duty for finished autos, because Chrysler's domestic plants are themselves covered by foreign-trade subzones.

Japanese CVT will beat Europeans to market

By Richard Feast

A Japanese auto maker will beat two European companies to market with production versions of the continuously variable automatic transmission developed by Netherlands firm, van Doorne Transmissie.

Starting this month, Fuji Heavy Industries Ltd., Japan, will be able to offer its Subaru Justy automobile with a locally made CVT. Meanwhile, Ford of Europe and Fiat Auto S.p.A. are still struggling to bring their products to market this year.

During the first year, Subaru CVT sales will be limited to Japan. After that, exports will be allowed under terms of an agreement reached with van Doorne.

All this is of great concern to Ford and Fiat, each of which expected to be first to bring out a CVT car nearly two years ago. They now have to accelerate their programs in order to beat Subaru to market, at least in Europe. Their present tests involve transmissions made under semi-production conditions, an improvement over the handmade components used in early development work.

CVT is a stepless automatic transmission for front-wheel-drive cars. Lighter and simpler than conventional automatics, it is said to provide fuel economy as good as a manual transmission's. If so, it could ignite a revolution in transmission design.

The system has been a long time arriving. The story of its development is one of the most convoluted in recent automotive history, mostly because of van Doorne's secrecy.

No outsiders have been allowed inside van Doorne's premises, despite the fact that a considerable amount of public money has been sunk into the project by the Dutch government. The company has no official spokesperson, and its executives maintain a low profile.

The history of van Doorne Transmissie dates back to 1972 and indirectly originates with the little Daf cars introduced in 1959 with rubber-belt automatic transmissions. The company has seemed constantly short of capital. In 1984, when a West German component supplier tried to have the company declared bankrupt because of money it was owed, the Dutch state stepped in with additional financial aid.

Starting this month, Fuji Heavy Industries, Japan, will offer its home market a locally made continuously variable transmission in its Subaru Justy model (above).

In the mid-'70s there were legal skirmishes between van Doorne and the car company that eventually would take a financial interest in it — Volvo. The Swedish company believed it had acquired van Doorne patents when it took control of Daf. But rights to the transmission were held by VADO, family holding company of the van Doornes, who founded the Daf car and truck business.

More recently, Fuji's threat of legal action, for non-delivery of promised components, spotlighted van Doorne's key weakness: inadequate planning to produce in volume the precision components that are the guts of the CVT — its pulleys and steel belts.

As part of the settlement between van Doorne and Fuji, the Japanese company was granted a license to manufacture its own components rather than buy them from the Dutch firm.

By the end of 1984, van Doorne had $30 million worth of orders for CVT systems, and no factory or machinery with which to make them. That led to van Doorne's complete restructuring last year, which followed the departure in March 1984 of managing director Richard Hamstra Pik.

The latest financial crisis was resolved last November. After more than six months of negotiation, Borg-Warner's 24 percent stake in van Doorne, acquired in 1978 and taken over by a reluctant Dutch Economics Ministry near the end of 1984, was assumed by MIP, a Dutch firm.

MIP, which provides risk capital for industry from clearing banks and the government, also took on a portion of the 39.5 percent of van Doorne held by Volvo Car B.V., Holland. These moves were accompanied by a F1 30/$11.7 million increase in share capital and an another F1 20/$7.8 million in long-term loans.

Thus, van Doorne's current shareholders are MIP (49 percent), Fiat Auto (24 percent) and Volvo Car (27 percent). Volvo Car itself has 70 percent of its capital in the hands of various Dutch state enterprises, with only 30 percent owned by Volvo Car Corp., Sweden.

What van Doorne now has is an order for 50,000 of its so-called "vee-belts," to be delivered to Ford which will turn them into complete transmissions at its Bordeaux, France, factory. Ford has invested some $55 million at Bordeaux to make the CVT (which it confusingly calls CTX) and will supply finished units to Fiat, as well as furnishing its own needs.

The van Doorne belts will not be made at the company's Tilburg factory in the Netherlands, where its headquarters are also located. Instead they will be made at a Volvo Car components plant in St. Truiden, just over the border in Belgium.

Ford is expected to use its CTX initially in the Fiesta, although it also has potential in the larger Escort. Fiat will produce the model originally scheduled for introduction in mid-1984, the Unomatic. Fiat displayed prototypes of CVT-equipped Ritmos as far back as 1980.

Still another part of the tangled tale is the fact that Volvo, one of van Doorne's major investors, will not use the system in its new fwd 400 series, whose coupe version appeared at the recent Geneva auto show. The 400 will use a ZF automatic.

When van Doorne was hawking its ideas to auto makers around the world in the 1970s, the concept that emerged was for three different sizes of CVT to be produced by different partners. Fuji was to make the smallest one for engines of around 1.0 liter. Ford's was the middle one for 1.0- to 1.6-liter engines. General Motors agreed to produce a unit for 2.0-liter engines. Van Doorne was to make internal components, and Fuji, Ford and GM's Hydra-matic Division (at Strasbourg, France) were to use them to build complete units.

Another oddity now is that Fiat, an investor in van Doorne, will not be a producer, but prefers to buy the transmissions from Ford.

With Fuji about to launch CVT production on its own and Ford preparing for start-up around November, the unknown factor is GM. Its project is believed to involve electronic controls (rather than mechanical types like Fuji's and Ford's) to improve fuel efficiency. The Dutch press has written about GM using a chain, rather than a belt, supplied by Borg-Warner.

GM has invested around $180 million at Strasbourg, in part to make CVTs. But GM designs in Europe are handled by Adam Opel AG, West Germany. A senior Opel engineer recently confirmed his company's lack of enthusiasm for the CVT principle. Opel is understood to be developing a more conventional automatic with four speeds and lockup. If GM does make CVTs in Europe, it's believed they would be used only in North American-built cars.

Fourteen years after van Doorne was established, its CVTs at last seem destined for production. The next hurdle is the marketplace. Ironically, in Europe, at least, automatic transmissions go into only 5 percent of new cars sold, and most of those are larger, luxury models for which no CVT has yet been developed. It would take a massive swing in buying patterns for Europeans to start specifying automatics in the types of cars where CVTs will first be offered. ■

Lennox succeeds Smith as MVMA chairman

DETROIT — Donald D. Lennox, chairman and chief executive of Navistar International Corp., has been elected chairman of the Motor Vehicle Manufacturers Association. He succeeds Roger B. Smith, chairman and chief executive of General Motors, for the one-year term, effective July 1.

Lee A. Iacocca, of Chrysler Corp., and Donald E. Petersen, of Ford Motor Co., were elected vice chairmen. Each is chairman and chief executive of his company.

Joseph E. Cappy, president and chief executive of American Motors, was elected treasurer, and Smith was elected secretary.

Thomas H. Hanna, MVMA president and chief executive, was reelected.

Elected to three-year terms on the MVMA board of directors were Howard H. Kehrl, vice chairman, GM; Robert A. Perkins, vice president, Washington office, Chrysler; Will Scott, vice president, government relations, Ford; Neil A. Springer, president and chief operating officer, Navistar; and Cappy and Hanna.

Soichiro Irimajiri, president of Honda of America Manufacturing Inc., was elected to a one-year term.

Other directors who will continue on the board are: Bjorn Ahlstrom, president and chief executive, Volvo North America Corp.; Iain M. Anderson, executive vice president, finance and administration, Volkswagen of America; Betsy Ancker-Johnson, vice president, Environmental Activities Staff, GM; and Jose J. Dedeurwaerder, vice chairman, AMC.

Also, Gerald Greenwald, chairman, Chrysler Motors; F. James McDonald, president and chief operating officer, GM; Noel Phillips, president and chief executive, VWoA; Harold A. Poling, president and chief operating officer, Ford; and Marvin Stucky, vice president, civic and governmental affairs, AMC.

Iacocca, Lennox, Petersen and Smith also continue as directors.

The board also appointed Hanna chairman of the Executive Committee. Other members are Ancker-Johnson, Anderson, Perkins, Scott, Springer and Stucky.

MVMA members are American Motors; Chrysler Corp.; Ford Motor Co.; General Motors; Honda of America Manufacturing Inc.; AM General Division of LTV Aerospace and Defense Co.; M.A.N. Truck and Bus Corp.; Navistar International Corp.; PACCAR Inc.; Volkswagen of America; and Volvo North America Corp.

European car sales heading for record 11-plus million

By Richard Feast
EUROPEAN EDITOR

LONDON — In the wake of falling oil prices, Western European new-car demand this year will reach record levels — in excess of 11 million units.

By the end of May, sales were up 7.5 percent to nearly 5.14 million. The industry expectation is that the year-end increase will be on the order of 5 percent above last year's record of 10.64 million.

All but three of the 16 countries in Western Europe registered advances, the most important of which was West Germany's gain of 180,000 units and more than 17 percent. But the most notable aspect of the preliminary statistics circulating within the industry is the widespread nature of the trend.

National markets hardly ever act in European unison, as local circumstances vary greatly.

"The stimulation comes from the drop in oil prices, which has allowed governments to reduce interest rates," said Ian Robertson of the Economist Intelligence Unit. "One couldn't expect this from a cyclical point of view."

John Lawson, of DRI Europe, agreed, adding, "The consumer outlook has brightened since the fall in oil prices. Everyone feels better off."

The price of a barrel of oil has halved to about $15 since the second oil shock. Stock prices across Europe are up, in anticipation of improved company profitability from lower energy prices and borrowing costs.

The market in West Germany, the largest in Europe, is distorted to some extent because it contrasts with the trough over the two previous years caused by the emissions debate in the country. As the uncertainty over exhaust regulations cleared toward the end of last year, market confidence began to return.

Thus, the pace of Germany's early increase — 17.1 percent in the first five months — is unlikely to be maintained by the end of the year. And after some time in the doldrums, sales in the country are effectively returning only to normal levels.

Italy (up 4.4 percent) and the United Kingdom (up 1.7 percent) continued to climb despite record sales in each country last year. French buyers took delivery of 4.3 percent more cars than in the opening five months of last year, signaling a belated recovery after a considerable period of sluggish sales.

The next most important markets — the Netherlands, Spain and Belgium — advanced similarly.

Indeed, the only countries which failed to fall in line with the overall trend were Sweden and the small Irish and Greek markets.

The Irish industry association attributed it to continuing high taxation — on a personal level, on gasoline prices and on car retail prices. Combined taxation on cars up to 2 liters in the country is 41.7 percent; over 2 liters it is 44.7 percent.

Similarly, new Greek government taxation on cars has "destroyed the market," in the words of one automaker.

In Sweden, new-car sales are now in line with expectations, following the unprecedented boom in the first half of last year in anticipation of tax increases in June and a shortening of credit repayment periods.

At the end of May, consolidated sales of the Volkswagen group — including its newly acquired Seat company and the more usual Audis — were well ahead of the field with shares of 14.6 percent and 750,800 units. Even without Seat's 1.4 percent market share, it would be in advance of Fiat Auto's 12.9 percent and 661,400.

Both groups gained in market share thanks to sales gains greater than the overall 7.5-percent advance. By contrast, Ford, General Motors (Opel/Vauxhall), and PSA (Peugeot-Citroen) gained sales but lost market share.

Renault's plunge continued despite some aggressive pricing which has been sharply criticized by senior officials at PSA and Fiat. By the end of May its slice was below 10 percent and little more than 500,000 units. While the market went up on a broad front, Renault sales were off 3.9 percent.

Japanese makers are on course to break last year's record sales — possibly by as early as October. By the end of May, their combined sales were up 21.5 percent to 605,500, giving them a market share of 11.8 percent.

Most of the advance came in West Germany, where they gained almost 30 percent compared with the overall German marked increased a little more than 17 percent. In the first five months, the Japanese portion of the German cake was 14.4 percent and nearly 178,000 units.

Toyota maintained its slight advantage over Nissan in total European sales — 151,400 units to 148,000.

The news that Japan's Ministry of International Trade and Industry has asked its automakers to slow down car shipments to Europe has been welcomed here.

How the markets changed

JAPAN FROM PAGE 1

over the corresponding period a year ago.

According to the figures compiled by the Japan Automobile Manufacturers Association, exports of cars by Japanese automakers to the Common Market in April totaled 93,886 units, an increase of 87.0 percent over the 50,200 units shipped in April 1985.

JAMA said total vehicle shipments to the Common Market in April were 112,442, up 69.1 percent over the 66,485 units exported a year earlier.

Trade figures from the Japanese Foreign Ministry indicate that car shipments to Common Market nations in May totaled $423.7 million, catapulting 167 percent over the year before, while truck-bus exports amounted to $58.9 million, up 119 percent.

MITI officials said the ministry may ask Japanese auto manufacturers to hold exports to the Common Market to about 10 to 15 percent above last year's totals.

The officials also hinted that MITI may simply request the auto firms to limit their exports to whatever figure is acceptable to the Common Market.

It has been reported that the MITI export request stems from an informal warning against rising Japanese imports issued by the EC Commission during the recent Tokyo Summit Meeting.

According to MITI officials, the Common Market called upon Japan to keep its annual car exports at a level that will not rise 10 percent above last year's total, while Japan held out for an increase of 15 to 20 percent in shipments.

According to JAMA's 1985 calendar-year export figure, the Common Market received 800,641 cars, including 9,205 exported to Portugal and another 71 to Spain. The two nations became members of the Common Market in January.

Total vehicle exports to the Common Market in 1985 totaled 995,489 cars, trucks and buses, including 22,146 to Portugal and 384 to Spain.

Toyota Motor Corp. said its exports to the Common Market in the January-April period totaled 101,867 vehicles, up 132.9 over last year.

Nissan Motor Co. said its exports for the period amounted to 137,757 units for an increase of 26.7 percent.

A Toyota spokesman said the company is "talking with MITI about prudent exports to the Common Market, but as yet we have heard nothing specific."

Mitsubishi Motors Corp. shipped 44,132 vehicles to the Common Market in the first four months of this year, up 57.4 percent. Mazda Motor Corp. shipped 97,699 units, an increase of 40.3 percent.

Although Japanese car shipments to the Common Market have been under a monitoring system since 1983, MITI is concerned that the auto trade will ignite another bilateral dispute if the current escalating shipments are left unchecked. Exports of machine tools and other products already have caused friction between Japan and the Common Market.

A MITI official noted that annual growth of auto shipments in excess of 15 percent should be regarded as "torrential exports."

However, MITI officials hinted that the ministry would not request the automakers to set self-imposed quotas of fixed guidelines, as in the case of exports to the United States.

Japan and the Common Market countries are expected to hold regular trade monitoring consultations in September.

West Germany, with 37,372 Japanese vehicle imports in April for a 96.6 percent increase over the same month the year before, is the leading importer among Common Market countries, followed by Great Britain with 23,991 units, up 101.7 percent, and Belgium with 9,932 units, up 58.2 percent.

On the other hand, Spain imported 31 units in April, compared with none the year before. Italy, which has import control policies, received 174 units, a decline of 52.6 percent. France, which also enforces import restriction, received 6,770 vehicles in April, up 20.5 percent.

NADA firms '87 convention plans
The National Automobile Dealers Association has chosen the 3,174-room Las Vegas Hilton as headquarters for its Jan. 31-Feb. 3, 1987 convention and exposition. Announcing the choice, from left, NADA First Vice President Jim Caplinger, President Jim Woulfe and Convention Committee Chairman H.E. "Buddy" Derrick Jr.

47 dealers in top black 100

NEW YORK — The number of automotive dealerships owned by blacks is rising, and successful dealers are expanding into multiple franchises or other businesses.

Black Enterprise magazine, in a feature on the nation's top 100 black businesses, has 47 auto dealers on this year's list. That is the most ever.

Ford Motor Co., with an increase of nearly 70 percent, leads in black dealership appointments, the magazine said.

Despite the increase, the number of black dealerships is still a small fraction of the 5,628 Ford and Lincoln-Mercury dealerships in the United States, the magazine said. But Ford wants to add another 30 minority dealers by the end of 1986, the magazine said.

General Motors, with nearly twice as many dealerships nationwide, has 95 black dealers, and the goal is to have 130 by the end of this year, the magazine said.

Chrysler Corp., it said, doubled its number of black dealers last year from 21 to 42.

OBITUARIES

Robert V. Daly

BLOOMFIELD TOWNSHIP, Mich. — Robert V. Daly, 72, a member of the Automotive Hall of Fame in Midland, Mich., died June 7. He was with General Motors' United Motors Division for 11 years. He also was vice president — marketing, Gulf & Western Industries, and vice president and general manager of parts for Chrysler Corp.'s Mopar Division, leaving to head his own consulting firm. Mr. Daly was vice president — parts and service, Lucas Industries, from 1973 to 1976. He was a member of Lucas' board and was a consultant for Lucas until 1978.

Frank A. Klimoski

HOLYOKE, Mass. — Frank A. Klimoski, 54, co-owner and vice president of Magna Buick, died June 3. He had been associated with the dealership since 1959.

Alvin Shroyer

BIG SPRING, Texas — Alvin Shroyer Sr., 83, an Oldsmobile dealer for more than 50 years, died recently. He established Shroyer Motor Co. in 1932, at its present location. Mr. Shroyer was honored by Oldsmobile in 1984 as one of the two longest-established dealers in the country. He had been a director of the Texas Automobile Dealers Association.

Ossie G. Birkeland

ROCK ISLAND, Ill. — Ossie G. Birkeland, who owned and operated Birkeland Auto Sales here from 1946 to 1978, died May 23. He was 69. He had also owned Greater Tri-City Auto Auction, East Moline, from 1963 to 1978.

Harry Rosenthal

MIAMI — Harry Rosenthal, 83, died here June 11. He was founder of Rosenthal Chevrolet Co., which has grown into a Washington D.C.-based chain of 12 dealerships under his son, Robert M. Rosenthal. The senior Mr. Rosenthal started his first dealership, a Chevrolet franchise, in 1954 after working in the field for the division for 35 years. He retired from the dealership in 1979.

BRAZIL FROM PAGE 1

for automobile engines.

The two-week-old talks do not involve the creation of new production capacity, a spokesman for Ford in Brazil said.

Each of the two automakers has been suffering from idle capacity in some areas, while experiencing critical production shortages in others.

For example, Ford's Brazilian operation has been unable to meet demand for 1.6-liter four-cylinder engines, although it has an oversupply of 2.3-liter four-cylinder engines. Volkswagen is interested in using the 2.3-liter engine for its upcoming Quantum sedan.

Ford is in need of an intermediate four-cylinder engine for its Corcel replacement and is eyeing the 1.8-liter Volkswagen Santana engine.

A consolidation of operations also would make sense from a pure financial standpoint, as both automakers have been posting losses in South America. Meanwhile, both Ford and Volkswagen have begun aggressive campaigns to increase exports from Brazil, which along with a booming local market may be creating a strain on manufacturing operations.

Ford already is marketing a Brazilian-built medium-duty truck in the United States and will begin importing additional truck diesel engines from Brazil by the end of this year.

Volkswagen has said it plans to export about $1 billion worth of products annually from Brazil by the end of the decade. It will supply some 4,000 medium-duty trucks to PACCAR Inc. for distribution in the United States beginning next year and export about 50,000 subcompact cars annually to Volkswagen of America.

Ford employs 24,000 in Brazil and 9,000 in Argentina, operating vehicle assembly plants in Sao Paulo, Brazil, and Pacheco, Argentina.

Volkswagen workers number more than 35,000 in Argentina and Brazil combined. The company has three car and truck assembly plants and two engine plants in Brazil.

INVENTORIES

62-day domestic-car supply is lowest in eight months

By Kathy Boyer
DETROIT REPORTER

June opened with a 62-day supply of new domestic cars in stock, the lowest level in eight months.

Not since Oct. 1, when a 36-day supply was reported, had the days' supply been so low.

A month earlier, the days' supply was 70, and a year earlier the count was 50.

June 1 also marked the first inventory downturn in four months.

Cars in inventory on June 1 numbered 1,866,853, the lowest count since Feb. 1, when a stock of 1,767,086 cars was reported.

The total was 1,945,048 a month ago. A year ago, it was 1,546,188.

A number of factors contributed to the decrease. May sales exceeded April's; there were production cuts in May, and several plants were down for model changeover.

Should this continue, the industry could possibly see the inventory shrink to the ideal days' supply of 55.

The June 1 inventories were split this way: General Motors, 60.02 percent; Ford Motor Co., 21.18 percent; Chrysler Motors, 15.60 percent; American Motors, 1.76 percent; Volkswagen, 1.08 percent; Honda, 0.34 percent; and Nissan, 0.02 percent.

One month earlier, the split was: GM, 60.79 percent; Ford, 20.38 percent; Chrysler, 15.76 percent; American Motors, 1.70 percent; Volkswagen, 1.03 percent; Honda, 0.27 percent; and Nissan, 0.07 percent.

The shares by size class on June 1 were: subcompact, 17.70 percent; compact, 21.79 percent; intermediate, 37.22 percent; standard, 13.23 percent; and luxury, 10.06 percent.

On May 1, the percentages were: subcompact, 17.26 percent; compact, 22.01 percent; intermediate, 38.23 percent; standard, 12.88 percent; and luxury, 9.62 percent.

The month opened with a 61-day supply of subcompacts. Days' supplies by nameplate were: Accord, 10; Sentra, 11; Horizon, 30; Omni, 31; Escort, 48; Lynx, 64; Golf/GTI, 70; Chevette, 73; Daytona, 93; Nova, 94; Fiero, 94; Charger, 94; Turismo, 95; Pontiac 1000, 109; Alliance, 137; Laser, 144; and Encore, 309.

There was a 62-day supply of compacts: Mustang, 45; Sunbird, 48; Firebird, 49; Reliant, 53; Cavalier, 53; Topaz, 55; Camaro, 66; Tempo, 68; LeBaron, 76; Aries, 78; Cimarron, 80; Firenza, 84; Capri, 89; Skyhawk, 133; and Eagle, 148.

The 60-day supply of intermediate was split this way: Grand Am, 18; Sable, 40; Taurus, 41; Cutlass Supreme, 50; Cutlass Ciera, 50; Calais, 55; Marquis, 56; Somerset Regal, 57; LTD, 57; Celebrity, 57; Cougar, 62; Caravelle, 64; Citation, 69; Dodge 600, 72; Pontiac 6000, 76; Monte Carlo, 79; Century, 79; Thunderbird, 80; Bonneville, 92; New Yorker, 96; Regal, 98; Grand Prix, 109; LeBaron GTS, 122; and Lancer, 152.

There was a 66-day supply of standard-sized cars: Plymouth, 44; Grand Marquis, 56; Diplomat, 57; Crown Victoria, 59; LeSabre, 61; Oldsmobile 88, 69; Chevrolet, 73; and Parisienne, 80.

Luxury cars had a 66-day supply: Oldsmobile 98, 48; Cadillac, 55; Lincoln, 59; Corvette, 61; Continental, 67; Mark VII, 72; Fifth Avenue, 76; Electra, 79; Seville, 85; Eldorado, 90; Toronado, 91; Riviera, 153.

*Includes domestic trucks

By Kathy Boyer
DETROIT REPORTER

The inventory of new imported cars in the United States on June 1 rose to the highest level in 46 months.

The month opened with a stockpile of 387,911, according to Automotive News estimates. The count hadn't been that high since Aug. 1, 1982, when 429,663 were reported.

On May 1 of this year, the figure was 346,487. It was 297,000 on June 1, 1985.

The latest total represented a supply of 37 days, down from 38 a month ago.

The inventory of new imported trucks on June 1 was the highest for any month since Automotive News began breaking out car and truck inventories in April 1982.

The truck total of 177,788 was almost 21,000 higher than the month-earlier figure of 156,930.

Sales of imported trucks in May were about 12,000 units higher than in April, indicating that the inventory growth is a planned buildup in anticipation of a continuing sales increase.

There was a 51-day supply of pickups on June 1, the highest since Dec. 1, 1983, when a 55-day supply was reported.

On May 1, the figure was 48 days and on June 1, 1985, it was 31.

The combined imported car and truck inventory on June 1 totaled 565,699, the highest since Aug. 1, 1982, when there were 600,632 imported cars and trucks in stock.

On May 1, the combined total was 503,417, and it was 389,815 on June 1, 1985.

The combined days' supply of cars and trucks was 41 on June 1, almost unchanged from May's figure of 40. A year ago, the days' supply was 29.

On June 1, import-car inventories were split this way: Japan, 66.80 percent; Germany, 21.67 percent; and other countries, 11.53 percent.

On May 1, the split was: Japan, 63.20 percent; Germany, 24.41 percent; and other countries, 12.39 percent.

Here are the June 1 days'-supply figures for imported cars by country of origin: Japan — Honda, 9; Toyota, 10; Mazda, 22; Acura, 28; Subaru, 33; Nissan, 40; Mitsubishi, 42; Chevrolet, 96 (including 66 for the Suzuki-built Sprint and 123 for the Isuzu-built Spectrum); Chrysler, 101; and Isuzu, 237.

West Germany — Mercedes-Benz, 19; BMW, 37; Volkswagen, 58; Merkur, 62; Porsche, 63; and Audi, 99.

Domestic-car sales slide again in Canada

By Jenny L. King
DETROIT REPORTER

May sales of new domestic cars in Canada were off 2.22 percent from the year-ago total. It was the third consecutive monthly decline.

Truck sales continued their long, steady climb, up 15.99 percent for the month and 13.95 percent for the year.

New-car sales by the major North American makers totaled 82,527 in May, down 2.22 percent from 84,405 in May, 1985, and down 8.10 percent from 89,801 in April of this year.

General Motors was the only manufacturer to post a May increase, up 8.16 percent, to 41,821 from 38,667 a year earlier. Ford Motor Co. dipped 2.09 percent, to 21,831 from 22,296. Chrysler Corp. plunged 17.29 percent, to 16,551 from 20,010.

American Motors reported sales of 1,594 AMC and Renault products in May, down 40.23 percent from 2,667 a year earlier. Volvo was off 4.58 percent, to 730 from sales of 765.

GM's share of the market was up nearly five percentage points, to 50.68 percent from 45.81 percent in May, 1985. Ford earned 26.45 percent, up slightly from 26.41 percent. Chrysler dropped to 20.06 percent from 23.71 percent. AMC was down to 1.93 percent from 3.16 percent and Volvo dipped to 0.88 percent from 0.91 percent.

New-car sales January through May numbered 348,191, off 2.70 percent from 357,866 last year.

Truck sales of 36,532 in May were up 15.99 percent from 31,497 in the year-earlier month. They included increases for all makers except Chrysler.

On a percentage basis, AMC's gain was the largest, with Jeep sales up 49.90 percent, to 1,571 from 1,048. GM reported sales of 14,839 new trucks, up 27.94 percent from 11,598. Ford was up 14.47 percent, to 13,272 from 11,594, and Chrysler was down 5.61 percent, to 6,850 from 7,257.

AMC earned 4.30 percent of the May truck market, up from 3.33 percent in 1985. GM moved up to 40.62 percent from 36.82 percent. Ford had 36.33 percent, off from 36.81 percent, and Chrysler dropped to 18.75 percent from 23.04 percent.

Year-to-date truck sales were up 13.95 percent, to 152,873 from 134,153.

UAW divorce becomes final

Canadian autoworkers officially divorced the international UAW last week and named their organization.

In a one-day convention in Toronto, autoworkers ratified naming the group the National Automobile, Aerospace and Agricultural Implement Workers of Canada. It will also be known as the Canadian Auto Workers (CAW).

The Canadian action came the week after the UAW met in California for its triennial constitutional convention and officially parted with the Canadians. The split between the two unions occurred some 18 months ago following the 1984 contract talks.

A delegate from Local 222 in Oshawa, Ontario, cast the only dissenting vote among the 318 delegates ratifying the agreement last week.

The CAW has a membership of some 120,000.

A CAW spokesman said the UAW will transfer some $32.4 million to the Canadian union. The money is from the UAW strike fund and also from a separate fund into which Canadian dues had been paid pending the official divorce.

Almost $25.9 million will be earmarked for the CAW strike fund. The remainder is targeted for operating expenses.

At its founding convention last fall, the CAW elected officers of the new union. Robert White is president of the CAW.

Early-June sales rise slightly

Early-June domestic new-car sales were up less than one percent from the year-ago level. June 1-10 sales numbered 217,509 compared with 216,565 for the period in 1985.

General Motors reported sales of 128,977, down 0.48 percent from 129,594. Ford Motor Co. was off 5.22 percent, to 50,088 from 52,846. Chrysler Motors sales of 32,609 were up 15.70 percent from 28,184. American Motors was down 38.56 percent, to 1,450 from 2,360.

Honda was up 69.92 percent, to 3,135 from 1,845. Estimated Volkswagen sales of 1,000 were up 1.42 percent from 986, and estimated Nissan sales of 250 were off 66.67 percent from 750 a year earlier.

Year-to-date sales of 3,621,227 were off 6.05 percent from 3,854,298 in 1985.

PRODUCTION

Car output dips 2.75 pct.; week's total is 167,531

By Kathy Boyer
DETROIT REPORTER

Scheduled production of 167,531 cars in the U.S. last week dipped 2.75 percent from the previous week's 172,270.

The prior week's build marked the first time in nine weeks that the makers produced more than 170,000 cars.

Last week's output was 2.01 percent better than the year-ago week's 164,228.

So far this year, 3,902,804 cars have been assembled, 3.95 percent fewer than the 4,063,336 completed last year at this point.

Last week's scheduled output was divided as follows: General Motors, 53.48 percent; Ford Motor Co., 23.28 percent; Chrysler Motors, 15.94 percent; Honda of America Manufacturing Inc., 2.77 percent; New United Motor Manufacturing Inc., 2.15 percent; American Motors, 1.19 percent; and Volkswagen of America, 1.19 percent.

As previously reported, Nissan Motor Manufacturing Co.'s car line at its Smyrna, Tenn., plant remains down for model changeover.

Chrysler began production of its Plymouth Sundance and Dodge Shadow on June 9. The cars will be introduced as 1987 models.

GM's Van Nuys, Calif., plant, which assembles the Chevrolet Camaro and Pontiac Firebird, resumes production today (June 16).

The plant had been down for one week for inventory adjustment.

Neither GM nor Ford scheduled overtime Saturday (June 14).

Ford has slated daily overtime this week at all of its plants except Atlanta and Chicago.

Chrysler scheduled overtime at its Newark, Del., plant Saturday.

Newark and Chrysler's Belvidere, Ill., and St. Louis plants are slated for daily overtime this week.

Truck output pegged at 74,869

Targeted U.S. truck output of 74,869 units last week was 2.17 percent below the previous week's 76,530 but was 0.16 percent more than the year-ago week's 74,751.

Year-to-date, 1,701,428 trucks have been assembled, 4.07 percent more than the 1,634,858 built last year at this point.

General Motors scheduled no Saturday (June 14) overtime at any of its truck plants.

Ford Motor Co. slated Saturday overtime at its Twin Cities and Norfolk, Va., plants.

Daily overtime is scheduled for all Ford plants this week (June 16).

Saturday (June 21) overtime is slated at Ford's Louisville plant.

Canada again schedules 25,550

Production of 25,550 cars in Canada last week was 1.87 percent more than the previous week's 25,082 and 1.99 percent more than the year-ago week's 25,052.

Last week was the third consecutive week that the makers scheduled a 25,550-unit build.

So far this year, 541,282 cars have been assembled, 8.73 percent more than the 497,810 built last year at this point.

Canadian truck output of 19,167 units last week was 2.26 percent more than the previous week's 18,743 and 0.54 percent more than the year-ago week's 19,065.

Year-to-date, 438,691 trucks have been built, 2.98 percent more than the 426,014 assembled last year at this time.

Rockwell to upgrade plastic parts

TROY, Mich. — Rockwell International announced a multimillion-dollar capital spending plan for research and development of fiberglass reinforced plastic automotive body panels.

The program, aimed at reducing the manufacturing time for such panels and for other automotive parts involves:

1. Acquisition of a high-speed, electronically programmable press.

2. Development of a rapid-gelling fiberglass-reinforced sheet molding compound (SMC) for use in high-speed presses.

3. Refinement of mold-design methods.

Rockwell is the first independent automotive plastics supplier to order the new, rapid-acting press, which was designed by MTS Systems Inc., said Benjamin E. Ewing, director of sales and marketing for Rockwell's Plastic Products Businesses.

He said, "The rapid action and programmable controllability of the new high-speed press makes it feasible to use very rapid-gelling (SMC) formulations which would be much less practical using traditional presses."

Ewing said this year's R&D spending plan includes a powder mold-coating system believed to be the first such commercial installation in North America.

The program also includes a new computer-aided-design system to enhance the design service that Plastic Products offers its customers and a joint program with Rockwell's corporate Science Center, in Thousand Oaks, Calif., to develop improved adhesive bonding of SMC laminates.

John J. Sullivan, director of engineering and product development, Plastic Products Businesses, said the new press will be used exclusively in an accelerated-process R&D program.

Rockwell, he said, has targeted a 30-percent reduction in processing time, which would make reinforced plastic parts cost-competitive with alternative materials at much higher volumes than those currently practical.

"We anticipate being able to make production of SMC parts cost-competitive at volumes of 200,000 to 250,000 units, considerably increased from today's 150,000 parts," Sullivan said.

"The main thing deterring wider application of reinforced plastic parts is the fact that many of the comparable steel products gain a price advantage when production runs exceed approximately 150,000 units," Sullivan said.

"The steps we are taking will largely remove this deterrent."

The new, rapid-acting press features a double-action platen, in which both halves of the platen open with a combined upward and downward stroke rather than the single downward stroke of conventional presses. The platens are electronically controlled on six angles of motion.

Rockwell said its Centralia, Ill., compounding and processing plant has one of the largest SMC press capacities in the world, with 30 major production presses, 22 of which are rated at 1,000 tons or more.

Jefferson could live for Liberty

By Dave Zola
DETROIT REPORTER

BOSTON — Chrysler Motors is proposing to build at its aging Detroit Jefferson Avenue plant an all-new vehicle that would utilize several breakthrough modular assembly techniques developed by the company's Liberty advanced design staff.

However, in order to accommodate a new model, the facility would need a complete renovation — even more extensive than the $500 million, three-month modernization project that transformed the company's Warren, Mich., assembly plant into "Dodge City" — according to Gerald Greenwald, Chrysler Motors chairman.

Dodge City is the home of the new mid-sized Dakota pickup.

Jefferson also would need a highly innovative labor agreement and financial incentives from city and state governments if it is to survive beyond 1987.

"We're hopeful many (Liberty) ideas can be applied to the plant and vehicle if we can reach an agreement on Jefferson with the UAW," Greenwald said.

"We think we've come close to doing the impossible. We think we have a concept, but we're going to need a modern labor agreement and help from city and state governments."

Greenwald refused to disclose the type of vehicle under consideration for Jefferson, but he did say it would have to be a high-volume product to justify the costs.

Some reports have indicated Chrysler is looking at Jefferson as a source for light-truck production. Company executives have admitted that a small utility vehicle built on the Dakota pickup truck platform is in the works. But capacity constraints at the Warren plant appear to be a major stumbling block.

Greenwald also declined to comment on what demands the company would make of UAW and local government officials. Talks with the union begin June 24.

Since any project going into the Jefferson plant would require a major renovation of the facility, the program would be a prime candidate to adopt some of the Liberty design and manufacturing concepts, Greenwald said.

"The Liberty team continues to gain knowledge about product design and plant application," he said. "Since a Jefferson program would be a future product, it stands to reason we would be able to put more of that into Jefferson.

"Liberty is a test bed for new designs," he said. "We probably have 15 Liberty vehicles running around right now, and some look more like trucks or vans than cars."

Ford eyes Europe as design source for its small cars

By Richard Johnson
DETROIT REPORTER

Ford Motor Co. may soon turn to its European product engineering staff for design and development of small cars for the North American market.

What has been widely reported as the exclusive province of Japanese partner Mazda could heavily involve Ford of Europe product planners, according to Philip E. Benton Jr., executive vice president — International Automotive Operations.

In an interview, Benton said Ford of Europe may split design and engineering functions with Mazda as Ford sets about replacing its current compact/subcompact lineup.

And he vehemently denied reports that Mazda, which is 25 percent owned by Ford, will assume major small-car planning duties at Ford of Europe — reports which he said have damaged morale in Europe.

Indeed, he said that as a proven vehicle development unit in small-car segments, European operations are a good candidate to design, for instance, a replacement for Tempo/Topaz in the North American market.

"I believe Europe can do that job with North America just as well as Mazda," Benton said. "I'm not knocking Mazda. But I can see a circumstance where you want to do a B-car, a C-car and a C/D-car. Why not have Europe do one of those and Mazda do the other two, or Europe do two or Mazda do one? It is a more efficient utilization of resources."

Benton said the European product group could land an assignment to do "any one of them."

"It would more likely be a Tempo because Europe, if anything, is probably better at Tempo-sized cars because that size has been so important to them," he said. "The Sierra has been their lifeblood. Europe is likely to be best at that kind of car vis-a-vis the Japanese and North America.

"But conceptually, it could be any one of them, depending on a lot of factors," he said. "When we get swinging here, you can see a circumstance where the C-car is coming up and Mazda's plate is full with B's and C-Ds. In that case, you might use Europe. And at

Japan: no curbs for Europe

By Francis J. Gawronski
TOKYO BUREAU CHIEF

TOKYO — The Japan Automobile Manufacturers Association does not feel it is necessary to reduce Japanese car exports to the Common Market countries immediately, JAMA President Shoichiro Toyoda told a news conference.

The Ministry of International Trade and Industry has said it plans to instruct Japanese auto makers to curtail car exports to the Common Market in an effort to head off possible friction over automotive trade (Automotive News, June 16).

MITI has indicated it may ask the manufacturers to hold exports to the Common Market to about 10 to 15 percent above last year's totals.

Toyoda, who also is president of Toyota Motor Corp., said that a recent sharp increase in car exports to Common Market nations is attributable to the economic recovery in those countries. He said the Japanese share of new-vehicle sales in the Common Market has not increased dramatically recently.

Thus, Toyoda said, JAMA has no plans to immediately take measures to hold down exports to the Common Market. He said it is basically a matter to be left to the discretion of individual Japanese auto makers.

JAMA said its statistics show that Japan's motor-vehicle exports to the Common Market nations in April totaled 112,442 units, an increase of 69.1 percent over volume in the like month a year earlier.

Japanese auto exports to Common Market countries have been increasing since September because the yen's appreciation against European currencies has been slower than against the U.S. dollar.

Tjaarda's world: dynamic design

By Giancarlo Perini
STAFF CORRESPONDENT

TURIN, Italy — In international automotive design circles, Tom Tjaarda is respected not only for his work but for the man he is.

The tall, good-looking designer of one of the most successful sports cars — the Ford Pantera — is well-mannered and without swagger. Yet he's a dynamo at the drawing board, with the same will to make it as when he first came to Turin more than 25 years ago.

Known as a discreet person and a careful dresser, he drives a Volkswagen Golf. He says "it has very subtle and well-balanced design, is one of the best cars on the market and does not look arrogant."

His Golf has body-colored aero wheel covers and a thin clear strip, which he added to highlight the body design.

Modest in his everyday life, Tjaarda the designer

Europe called long-range priority for Chrysler

By Mary Connelly
DETROIT REPORTER

Chrysler Corp. will retain a toehold in Europe via partnerships on the Continent but plans no immediate aggressive assault on that market.

"We don't have a current plan and nothing is imminent that would suggest we're going to try to take Europe by storm," Robert S. Miller Jr., vice chairman of Chrysler Corp., told Automotive News.

"It is one of the world's three biggest auto markets. So you've got to say that remains a question mark.

"But currently, nobody makes any money in Europe on a consistent basis. The major players all kill each other fighting for market share. Several of the players are quasi-government-backed, like Renault.

"It's a very tough market," Miller said. "It would be particularly tough for a newcomer, and Chrysler got clobbered the last time it tried to take Europe."

Speculation about Chrysler's international plans has heightened in recent weeks because of Chrysler's latest raid of Ford Motor Co. personnel.

Earlier this month, Chrysler hired Robert A. Lutz from Ford Motor Co. where he had been a director and had extensive overseas experience. Lutz' jobs at Ford included executive vice president of International Automotive Operations and chairman of Ford of Europe.

Lutz is now executive vice president of Chrysler Motors with responsibility for overseeing international, truck and component business operations.

In addition, Chrysler recently hired Michael Hammes as vice president of International Operations. Hammes, too, is a former Ford executive and most recently was vice president — truck operations at Ford of Europe.

But the hirings apparently do not signal an immediate focus on Europe by Chrysler.

"It has to remain on your long-range list of priorities to have a presence (in Europe)," Miller said. "But short-term, it's not at the top of our list. We think the partnerships that we are pursuing are a good way to go. But those aren't major involvements in Europe like Ford's and General Motors'."

Chrysler recently reached agreements which will increase its equity in Maserati S.p.A. from 3.5 percent to 51 percent by 1995.

Shortly after, it announced it is selling its 12.5 percent equity in Peugeot S.A.

"We've had a relationship with Peugeot for some time, and I'd like to underscore that that commercial and industrial relationship continues even though we did take the action to sell our stockholding," Miller said.

Miller said defending the North American market is the chief focus of Chrysler's international strategy.

"The first priority is to protect the home base, which is North America — the United States, Canada and Mexico," Miller said. Building supply relationships and partnerships in countries such as Brazil and Korea is also important to the corporation.

"We are pursuing those," Miller said.

Chrysler also has "a major stake" in the Japanese car market through its 24 percent ownership of Mitsubishi Motors, Miller said.

"We sit on the board of directors and have a growing cooperation with them," he added.

Miller indicated that Lutz and Hammes now have the assignment of "raising our level of sensitivity and awareness on what needs to be done."

"But I think you've got to give them a little time," he added.

Chrysler's strategy explained by Miller

By Mary Connelly
DETROIT REPORTER

Chrysler Corp. will not resort to a hostile takeover in its acquisition of a high-technology company to round out its diversification.

That could limit its choices as it seeks an aerospace, defense or electronics firm to protect it from the cyclical auto industry and feed technologies back to the vehicle manufacturing operation.

Making the planned high-tech acquisition could take "a couple of years," Robert S. Miller Jr., vice chairman of Chrysler Corp., told Automotive News.

"We're not in a big hurry," Miller said. "We're going to take our time. We've pointed our bat at the general direction and if it takes a couple of years, then so be it."

Chrysler has been seeking to fill its so-called high-technology "empty box" as part of its corporate diversification and a reorganization which created a holding company and four subsidiaries.

Miller said Chrysler has not determined if it will seek to acquire one large company or several smaller ones.

"There are two choices," he said. "One is a string of pearls where you knit together smaller companies until you have a meaningful mass, and the other would be the big bang involving a major acquisition. I wouldn't rule out either one for now. We have been out looking and talking to some companies. So far, we haven't found one that meets all the criteria."

Miller said an important criterion is being able to achieve a friendly acquisition.

"Unless the management and the board of another company see the positive benefits and want to become part of the Chrysler family, then it's a non-starter. That may restrict a lot of choices that other companies in theory would have.

"But from our standpoint," Miller said, "it would be wrong to start out in a hostile environment because one of the things we'd be looking for is a good strong management that wanted to stay in place and run that end of the business."

Chrysler's three previous acquisitions — E.F. Hutton Credit Corp., FinanceAmerica Corp. and Gulfstream Aerospace Corp. — were "friendly acquisitions," Miller said.

"In each case the managements of those companies are still in place," he said.

Miller said Chrysler's corporate diversification will not be carried out at the expense of the core business — vehicle manufacturing.

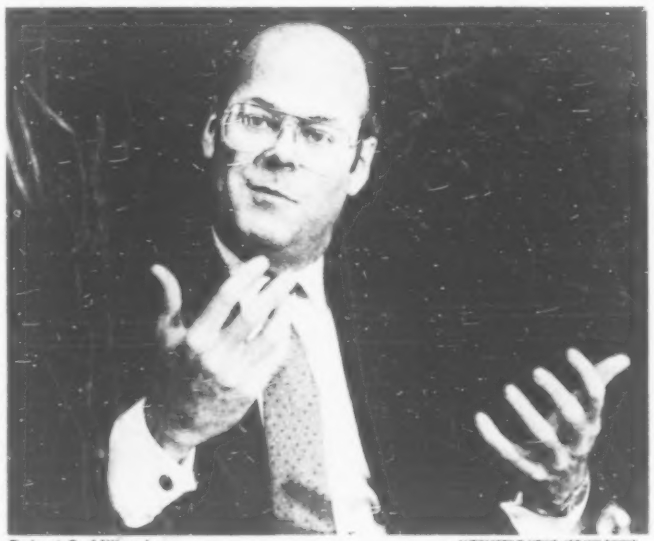
"We're not going to starve the car business to do the diversification," he said. "Our first priority is to stay competitive in the car business — our basic business, our great love."

Asked how much of Chrysler's business will be automotive and how much non-automotive by the end of the decade, Miller said, "I would say that by 1990, we would be no less than two-thirds still driven by automotive. Maybe 10 years down the road, 50-50 would be conceivable. The premise for 50-50 is that we continue to grow in the car business and have excess funding capacity to take on more."

Miller said Chrysler has targeted aerospace, technology and defense companies in its search for an acquisition because not only would they protect Chrysler from the cycles of the auto industry but they may bolster the car business.

"Those are leading technologies and growth companies but they also can feed back to the car business," Miller said. "If you think about Gulfstream as a concept, it takes sophisticated electronics and wraps it around with lightweight composite materials into an aerodynamic shape. All of that is a description of what it's going to take to win in the car business in the 1990s.

"I don't want to overplay what Gulfstream has done for the car business, and there hasn't been a lot so far, but the leading technologies that are in aerospace, defense and electronics are going to be the very same things that you're going to need to be in the car business. I think that over time, there will be some osmosis. I'm sure that's what (General Motors Chairman) Roger Smith had in mind when he paid the big bucks for Hughes Aircraft Co."



Robert S. Miller Jr. AUTOMOTIVE NEWS/JOE WILSSENS

Miller said Chrysler was interested, as well, in purchasing Hughes "but thought the price got too high."

Although Chrysler has $3 billion in cash and marketable securities, Miller said, "I wouldn't characterize that as being available for a $3 billion cash acquisition."

"The old Chrysler Corp. used to be hand-to-mouth," he said. "You'd call up the treasurer and say how much cash is there and he'd give an answer and you'd say 'OK, I need to lay off 50 engineers.'

"We have $3 billion in cash in part because we want to make sure that we don't have to interrupt our research and development effort, our new product programs because of cash. I don't want the head of engineering ever calling the treasurer to ask him how many engineers can he afford this month. We're financing the company so we can make a plan and stick to it.

GM bus unit for sale, HD rework eyed

By Michelle Krebs
FINANCIAL EDITOR

DETROIT — General Motors told employes in Pontiac, Mich., that it is looking for a buyer for its bus operations and is trying to make its heavy-truck operations more competitive.

GM President F. James McDonald told Automotive News that the bus business is no longer viable. He said preliminary talks with possible buyers have taken place but no agreement has been reached.

GM has about a third of the U.S. bus business, down from 50 percent in the 1970s. The Pontiac bus plant employs 400 persons who have been laid off frequently when orders lag.

GM can no longer cope with high labor costs, the rigid local contract at the truck and bus plant and the cyclical nature of the bus business. In addition, McDonald said the city bus business has dried up since the federal government stopped subsidies to cities for buses.

A GM spokesman said last week's statement was a "message to employes" because there have been a lot of rumors floating around. He declined to mention the companies with whom GM is talking.

McDonald said GM does not want to get out of the heavy-truck business but needs to make it more competitive. The heavy-truck business is considered a no-growth business and foreign competition is compounding the problem.

McDonald suggested one possible solution may be to find a partner.

Shadow/Sundance ad budget tops $40 million

By Dave Zoia
DETROIT REPORTER

BOSTON — Chrysler Motors is setting aside $40 million to $50 million to push its new Dodge Shadow and Plymouth compact cars — more than the company has spent to advertise any other new vehicle in its history.

"Never before have we put more resources behind a new car or truck," said John B. Damoose, Dodge general marketing manager.

The division will spend $20 million to $25 million to advertise the Dodge Shadow. Plymouth will match that amount for Sundance.

Chrysler is planning an aggressive marketing campaign aimed at women, who are expected to account for at least 50 percent of sales.

As part of its special targeting to women buyers, Chrysler will produce six- to eight-page magazine inserts featuring lifestyle tips for women and a message from Chrysler Corp. Chairman Lee Iacocca. It will do two such sections annually during the next few years.

The two new models will be introduced officially Sept. 18, but dealers will be selling the vehicles as they arrive.

Production of four-door models already is underway at the Sterling Heights, Mich., plant. Output of two-doors begins Aug. 18. Sales are expected to total 70,000 for the remainder of calendar 1986. About 180,000 units will be built annually once output hits stride.

Chrysler will be the first automaker to use 15-second television spots, when it launches a teaser campaign for the Shadow/Sundance in late August. The manufacturer also will buy out special issues of USA Today and Life magazine in order to tout the two new compacts.

The Sundance/Shadow will be priced around $7,500 and offer about 45 items as standard. Only 13 stand-alone options will be available. The Plymouth Sundance will be priced about $100 more than the Shadow.

Dodge, which is accenting performance for 1987, will adopt a new advertising theme, "Setting New Standards of Performance," which will appear in each of its Shadow ads.

Plymouth again will run with the "Born in America" theme, but will place more emphasis on products in its advertising. Past ads centered on American lifestyles and showed little of the vehicles themselves.

Chrysler to sell cars loans on secondary market

By Michelle Krebs
FINANCIAL EDITOR

Chrysler Financial Corp. has announced plans to sell pools of car loans to Wall Street investors on the secondary market.

Chrysler Financial's announcement is a further indication that a secondary market for car-loan securities, patterned after the secondary mortgage market, is developing as an alternate means to fund car-loan demand.

A secondary market for mortgages has become a way of life. Automotive financing experts see a similar market developing for car loans. They say that ultimately, a secondary market for vehicle loans will lead to lower interest rates on those loans and ensure that funding for car loans is always available.

Chrysler Financial becomes the second auto finance company to offer an asset-backed security. General Motors Acceptance Corp. was the first and so far has sold nearly $2 billion worth of car loans as securities. GMAC has a $755 million offering in the works for later this month. Ford Motor Credit Co. may make an offering by the end of the year.

Robert S. Miller, Chrysler Corp. vice chairman and chairman of Chrysler Financial Corp., said Chrysler Financial wants to be sure it has a means to obtain funding for car loans in the future.

"I think that by 1990, that's going to be the predominant form of car-loan financing," Miller said, adding that Chrysler Financial wants the experience of putting the packages together.

"We're not doing it because we need the money," Miller said. "And the first one through isn't really cost-effective because of all the work you have to do to get it ready. But once you've done it, you're ready for 1990. People who were not prepared to do that in mortgages got left in the lurch."

Chrysler Financial created a new wholly owned special-purpose subsidiary, Chrysler Auto Receivables Co., which last week filed the registration statement with the Securities and Exchange Commission covering the public offering of $250 million of Certificates of Automotive Receivables.

Each CARS certificate represents an undivided participation interest in a pool of retail passenger-car and light-truck installment sales contracts. The issue carries a letter of credit on a portion of cash flows to certificate holders provided by the Union Bank of Switzerland.

The proposed offering will be made in mid-July, following SEC clearance. Underwriters will be managed by Salomon Brothers Inc.

Ford Credit Chairman James Ford said his company is considering the asset-backed securities. An offering may be issued by the end of this year.

Ford noted that investors are not familiar with the securities, thus that method is less cost-effective than other funding techniques. He said Ford Motor Credit will continue to stress those other techniques.

For example, Ford Credit has sold wholesale large blocks of car-loan receivables with banks and savings and loans and other investors since 1982. In 1985, it sold the receivables at auction instead of pricing them on a negotiated transaction basis. Ford Credit sold $800 million worth of receivables in two auctions last year, taking bids in minimum amounts of $125 million each.

"The secondary market for auto receivables isn't ever going to be as huge as the secondary mortgage market," Ford said. "On the other hand, it will be a good market because vehicle loans are good collateral. It's a matter of investors getting used to them, then the market will develop."

GMAC has made three public offerings through First Boston Corp. amounting to nearly $2 billion.

The first was for $524 million worth of asset-backed securities in December 1985, which marked the first time that type of offering was used by a U.S. automobile finance company. In January, GMAC made another offering amounting to $424 million and in April it made one for $1 billion. A $755-million offering is in the works for later this month.

GMAC Chairman Robert F. Murphy said GMAC plans several more such issues this year. He said the receivables sales are attractive to GMAC because they tap a different kind of investor than do other securities.

10 billion people view Opel World Cup signs

By Richard Feast
EUROPEAN EDITOR

LONDON — Advertisements for General Motors' Adam Opel subsidiary are being beamed almost nightly to millions of television screens throughout the world.

Opel is one of a dozen official sponsors of the World Cup soccer championships now taking place in Mexico City. It is the only sponsor from the auto industry. At each match, the stadium advertising posters form an inviting backdrop to the action on the field.

"We estimate that on a cumulative basis, 10 billion people worldwide will watch the championships on TV. We calculate that the Opel logo will be shown for more than six hours in all," said Hans-Wilhelm Gaeb, Opel's director of public affairs.

Soccer may not be America's favorite sport, but it certainly excites the rest of the world. The final next Sunday (June 29) will draw a television audience of about one billion, or a quarter of the world's population.

Opel's commitment to soccer — it is also sponsoring the European championships — will cost it $1.3 million a year during the 1986-89 period. Gaeb considers it money well spent, though he acknowledged that there was resistance from some Opel executives when the deal was being planned.

But he reports that after a few matches, reaction from mechanics, salesmen, dealers and accountants was very positive.

Opel's national sales companies throughout Europe are contributing to the soccer budget.

The decision to go into the World Cup stemmed from Opel's realization that its image is rather staid and conservative. It is promoting its name through young and dynamic sports, of which soccer is just one.

Soccer ads big winner

By Stephen Downer
SPECIAL CORRESPONDENT

MEXICO CITY — World Cup Soccer fever seems to be benefiting Ford, General Motors and Nissan in Mexico.

All three have given heavy advertising support to media coverage of the 24-nation soccer tournament here. It ends June 29.

The Mexican national team's best showing since the event was first staged in Uruguay in 1930 will reflect favorably on Ford, GM, and Nissan, ad analysts believe.

The advertisers are smiling. "We feel it was a very good buy," said Jose Luis Granados, Nissan Mexicana's former advertising chief, who helped negotiate Nissan's purchase of 257 minutes of advertising with state television company Imevision Channel 13.

Granados, who left Nissan after the finals started, said Nissan paid Imevision about $1 million for the spots, about a third of the price paid by Ford and General Motors to private TV rival Televisa.

According to Granados, "Our presence on Channel 13 is greater than that of Ford and GM on Televisa because we are the only carmaker on Channel 13."

However, GM de Mexico said it had bought 586 minutes of time during World Cup-related programs broadcast by Televisa between April 21 and June 21, more than double the time bought by Nissan on Channel 13. It also bought 41,065 radio spots during programs about the World Cup.

Ford hired Mexico's soccer idol, Hugo Sanchez, for a fee believed to be about $300,000.

Sanchez endorses the Ford Topaz. Topaz sales had been slow before the soccer star's arrival but picked up considerably afterwards, said Mike Meckel, Ford's ad manager in Mexico.

Ford loaned the World Cup organizing committee 200 Topaz models. GM loaned 50 Celebrity Eurosport sedans to European journalists. Renault of Mexico provided a similar service to 25 French journalists.

To coincide with the World Cup finals, Nissan Mexicana placed 500 Nissan Tsuru models, with Pedro Domecq brandy advertising slogans painted on the side, on sale for a month. The price is about $1,600 less than the normal Tsuru price.

SERVICE INDEX
104.9★

	April, '85 vs. April, '86	4 mos., '85 vs. 4 mos., '86
Gross Profit on All Labor and P&A Sales	+4.2%	+7.8%
Repair Orders Written	−0.9%	−2.2%
Total Labor Sales (Customer & Warranty)	+9.5%	+9.1%
Shop Parts Sales (Customer & Warranty)	+9.2%	+4.2%
Sales of All P&A	+2.6%	−0.4%

★—Survey by Automotive News shows that dealers' service and parts business in April, 1986, was 104.9 percent of business in April, 1985. Service business in the first 4 months of 1986 was 102.7 percent of business in the corresponding period in 1985.

Shop work shows gain

By Arthur Flax
SERVICE EDITOR

Service and parts business at new-car dealerships increased in April and in the first four months of 1986.

According to the Automotive News Service Index, shop business at dealerships in April amounted to 104.9 percent of the volume recorded in April 1985.

In the first four months of 1986, service and parts volume showed a gain of 3.7 percent over 1985.

In April, total labor sales (customer-paid and warranty) showed the biggest gain, up 9.5 percent.

Shop parts sales (customer-paid and warranty) were up 9.2 percent; gross profit on all labor, parts and accessories sales was up 4.2 percent; and sales of all parts and accessories climbed 2.6 percent.

Repair orders written were down 0.9 percent in April 1986.

In addition, parts and accessories sales to off-premises customers were down 1.9 percent in April.

Total labor sales registered the biggest gain for the first four months of 1986, climbing 9.1 percent over the period in the previous year. Other indicators showing gains through April were gross profit on all labor, parts and accessories sales, up 7.8 percent, and shop parts sales, up 4.2 percent.

Registering declines were repair orders written, down 2.2 percent, and sales of all parts and accessories, down 0.4 percent.

Parts and accessories sales to off-premises customers were down 3.8 percent through April 1986.

Bombardier, Daihatsu move forward on mini

By Richard Johnson
DETROIT REPORTER

Bombardier Inc., the Montreal-based manufacturer of snowmobiles, military vehicles and mass-transit cars, is moving ahead with the design and development of a new minicar with Japan's Daihatsu.

The Canadian company has received additional funding from the federal government and the Quebec provincial government to pursue plans for its so-called New Concept Vehicle.

However, Bombardier Chairman Laurent Beaudoin said last week that a final decision on whether to manufacture the car will not be made before the end of the year.

In Japan earlier this month, Daihatsu said it would supply engines and transmissions to Bombardier for a small-car venture. Beaudoin acknowledged last week that the components would be supplied by Daihatsu if the project receives a go-ahead.

Bombardier, maker of the Ski-Doo snowmobile line, received a $2 million subsidy from the Quebec and Canadian governments last year to study the feasibility of minicar production at its Valcourt, Quebec, plant. The company recently received another $8.8 million in grants to continue the project. The latter amount equals two-thirds of the $13.2 "initial phase" of the research project.

Beaudoin said the company is studying "a completely new motor-vehicle design that should meet consumers' city driving needs." He said Bombardier is receiving "technical support" from minicar specialist Daihatsu — the first acknowledgement of an association with the Japanese firm.

Beaudoin said the company would likely retain a majority interest in any joint car-production venture that results from the study. He said the vehicles could be distributed through Bombardier snowmobile dealers.

Daihatsu, which is 15 percent owned by Toyota Motor Corp., is well-versed in the minicar market. The company is tentatively planning to bring its three-cylinder, 139-inch-long Charade minihatchback to the United States in late 1987.

Andre Bissonnette, small business minister in the federal government's Ministry of Regional Industrial Expansion, said the government subsidy will help develop Canadian expertise in a "key automotive sector."

Bombardier is studying 'a completely new motor-vehicle design that should meet consumers' city driving needs.'
— Laurent Beaudoin

Bissonnette said the project could lead to construction of an automotive research center in Montreal and a new assembly plant in Valcourt.

However, a Bombardier spokeswoman cautioned last week that the two capital development projects are contingent on a final decision to proceed with manufacturing plans. She said she was unsure whether the project might result in an all-new assembly plant or expansion of existing operations at Valcourt.

The company currently has three units at Valcourt — building snowmobiles, military vehicles and mass-transit cars.

The Canadian government has been interested in helping Bombardier make use of excess manufacturing capacity at Valcourt. The unused capacity has resulted from a decline in the overall snowmobile market in recent years.

The Bombardier spokeswoman said the design of the new model is being formulated by the Canadian company with technical assistance from Daihatsu. She said the study is being limited to small, fuel-efficient, commuter cars and does not include vehicles that could be fitted into larger market segments.

Bombardier has said nothing about volume projections or pricing and has released no technical specifications for the drawing-board vehicle. Neither has the company discussed potential marketing plans.

Egan knighted

LONDON — The official title is now Sir John Egan, chairman and chief executive of Jaguar, following the knighthood awarded in the Queen's birthday honors list.

TRUCK INDUSTRY

Freightliner speeds parts shipping

PORTLAND, Ore. — Freightliner will begin filling and shipping dealer parts stock orders on a daily basis, providing next-day delivery in most cases.

The company also introduced a completely electronic direct-ship order-entry system linking dealers and factory parts suppliers.

Freightliner President Peter E. Rupp, while sanguine about his company's improving market share, continues to predict a lackluster year for the Class 8 market.

Under Freightliner's new program, any stock order placed over the company's electronic dealer communications system by 10 p.m. (PST) will be shipped the next work day, with freight prepaid at normal dealer-net stock prices.

There are no requirements for a minimum order. All normal benefits, such as return allowances, will apply.

The company's new direct-ship order-entry system is an on-line system for ordering parts directly from suppliers' factories. It allows Freightliner dealers to place direct-ship parts orders quickly, easily and accurately over their personal computers, according to company officials.

Called "Max," the new system forms an instantaneous communications link between Freightliner dealers, parts suppliers and the parts distribution network.

Rupp said the new programs were designed to enhance the competitiveness of Freightliner dealers in a "very tough economic environment" as well as to improve dealers' responsiveness to customers.

Freightliner estimates that with its daily stock order program, dealers will receive parts orders 90 percent of the time on the second day after the order is placed and on the third day at the very latest.

The new program also will save dealers' money in their parts departments.

Many "emergency" orders, which normally entail higher parts prices and shipping costs, now can be filled using the new system, cutting dealers' operating costs.

The new program also will allow dealers to reduce inventory carrying costs and achieve a higher inventory turn rate for improved profitability.

Meanwhile, "Max" allows dealers to build parts orders online at their convenience on a 24-hour basis.

When a dealer enters an order on his computer, the information is transferred electronically to the appropriate factory or parts supplier while the "Max" system simultaneously provides the dealer with pricing information, order status and date of shipment.

He can also use the system to select the most advantageous price breaks for parts as well as the total dollar value of the direct-ship order.

Chassis maker taps Korea for new range of products

By Joseph Bohn
TRUCK EDITOR

An increasing number of manufacturers, both foreign and domestic, have entered the chassis market; but there's something to be said for one importing its products from Korea.

The Smith Cos., Plaistow, N.H., formed Asia Smith Motor Inc. to manufacture trucks, buses and chassis for light to heavy market segments.

Milton Smith, president, said Asia Smith will market a full line of trucks and buses ranging from half-ton utility trucks and chassis to 15-ton dump trucks and chassis.

Asia Smith signed an agreement with Asia Motors Co., Seoul, South Korea, to manufacture the vehicles. The Korean company now produces about 80 percent of that country's trucks and buses.

The arrangement calls for vehicles to be assembled in South Korea using engines, transmissions and other components manufactured in the United States, Smith said.

Since the working components are American-made, they can draw on existing U.S. service and parts-supply networks, he added.

To support the Asia Smith lines, a new research and development facility has been opened in Plaistow.

Asia Smith's use of offshore manufacturing technology and quality American componentry will allow it to market vehicles very competitively priced and warranted, Smith said.

Cabot Smith, assistant controller, believes the new spinoff company will more than double his company's current sales volume of $60 million a year.

He anticipates selling 1,000 to 2,000 new chassis by next June, the new company's first anniversary.

Asia Smith Motor already has its first 300-unit school bus chassis order and is working on another 250-unit order. It is also working on a "few other deals" Cabot Smith declined to discuss, involving chassis for light-duty vans.

Assisting in development of the company are the Southern California Advisory Group, Bank of New England, Northrup Corp., Cambus International of Australia and The Associates.

The Associates, a division of Gulf & Western and a major independent manufacturing and automotive financing company, has approved Asia Smith for floorplanning services and retail financing support nationally.

The company's first entry is a multipurpose chassis, the Asia Smith AM 907 chassis. It uses a Caterpillar 3208, high-torque V-8 diesel engine and an Allison MT 643 series fully automatic transmission.

MacGregor Smith, a vice president and marketing executive, said his new company's main thrust would be in school bus chassis.

Smith Cos., Asia Smith's parent, already has a sizeable 18-20 percent share of the school bus chassis market and plans to expand into the "flat-nose" segment of the market.

That segment, currently accounting for 11 percent of the market, is projected to grow to 45-50 percent.

Its first contract was for 300 units using the 907 chassis.

They are currently being assembled and fitted with a flat-nosed school bus body.

Its 907 chassis can also be applied to city transit buses, large step vans, specialty trucks and large motor homes.

The company plans to offer a couple of chassis to the motor home market, including a Combi chassis in the 14,000-16,000-pound GVW range and a larger 30,000-34,000-pound GVW unit, MacGregor Smith said.

The company can produce 300 to 500 AM 907 units a month.

The company is also developing other chassis. They include the Asia Smith City Bus and a 15-ton dump truck. Both are Caterpillar-powered.

Future units will include the Asia Smith Combi bus, a special farm vehicle and an all-wheel-drive sports/utility vehicle.

Japan's jobless rate returns to record 2.9 pct. in April

TOKYO — Japan's unemployment rate in April matched the record of 2.9 percent set in December 1985. The April rate increased 0.2 percentage points from March on a seasonal basis.

The government's Management and Coordination Agency said unemployment in April rose to 1.82 million, up 250,000 from a year ago.

Males accounted for 1.05 million of the total, up 120,000, and females accounted for 770,000, up 130,000.

The adverse impact of the yen's brisk appreciation against the dollar since last fall is being gradually felt by Japan's labor force, the agency said.

It said that the increase in unemployment does not necessarily indicate that the nation is experiencing a recession; however, it is a sign that the economy is at a turning point.

The agency said that the number of workers in April totaled 58.84 million, up 360,000 in a year.

Domestic slide cuts April registrations

By Jenny L. King
DETROIT REPORTER

April new-car registrations in the United States slipped 3.13 percent from the year-earlier total but were the second highest of any month this year.

Imports gained 6.32 percentage points year-to-year to achieve their deepest April penetration in five years.

R.L. Polk & Co. reported a total of 906,271 new-car registrations for April, down 3.13 percent from 935,508 for the same month in 1985. They were up 6.86 percent from 848,088 in March of this year and were second only to January's 912,644 in the 1986 ranking.

Domestic registrations in April were 640,112, down 11.08 percent from 719,906 in 1985.

Import registrations in April were up 23.45 percent, to 266,159 from 215,602. Imports claimed 29.37 percent of the month's market, up from 23.05 percent the preceding year and the best for April since 1981 when imports accounted for a record 30.33 percent.

The imports' gain of 6.32 percentage points for April was taken from each of the domestics. General Motors was down 2.48 percentage points, Ford Motor Co. dropped 1.93 percentage points, Chrysler Motors was off 1.26 percentage points and American Motors lost 0.65 percentage points.

Second in size to the imports' 29.37-percent share of the April market were domestic intermediates, which claimed 26.89 percent. They were followed by compacts at 15.79 percent, subcompacts at 10.61 percent, standard-sized cars at 9.57 percent and luxury cars at 7.86 percent.

The domestics-only market was comprised of 37.95 percent intermediates, 22.35 percent compacts, 15.02 percent subcompacts, 13.55 percent standard-sized cars and 11.13 percent luxury cars.

Gray-market group elects

WASHINGTON — The Automobile Importers Compliance Association, whose members are importers of gray-market vehicles, has elected new officers.

They are: Jay Siff, Orion Motors, Sellersville, Pa., president; Stefan L. Antal, Tysons Motors, Inc., McLean, Va., vice president; John C. Gregg, ACS Vehicle Sales & Service, Orange, Calif., treasurer; and S. Shafig Hassan, Hassan & Associates, Laguna Beach, Calif., secretary.

Elected directors were: Ken Shaffer, Transcar, New York; Bruce Wilson, Roanoke Cos., Schaumburg, Ill.; Pat McNulty, International Import Cars, North Hampton, N.H.; Lee Cunningham, Automotive Research Inc., Houston; Henry Olczak, Henry's Foreign Auto Center, Woodbridge. N.J.; Ed Seguel, Seguel's Service, Sarasota, Fla.; and Tod Thompson, Tesla Lab Inc., Westminster, Calif.

Consumer award for Claybrook

WASHINGTON — The Philip Hart Distinguished Consumer Service Award was conferred on Joan Claybrook by the Consumer Federation of America.

Claybrook is currently president of Ralph Nader's Public Citizen. During the Carter administration, she was head of NHTSA.

CFA said: "Her efforts forced automobile manufacturers to build safer cars and were responsible for saving countless American lives."

BENTON

FROM PAGE 1

the same time, you're using North American Automotive Operations as the lead activity for the D-car.

According to several reports, Mazda will figure heavily in design and engineering of a 1991 or 1992 Tempo/Topaz replacement as well as the 1990/1991 Escort replacement. The Japanese company's 323 model serves as a platform for Ford-badged subcompacts being assembled in Taiwan and Mexico for North American consumption.

A sporty Ford of Australia-built 2+2 coming to North America later in the decade will also be based on the 323.

In addition, Mazda will sell to Ford about half the 626-class output at its Flat Rock, Mich., assembly plant for marketing as a Mustang.

And there have been reports that Mazda product engineers will have their hands in virtually all new Ford of Europe small-car replacements, including Escort and the Sierra compact.

Benton said he is disturbed by a "controversy" surrounding Europe's future role in product planning. He said the issue was raised at a recent company staff meeting.

"The way it was brought to my attention, our engineering people in Europe were somewhat down in the mouth because they keep reading news accounts that Mazda is going to be the source of their next car," he said. "That's absolutely not true and I'm going to say that to anyone who will listen until people finally believe it.

"There is an impression abroad that, for instance, when the B-car in Europe (Fiesta) is replaced that Mazda is going to do it, and that is not so," said Benton. "Europe is going to do it."

Benton conceded that "when you get into manufacturing, they (the Japanese) have some productivity advantages over us."

"In North America, the relationship with Mazda is very close, and North America is attempting to realize some of the Japanese efficiencies by having some of that work done in Japan," he said. "But North America faces quite a different problem than we face in Europe."

Outboard Marine to buy fours and V-8s from Ford

DEARBORN, Mich. — Ford Motor Co.'s Power Products Operations will supply marine-base engines to Outboard Marine Corp.

OMC will use the 140-cid four and the 460-cid V-8. Both Ford marine-block assemblies will be built into OMC marine engines and coupled with the new OMC Cobra stern drives.

AUTOMOTIVE NEWS/JOE WILSSENS

At Stewart's suggestion, sprinklers were added to the track so engineers can drive the same road wet and dry

Now, he's Dr. Jackie Stewart

BY ROGER ROWAND
ENGINEERING EDITOR

DEARBORN, Mich. — As a rule, newspapers don't run stories when people they cover receive honorary degrees. It may take an exception to prove that rule; an exception like Jackie Stewart, perhaps.

Stewart is a charismatic 47-year-old, three-time World Champion race driver who's been an engineering consultant to Ford Motor Co. for some 22 years. He has been called the world's greatest Formula One race driver.

Stewart dropped out of school at age 15 because of dyslexia, a learning disability, so it was newsworthy when he was awarded an honorary doctorate in automotive engineering from Lawrence Institute of Technology. LIT is a 6,500-student college in Southfield, Mich.

The honor was presented at Ford Motor Co.'s Dearborn proving ground during dedication of a track improvement made at Stewart's suggestion.

In presenting it, LIT President Richard E. Marburger told Stewart his racing experience and ongoing work have "resulted in better products and a renewed confidence in automotive transportation."

About a year ago the former racer suggested the proving ground be equipped with a track wetting system. Such as system, he said, would allow engineers to drive the same stretch of road wet and dry in rapid succession, giving them invaluable knowledge. It was at the dedication of that 1.1-mile stretch that Stewart received his honorary degree.

It was obvious Stewart thoroughly enjoyed donning the mortarboard, gown and the orange School of Engineering hood. "I doubt that I'm ever going to take it off," he said.

He provided further insight into why the honorary degree meant so much to him, beyond the fact that he lacks formal advanced education.

He said he was scheduled to be the featured speaker at the graduation of his son Mark, 18, in a few days. That ceremony will take place in Massachusetts at a school for young people with dyslexia .

Nissan sets high target in Europe

By Knut Moberg
SPECIAL CORRESPONDENT

TOKYO — Nissan Motor Co. has set its sights on becoming the largest producer of Japanese vehicles in Europe.

Managing Director Kiyofumi Morimoto, responsible for all of Nissan's export markets except the United States, said Nissan expects its new plant in northern England to eventually build cars for export throughout Europe. Initially, it will build a medium-sized car for sale only in Britain. That car is slated for introduction this year.

Nissan plans to add capacity to the plant to accommodate the export vehicles, Morimoto said.

Nissan also is retooling its joint-venture Arna plant in Italy to produce a four-wheel-drive utility vehicle. The plant, in which Alfa Romeo owns a stake, recently stopped car production because of low sales.

Arna is not on the agenda of the negotiations in which Ford is trying to buy a stake in the Italian government-owned company, Morimoto said. He predicted Ford will be successful in its bid, and Arna will be split three ways: 50 percent to Nissan, 25 percent to Alfa and 25 percent to Ford.

Nissan's third European operation is in Spain, where the company produces the Patrol, a four-wheel-drive utility vehicle.

Nissan has another European connection: Volkswagen. Nissan assembles VWs in Japan, making VW the only foreign car built in the country.

Nissan wants to be more than Europe's leading Japanese-car producer. It wants to be the Japanese sales leader in Europe. It thus takes on Toyota.

Last year, Toyota was the No. 1 importer in Finland, and it increased its sales markedly in Denmark and Norway. European importers of Toyota have been told that the company has big plans for exporting cars to Europe, "and as a first goal, we would like to be the most-sold cars in four or five markets," one importer said, quoting Toyota.

Honda is the only Japanese maker other than Nissan that produces vehicles in Europe: Its new Legend/Sterling is a product of a joint venture with Austin Rover.

Nissan hikes investment in Mexico

MEXICO CITY — Nissan Motor Co. said it will boost its investment in Mexico because of the growing preference of Mexican consumers for its cars and trucks.

The company said that next September, it will begin remodeling and expanding painting operations at its Civac plant at a cost of about $4 million.

By the end of this year, work will be finished on a $5 million project designed to make new stamped parts for export, Nissan said.

Nissan Mexicana already has made two huge investments in its facilities in Mexico this year.

The investments of $50 million and $54 million were used to expand the company's industrial facilities to enable it to meet domestic and export targets. Nissan said.

Among the facilities expanded was a painting system in its Aguascalientes plant. Construction has already begun and the $4 million system should be in operation by the end of the year.

On Dec. 23, 1985, the Secretariat of Commerce declared Nissan the winner of a contest, announced in July, to be the exclusive producer in Mexico of the Minivan CW.

A number of manufacturers entered the contest to produce the new passenger and cargo vehicle. The winner was chosen by the Secretariat of Commerce and the Intersecretarial Commission on the Automotive Industry.

Nissan said it has begun expanding its production facilities at a cost of more than $6 million and will ship the Minivan CW early in 1987 to both domestic and foreign consumers.

This year marks Nissan's 25th year of operating in Mexico. It has three plants: One assembles cars and trucks and produces engines; one is a gray-iron foundry; and the third stamps parts, processes aluminum and produces engines.

The firm also has a parts distribution center in Toluca, about 40 miles from Mexico City.

Nissan Mexicana said it employs 3,261 union and 2,611 non-union workers and has 150 distributors nationwide, who employ another 7,000 people.

Mexico eyes pact with U.S.

By Richard Johnson
DETROIT REPORTER

As final details of Mexico's entry into the General Agreement on Tariffs and Trade (GATT) were being wrapped up in Geneva last week, attention turned to bilateral trade talks with the United States — including a possible auto pact.

The Mexican Commerce Ministry last year informally proposed an automotive trade agreement between the two countries. Mexican authorities reportedly want to ensure access to the American auto market while protecting against an invasion of foreign-built vehicles.

The show of interest led U.S. trade officials to survey American manufacturers, who in turn asked for more details. Mexican trade officials have said they are not out to duplicate the Canada-U.S. auto trade agreement, but they have not outlined a specific proposal.

Chris Wilson, of the U.S. Commerce Department's Mexico section, said last week that progress toward bilateral trade talks has been delayed in recent months by Mexico's drive to join GATT. Final terms of the entry were being reviewed last week in Geneva.

Meanwhile, the Reagan administration has shown a general willingness to negotiate bilaterally with other countries. Trade talks with Canada began recently.

Fear has been expressed within several Mexican industrial sectors — including the automotive industry — that GATT entry will result in lower tariffs and a flood of foreign goods.

Collapse of the world oil market has brought the country to the brink of default on foreign loans. The peso has plummeted and a wave of foreign goods could further depress the economy.

But in the auto sector, there is concern that Mexico could be edged out by other low-cost-base producing nations — including Korea, Taiwan and Brazil — in the competition to supply North America with small cars.

The U.S.-Canada auto pact basically permits duty-free movement of automotive products between the two countries, providing certain content levels are met. In Canada, auto companies must also produce as many cars as they sell in there to comply with the pact.

The Mexican Automotive Industry Association has projected 1986 production of about 435,000 cars, trucks, tractor trailers and buses and predicted exports of 70,000 to 90,000 units.

Entry into GATT, which sets forth principles of international law for major trading partners, must now be approved by the Mexican legislature. According to U.S. government officials, ratification will probably be completed by September and talks aimed at a "framework agreement" of trade principles will begin in earnest before the end of the year.

The "framework agreement" would set forth basic procedures for consultation and resolution of disputes, Wilson said, and presumably would be a forerunner to a broader agreement addressing specific industrial sectors.

Wilson said an auto agreement has "been discussed." But he said "nothing definitive has been laid down about inclusion of the automotive sector."

PRODUCTION

Cars reach 4 million, 5 days behind 1985

By Kathy Boyer
DETROIT REPORTER

Domestic auto makers built their four-millionth car last Wednesday (June 18), five days behind 1985.

So far this year, 4,077,381 cars have been produced, 3.73 percent less than the 4,235,521 completed last year at this point.

Last week's targeted output of 175,520 cars was the highest since the week ended April 12, when 176,098 units were assembled.

Last week's build was 5.36 percent more than the previous week's 166,588 but 0.13 percent below the year-ago week's 175,757.

Companies shared last week's scheduled production as follows: General Motors, 54.01 percent; Ford Motor Co., 22.51 percent; Chrysler Motors, 16.48 percent; Honda of America Manufacturing Inc., 2.66 percent; New United Motor Manufacturing Inc., 2.06 percent; American Motors, 1.14 percent; and Volkswagen of America, 1.14.

Nissan Motor Manufacturing Co.'s car line at its plant in Smyrna, Tenn., remains idle for model changeover.

Chrysler began production of its Plymouth Sundance and Dodge Shadow on June 9. The first week's production was reported as follows: Sundance, 267 and Shadow, 270.

However, the models aren't expected to be introduced to the public until Sept. 18.

Neither GM nor Ford scheduled Saturday (June 21) overtime.

Ford has slated daily overtime this week (June 23) at all of its plants except Atlanta and Chicago.

Chrysler scheduled Saturday overtime at its Belvidere, Ill., and St. Louis (No. 2) plants.

Those plants also are slated for daily overtime this week.

Truck production moves up

Last week's domestic truck production of 76,029 units was 1.41 percent more than the previous week's 74,973 and 4.08 percent more than the year-ago week's 73,047.

Year-to-date, 1,777,561 trucks have been built, 3.80 percent more than the 1,712,460 completed last year at this time.

General Motors slated overtime Saturday (June 21) at its Baltimore plant.

Ford Motor Co. canceled the Saturday overtime scheduled earlier at its Louisville plant.

Ford has slated daily overtime at all its plants this week (June 23).

Canada aims at 1986 peak

Canadian car production last week was pegged at 25,990, the highest weekly output this year.

The week's estimated build was 1.51 percent more than the previous week's 25,603 and 0.78 percent more than the year-ago week's 25,789.

So far this year, 567,325 cars have been assembled, 8.41 percent more than the 523,316 built last year at this point.

Targeted truck production of 19,773 units last week was the highest since the week ended March 15, when 19,980 trucks were built.

Last week's scheduled output was 1.38 percent more than the previous week's 19,504 and 3.37 percent more than the year-ago week's 19,128.

Year-to-date, 458,801 trucks have been built, 2.85 percent more than the 446,079 completed last year at this time.

Local OK's Taurus strike at Atlanta

By Mary Connelly
DETROIT REPORTER

The union at one of the two plants producing Ford Motor Co.'s hot-selling Taurus and Sable models has approved a strike-authorization vote.

No strike deadline has been set.

UAW Local 882 at Ford's Atlanta assembly plant authorized the local bargaining committee to call a strike if negotiations with the company fail.

The international UAW must also approve a strike.

"There's a lot of issues involved," said a Local 882 official. "One issue is overloading jobs, one is health and safety and one is outsourcing."

The union charges that Ford has reduced manpower at the plant and that employees have an excessive workload.

Talks between the two sides are continuing.

"Ford Motor Co. regrets the work-stoppage authorization vote," the company said. "We believe the work requirements at the plant are reasonable and consistent with similar jobs at similar plants throughout the country.

"We will continue to work with union leadership to come to a fair agreement on the issues at hand," Ford said.

An estimated 3,000 hourly workers are employed at the Atlanta plant.

The union said 90 percent of those voting approved the strike-authorization vote.

No similar dispute exists at Ford's Chicago assembly plant which, like Atlanta, assembles Taurus and Sable sedans and wagons.

Ford has been selling the models, which were introduced last Dec. 26, as fast as they can be produced.

The Atlanta and Chicago plants have an annual capacity of 500,000 units.

A total of 132,953 Taurus and 59,931 Sable models had been produced through mid-June since production began last October in Atlanta and last January in Chicago.

Both plants are scheduled for vacation shutdown the weeks of June 30 and July 7.

B-O-C Lansing producing V-6

LANSING, Mich. — Production of V-6 engines began last week at the Buick-Oldsmobile-Cadillac Group plant here.

The B-O-C Powertrain Product Team Lansing Engine Plant, which produces V-8 engines at a daily rate of 1,800 units, will add 2,400 of V-6 engines when acceleration is completed this fall.

The new engines will be shipped to nine assembly plants and will be used in the Oldsmobile Tornado, Cutlass Ciera and 98.

The plant had produced V-8 diesel engines until last fall when General Motors phased out that engine. The plant's 3,200 employees could have faced indefinite layoffs but GM, UAW Local 652 and Lansing city officials worked together to save the jobs.

Ford seeks partners in Europe

By Richard Johnson
DETROIT REPORTER

In an effort to streamline operations, Ford of Europe is seeking opportunities to develop common car platforms and components with other European manufacturers.

But the Ford Motor Co. subsidiary has no immediate plans to close a major assembly plant to reduce capacity on the Continent.

The company is attempting to achieve efficiencies piecemeal that might have been accomplished in one bold stroke had Ford successfully completed a bread merger of European operations with Fiat.

"I think you will see us looking for opportunities to share one-offs and share components," Philip E. Benton Jr., executive vice president — Ford International Automotive Operations, told Automotive News.

"On the next generation of transmissions, for example, we will be studying the opportunities to get together with other manufacturers and do that transmission jointly."

However, Benton, who assumed his new post in March, added that "there is nothing that is going to pop immediately."

A half-dozen major manufacturers each occupy about 12 percent of the European market and each of the six is either losing money or is marginally profitable.

Since the collapse of the Ford-Fiat talks last fall, the emphasis at Ford of Europe has been on less dramatic means of lowering costs. The concept of sharing specific

Auto leaders average $620,000 in '85 pay

By Michelle Krebs
FINANCIAL EDITOR

Another solid year for the automotive industry meant another year of solid increases in compensation for the executives of automotive and supplier companies.

The annual Automotive News survey of executive pay showed that the average compensation — combined salary and bonus — in 1985 topped $660,000 for the first time. The average pay amounted to $620,044, up 9 percent from the $571,208 average compensation for 1984.

The survey is compiled from proxy statements of publicly traded companies. The proxy statements list compensation for a company's five top-paid executives.

The figures generally include only salary and bonus. They usually do not include stock bonuses, stock options, profits from stock options exercised or long-term and contingent remuneration.

The combined compensation of the 170 executives on the 1985 list broke the $100-million mark with $105 million. In 1984, the combined compensation for the same number of executives was short of $100 million.

In 1985, more executives joined the million-dollar club. Eighteen received $1 million or more in salary and bonus combined. That compares with 12 in 1984 and six in 1983.

Lewis W. Lehr, 3M chairman, became the highest-paid executive and the executive who received the largest pay raise. However, his compensation of nearly $5.2 mil-

Ford nears pact on computer net

By Bill Kalb and Dave Zola

Ford Motor Co. is on the brink of awarding a $300 million to $500 million contract to one of three U.S. computer firms for the development of an integrated office communications system.

The communications network would link Ford offices and engineering facilities nationwide via personal computers, eliminating much of the paperwork and speeding communications.

Three firms, IBM, Digital Equipment Corp. and Wang Laboratories Inc., are bidding on the pact, valued at up to $500 million over the next three years.

One industry source indicated that IBM is heavily favored by Ford executives because of its position as the country's largest office automation firm.

Ford refused to allow some smaller computer companies to bid on the project because the automaker feels that only a large supplier will be able to handle the enormous job, one source said. The cost of putting together a bid for the program was estimated at $250,000.

Still, others indicate that Digital has the edge, because of the company's sterling reputation for mating non-compatible systems.

Ford could award the contract within the next week. The company began taking bids about one month ago.

Neither Ford nor the three computer firms involved would comment on the project.

However, sources characterized the Ford program as an attempt to keep pace with General Motors in the realm of electronic data transfer.

GM has undertaken an aggressive program to automate its administrative and manufacturing facilities through its acquisition of Electronic Data Systems.

Ford reportedly was interested in acquiring Sperry Corp. as an answer to its office automation problems, but that failed to materialize. Sperry later was bought by Burroughs Corp.

Last October, Ford raided EDS

How is Acura doing? Indications are mixed

By Roger Rowand
AUTOMOTIVE NEWS STAFF

Full storage lots at some dealerships, a Wall Street Journal ad and lots of imagination have fueled conjecture about the sales strength of Honda's new entry, the Acura line.

Honda hasn't yet opened all of its initial Acura dealerships, but their allotments of cars are being shipped to points that have opened.

Open dealerships are doing hotcakes business. At the same time, however, some appear to have bulging inventories because of those extra cars.

The Journal classified ad was run by a Kansas dealer who promised low retail prices and delivery anywhere in the country. Some readers thought it smacked of distress.

The Kansas dealership, however, said the ad was just another way of trying to sell cars. Other dealers said they didn't blame the Midwest dealer at all but they could see how the ad could be misinterpreted.

Acura Automobile Division of American Honda Motor Co. markets the Japanese-built Legend and Integra, which went on sale at about 60 points March 27. About 150 dealers will be handling the lines by year-end, Acura has said.

Dealers have been told there will be 600 in the network two years after that.

"We don't have enough Integras, we have a waiting list," Joseph Posby, general manager at Tamaroff Acura, East Detroit, Mich., reported cheerfully.

Marc Treiber, sales manager at Martin Manhattan Acura in New York City, said, "Give or take, we've sold in excess of 300, plus 70 we have waiting for prep.

"We're taking a lot of business from Audi, Volvo and BMW and some of those are second- and third-generation owners. By that, I mean a guy in his second or third product in a line. Now he's buying a Legend.

"We're getting the cars we want because there are dealers who

Mixed future for Fiero concept

By Dave Zola
DETROIT REPORTER

The future of the Pontiac Fiero design concept — in which plastic body panels are draped over a steel space frame — appears solid at General Motors. But its chances of catching on elsewhere soon seem remote.

Both Ford Motor Co. and Chrysler Motors are cool to the design technique.

Chrysler, even more emphatically than Ford, declares that its future plastic-bodied cars won't utilize a Fiero-like steel cage underbody.

Ford has space-frame-based vehicles in the concept stage, but currently is debating internally whether it's worth building a plastic-bodied vehicle at all.

Like Ford and Chrysler, GM is painfully aware of the drawbacks of the Fiero design — chiefly its excessive weight, exorbitant cost and unproven track record in high-volume production.

The design also hasn't been demonstrated successfully in a four-passenger vehicle, GM President F. James McDonald pointed out in a recent interview.

Because plastic panels do not absorb energy the way sheet metal does, the space frame has to be engineered to take all the punishment in the event of a collision.

"A car has to be able to hit a barrier at 30 mph and protect even the unbelted passenger," McDonald said. "We've done it for a 2-seater.

"But there isn't a space-frame vehicle yet for four passengers," he added. "We're working on it, and I'm sure it will come."

On the plus side, use of the space frame and plastic panels gives GM great design flexibility. A styling change on the Fiero GT for 1986 is said to have been accomplished in a fraction of the time normally required.

While other automakers are taking a wait-and-see attitude about the plastic-paneled car, GM may be laying the groundwork for future car designs worldwide.

GM plans to be building more than one million plastic-bodied cars annually by the early 1990s — all of which could be using some form of space-frame design.

GM's next biggest tests will come early next decade as it goes the steel-space-frame, plastic-panel route for its front-wheel-drive Camaro/Firebird models, which are due in 1990-91. Around the same time, GM

Chrysler plans product barrage, then breather

AUTOMOTIVE NEWS/JOE WILCOCKS

Chrysler Vice Chairman Bennett E. Bidwell

By Mary Connelly
DETROIT REPORTER

Chrysler Corp.'s product plan through 1990 envisions a slackening pace following the company's current barrage of new models.

Chrysler is also expected to seek a larger share of the truck market and to try the streamlined manufacturing techniques of the Omni/Horizon America models on at least one more vehicle.

In an interview with Automotive News, Chrysler Vice Chairman Bennett E. Bidwell said product introductions will continue "by Chrysler standards at a fairly aggressive pace" but will not match the blizzard of vehicles now being launched.

Between March 1986 and May 1987, Chrysler has scheduled nine major product introductions.

"We had a little dry period. Now we've got a bubble. And if we are able to do it on time and as planned, it will be a more normal one to 1½ new products a year," Bidwell said in describing the pace of the future product plan.

Chrysler's current assault on the market includes the Dodge Omni and Plymouth Horizon America models, the Shadow-Sundance compact twins, the Dodge Dakota pickup, the long-wheelbase minivan, the Chrysler-Maserati luxury Q-coupe and the LeBaron coupe and convertible.

"For a company the size of Chrysler, that's straining our physical resources," Bidwell said. "Our people are really working, gutting plants and launching on time."

Chrysler is betting on the 1987 mid-sized Dakota to create a new market segment and strengthen its competitive position in the truck market.

The company is aiming for 150,000 annual sales and is producing the pickup at its renovated Dodge City truck complex in Warren, Mich.

In addition, Chrysler said last week that it would invest up to $1.2 billion in its aging Jefferson Avenue plant in Detroit for truck production if a "progressive" labor agreement can be reached with the UAW. The plant had had no product slated after the 1987 model year.

"We think we can do a lot better than 11 or 12 percent of the truck market," Bidwell said. "In the truck market, we are competing against Ford and General Motors only. We figure we can play those guys head up. The Japanese are jumping a chicken-war tax of 25 percent, and we can compete all day long against Nissan and Toyota."

Chrysler also has high hopes for the LeBaron convertible due to join the product line in the spring.

"I predict our new convertible will sell 40,000 on an annual rate," Bidwell said. "We're going to knock everybody in the head in the convertible business.

"I've been trying to tell my guys that in the first ad, we should just show the car and a headline which says 'This is what God intended a convertible to look like.' But the ad agency runs research and says you shouldn't use the name God, so we won't do it."

Chrysler may also copy the cost-saving techniques of the America subcompacts on an additional model.

"I think we'll try it at least one more time on at least one more vehicle. But how extensively we'll apply it after that, I don't know," Bidwell said. "We have only been in the marketplace with it for about six weeks, and you don't learn it all that quickly."

Bidwell described the K-car as "a logical place to try it at another time."

He also said Chrysler might have increased the $5,499 sticker price on the America model had it known the dramatic changes that would occur in the yen-dollar relationship.

Bidwell also said that Chrysler's North American business plan, to be presented to the board of directors July 10, calls for "significant productivity increases, some level of manpower reduction through attrition over a period of time and fixed-cost containment."

Personnel reduction would come from the salaried ranks, Bidwell said.

"We've got to learn how to do (renovate) plants cheaper than we've been doing them," he said. Bidwell also said Chrysler is "watching an overcommitment to automation."

"We don't know whether you should have 2,000 or 1,000 or 4,200 robots," he said. "We're watching what other people are doing. They are watching what we are doing. We don't want to go too far.

"There is some belief in some corners of the industry that some plants — I'm not talking about Chrysler — have become too automated. One of the problems with automation is that when something goes down, the plant goes down."

Bidwell says plans through 1990 rule out any new auto plant

By Mary Connelly
DETROIT REPORTER

Chrysler Corp.'s product plan through 1990 does not call for an additional domestic assembly plant, according to Vice Chairman Bennett E. Bidwell.

Chrysler has said it is running its assembly plants at 118 percent of straight-time capacity.

Officials earlier this year indicated that discussions were being held about adding another plant and confirmed that a review of possible "greenfield" sites for assembly was under way.

However, Bidwell told Automotive News that Chrysler will finalize its product program through 1990 next month and that an additional domestic assembly plant is not forecast.

"At the moment, we do not plan another plant in the next three to four years," Bidwell said. "And the Jefferson Avenue plant remains an open issue."

Chrysler and the UAW began negotiations last week aimed at reaching a new local contract which the company said is needed to keep the aging plant operating after the 1987 model year.

"We're working hard to see if there is some place for Jefferson in our system," Bidwell said.

Referring to Chrysler's constrained capacity, Bidwell said, "We've always had a problem. We haven't had the flexibility we would like to have.

"On the other hand, we made a lot of money in 1984 and 1985 because we stuffed the plants we had full."

Bidwell said current plant utilization is among the reasons Chrysler claims the lowest fixed cost per vehicle of the domestic automakers.

"One of the ways not to stay the lowest-cost-producer is to turn around and add another assembly plant willy-nilly just to get a little flexibility," he said.

Bidwell also noted that while Chrysler suffers from capacity constraints, excess production capacity is forecast for the domestic auto industry.

Chrysler's tight production fit has led it to launch talks with American Motors about the possibility of building the Fifth Avenue and related large rear-wheel-drive models at AMC's Kenosha, Wis., assembly plant. The models are being cleared out of Chrysler's St. Louis II plant to make way for additional minivan production.

"We are trying to make a deal with AMC," Bidwell said. "That's added capacity."

In addition, the capacity at Chrysler's joint-venture plant with Mitsubishi Motors Corp. in Bloomington-Normal, Ill., has been expanded to 240,000 units a year from the 180,000 originally planned.

The plant is slated to start production in 1988.

"That is now capacity of over 100,000 for Chrysler," Bidwell said, "because we've taken the total plant capacity over 200,000."

Contrary to what other Chrysler officials have said, Bidwell said there are no current plans to increase output significantly at Chrysler's Mexican plants to offset capacity constraints in the United States.

"What we have ahead of us are some further investments in Mexico to modernize our product line that is sold within Mexico," Bidwell said. "But there isn't a specific plan to add to our capacity in Mexico.

"At the moment, we are bringing in the Ramcharger and some K-cars but we have no plans to significantly expand that.

"It's conceivable if we were sold out of the new J-bodies that we may try to build a few of those in Mexico. That's kind of an if-come situation."

The 1987 J-body LeBaron coupe will be built in the United States at the St. Louis I plant.

Fruehauf faces new difficulties

By Joseph Bohn
TRUCK EDITOR

Fruehauf Corp.'s move last week to fend off a hostile takeover bid will leave it highly leveraged and likely to dispose of some properties to reduce the debt it will incur.

Overall, the Detroit-based company is expected to retain its competitiveness in the marketplace as the leading producer of semitrailers and shipping containers.

To escape New York corporate raider Asher Edelman's hostile takeover bid, Fruehauf entered into a definitive merger agreement, following which it will be acquired by LMC Holdings Inc.

LMC is a newly formed holding company to be owned by members of Fruehauf management and Merrill Lynch & Co. Inc.

LMC Holdings will pay about $850 million in cash to acquire Fruehauf in a deal valued at $1.1 billion.

That includes a tender offer of $48.50 a share for 17.5 million shares which represent 78 percent of the company's outstanding stock.

Merrill Lynch, which will become an equity partner in LMC, will provide $375 million. Manufacturers Hanover Trust Co. will provide an additional $375 million.

Fruehauf itself will contribute another $100 million. Robert Eldred, vice president and senior analyst with First of Michigan Corp., Detroit, feels Fruehauf will have no trouble raising that amount.

LMC also plans to exchange the remaining 22 percent of Fruehauf's outstanding shares for preferred stock and shares in the new firm.

Fruehauf's top 27 officers and key employees have agreed to golden parachutes, according to filings with the Securities and Exchange Commission. Under the agreements, the employees would stay with Fruehauf for six months following a takeover. If their employment were terminated, they would receive, among other things, nearly three times their average annual compensation for five years following a takeover.

Meanwhile, Edelman's group hiked its takeover bid by $1 a share

Carroll, Hogue to fill AMC posts

American Motors reshuffled part of its top management ranks last week following the departure of sales executive Samuel Tucker to Jaguar.

William C. Carroll, formerly president of American Motors (Canada), will succeed Tucker as AMC's general manager for North American sales.

Carroll

Ronald Hogue, who has been director of dealer investment in the United States, replaces Carroll as the company's top man in Canada.

Carroll will head AMC's field sales organizations in the United States and Canada. He will report to Peter G. Guptill, group vice president for sales and marketing.

He joined AMC in 1975 and was zone manager in Philadelphia and Los Angeles before going to AMC (Canada) in June 1985. He was with Ford Motor Co. before joining AMC.

Hogue, 53, a native Canadian, joined AMC (Canada) in 1952 and moved to the United States as Detroit zone manager in 1981. He has been dealer investment director since 1984.

Tucker, 43, will take over July 14 as vice president — field operations for Jaguar Cars Inc., Jaguar plc's U.S. subsidiary. He will be responsible for all sales operations, including customer relations, dealer development and distribution.

Tucker started with AMC in 1971 and was director of marketing for AMC's international operations before becoming general manager for U.S. sales.

Edward C. Lumley has been elected to the AMC board of directors. He is a former Canadian minister of industry, trade and commerce.

Lumley is president of E.C.L. Associates Inc., a private management services firm in Ontario, and is chairman of Noranda Manufacturing Co. in Montreal. He held key Canadian government posts from 1974 to 1984. As minister of industry, trade and commerce, he was instrumental in AMC's decision in 1984 to locate a new assembly plant in Bramalea, Ont.

Bidwell sees change afoot in incentives

By Mary Connelly
DETROIT REPORTER

Chrysler Corp. Vice Chairman Bennett E. Bidwell predicts that financing incentives will diminish in the months ahead.

"As an industry, we're gradually de-emphasizing the magnitude of what we are giving away. And a lot of other things are happening that are of some significance," Bidwell said in an interview June 19.

He said new models are being introduced without incentives or rebates — such as Ford Motor Co.'s Taurus and Sable and Chrysler's 1987 Shadow and Sundance compacts and Dakota pickup. The upcoming LeBaron coupe and other new 1987 models will also be offered without incentives.

"You're beginning to see a chunk of the market now come into the non-incentive-bearing area," Bidwell said. "I think you'll see some continuation of incentives, but I doubt it will be of the across-the-board form it's been lately."

Bidwell also cited the Dodge Omni and Plymouth Horizon America models as an example of a successful sales effort without financing incentives or rebates. The low-cost subcompacts achieved a $5,499 sticker price through the streamlining of manufacturing techniques.

Bidwell said that if financing incentives are fewer, price increases will have to remain "modest."

"You can't stop incentives and take a big price increase," he said. "You can't do both. So I would expect price increases would remain modest or, if they are not modest, they are going to create another round of incentives.

"I'm not a General Motors basher, but their unique combination of raising the price and then the next day coming out with an incentive — I would hope they would learn that is not optimum."

However, Bidwell said he does not expect the complete disappearance of financing incentives.

Nevada heads for Paris
Renault will present the station wagon version of its new R21 — to be known as Nevada — at this fall's Paris auto show. The Nevada will be available as a five- or seven-seater using the full range of R21 gas and diesel engines.

Balloon notes soaring

By Michelle Krebs
FINANCIAL EDITOR

The finance subsidiaries of the Big Three auto manufacturers are now offering balloon-note financing on automobile loans.

Ford Motor Credit Co. announced last week its nationwide expansion of a balloon-note program. General Motors Acceptance Corp. made a similar announcement earlier this month, and Chrysler Credit said it is test-marketing a program which may go nationwide within the next month.

A balloon note is like leasing in that the consumer pays only for the time he or she uses the car, which makes the monthly payments lower than on a conventional loan.

As with an open-end lease, the consumer has three choices at the end of the term: pay off the note and buy the car at a guaranteed price depending on the condition of the car; return the car to the dealer; or refinance the balance.

However, unlike a lease, the title remains in the car buyer's name, not in the name of the financial institution. Also, as tax laws now stand, a consumer can write off the interest on the balloon note.

Ford Credit calls its program the Customer Option Plan. Richard L. Fenstermacher, executive vice president of Ford Credit's North American automotive financing operations, said the plan can reduce monthly payments by more than 20 percent compared with conventional 48-month financing.

Chrysler Credit calls its program the Fixed Value Payment Plan. It has been in a test-market phase since April in Michigan, Massachusetts and Oregon.

Gary G. Howe, Chrysler Credit marketing vice president, said the test period is about to run out and a nationwide introduction of the plan may come about in the next month.

"We're coming out with the program," Howe said, "because being No. 1 in quality and being the only company in the United States with five-year or 50,000-mile warranty we feel extremely comfortable guaranteeing the value of vehicle for four years."

General Motors Acceptance Corp. earlier this month introduced a similar balloon-note program called Buyer's Choice. It was test-marketed in Michigan and expanded nationwide except in Illinois, Nebraska, North Carolina, Pennsylvania and the District of Columbia, where balloon-payment financing is not allowed.

All three programs offer the choice of paying off the loan, returning the car or refinancing the balance of the loan at the original rate.

Many banks have introduced balloon-financing programs in the past year. A disadvantage of many of them is that they require that the balance be refinanced at used-car rates which are higher than new-car rates.

Domestic sales climb 5 pct. for June 11-20

By Jenny L. King
DETROIT REPORTER

Mid-June domestic new-car sales rose nearly 5 percent above the year-ago level.

They progressed 15.38 percent percent from the June 1-10 period, which had one fewer selling day.

After 17 sales periods, with eight ahead and nine behind the comparable 1985 segment, the year-to-date total was 5.38 percent below the 1985 figure.

With the most recent rounds of incentive programs living out their final days, consumers may have been making some last-minute decisions to buy. General Motors' programs are due to expire June 30, with Ford Motor Co. incentives expiring July 5. Chrysler Motors will have to make a decision by July 10.

June 11-20 sales of 252,092 were up 4.82 percent from 240,489 for the period a year earlier. The daily selling rate reached 28,010, up from 26,721 in 1985. There were nine days in the mid-month period both years. The early-June rate was 27,312, based on sales of 218,497.

Domestic sales since the first of the calendar year totaled 3,874,307, down from 4,094,787 in 1985.

Increases of 11.25 percent for General Motors, 8.00 percent for Chrysler Motors and 10.03 percent for Honda made up for mid-month losses by the remaining domestic makers.

GM reported sales of 149,086, compared with 134,014 a year earlier. Chrysler advanced to 34,467 from 31,915, and Honda climbed to 5,135 from 4,667.

Ford Motor Co. sales were down 7.07 percent, to 59,785 from 64,333. Volkswagen slipped 19.03 percent, to 1,749 from 2,160. American Motors sales of 1,620 were down 38.87 percent from 2,650, and estimated sales of buildout Nissan Sentras were 250, down 66.67 percent.

GM's sales increase helped balloon its share of the market to 59.14 percent from 55.73 percent. Ford tumbled to 23.72 percent from 26.75 percent. Chrysler edged up to 13.67 percent from 13.27 percent. Honda earned 2.04 percent, up from 1.94 percent. AMC had 0.64 percent, down from 1.10 percent. VW slipped to 0.69 percent from 0.90 percent, and Nissan was down to 0.10 percent from 0.31 percent.

Sales by individual makes were a mixed bag for the mid-June period, ranging from an estimated 66.67-percent drop for Nissan to an 86.91-percent climb and a June 11-20 record for Pontiac.

Plymouth was up 43.75 percent and Dodge was up 9.87 percent, while Chrysler dropped 16.90 percent. Ford was down 5.68 percent, Mercury was down 8.84 percent and Lincoln was off 13.38 percent.

Buick was up 7.14 percent, Cadillac dropped 14.99 percent, Chevrolet climbed 24.34 percent, Oldsmobile skidded 30.90 percent and Pontiac was up 86.91 percent to a record 36,452 from 19,502.

AMC dipped 14.29 percent, while Renault domestics were off an estimated 42.61 percent. VW was down 19.03 percent, Honda was up 10.03 percent and Nissan plunged an estimated 66.67 percent.

Buick begins overhauling field sales operations

By Michelle Krebs
FINANCIAL EDITOR

FLINT, Mich. — Buick dealers will receive more attention than ever under a major reorganization of the division's sales department.

"We'll be able to support dealers like never before," said William J. Atkinson, Buick Motor Division general sales manager.

Atkinson announced last week that Buick's sales organization will be realigned from six to four areas — Northeast, Southeast, Central and Western. The number of zones within those areas will be cut to 24 from 26. The Newark, N.J., zone will be consolidated into the New York zone and Oklahoma City will move into the Dallas zone.

Atkinson said General Motors' goal for each division to reduce its salaried headcount by 25 percent during the next few years was not the impetus for the reorganization.

"I've never been told I have to reduce the headcount by 25 percent," he said.

Instead, the reorganization was prompted by Buick's realization that competition will intensify and, in light of GM's overall cost-cutting efforts, Buick could not ask for more than its present 800-member sales staff to do the job.

That realization prompted Atkinson to appoint a core group of Buick sales personnel to reorganize the sales operation. The group was charged with finding a way to make the existing staff more effective and more productive while finding ways to improve Buick's customer satisfaction. A lower headcount and reduced costs were to be side benefits.

"Customer satisfaction will be *the* product discriminator before the end of the decade," said Atkinson. "We're Number One within GM in terms of customer satisfaction, and we want to keep it going."

The study group came up with a number of conclusions and possible solutions to problems that will be implemented during the next two years.

For example, the group discovered that 53 percent of Buick's 2,996 dealers account for 92 percent of Buick's annual sales. The other 47 percent account for the remaining 8 percent of sales.

The number of dealers per district manager and district service manager ranged from 12 to 33, and dealers say they want more contact with the district managers.

The group concluded that district managers and district service managers should concentrate their efforts on the 1,586 dealers who sell 92 percent of the cars, yet the smaller dealers should not be ignored.

The group suggested that Buick establish a telephone Dealer Assistance Center. District managers and district service managers will man phones and will be assigned to about 60 smaller dealers each. A small dealer can be called every two weeks under the system.

"They have not had that kind of attention ever," Atkinson said.

The reorganization reduces the workload of the district personnel to 10 dealers per district service manager and 14 per district manager.

In addition, the group concluded that a district service manager's time is being consumed more and more by Better Business Bureau arbitration cases. Now, those cases will be handled by arbitration specialists.

"Instead of constantly putting out fires," Atkinson said, "the district managers will be able to do some fire prevention."

The group also found that, excluding the cost of the central office sales staff and travel expenses, it costs Buick an average of $14,000 per dealer for field representatives to maintain a relationship with a dealer. Atkinson called the number "shocking."

Buick's central office in Flint now will provide support, including training, distribution and office management, instead of each zone having a full support staff.

Atkinson sees business being conducted as usual for the next nine to 12 months, but in about 15 months the reorganization will come to fruition. In the meantime, an implementation team has been appointed to put the reorganization in place.

The team will set up the Dealer Assistance Center and determine which dealers will be assigned to the center, define the overall organization and set up the necessary computer systems.

Atkinson said the study group identified 22 systems needed for the reorganization, 10 of which exist but a dozen of which do not. The team will manage the systems after they are in place until recruits are brought in from the field.

Robert E. Coletta, formerly Northeast manager, will head the Buick Study and Implementation Team, located in Flint. Other team members are: G.L. Walbrun, Newark zone manager; Paul R. Morgensen, Buffalo zone manager; Earl C. Liston, Denver zone manager; and Chris Wolf, special projects manager.

Other personnel assignments announced in conjunction with the reorganization are: Fred H. Dorgin, formerly Midwest area manager, to Northeast manager; Jack J. Faerber continues as Southeast manager; W. Knox Ramsey, formerly Southwest manager, to Western manager; R.J. Adams, formerly assistant general sales manager — administrative, to Central area manager.

Also, Darwin E. Clark, formerly Western area manager, replaces Adams; L.D. Robbins continues as assistant general sales manager-service; and Robert L. Ingersoll, formerly Central area manager, is on special assignment pending his Oct. 1 retirement.

Hunting used-car quality

By Helen Kahn
WASHINGTON BUREAU CHIEF

WASHINGTON — Used cars more than seven years old bought through newspaper advertisements are of lower average quality than those brought from any other source.

That is the conclusion of a Bureau of Economics staff study released by the Federal Trade Commission.

The highest quality older used cars came from franchised dealers and friends and relatives of the purchaser, according to the study. Those bought from used-car dealers varied widely in quality, according to "Product Quality and Information in the Used Car Market," written by James M. Lacko.

The study suggests that older cars bought from private sellers through newspaper ads are of low average quality because the private sellers do not have as much incentive to keep a reputation for honesty and high quality as dealers who sell many cars or as friends and relatives.

"In general, however, comparisons of average quality across type of seller for newer model-year cars shows no pattern of significant differences," he concludes. "The results are markedly different for older model-year cars."

Lacko explains that the sellers of the newer used cars generally did not have good information to disclose to buyers about mechanical quality or future costs for repairs.

The Lacko study finds the percentage of the older used cars repaired within the first year after purchase was 40 percent lower for those bought from friends and relatives and from new car dealers than through newspaper ads.

In addition, the average repair costs for these older cars bought through ads were much higher: $265 compared to $65 from franchised dealers; $80 from friends and relatives; and $153 from used-car dealers.

The Lacko study concludes the existence of a warranty increased used-car prices by about 10 percent, but the average quality of the car was the same, with or without a warranty.

Used cars with reputations for below-average reliability were generally priced 12 percent below models of average reliability. But models of above-average reputations did not command a significant price premium.

The study, which was based on a 1979-1980 survey of used-car buyers who had bought the previous year, reflects the views of the author, not the FTC.

Leaks found in fuel-storage tanks

By Helen Kahn
WASHINGTON BUREAU CHIEF

WASHINGTON — EPA has released results of a study of underground storage tanks containing motor fuels which suggests that the problem of contaminated drinking water may be worse than anticipated.

That is partly because leakage occurred in more than one-third of the 433 underground motor-fuel tanks surveyed in the national probability sample — which, for technical reasons, may be higher than real life. Another important factor is that, contrary to expectations, the failure rate for fiberglass tanks was as high as for steel tanks.

Almost all auto dealers have at least one gas pump and one underground storage tank with gasoline; some also have diesel-fuel storage tanks. In addition, dealers have another problem EPA is starting to probe: leaking hydraulic lifts.

Under the 1984 Resource Conservation and Recovery Act, EPA set up an Office of Underground Storage Tanks to assess problems.

Ron Brand, director of OUST, said this study will help EPA propose rules early next year on "new and already installed petroleum and chemical tanks that will include provisions on leak detection, tank design and construction, installation, compatibility, repair and closing of tanks."

Those tanks are not be to confused with tanks of hazardous wastes, for which EPA will issue final rules soon.

EPA's two-year study covered only motor fuel stored at gas stations, trucking companies, auto dealerships and marinas; fuel stored for company and private fleets; and fuel stored at farms.

The survey was conducted with a national probability sample of 890 establishments with 2,400 tanks. A random sub-sample of 218 establishments was chosen for physical inspection and at those sites, 433 tank systems were tested for leaks.

Some major findings included:

1. There are an estimated 796,000 individual motor-fuel storage tanks, located at an estimated 326,000 establishment with an average of two to four tanks per establishment.

2. Some 35 percent of the tank systems failed the tightness test, but not under normal conditions since EPA had them filled above normal operating levels with slightly elevated pressure on the tank.

3. Average rate for leaking tanks, adjusted for typical operating conditions, was 0.31 gallons per hour. Half the leaks were 0.25 gallons per hour or less.

4. There was not any one variable (type of material or fuel type) that correlated strongly with test failure.

5. Fourteen percent of the places have one or more abandoned tanks on site.

6. Mean age of tanks is 12 years.

7. Twenty-one percent are installed partly or completely below the water table.

The 1984 law banned placing in the ground tank systems that are not protected from corrosion. EPA has already told all tank owners, including auto dealers, to tell state agencies of the existence and number of their tanks.

OUST has searched tank-leak and spill records in all 50 states to assess the cause and the extent of damage. EPA has told its Edison, N.J., lab to test commercial leak-detection methods and figure out ways to improve them, especially since none of them are reliable.

EPA is also working with state and county official and is looking specifically at programs in Florida, California, and Suffolk County, N.Y.

MVMA issues data on world vehicles

The 22nd edition of the Motor Vehicle Manufacturers Association's World Motor Vehicle Data — a unique compendium of automotive data from around the world — is now available.

The 1986 edition, like each of its predecessors, is largely the work of Jacques Evers, MVMA manager of policy analysis — statistics. The 372-page volume provides information through 1984.

The book contains worldwide data on production/assembly, diesel engines, exports, imports, registration/sales and vehicles retired from circulation.

This year, there are several new tables presenting export data by country of destination.

The first edition of World Motor Vehicle Data had 35 pages. Through the years, Evers said, data has been expanded for Japan and Korea and the section on the European Economic Community has been added.

Evers said he keeps in constant touch with his counterparts at foreign motor vehicle associations. He said that World Motor Vehicle Data has been used extensively by automotive suppliers and manufacturers, government and university researchers, the media "and to an increasing extent by consultants and brokerage houses."

The book, which costs $35, is available from: Motor Vehicle Manufacturers Association, 300 New Center Building, Detroit MI 48202.

Renault de Mexico opening short-lived

MEXICO CITY — Renault de Mexico, which was pressured into reopening its Ciudad Sahagun assembly plant, has again shut down operations because of slow sales.

The plant, about 44 miles northeast of Mexico City, is scheduled to resume production in early August, according to a company statement.

The facility was closed for almost three months at the beginning of the year.

At that time, management had planned a nine-month shutdown, but pressure by union leaders, the Ministry of Labor's arbitration board and Gov. Rosell de la Lama caused Renault to reopen the plant.

Renault made a concession to unions and government officials and agreed to pay 70 percent of workers' compensation, plus 100 percent of Social Security payments during the plant closings.

The industry has avoided widespread shutdowns, though March sales plunged 44 percent from the total for the year-ago month, and difficulties in the automotive industry continue to be enormous.

But the makers are reluctant to discuss domestic sales, generally pointing to continued export growth.

Compact-producer Volkswagen, however, has a huge — though unspecified — backlog of unsold cars, and dealer sales show no signs of improvement.

SALARIES

FROM PAGE 1

lion, up 544 percent from 1984, included profit sharing and the company's contribution to the savings program, as did 1984's compensation. The company does not break out salaries and bonuses from other compensation.

Chrysler Corp. Chairman Lee Iacocca was No. 2 on the list with $1.6 million in salary and bonus, moving up from fourth place in 1984's standings. Ford Motor Co. Chairman Donald E. Petersen, Rockwell International Chairman Robert Anderson, and Ford President Harold A. Poling rounded out the five highest paid executives.

In 1985, executives of the auto companies kept ahead of their counterparts at automotive supplier companies. Two years ago the opposite was the case. In 1985, 13 Big Three executives were among the industry's 35 highest-paid executives. Five from Chrysler made the Top 35, as did five from Ford Motor Co. and three from General Motors.

In 1983, 10 auto company executives were among the Top 35, while the year before only GM's top two executives were included.

Chrysler's top four executives were members of the million-dollar club in 1985. A year earlier, only Iacocca received more than $1 million. Three Ford executives earned $1 million or more last year, as did two from GM.

The 1985 listing, however, showed that, if executive compensation is any indication, all is not well throughout the entire automotive industry.

While 96 of the 170 executives listed in the survey saw bigger paychecks in 1985, 56 suffered a drop in pay — nearly three times as many as in 1984 vs. 1983.

Pay declines were most evident at supplier companies whose primary business is chemicals, steel and other metals as well as rubber and tires.

Executives at chemical companies including E. I.du Pont de Nemours & Co., Dow Chemical Co. and Monsanto Co. received less compensation in 1985 than in 1984. So did executives of Aluminum Company of America and Reynolds Metals Co. Executives at Goodyear, Firestone and Armstrong also received less compensation in 1985.

Executives at LTV Corp., Fleetwood Enterprises and Grumman Corp. suffered declines in compensation for the second consecutive year.

NOTE: List is compiled from proxy statements of publicly traded companies, which contain compensation for five top-paid executives. Figure includes salary and bonus, not stock bonuses, stock options, profits from stock options exercised, nor long-term and contingent remuneration unless otherwise noted. Salaries and bonuses awarded are for calendar 1985 unless otherwise noted.

1—Proxy for 3M includes salaries, profit sharing and the company's matching share of the savings program. Salaries and bonuses are not broken out.

2—Petersen, previously president, and Poling, previously executive VP, became chairman and president respectively in February, 1985, following the retirement of Philip Caldwell as chairman. Ross replaced Poling as executive VP of North American Automotive Operations. Benton became executive VP of international. Will Caldwell retired Jan. 1, 1986.

3—Allied-Signal Inc. is the result of the merger of Allied Corp. and Signal Cos. Before the merger, Shumway had been chairman. Dingman president of Signal Cos., Montrone, Derbes, Teske were executive VPs of Garrett Corp., a Signal subsidiary. They became executive VPs of Allied-Signal Inc. Hennessy became chairman of the merged companies.

4—Chrysler Corp. reorganized in November, 1985. Greenwald was vice chairman and became chairman of Chrysler Motors; Sperlich was Chrysler Corp. president and became Chrysler Motors president; and Bidwell was executive VP and became Chrysler Corp. vice chairman.

5—Gray was chief executive officer in 1984 but not in 1985. Daniell became ceo.

6—International Harvester was renamed Navistar after selling its farm equipment business. Kaine and Rutherford, both vice chairmen of the Transition Agricultural Equipment Operations, retired 5-31.

7—Promoted to president from executive vice president.

8—Reynolds became Gencorp ceo in August 1985.

9—Skurla became president succeeding Gavin on 2-14.

PRODUCTION

U.S. car output slips

By Kathy Boyer
DETROIT REPORTER

United States auto makers scheduled assembly of 170,295 cars last week, down 5.48 percent from the previous week's 180,166.

The prior week's build was the highest since the week ended March 8, when 182,516 cars were produced.

The targeted output last week was 0.39 percent above the year-ago week's 169,626.

So far this year, 4,252,322 cars have been assembled, 3.80 percent below the 4,420,534 built last year at this point.

Companies split last week's scheduled production as follows: General Motors, 55.40 percent; Ford Motor Co., 23.07 percent; Chrysler Motors, 15.50 percent; Honda of America Manufacturing Inc., 2.75 percent; New United Motor Manufacturing Inc., 2.11 percent; and Volkswagen of America, 1.17 percent.

Nissan Motor Manufacturing Co.'s car line at the Smyrna, Tenn., plant remains down for model changeover.

American Motors' Kenosha, Wis., plant was idle last week (June 23) for inventory adjustment. The plant is scheduled to resume production today (June 30).

Honda's Marysville, Ohio, plant is down this week for plant maintenance.

GM announced it will halt production today at its Detroit Clark Avenue plant for model changeover. The plant will resume operations July 31. A total of 6,000 employees will be laid off, bringing the number of temporary layoffs at GM to 14,700.

The Detroit plant produces the Cadillac Fleetwood Brougham, Oldsmobile 88 station wagon and Chevrolet Caprice.

All Ford plants except Dearborn will begin a two-week vacation today.

No Saturday overtime was scheduled at GM or Ford plants last week.

Chrysler has slated both Saturday overtime and daily overtime this week (June 30) at its St. Louis (No II) and Belvidere, Ill., plants.

Trucks climb fractionally

Domestic truck output rose a fraction last week as the makers scheduled 76,088 units, up 0.29 percent from the previous week's 75,871. The figure was 14.49 percent higher than the year-ago week's 66,457.

Year-to-date, 1,853,491 trucks have been assembled, 3.84 percent more than the 1,785,009 completed last year at this time.

Starting today (June 30), all Ford Motor Co. truck assembly plants except Wayne, Mich., will be idle for two weeks for vacation. The Wayne plant is not scheduled for vacation until August.

General Motors slated Saturday (June 28) overtime at its Baltimore plant.

Canadian output reduced

Canadian auto makers scheduled production of 24,864 cars last week, 3.45 percent below the previous week's 25,753 but 9.27 percent more than the year-ago week's 22,754.

So far this year, 591,952 cars have been assembled, 7.58 percent more than the 550,236 completed last year at this point.

Truck output was pegged at 17,535 units last week, 11.47 percent below the previous week's 19,807 but 2.16 percent more than the year-ago week's 17,165.

Year-to-date, 476,370 trucks have been built, 2.90 percent more than the 462,949 units assembled last year at this time.

Peterbilt to close in California

By Joseph Bohn
TRUCK EDITOR

Peterbilt Motors is planning to shut down truck production at its Newark, Calif., plant indefinitely on or before Dec. 31.

Newark is one of three North American plants manufacturing Peterbilt Class 8 trucks. The others are in Denton, Tex., and Madison, Tenn.

Newark also houses Peterbilt's divisional headquarters. Its sales and engineering offices will continue to be housed there for the time being.

But there have been rumors that Peterbilt would move its divisional headquarters to one of its other two plant locations.

Now that Newark production is being mothballed, the likelihood of the company relocating its headquarters is substantially greater.

Peterbilt owns a large tract of land in Newark, principally housing its soon-to-be discontinued production facility. The land would be worth a considerable amount of money on the California market.

Newark's shutdown will eliminate one-third of the division's manufacturing capability.

Peterbilt is a subsidiary of PACCAR.

Its sister division is Kenworth, also a heavy truck manufacturer.

On April 30, Kenworth closed its Kansas City, Mo., facility, eliminating one-third of its truck manufacturing capacity. Like Peterbilt, it had three manufacturing plants of roughly similar capacity.

In the Kenworth shutdown, few people were relocated to either of the two other plants. A PACCAR spokesman anticipated that few would be relocated in the Peterbilt move, except for those with very special expertise.

Industry sources speculated that Peterbilt's plant shutdown could be tied into discussions it is having with General Motors, which earlier announced it was seeking a heavy-truck partner.

A PACCAR spokesman said that "to my knowledge" the two companies weren't having discussions.

However, GM and PACCAR dealers at the American Truck Dealers convention in Anaheim, Calif., earlier this year reported that the companies had had some discussions.

Some observers feel that Peterbilt's consolidation of manufacturing operations could be more than simply a reflection of the stagnant Class 8 market and that it could tie into negotiations with GM.

Along with the Peterbilt consolidation, Western Star, Bellevue, Wash., announced it would move its headquarters to Nashville, Tenn., July 1.

And Freightliner Corp. has also shifted some engineers from its Portland, Ore., headquarters to its plant in Mt. Holly, N.C., an action which some observers said was designed to cut costs.

They pointed out that salaries on the West Coast are considerably higher than in the South. There have been fears among some Freightliner personnel that the company would seek to cut costs by such relocations and changes in personnel.

Korea's growth rapid and solid

By Matt DeLorenzo
LOS ANGELES REPORTER

Hyundai's success in Canada and more recently in the United States underscores the speed with which Korea has entered the mainstream of worldwide auto manufacturing.

Already there is talk of another Japan, a thought not too comforting to manufacturers on both sides of the Atlantic.

From a total of about 9,200 automobiles produced in 1974 to a Korean government estimate of 1.2 million units annually by 1990, the growth is remarkable indeed for a country that did not begin building cars in the form of knockdown kits from Japan until the early 1960s.

Despite the rapid growth, it is difficult to conceive the Koreans reaching the scale of the Japanese industry, which produced 12 million cars and trucks in 1985.

A number of factors will limit the scale of the Korean industry, including the current restrictive worldwide trade climate, the number of Korean manufacturers and how they are organized, increased competition from other lesser developed countries and the size and scope of the Korean economy itself.

Many comparisons have been made between Japan and Korea. However, the differences between the two stand out starkly.

Korea, a debtor nation, had a trade deficit of about $1 billion in 1985 and foreign debt is $46 billion, which is nearly half its gross national product. It expects to have a trade surplus of $600 million to $1 billion this year.

Japan, on the other hand, with a GNP six times that of Korea, enjoys a trade surplus with the rest of the world of about $34 billion and is the world's largest creditor nation.

Korea's per capita income is about $2,000, compared with Japan's $13,000, and Korea's population of 35 million is about a third of Japan's.

Japan has a domestic market of about five million new cars and trucks annually and total registrations of more than 44 million vehicles or more than 300 for every 1,000 persons.

Korea's domestic market, on the other hand, is miniscule in comparision, with 1985 sales of 157,000 passenger cars and just over 100,000 commercial vehicles. According to government firgures, Korea today has only 15 vehicles per 1,000 population, which is behind other less-developed countries such as Taiwan at 26 per 1,000, Mexico at 79 and Brazil at 85.

Domestic sales fall in first half; 4 pct. below '85

By Jenny L. King
DETROIT REPORTER

Despite consumer incentives, domestic new-car sales in the first half of 1986 missed the year-ago mark by 175,000 units, or 4.1 percent. June sales, however, were up 8.81 percent over the 1985 total.

Domestic sales January through June totaled 4,139,979, off 4.05 percent from 4,314,667 last year. Import first-half sales were up 14.56 percent, to 1,508,744 from 1,316,960. The industry's first half was up 0.30 percent, to 5,648,723 from 5,631,627.

Imports claimed 26.71 percent of the market.

In June, the domestic automakers reported sales of 736,261, up 8.81 percent from 676,675 last year. The import total reached a record 265,297, up 6.73 percent from 248,561. Imports represented 26.49 percent of the total market of 1,001,558.

In the first half, Honda and Nissan were the only domestics to top their 1985 sales. General Motors was down 2.57 percent, to 2,373,738 from 2,436,247. Ford Motor Co. reported sales of 1,006,493, off 6.97 percent from 1,081,872. Chrysler Motors slipped 5.99 percent, to 567,651 from 603,818.

American Motors plunged 43.61 percent, to 35,206 from 62,430. Honda was up 11.29 percent, to 92,430 from 83,051. Volkswagen reported first-half sales of 39,091, off 2.18 percent from 39,962. Nissan was up 248.15 percent, to 25,370 from 7,287. Nissan began selling U.S.-built cars in the spring of 1985.

GM sales for June were up 9.39 percent, to 417,292 from 381,471. Ford reported sales of 179,301, up 3.02 percent. Chrysler soared 21.08 percent, to 109,052 from 90,065.

AMC's June sales of 5,726 were off 36.84 percent from 9,066. Honda reported any-month-record sales of 18,220, up 50.07 percent from 12,141 in 1985. VW was up 5.82 percent, to 6,453 from 6,098, while Nissan, undergoing a model changeover, had sales of just 217 units in June compared with 3,759 in 1985.

Analysts tend to agree that the die is cast: The domestic makers will have to continue to offer incentives to sell cars during the second half of 1986. "Consumers wait for them. They are part of the market now," said Jean-Claude Gruet, of Salomon Brothers.

PaineWebber Inc. auto analyst Ann Knight said the record-low interest rates haven't had the desired sales impact because few customers want loans for less than 48 or 60 months.

Big losses hit makers in Mexico

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Oscar Marx III, who is being called back to the United States after three years as president of Ford of Mexico, said that Mexico's six automobile makers have lost a total of about $1.5 billion in the last five years.

"What is particularly disturbing is that the losses continue," he said in an interview. "The motor companies are beginning to question whether Mexico will be as profitable as it has been historically."

Chrysler tries 'checkerboarding'

By Dave Zola
DETROIT REPORTER

Chrysler Motors is counting on a new product design/marketing philosophy to help put it one step ahead of the competition.

"Most of our efforts the last few years have been on getting our quality up," said Thomas C. Gale, vice president, product design. "Now, we're in a position to get more competitive in our development programs."

The result is the beginning of a design/marketing strategy the automaker calls checkerboarding, a concept whereby some vehicles will be sold under just

AMC paying 'wheel tax;' plant periled

By Mary Connelly
DETROIT REPORTER

American Motors last week spent $2 million as the first payment for concessions made by workers at its Toledo Jeep plant — a move which could signal the death knell of the Ohio operation.

AMC said UAW workers at the plant refused to "budge" from their position that concessions be repaid via a so-called "wheel tax" based on AMC's North American production. AMC estimates that would cost $27 million over three

Long-promised layoffs begin as Renault reorganizes

By Jean-Jacques Renaux
SPECIAL CORRESPONDENT

PARIS — Renault last week announced that 850 persons will be laid off at the old Billancourt plant and at the company's headquarters in Paris.

These are the first straight layoffs announced by Renault since Georges Besse, president-director general, said a year ago that he planned to reduce the workforce by 21,000.

The reduction should be achieved by the end of this year, but it is becoming clear that early retirements and financially encouraged voluntary departures will not be nearly enough to reach the goal. More layoffs are expected toward the end of the year.

In other moves, Besse is seeking $2.2 billion to $2.8 billion in additional capital from the French government, Renault's sole stockholder, and sales chief Jose Dedeurwaerder plans extensive marketing changes for the 1987 model year, including a five-year rust warranty on cars sold in France.

The Billancourt plant, built on an island in the River Seine at the gate of Paris, is the company's oldest plant — it is in the place that Louis Renault started his car business in 1898.

It is also a symbol and a stronghold of the communist CGT union. For some time the closing of the plant has been a sensitive issue at Renault, and the decision was always delayed.

At Billancourt, Renault makes the recently introduced Express light truck, some Renault 5s and most of the 25-year-old little Renault 4s (still produced at the rate of some 575 units a day in several plants in France, Spain, Portugal and Yugoslavia).

At the beginning of the summer, Renault closed the engine shop at Billancourt after discontinuing the tiny 850-cc, three-bearing, four-cylinder powerplant. More than 10 million units had been produced since 1948, and the engine powered most of the small Renault cars through nearly four decades.

In announcing the layoffs, Besse said that the company's turnaround is on schedule. A year ago, the group was losing some 1 billion francs a month ($140 million at current rates). Now, the financial loss is about half that, some 500 million francs per month, Besse said.

Renault could reduce its corporate loss by 50 percent for the full year, he said. Last year, Renault announced a loss of 10.93 billion francs.

The state-owned company is expected to receive a substantial injection of new capital from the French government.

"We cannot refer to it as a capital increase," a Renault representative said, "since we actually have no capital left.

"If Renault didn't have a very special stature as a state-owned group since a law enacted in 1945 by Gen. de Gaulle, we would have gone bankrupt by now."

Said a French secretary of state: "It is a well-known fact that Renault was always undercapitalized."

According to sources in the industry and close to the administration, Besse asked for 16 billion to 20 billion francs ($2.2 billion to $2.8 billion). It is assumed he will get a substantial part of it, but maybe not in one big bailout package.

Jacques Calvet, president of PSA, the privately owned maker of Peugeot and Citroen, reportedly considers such massive aid to Renault potentially "unfair."

Yet, he agreed with the principle in an interview with the French magazine L'Expansion. Said Calvet: "It is the state's duty to determine whether the proposed (turnaround) plan is convincing enough, and whether the figure asked for is of a sensible size and would not distort the competition."

For the 1987 model-year, Dedeurwaerder announced a major marketing overhaul with many new services offered to dealers and customers. The model year traditionally begins July 1, even if the main product changes won't be introduced before the Paris Motor Show in October.

Beginning July 1, every new Renault sold in France will carry a five-year rust warranty. The warranty will be extended to some other markets, depending upon local competition in the warranty field.

Renault said that after three years of financial losses, most of its French dealers have been showing a profit since mid-1985.

The distribution network in France has been trimmed from 580 main dealerships at the beginning of 1984 to 473 at the beginning of this year.

Dedeurwaerder has initiated a large-scale modernization of the distribution system in France, using some ideas he brought with him from the United States. For instance, the dealers are beginning to work with computer terminals linked to the company and its various plants.

Several training systems are also provided for dealers, salespersons and service people.

Renault last week showed pictures of the Nevada, a station wagon derived from the 21 sedan. The Nevada (Automotive News, June 30) will bow at the Paris Motor Show in early October and go on sale throughout Europe during the fall.

The wagon has an extended wheelbase, making it 7 inches longer than the sedan. The Nevada will be exported to the United States to complement the Medallion sedan, which American Motors is scheduled to introduce during the second half of next year.

It will use the same engines as the Medallion sedan: a 2.2-liter four and a 2.8-liter V-6, both with electronic port injection.

Irish adoption, GM-style

DUBLIN — General Motors has instituted an "adopt-a-company" program here to curb unemployment.

The idea was dreamed up by GM's Irish boss, Arnold O'Byrne. GM once manufactured Opels in Ireland, but now has only a marketing operation here.

After a recession began in 1981, unemployment in Ireland reached 18 percent.

O'Byrne decided to help an unemployed couple, Philip and Ann Noonan, and said that GM would provide all sorts of aid, short of cash. The Noonans started Nice Ideas, a small manufacturing operation turning out chess sets in metal, based on Celtic designs going back to the 12th century.

The Noonans have a small plant near GM in Dublin. GM executives, marketing people and accountants visit the Nice Ideas plant to help with specifics, and Nice Ideas people visit GM, even to use the photocopier.

The GM aid to the Noonans is limited to one year and will end shortly. After that, GM will look for another company to adopt. O'Byrne has asked the country's top 100 companies to do likewise.

Correction

The June 30 issue of Automotive News incorrectly reported the compensation for 3M Chairman Lewis M. Lehr.

Lehr earned $828,814 in cash compensation for 1985 which ranked him 30th on the list rather than first as reported. The $5.2-million figure reported represented the cash compensation paid to 3M's top executives as a group.

The revised list ranks Chrysler Chairman Lee Iacocca as the highest paid automotive executive.

The change brings the total cash compensation — salary and bonus combined — for the 170 executives of automotive and supplier companies to $100.2 million, not $105 million as reported. It also changes the average compensation of the executives to $589,587 for 1985, up 3 percent from $571,208 in 1984.

Premiere of Premier
An American Motors designer puts the finishing touches on the logo of Renault Premier, the company's new intermediate line. The cars will be produced at the new Bramalea, Ontario, assembly plant for the 1988 model year.

French sourcing likely for next Alliance/Encore

By Jean-Jacques Renaux
SPECIAL CORRESPONDENT

American Motors and Renault will stay in the market segment of the current Alliance and Encore after the models are phased out in 1987 or 1988. But their replacements will probably be imported from France rather than made in America.

Renault representatives have not confirmed it, but they do not deny that this plan fits best into their picture.

The current Alliance and Encore models are now produced in Kenosha, Wis., at a declining rate of some 350 cars a day, down from a peak rate of more than 1,100 daily. Production can go on at that rate for some time while the plant is tooling to produce up to 150,000 Chrysler cars a year.

But once the Chrysler operation is running at full rate, there will be no significant capacity left in Kenosha to launch any new AMC/Renault volume model.

"Of course, it can be assumed that we will stay in that market segment," a Renault spokesman said. "With the Jeeps, the imported Medallion and the Bramalea-made X58 carrying the nameplate Premier, we will cover about 60 percent of the U.S. market. It would certainly not be a good idea to drop a market segment like that of the Alliance and Encore."

According to Renault, President-Director General Georges Besse has stressed that he wants Renault to stay with AMC in the United States, marketing cars of three sorts: truly American-made cars (the Jeeps), cars made in America with some imported content (such as the forthcoming Bramalea X58 and X59), and cars imported from Europe (such as the forthcoming Medallion).

It would be an obvious move to source one more new car from Europe to replace the Alliance and Encore, so far as the market there and the exchange rates make it profitable.

It would help Renault increase its production in France, thus reducing the between the company's current production and its break-even point.

Renault will unveil its replacement for the Renault 9 and 11 this fall at the Paris motor show.

AMC-Chrysler pact is hailed by Cappy

By Mary Connelly
DETROIT REPORTER

In the wake of the unprecedented announcement that American Motors will likely begin building cars for Chrysler Corp. in 1987, AMC President Joseph Cappy said the company would like to become a leader in similar innovative joint ventures.

AMC and Chrysler announced last week that a memorandum of understanding has been signed under which AMC is to assemble large, rear-wheel-drive cars for Chrysler at its Kenosha, Wis., assembly plant. AMC Alliance and Encore models will be simultaneously produced at the plant.

It will cost $13 million to $15 million to retrain the Kenosha workforce and launch production at the under-utilized plant in February, 1987, Cappy said in an interview with Automotive News. State and federal aid is being sought to help pay for training.

Cappy said about 200,000 cars are expected to be produced over the 2½-year life of the contract. The agreement carries an extension option. Renewal will be based on market demand for the Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury.

The two companies are also discussing the possibility of Kenosha doing some stamping for those cars, Cappy said.

AMC is also interested in discussing production of other components for Chrysler, he said.

Cappy indicated that AMC is actively seeking similar ventures with other manufacturers.

"Frankly, we've been kicking around this thing for some time now," he said. "There have been other possibilities in the past that didn't pan out."

He said the company is talking to "quite a few people" and has received an inquiry from an Asian company he declined to specify.

Even with the assembly of the Chrysler models, AMC has excess capacity in its Kenosha and Brampton, Ontario, plants, he said.

In addition, AMC "for a price" would be willing to expand capacity at its $675 million plant under construction in Bramalea, Ontario, Cappy said. It will begin producing the Renault Premier, a new line of intermediate size cars, in the summer of 1987.

Stating the "possibilities are endless," Cappy cited joint assembly operations such as the General Motors-Toyota plant and joint development of product or components.

Cappy said an agreement with Chrysler would boost AMC's financial and economic outlook.

AMC lost $125 million in 1985 and posted a net loss of $19 million in the first quarter of 1986.

Chrysler is expected to make a fixed payment to AMC and subsequent variable monthly payments based on production.

The large M-body cars expected to be produced by AMC are being moved out of Chrysler's St. Louis II plant for the launch of a second minivan plant. Continued demand for the cars, coupled with constrained assembly capacity, led Chrysler to the deal.

Chrysler has said it is running its domestic assembly plants at the equivalent of 118 percent of straight-time capacity and has no plans through 1990 for an additional domestic assembly plant.

Cappy said there are no talks being held regarding production of additional Chrysler models.

Employee training is a "required element" for finalization of the AMC-Chrysler agreement.

Cappy said he is "very confident" the state of Wisconsin will approve training money. AMC also is seeking federal training aid.

An estimated 3,200 hourly and 300 salaried employees are expected to be recalled from layoff at AMC's Kenosha and Milwaukee plants if the agreement is finalized.

UAW Local 72, which represents workers at Kenosha, agreed to reduce job classifications as an enticement to win the Chrysler work.

Chevy sets timetable for new small cars

By Michelle Krebs
FINANCIAL EDITOR

Chevrolet Motor Division will introduce the second-generation Sprint, Spectrum and Nova in 1989 and 1990.

General Manager Robert Burger said the new cars will be introduced over a two-year period.

"I have been urging the Chevrolet dealer body to use their selling muscle and do the very best job they can with today's products to give us a new owner base to spring from when we launch the new vehicles," Burger said.

By the time the second-generation models arrive, Burger said, Chevrolet would like to be importing 200,000 Spectrums a year from its Japanese partner, Isuzu. Increased volume of the Suzuki-built Sprint hinges on General Motors and Suzuki building a plant in Canada. An announcement on those plans is expected this month.

Chevrolet today is limited to 80,000 Spectrums and 60,000 Sprints because of self-imposed restraints by the Japanese from April 1, 1986, to March 31, 1987.

In the meantime, Burger said, the imported Chevrolets will be updated, particularly in terms of powertrains. The Sprint will have a turbocharged engine for 1987 as will the Spectrum in mid-1987.

Burger said the Sprint, Spectrum and Nova will fill the void left by the Chevette, which will disappear from Chevrolet's product line after the 1987 model year.

"The Chevette, frankly, is a car that in some degree gets in the way of the Sprint and Spectrum, particularly at retail," Burger said. "In the fleet end of the business, the Chevette is still considered one of the best for daily rental. For this year, that's where the bulk of the sales are."

Burger said that in 1987, Chevrolet will push Spectrum as the fleet replacement for Chevette in the daily rental business.

Chevrolet is still on target to sell 1.81 million cars and 1.29 million trucks in the 1986 model year, Burger said. That compares with sales of 1.60 million cars and 1.25 million trucks sold in the 1985 model year. Burger expects Chevrolet's share of the new-car market to be 15.8 percent for the model year.

Included in Chevrolet's 1986 totals are projections to sell nearly 750,000 small cars — 265,000 Sprint, Spectrum and Nova models combined, up to 70,000 Chevettes and up to 400,000 Cavaliers.

Some observers say Chevrolet has too many small cars, causing confusion among consumers.

"We have enough," Burger said. "I don't think we have too many. Every car that we have in the subcompact segment is a vehicle that has found itself a niche in the marketplace.

"We can handle Sprint, Spectrum, Nova and Cavalier in total and not let any one of them get in the way of the others," he added.

Chevrolet touts the Sprint as the highest mpg car in the United States; its advertising boasts that the car can run from California to New York on $66 worth of gas.

Burger said Chevrolet could sell more if it could get more.

Not so with the Spectrum. "That piece of the subcompact pie is a little more blurred, not quite as easily identified," he said. "I wouldn't say that we struggle there, but we have to keep the heat on."

AUTOMOTIVE NEWS/JOE WILSSENS

Burger says Chevrolet has the right number of small cars

Burger said a number of good vehicles with many of the same characteristics compete in Spectrum's category.

Burger said Chevrolet relies on its dealers to push the car and has given the car a disproportionate share of attention this year compared with last.

Cavalier, Burger predicted, will be the the No. 1 or No. 2 best-selling car in the United States. "It's well accepted from the East to the West and the North to the South," he said. "And it poses no threat to Nova sales, and neither does the Nova pose any threat to Cavalier sales."

Sales of the Nova, the Corolla derivative built at the GM-Toyota joint-venture plant in Fremont, Calif., are doing better than they did earlier.

"The Nova is another car that has found itself in a niche alongside the imports," Burger said.

Burger said Chevrolet cut back on advertising after the Nova's introduction, and that was a mistake.

"We assumed that it was the product of a joint venture of two very successful companies in the automobile business and that *that* — in and of itself — would ensure its success," he said.

Chevrolet since has shifted its advertising from the joint-venture and Toyota angle to "ask the woman or man who owns one."

Burger said the division began to treat Nova as a Chevrolet. When interest-rate support was put on Cavaliers, Spectrum and the rest of the Chevrolet line, it also was put on Nova, and that boosted sales.

Next leading compacts Chevys, vows Burger

By Michelle Krebs
FINANCIAL EDITOR

Chevrolet General Manager Robert Burger predicts the all-new Corsica and Beretta models, to be introduced in the spring of 1987, will be the best-selling cars in the compact segment in 1988.

He said Chevrolet will sell between 425,000 and 450,000 of them during the 1988 calendar year.

The Corsica four-door sedan and the Beretta coupe, codenamed L-body cars as part of the GM25 program, are compacts exclusive to Chevrolet. Renovated plants at Linden, N.J., and Wilmington, Del., will assemble the cars.

"The Corsica and Beretta put us right smack back in the compact market in which we were so successful with the Citation," Burger said.

Chevrolet feels it abandoned the segment more than a year ago when it dropped the X-body Citation because of bad publicity and litigation concerning its quality. Chevrolet considers the Cavalier a subcompact, not a compact.

Because of the difference in their personalities, Corsica and Beretta will be marketed as separate models, even though they are built from the same platform.

Burger likens the Beretta to the Monte Carlo coupe. The Beretta was designed and built as a sporty coupe, not a derivative of a sedan. Burger expects it to attract the Chevrolet Camaro- or Ford Mustang-type buyer.

"It will appeal more to the sporty end. It probably will have a lot of interaction with some cars within General Motors and, most important, those offered by the imports," he said.

The Corsica is a roomy four-door, four-passenger model.

"The market is pretty well defined — demographically and psychographically," he said. "It's a large market, and it has a certain individual within it, so we'll just take the car right after the compact-type buyers, whether they're Citation owners or whether they're owners of the same size cars offered by competitors.

"If tradition holds," Burger added, "the four-door will do much better as the cars settle in. Initially, the coupe may take off a little quicker. I think it'll settle down in the 60-40 range in favor of four-doors."

Burger said the acceleration curve for startup at the two plants will be slow. However, he said he hopes the acceleration will be faster than that of the Nova, the joint-venture car made by GM and Toyota in Fremont, Calif., and sold by Chevrolet.

He said he believes Chevrolet will be very short of cars right after introduction. Full production is targeted for June 1987.

Japan sets European export cap

By Francis J. Gawronski
TOKYO BUREAU CHIEF

TOKYO — The Ministry of International Trade and Industry has officially urged Japanese automakers to abide by Japan's self-imposed "orderly export policy" in regard to shipments of vehicles to the Common Market.

Alarmed by the brisk rise in exports to the Common Market, MITI moved to head off possible friction with Europe over auto trade.

The request was made directly to representatives of the auto manufacturers because MITI expects Japan's car exports to the Common Market for April through June to be approximately 40 percent above last year's level.

According to export figures compiled by the Japan Automobile Manufacturers Association, cumulative shipments of all vehicles to the Common Market for the first two months of fiscal 1986 — April and May — totaled 211,796 cars, trucks and buses (112,442 in April and 99,354 in May).

That represents an increase of 61.7 percent over the 130,952 units (66,485 in April and 64,467 in May) exported the year before.

Through its administrative guidance policy, MITI has expressed concern about the possible spiraling escalation in shipments to the Common Market for the fiscal year ending next March.

MITI said a 10 to 15 percent increase in exports would be acceptable, tied to a projected 15 to 20 percent increase in annual auto sales in the Common Market.

However, if the current pace continues, the government fears the export volume will exceed an acceptable level in fiscal 1986.

In fiscal 1985, Japanese makers exported 6,848,493 units, of which 1,061,870 went to the Common Market, an increase of 15.1 percent over the year before.

Japan is maintaining a four-year, self-imposed export moderation policy for the Common Market and has been watching for any brisk rises in exports, especially in eight major trade products, including motor vehicles.

According to industry analysts, Japanese auto exports to the Common Market nations have been rising since last September as the car companies seek to make up for declining profits caused by the yen's appreciation.

Shoichiro Toyoda, JAMA president, said recently that "it is not necessary to reduce Japanese car exports to the Common Market countries."

Shakeout begins in heavy-truck industry

By Joseph Bohn and Rik Turner
AUTOMOTIVE NEWS STAFF

The heavy-truck industry is gaining momentum in its inevitable consolidation.

Several companies, including PACCAR, Freightliner and Mack, are reducing production capacity and/or laying off employees.

In addition to two permanent plant closures, PACCAR plans to consolidate the parts marketing operations of its Peterbilt and Kenworth divisions.

Effective Jan. 1, 1987, it will distribute and market parts for the two divisions from its current central PACCAR parts operation.

Sources said that while marketing and distribution are being consolidated, there will continue to be separate parts lines available for Peterbilt and Kenworth trucks.

Brent Johnston, currently general manager of the PACCAR parts operation, will head the new organizational structure. Neither Johnston or PACCAR's spokesman were available for comment at press-time.

Sources said a new organizational chart has been drawn up, but not yet distributed.

PACCAR's parts marketing consolidation, coupled with two permanent plant shutdowns and the recent defection of Kenworth's general manager to Navistar, fueled speculation that the entire operations of Kenworth and Peterbilt would be merged.

Dealers seem to regard that as totally unrealistic, pointing to strategies, styling and engineering differences between the divisions' products.

A more compelling argument against the move, however, is that it would end up eliminating half of PACCAR's dealer network.

In the first five months of this year, heavy-truck sales for the industry were down 20 percent from last year. Furthermore, PACCAR's special niche in the owner-operator segment is being eroded by a market shift to more fleet purchases.

Some truck companies have been phasing out use of owner-operators and going back to company-employed drivers as the best way to control their costs.

That is forcing PACCAR to shift strategies and pursue small and medium fleets more aggressively. Those customers are being courted aggressively by competitors.

The shutdown of Peterbilt's Newark, Calif., plant by Dec. 31 coupled with an earlier shutdown

Seminar points to growing interest

How hot is South Korea among U.S. businessmen?

Ask Dr. Jack G. Lewis, associate director of international programs at the University of Southern California's graduate school of business.

Lewis administers a series of Pacific Rim management programs on doing business with China, Taiwan, Korea and Japan for USC's International Business Education and Research Program.

"Last year, we had only five enrollments on Korea and had to cancel the program," he said, adding that in contrast, both China and Japan drew 13 attendees each.

"This year, we had 17 from upper middle management attending the Korea seminar." Only China outdrew Korea with 20, while 14 attended the program for Japan and 13 for Taiwan.

"We saw a very big shift in one year from Japan to Korea," he said. "People have become sated with Japan — they either have given up on Japan or feel they can deal with Japan."

Lewis said he felt "a real strong shift of dynamism toward Korea" in the seminar, even away from the People's Republic of China.

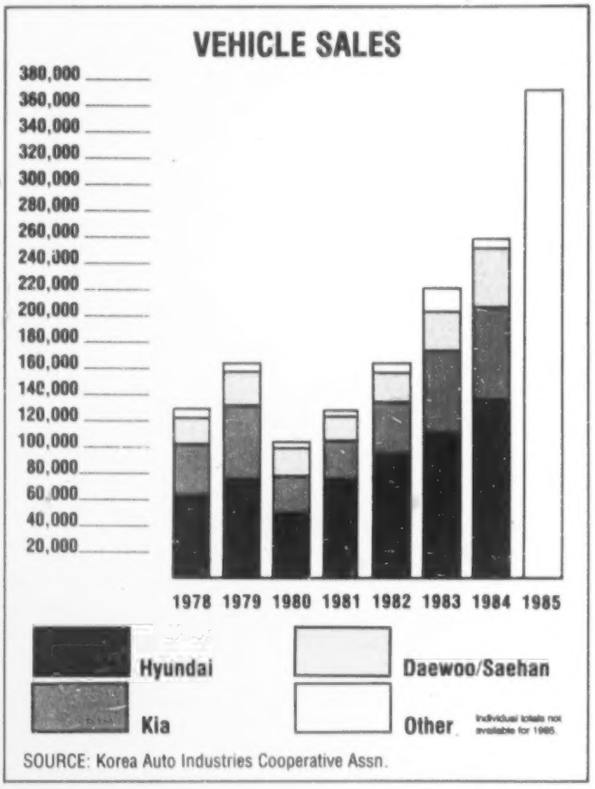
"In the PRC seminar, it was a little bit jaded," he said. "People are concerned with the risks of doing business in the PRC. There is a foreign exchange problem and people are worried about getting their earnings out of the country."

However, on the Korean front, Lewis said he senses a higher level of activity than with the other three countries. "You get a sense that much more is happening in terms of building organizational linkages between the United States and Korea than with Taiwan," he said.

The annual three-day seminars are divided into segments dealing with the overall business; trade and cultural conditions; micro- and macro-economic organization of business; and the practices involved in marketing, negotiating, purchasing and establishing operations in those countries.

According to Lewis, about a third of the attendees at the seminar on Korea were from the automotive industry, including some Hyundai Motor America executives and representatives from tire and other automotive supplier companies. Lewis expects the seminar to become more popular as U.S. businesses become more familiar with such Korean brand names such as Lucky-Goldstar and Samsung.

— Matt DeLorenzo



CHARLOTTE J. WINTER

KOREA

FROM PAGE 1

According to one analyst, "comparing Korea with Japan on equal footing is like mistaking a pygmy for a giant."

Although small in comparison with Japan, the Korean auto industry is viewed by the government as vital to attaining an annual GNP growth target of 7 to 9 percent. As a result, the government has taken an active role in fostering conditions that have permitted the rapid expansion of the nation's automotive manufacturing base.

There are currently six producers of vehicles: Hyundai, Daewoo, Kia, Asia, Dong-A and Keo-Hwa.

Until recently, only Hyundai and Daewoo have produced cars. Kia is just re-entering the car market; it has built vans and light-duty and medium-duty trucks. Asia builds heavy-duty trucks and buses, while Dong-A manufactures only buses and Keo-Hwa builds Jeep-type vehicles. Asia is affiliated with Kia, and Dong-A recently took over Keo-Hwa.

The three majors, Hyundai, Daewoo and Kia, represent virtually all of Korea's production. All three have ties with either Japanese or American companies. Hyundai is 15 percent owned by Mitsubishi; Daewoo is tied up with General Motors; and Kia has a relationship with Ford and Mazda.

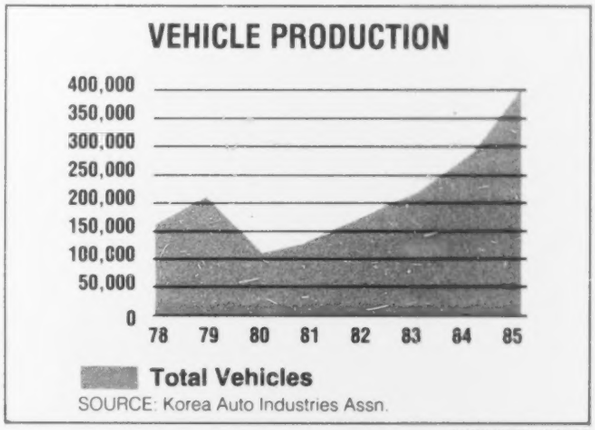
GM's joint venture dates back to 1972, when it signed an agreement with Shinjin, which was renamed Saehan Motors in 1976. Three years ago, that company became what is now known as Daewoo.

The Korean auto industry's roots go back to the mid-1950s following the Korean War, when companies repaired and built vehicles for military use as well as rebuilding military Jeeps for civilian use. The first cars were partially knocked-down Toyota Corona kits assembled by Shinjin Motor Co.

Kia began building three-wheeled trucks in 1962 and added four-wheeled models in 1971. Hyundai, now Korea's largest auto maker, was founded in 1967 and assembled Ford Cortinas in 1968, while Asia assembled Fiat kits in 1970.

By 1974, total production was just over 32,000 units, of which 9,200 were cars, 19,000 were trucks and just over 3,900 were buses.

In 1975, the government unveiled a long-range auto industry promotion plan and three new cars were developed that year, the Hyundai Pony, the Kia Brisa and the Daewoo Gemini. While the latter two were essentially badge-engineered versions of cars manufactured elsewhere in the world, the Pony was an original model developed and built by a Korean maker with the aid of Giugaro's Italian design house.



CHARLOTTE J. WINTER

Production grew dramatically and exports began. By 1979, capacity was 231,000 cars and 110,000 trucks and buses, according to Anthony Geber, writing in Korea's Economy, a publication of the Korean Economic Institute. Actual production was 112,000 passenger cars, 70,000 trucks and 12,000 buses.

Geber, a former foreign service officer assigned to Korea, wrote that "the Korean government has come to regard the automotive industry as one of the new generation of leading export industries. It realizes the large part that automotive exports play in such successful industrial economies as West Germany and Japan."

As a result, the government has had a keen interest in the fortunes of the Korean auto industry.

In 1980, the worldwide economic downturn triggered by the 1979 oil crises hit Korea as well and passenger-car production dropped by more than 50 percent with factories running at a third of their capacity.

As a result, the government stepped in and reorganized the auto industry. Passenger-car production was limited to Hyundai and Daewoo, while light trucks were assigned to Kia. Trucks over five tons could be built by Hyundai and Daewoo, while Asia was given trucks in the eight-to-nine-ton range. Keo-Hwa assembled Jeep-type vehicles, while the other five could build buses. Hyundai, Daewoo and Kia could also build special-purpose vehicles.

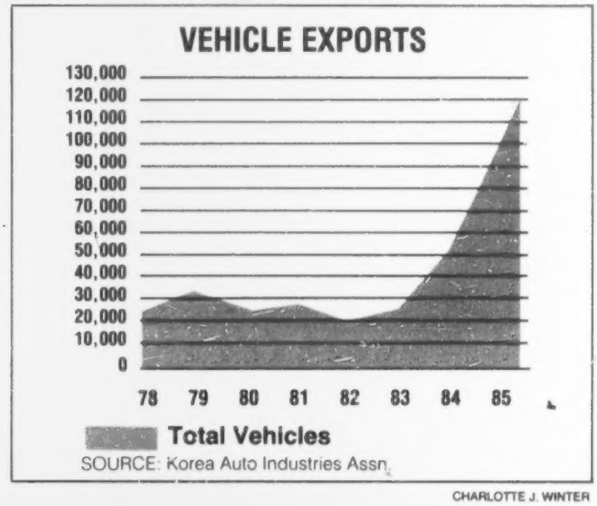
Hyundai, the largest, controlled 54.5 percent of the Korean domestic car-truck market in 1984. It has two basic car lines, the original rear-wheel-drive Pony and the Stellar. Two new models, the front-wheel-drive Excel (which is being exported to the United States) and the new Sonata, are also being sold alongside the older cars in Korea.

Daewoo, which has about 16 percent of the market, builds the Maepsy, which is a minicar, and is finishing work on its version of the Opel Kadett, which in addition to being sold in the home market, will be exported to the United States for sale by Pontiac as the LeMans.

Kia, which had been prohibited from building cars until 1987, will return to the market with a minicar developed jointly with Ford and Mazda. Kia, which has had the light-duty and mid-range truck market to itself, will also face competition in that segment when Hyundai and Daewoo are permitted to re-enter that arena. Kia had about 29 percent of the nation's new-vehicle market in 1985.

Although the internal Korean market will be somewhat freer with more companies allowed to build cars, the government is continuing to limit the involvement of others in auto manufacturing to ensure an orderly market. That strategy is evidenced by the government's refusal to let Samsung, an electronics giant in Korea that has a joint-venture relationship with Chrysler, to enter auto manufacturing.

With the industry reorganized, an economic recovery in North America and the successful launch of Hyundai's Pony in the Canadian market, vehicle production recovered from its 1980 low to nearly 160,000 cars by 1984. Hyundai's launch in the United States and Daewoo's pending export of the LeMans have resulted in a major expansion of capacity.



CHARLOTTE J. WINTER

The Korean government is predicting a 60 percent increase in capacity over 1985 to 600,000 units this year. Next year, capacity will increase by another 60 percent to nearly 1 million units, according to S. Kim Song, commodity manager of GM's Purchasing Activities Staff.

In a presentation to the Sixth United States-Japan Auto Industry Conference at the University of Michigan, Song estimated that Hyundai would have capacity for 450,000 units, Daewoo, 300,000 and Kia, 200,000. Hyundai has since upped its estimate to 600,000 units.

In addition to opening new export markets, Song expects the Korean domestic market to expand greatly. As noted earlier, Korea has relatively low penetration of autos per thousand population.

"There is a large reservoir of pent-up demand in Korea," Song said. Domestic demand might hit 800,000 units per year by the 1990s. The strong domestic demand coupled with tight worldwide trade policies will move the Koreans to foreign assembly in a much shorter time than the Japanese, who sold cars in the United States for more than 10 years before beginning U.S. assembly.

Hyundai, for example, has been selling cars in Canada for only 2½ years and has already begun work on an assembly plant in that country.

According to Geber, "Korean development strategists subscribe to a concept called the 'product life-cycle theory' according to which the comparative advantage of a given product gradually declines in a mature economy and is finally lost to other countries still in an earlier stage of development."

KOREA: A RISING POWER

Exports are vital; protectionism spells trouble

Korea hopes to avoid fire aimed at Japan

By Matt DeLorenzo
LOS ANGELES REPORTER

As South Korea prepares to plunge headlong into auto exports, it is facing waters muddied by strained trade relations worldwide that threaten an outbreak of protectionism. That spells trouble for the "economic miracle."

The dramatic growth in Korea's economy and its newly gained status as an industrialized nation is predicated on exports, and the automobile is a major part of the country's overall strategy.

While the Koreans look to neighboring Japan as a model of success, it is Japan's success in exporting cars and other consumer products that has fanned protectionist fires.

Korea is struggling to join the ranks of developed nations by posting a trade surplus for the first time in its history and is seeking to repay its $46 billion foreign debt. Therefore, it is sensitive to any doors closed in its face, and it is sensitive to any pressure to open its fledgling economy to the rest of the world.

As a result, Koreans are going to great lengths — in their business dealings in the United States and lobbying efforts in Washington — to put as much distance as possible between themselves and the Japanese on trade issues. They hope to head off any protectionist legislation aimed at their rival that might catch Korea in the crossfire.

In putting Korean trade issues into perspective, three things must be considered:

1. The importance of exports to the Korean economy.

2. Factors that give Korean products an advantage in world trade.

3. The effects that internal and external trade policies will have on Korea.

It cannot be denied that exports are critical to the continued growth of the Korean economy. According to S. Kim Song, a commodity manager for General Motors' Purchasing Activities Staff, Korea views export as an engine of growth."

She said that because Korea has lost some of its competitive edge in shoes, steel, shipbuilding, textiles

see TRADE, page 24

KOREANS CATCH ON
After a 1984 introduction, Hyundai soared to the top of Canada's import-sales charts within two years with the Stellar sedan and Pony hatchback, shown here as 1986 models. After just four months in the United States, Korea's Number One carmaker now claims the title for most cars sold by any importer in the first six months of operation. Its U.S. record is based solely on the subcompact Excel.

Domestic sales sharing in boom

By Matt DeLorenzo
LOS ANGELES REPORTER

South Korea's rapid development of its automotive export capacity has overshadowed the progress being made in building a domestic market for cars and trucks, one that has the potential of growing from just 9,000 passenger cars in 1974 to nearly 660,000 in 1990.

R.E. Gene Williams, head of Strategy Support Associates, Garfield Heights, Ohio, estimates that the number of passenger cars in use in the country will reach 2.2 million in 1990.

Williams, who previously worked for TRW, has put together a computer forecasting model that indicates a healthy domestic market for the developing industrialized country.

There were 460,000 passenger cars on Korean roads on Jan. 1, 1985, and that's expected to grow to 738,000 this year on domestic sales of 240,000 units.

According to the Korea Herald, first-quarter sales were 30,467 units, a 23-percent increase over a year earlier. The debut of Daewoo's version of the Opel Kadett and Kia's re-entry into the domestic-car market later this year with the Mazda-designed Festiva minicar are expected to push sales even higher.

The newspaper attributed the increase to a drop in oil prices, which had resulted in an average saving of 15,000 won per month by a person driving 100 kilometers a day and using 10 liters of fuel.

Williams expects sales to jump to 462,000 cars in 1988 and to 658,000 in 1990.

He predicts that Hyundai will continue to dominate the market in 1988, selling 304,000 units; Daewoo will produce 113,000 for domestic use; and Kia, 43,000. He said that Keo-Hwa, a utility-vehicle maker which is expected to join the minicar ranks in Korea, will build 1,800 of those units in 1988.

Breaking it out by model for 1990, Williams said Hyundai will produce 105,000 of its Pony Excel; 109,000 of the Sonata; 5,000 of the L-model, which is expected to be a version of Mitsubishi's large car, the Debonair; and 120,000 yet unnamed minicars for a total of 339,000 units.

Daewoo, which will produce 239,000 cars for the home market, will build 66,000 Royale models, which is a mid-sized car similar to Sonata; 53,000 of the Opel Kadett design; and 120,000 minicars. Kia is expected to produce 78,000 cars — 18,000 subcompacts in the Mazda 323 class and 60,000 Festiva minicars. Keo-Hwa will produce 2,200 minicars in 1990.

The light-truck market will be more stable, according to Williams, although their number on Korean roads will increase from 306,000 in 1986 to 556,000 in 1990. Sales are expected to be about 66,700 this year, moving to 115,000 in 1990.

The dominant company in that segment is Kia, which is expected to sell about 48,000 light trucks and vans in 1986 and 77,000 in 1990.

Hyundai is a distant second, selling 11,000 this year and 24,000 by 1990, Williams said. Daewoo will build 6,000 light trucks in 1986, moving up to 14,000 by 190. He expects Keo-Hwa to reduce production, slipping from 1,700 units this year to about 800 in 1990.

Government-business: Tie differs from Japan

By Matt DeLorenzo
LOS ANGELES REPORTER

The rapid development of South Korea as an industrialized nation owes much to the close relationship between government and business, similar to the Japanese model.

There exists "Korea Inc.," but because of cultural, economic and political factors, there are significant differences between the two nations' approach to the government/business combine.

"Korea's cooperative business-government relationships owe much to both its fear of war with the North, which makes economic growth a matter of survival, and its Confucian tradition," according to John T. Bennett, president of the Korea Economic Institute.

Bennett said that starting with basically an agrarian society that was shattered by the Korean War, the government viewed business as a way "to develop higher wages and to provide its own armaments." A series of five-year plans started by President Park Chung Hee in the early 1960s started the country on its rapid climb.

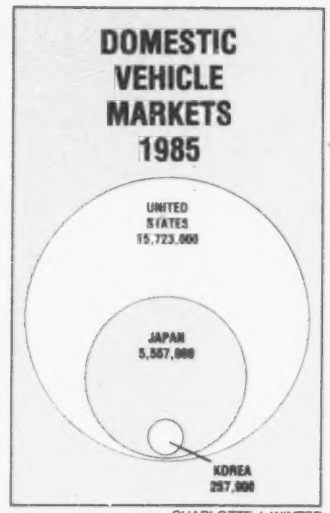
Working through large, family-run conglomerates known as Chaebol — which are similar to the Japanese industrial groups called Zaibatsu — the government "has clearly been the dominant partner, largely immune to any business-generated pressure," according to Glenn Lehmann, a consultant with Korean experience.

Because South Korea is smaller than Japan in both land and population, the number of those large conglomerates is fewer than in Japan and, as a result, their impact on the economy is much greater The sales of the four largest — Hyundai, Daewoo, Lucky-Goldstar and Samsung — account for 45 percent of Korea's gross national product.

Like the Japanese Zaibatsu, Korea's Chaebol are involved in such diverse fields as car and ship building, construction, textiles, electronics and petrochemicals. With such power concentrated in a relatively small number of companies, it would seem that they would have tremendous influence on the government. But, according to Bennett, that is not necessarily the case.

"Government tends to be dominant in the relationship as a spokesman for Korean values," he said, adding that "government is viewed as a failure if the economic miracle doesn't work."

As a result, government still calls the shots, as when the 1980 recession rocked the country's fledgling auto industry and government stepped in and decided which companies were to produce certain vehicles.



CHARLOTTE J. WINTER

Only recently, with a recovered economy and an auto industry ready to plunge into exports on a large scale, has the government reopened the auto industry to a degree.

It is allowing those companies which had been limited to trucks to produce cars and vice versa. However, it is keeping Samsung, which had no auto building experience, out of the assembly business for the time being.

Jack Lewis, a professor at University of Southern California's Graduate School of Business, said the large groups, once they are allowed to compete in a given area, are given a free hand by the government.

"A high level of competition leads to better products," he said, noting that stiff competition among consumer goods "has helped Japan. The South Korean government may help certain industries, but it lets the companies compete. They may have three or four companies in a target area. The competition leads to better products for export."

The large groups, according to Lewis, "are incredibly young. Most were started in the late 1960s. They have benefited from personal contacts in government and have grown quickly."

It is those contacts, as well as Korea's clumsy attempts at influence peddling in Washington in the early 1970s, that raised questions

KOREA: A RISING POWER

TRADE

FROM PAGE 22

and similar products to other developing countries, Korea sees the "automobile as one of the leading strategic export products and the locomotive for the renewed economic expansion for Korea to the year 2000."

A study by the Korea Institute for Economics and Technology put Korea's car exports at $1.8 billion by 1990 and $10 billion by the turn of the century.

Song noted that from 1959 to 1962, the gross national product in Korea grew 3.2 percent annually and the country suffered from severe economic stagnation and high inflation.

Following the takeover by Park Chung Hee's military dictatorship, a series of five-year plans aimed at developing heavy industry with the goal of expanding exports was instituted. From 1963 to 1979, Korea's economy grew at an annual rate of 7.9 percent and real export growth was just over 30 percent a year.

Since 1979, annual GNP growth peaked at 9.3 percent in 1983 and leveled off at 7.5 percent in 1984, according to U.S. Commerce Department figures. In 1985, that figure fell to 4.2 percent, but it is expected to return to the targeted 7 to 9 percent this year, fueled by auto exports.

However, the 1985 figure was an embarrassment to the administration of President Chun Doo Hwan and any slowdown in the "economic miracle" could undermine his regime politically.

As a result, the government has become even more sensitive to trade pressure from the United Sates that would either choke off exports or open the domestic market completely. Either of those occurrences would slow South Korea's economic growth.

In seeking export markets, Korea has been able to get in the door with low-cost products because of wage rates that are a fraction of those in the rest of the industrialized world. According to the Korean Ministry of Finance, the average hourly wage in 1984 for the manufacturing sector was $1.46, a rate that does not include benefits. The automotive sector was slightly higher at $1.64 per hour.

The work week in South Korea averages 50 hours. According to several analysts, benefits add 50 percent to the basic wage rate, which would put the automotive labor cost at about $2.50 per hour.

In Japan, the wage rate in the automotive sector is estimated at $12 to $13 per hour including benefits. That is figured at 238 yen to the dollar. It would be higher if figured at 170 yen to the dollar.

In the United States, the base rate for wutoworkers is $13.75 per hour without benefits and $24 to $25 per hour with benefits.

One analyst estimated the direct labor costs of a Korean small car at $300, compared with $800 for a similar Japanese model and $1,800 for an American model.

David C. Cole, a specialist on the Far East for the Harvard Institute for International Development, feels that the South Koreans will be able to take advantage of those low labor costs "to take over a significant share of the lower (automobile) market area. This is more of a threat to the Japanese manufacturers and less of a threat to the U.S. makers."

Cole added that since the Korean economy is so small in comparison to the Japanese economy, "What is a high rate of growth for them in automotive exports won't make a big dent in the U.S. market, especially for U.S. makers who have given up the low end of the market."

Cole added that while Korea's share of the U.S. market will be small, the Japanese and American companies are aware of the threat.

Korea's advantage goes far beyond just the basic labor rate, according to Cole.

"They have new equipment, new factories," he said. "They have good workers and they work very hard. Their tremendous advantage stems from their substantial cost advantage over the Japanese, and that is because the won (Korea's currency) has remained the same against the dollar while the yen has gone up."

Using the cost advantage to expand trade, Korean products have found quick success. An example is the Hyundai Pony, which in two years became the leading imported car in Canada.

'Their tremendous advantage stems from their substantial cost advantage over the Japanese, and that is because the won (Korea's currency) has remained the same against the dollar while the yen has gone up.'
— David C. Cole

Coming out of nowhere to be a force in foreign markets tends to make the Koreans an easy target. Faced with the prospect of rising trade tensions, it is generally felt that South Korea will be more flexible and will move more quickly than Japan in opening its markets and investing overseas.

"They (the Koreans) want to be an absolute success and they are seeking praise for what they've accomplished," said Max Jamiesson, executive vice president of Hyundai Motor America.

"But," he added, "they're running into criticism. They weren't expecting that and they're getting the feeling that they've done something wrong. That is why they've committed to putting up a plant in Canada within 18 months and are buying U.S. components for their cars."

In addition to seeking U.S. investments, Korea has also implemented a program to liberalize its market, including a reduction in tariffs designed to lower the average rate from 22.6 percent in 1983 to 16.9 percent by 1988.

The program also calls for reducing import licensing restrictions to less than 5 percent of total import categories. A total of 235 products are scheduled to be removed from the import embargo list this year.

However, Robert McElheny, a former assistant secretary for trade development in the U.S. Commerce Department, said there is a limit to how far the Koreans will go in opening their markets. Writing in Business Korea last October, he said, "The Korean government confronts a difficult situation. A slip in its GNP has spurred critics in the country to voice complaints on the government's policy of market liberalization.

"Rising protectionism abroad has made it extremely difficult for the Korean government to garner domestic support for liberal reforms that increase the percentage of foreign products that can be imported without prior official approval, and for reforms that ease restrictions on foreign investment in Korea."

Kum Jin-Ho, Korea's minister of trade and industry, told Business Korea last December that of the 31 items liberalized in January 1984 at the urging of the United States, Japan supplied 44 percent of those items, while the United States supplied only 16 percent. Since then, the appreciation of the yen has given American companies a boost in the Korean market, while at the same time spurring Korean exports to Japan.

'Korea's economic policies and development process have been similar to those of Japan only in that both countries have high population density and are poorly endowed with natural resources. But the magnitude of Korea's economy is only one-fifteenth of Japan's in GNP terms.'
— Park Un-Suh

Despite the distance Korea is trying to put between itself and Japan, the futures of the two countries are closely linked, according to Dr.Jack Lewis, of the Graduate School of Business at the University of Southern California.

"There is a deep relationship between Korea and the Japanese, he said. "Korea is benefiting from the Japanese example. How far they go will depend on two factors. One is the degree to which the Japanese will let Korea transfer technology from them. The second is how well they adopt quality control from Japan. What they're doing is using retired executives from Japan."

Park Un-Suh, director general of trade promotion for Korea's Ministry of Trade and Industry, said in Korean Economic Institute's Korea's Economy that his country, although resembling Japan in terms of development, will never reach the same economic scale that Japan enjoys today.

"Korea is sometimes perceived as a second Japan," he wrote. "This misleading perception is probably due to Korea's rapid economic and trade growth which is, however, only one side of the Korean economic reality.

"In fact, Korea's economic policies and development process have been similar to those of Japan only in that both countries have high population density and are poorly endowed with natural resources. But the magnitude of Korea's economy is only one-fifteenth of Japan's in GNP terms."

Park estimated that the Korean economy is almost 30 years behind Japan's in terms of ecomomic development.

Park said the most telling evidence on this point is that Korea has run chronic trade deficits "while Japan has recorded unbroken trade surpluses since 1964, totaling $34 billion last year alone."

The fact remains that this year, Korea will go into the black on trade while the United States posts a record trade imbalance. Korea's presence in the United States with highly visible products, such as Hyundai and Daewoo automobiles and consumer electronics from Lucky-Goldstar and Samsung, means that it will have to deal with trade issues on a continuing basis.

Hyundai's Jamiesson, however, feels that Japan's experience in the United States has clearly marked the pitfalls and that Korea intends to avoid them.

On trade, Jamiesson believes that the saber-rattling by politicians, business and labor in the United States is "sending a message to Japan. I also think the message will reach Korea, and the United States will get a result quicker from Korea than from Japan."

KOREA: A RISING POWER

Parts industry grows with eye on world sales

By Matt DeLorenzo
LOS ANGELES REPORTER

Moving beyond the export of built-up vehicles, South Korea's Ministry of Trade and Industry has targeted the automotive parts sector for development as one of the nation's strategic export markets.

Fueled by the expansion of Korea's automakers, the component industry is looking for sales of $1.5 billion this year, an increase of 50 percent over 1985's $1 billion. Exports are expected to reach about $200 million this year.

MTI's strategy in favoring auto parts works on several levels. On one level, it is designed to help the smaller suppliers expand to meet Korea's own original-equipment requirements as well as to allow them to supply foreign manufacturers.

'The economy has gotten larger and too complicated for the government to get as involved as it was before. . . '

— John T. Bennett

It is also designed to protect those smaller companies and make them more competitive as it opens up the sector to the larger manufacturing companies and joint ventures which have previously been kept out by the government.

Of overriding importance, according to one government official, is a move toward "systematization" or cooperative assembler-supplier relationships similar to those found in Japan.

The government feels that tighter bonds between suppliers and manufacturers will result in components of better quality and a more stable business environment in which the smaller firms will thrive by being locked into long-term relationships with a single manufacturer.

It is that interest in the smaller companies which marks a change in the South Korean government's attitude toward business, according to John T. Bennett, president of the Korean Economic Institute.

"The economy has gotten larger and too complicated for the government to get as involved as it was before" with the larger Chaebol groups, he said. "The government is now more deeply involved with the thousand or so smaller companies it has targeted for growth." Auto parts manufacturers are among those companies.

The Chaebol are the large, family-run conglomerates.

Currently, parts manufacturing is spread among more than 800 suppliers in South Korea, most of which are classified as small-to-medium-sized companies by the government.

Anthony Geber, a former state department official assigned to Korea, estimated in a paper for the Korea Economic Institute that 66 percent of those firms employ 100 persons or less and a corresponding number are capitalized at no more than $250,000 each.

The recession of the early 1980s caused a shakeout in that segment and in order to protect the companies that were left, the major conglomerates were restricted from producing many components.

However, the drive to make autos a major export commodity has forced changes in that policy. MTI not only recognizes the need for additional parts capacity to supply OEM demands, but it also recognizes that world-class quality requires the capital and volume that only a large company can provide.

In addition, the government encourages joint ventures and licensing arrangements with foreign firms in order to upgrade the quality and capacity of component manufacturing.

In the May issue of Business Korea, Noh Hee-Mok, an economist with the Korea Institute for Economics and Technology, said that the auto parts industry is expected to grow at an average annual rate of 20 percent during the next decade. Much of that growth will come from joint ventures and from the large companies which have absorbed smaller suppliers.

Among the joint ventures reported in Business Korea are three units set up by General Motors and Daewoo.

They are: DHMS Industries, which provides steering gears, axles, brakes, radiators and air-conditioner parts; Koram Plastics, a venture between Daewoo's Korea Steel Chemical and GM's Fisher Guide, which will produce polyurethane bumpers; and one between GM's Delco Remy and Daewoo Automotive Components, which makes starters, alternators, distributors and coils.

Those three represent an investment of just over $180 million. Ford Motor Co. is tied with Mando Machinery, which is affiliated with Hyundai, to produce radiators. Kia has an agreement to produce steering gears with TRW.

Beyond supplying the Korean OEMs, those joint ventures provide the stepping-stone for Korea to begin supplying parts to manufacturers throughout the world.

A key example of that scenario is the relationship between Chrysler and Samsung. Samsung, which has made its name in electronics, has so far been denied permission to get into auto manufacturing. However, with the easing of restrictions on parts manufacturing, Samsung will be able to produce components for vehicles assembled by Chrysler Corp.

American firms aren't the only ones seeking to exploit the low-cost advantages of a South Korean joint venture. According to Geber, at the end of 1983, there were 14 joint ventures with foreign companies and 50 technical-assistance

PARTS

FROM PAGE 26

agreements. Most of those were with Japanese firms.

Given the strength of the yen, the Japanese are likely to count more heavily on those relationships for low-cost components to offset higher vehicle prices resulting from unfavorable exchange rates.

The emergence of South Korea as a major player in outsourcing gives pause to labor leaders and suppliers in the United States, especially in view of the fact that Korea's auto parts exports are expected to reach $200 million this year and $500 million billion by 1988.

However, Max Jamiesson, executive vice president and chief operating officer of Hyundai Motor America, sees it differently. He feels that while the Koreans are eyeing the U.S. OEM market, U.S. suppliers should also be looking at Korean OEMs as potential customers, not only for components, but also for the machinery to build cars.

According to Jamiesson, trade has emerged as such a sensitive issue with the Koreans that opportunities exist for U.S. suppliers, despite the fact that those components may cost more than Korean-produced items. However, he stresses that the "window of opportunity" may not stay open forever.

Jamiesson noted that Korea has relied on Japanese-manufactured components in the past, but the steep appreciation in the value of the yen is giving U.S. suppliers a chance to become competitive. He feels that American companies have yet to take advantage of that opportunity.

"All we do is sit around and moan that we can't export our product, and I don't know if we've even tried," Jamiesson said of the U.S. suppliers.

Pointing to the Hyundai Excel, he said that the tires, cloth for the interior, spark plugs and glass are sourced in the United States.

"We're not doing that we because we couldn't locate suppliers in Korea," he said.

Jamiesson admitted that trade pressures may be contributing to the window of opportunity. But, he declared, "If you're a good vendor, who says you can't have a lasting relationship with our company? If you're competitive, and I mean competitive in quality and not necessarily price, they'll use you."

BUSINESS

FROM PAGE 22

of corruption in Park's administration as he pushed Korea forward.

A 1980 study by the Korean Development Institute and the Harvard Business School said corruption was minimal, but Bennett said those knowledgeable about Korea's history may think differently.

"That it existed, no one can deny," Bennett wrote in 1983 on Korea's business government relations. "Accepting the fact of past corruption raises another question: the degree to which government played an aggressive role. If government decisions could be bought, then the businessman might be in control.

"The answer seems to be that business could buy small favors (e.g., by which an otherwise qualified firm was permitted to make diesel engines), but not the important ones, at least after Syngman Rhee was replaced. The difficult decisions on exchange rates, duties and interest rates were made in the national interest. The objectives of growth and equitable income distribution have remained constant."

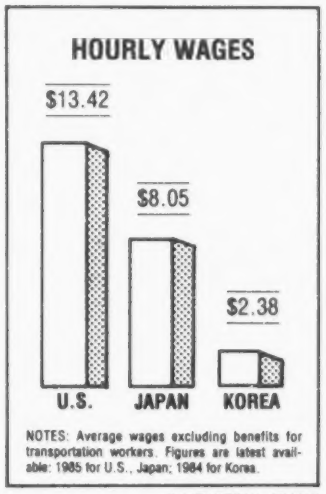
In contrast to Park's policies, which focused primarily on the larger companies involved in heavy industries like steel and shipbuilding, the government under President Chun Doo Hwan has recognized that the Chaebol have matured rapidly. Consequently, it is giving more autonomy to the large groups and is concentrating on smaller businesses.

"Beyond the large Chaebol, the economy is really more fragmented," USC's Lewis said.

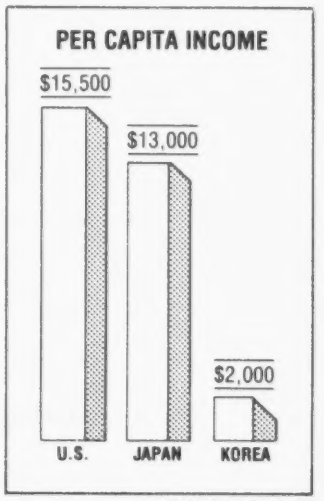
According to Lehmann, Korea's fifth five-year plan, which ends at the end of 1986, "acknowledged that the increased complexity of the economy and the distortions produced by the policies of the 1970s called for a change. The government will now intervene less and rely more on market forces and non-discretionary general incentives."

Another important change — and an important difference between Japan and Korea — is that the Korean government is selling its dominant position in the five commercial banks in the country. However, unlike Japan, where large conglomerates control their own banks, no one, including the Chaebol, will be allowed to own a majority or controlling interest in those financial institutions.

Beyond the similarities between the closeness of government and business in Korea and Japan, the manner in which business is conducted differs greatly between the two countries. In fact, American businessmen may feel more at home in Seoul than in Tokyo.



CHARLOTTE J. WINTER



CHARLOTTE J. WINTER

"Business in Korea at the macroeconomic level is organized in a way that is more familiar to Americans," Lewis said.

Max Jamiesson, executive vice president of Hyundai Motor America, agrees.

"Management is set up more like a pyramid," he said, noting that all the Chaebol have strong leaders willing to make decisions and take risks. Unlike the Japanese, who rely on a broad consensus where management decisions rise from the lower levels, Jamiesson said, "it doesn't take a lot of people to make a decision" in South Korea.

While the more traditional top-down style is similar to U.S. companies, Jamiesson adds, "they've infused some of the consensus style with that."

Another cultural trait that differentiates the Korean style of business from the Japanese style is that "Koreans are very confrontational," according to Bennett. He added that while the Japanese may acknowledge your position by saying yes when they actually disagree with you, the Koreans are more direct.

Jamiesson said that to an outsider, some meetings may seem like a fight — that each position is spelled out in no uncertain terms.

"But it is a means of communication on an issue, a means of building a strategy or a policy," he said. He added that while the discussions may be loud, the participants "will walk out of the room friends, and everyone will be committed to the idea."

A leading factor in this similar organization of business is education. "There is a high percentage of U.S. education among the troops; that is why their management style is closer to the U.S. pyramid," Jamiesson said.

"Koreans are terribly literate," Lewis said, noting that their literacy rate is above 95 percent. "There is a tremendous amount of information, and many are U.S.-educated."

Korea's educated and skilled workforce has resulted in a rapid transition to industrialized status. In 1963, 63 percent of the workforce was employed in agriculture, forestry and fishing, while manufacturing accounted for 8 percent.

By 1982, the non-industrial segment was only half as large at 32 percent, while manufacturing jobs nearly tripled to 21 percent, according to Korea Economic Institute figures. The service sector also has increased greatly, rising to 47 percent from 29 percent.

Compared to other industrialized nations, South Koreans work much longer for much less. The average work week is 50 hours, and in manufacturing the average pay is just over $2 per hour.

While few Koreans are involved in labor unions and businesses are organized into trade associations that set wages, it's expected that pay will increase as the economy expands to meet export requirements. With unemployment at 4.4 percent, which is viewed as virtually full employment, the demand for skilled workers will push up their compensation levels.

According to Bennett, "Because of competition for skilled workers, however, job changing has proved to be frequent compared to both Japan and the United States."

Bennett expects unions or trade associations representing workers to become a greater factor in the future.

KOREA: A RISING POWER

The threat from the North is part of daily life

By Matt DeLorenzo
LOS ANGELES REPORTER

Workers on auto assembly lines in South Korea wear reversible blue jackets that have a camouflage pattern on one side.

Neither a hunting jacket nor a fashion statement, it reflects the state of military preparedness in the country as it moves forward in its quest to become a leading industrial nation.

Ever mindful of North Korea, the South views its security as a top priority even as it grapples with internal politics as part of the transition from an authoritarian regime to a democracy.

"They take the threat (from the North) very seriously," said Daniel Murphy, a retired admiral in the U.S. Navy and former deputy director of the Central Intelligence Agency. "People don't have to be reminded that they were at war with those guys. When you visit Korea, you know you're in a country that is on wartime footing."

That threat contributes to South Korea's almost single-minded devotion to its "economic miracle."

"I believe that a major factor is that South Korea had enjoyed a remarkable consensus ever since the North Korean invasion of 1950 — a fundamental consensus often obscured by soaring political rhetoric," Gaston Sigur Jr., the State Department's assistant secretary for East Asian and Pacific, told Congress in testimony last April.

"From the experience of the Korean War, the people of South Korea became — and remain — virtually unanimous in their concern over the threat posed by the North."

The unifying influence of that threat hasn't stopped South Koreans from engaging in political jockeying between the ruling party and the opposition parties for position when President Chun Doo Hwan steps down in 1988 following the Olympics.

That jockeying has given way to large-scale demonstrations and violent clashes between left-wing student elements and the police.

But are those clashes a threat to the stability of Korea? Many analysts think not and argue that it is a mistake to compare the situation in Korea today to that in the Philippines.

First of all, according to Murphy, "The military is very loyal, professionally trained and highly respected. The economy is booming, although not as much as the government would like. The threat South Korea faces is more of an external threat rather than an insurgency as in Philippines."

He added, "Chun has agreed to step down, and it appears that he is going to give ground on the most important point of open rule rather than using the electoral college in the next election."

Much of the opposition's protest has been centered around the use of a 5,000-member electoral college rather than a direct election after Chun steps down. The opposition feels that the party in power stands a better chance of controlling the college and, as a result, the election overall.

Aside from that point, those on the extreme left are calling for Chun to step down earlier. However, in view of the government's commitment to making sure the 1988 Olympics go off without a hitch, it's not likely that will happen. The Olympics are viewed as a rite of passage into the industrialized world, much as the 1964 Olympics were for Japan.

While the spotlight may be on the Korean political scene — primarily as a result of the attention focused on the Philippines — politics in Korea have never been easy. "Korean politics have always been confrontational," said John T. Bennett, president of the Korean Economic Institute.

"There is more fragmentation in Korean politics than in Japan," said Dr. Jack Lewis, associate director of international programs at the University of Southern California's Graduate School of Business.

However, that fragmentation is also tempered with concern about the North. "In serious conversations, they always raise the threat from the North," Lewis said.

Murphy said history has a lot to do with Korea's political climate and why it seems so disorderly when compared to the Japanese.

"The Japanese never have had to live under the heel of a conqueror like Korea did," he said. "That had a big impact on people. They're more willing to accept a more authoritarian rule." However, finding their way into a democracy for the first time will be a turbulent process.

Korea's peninsula location between China and Japan has contributed to a history of occupation by both countries, yet, according to the State Department's Sigur, the country was able to survive as a "strong and culturally unique nation." The country was a monarchy until the 20th Century when Japan invaded and occupied the country from 1910 to 1945. That period was followed by the devastation of the Korean War.

Following the war, the country was led by President Syngman Rhee, whose policies, according to the Korean Economic Institute, were unsuccessful in promoting economic growth and whose corruption eventually led to his being forced from office in 1960.

He was followed by Park Chung Hee, whose export-based policies began to push the country forward. Violence ended Park's presidency; he was killed by his intelligence chief in 1979.

Chun rose to power and in 1981 announced that he would step down after serving a seven-year term as president.

While internal politics are being played out on the nightly news and may give South Korea an unstable appearance, some of those who have been there view the disturbances in the same light as the protests in the United States during the late 1960s.

"We've had our protests here," said Max Jamiesson, executive vice president of Hyundai Motor America, adding that broadcasts of violent demonstrations in the United States did not mean our government was about to collapse.

Murphy agreed, adding that the left in Korea is moving even farther out of the mainstream in its criticism of opposition leader Kim Young Sam. Murphy, who feels that some of those protests may be instigated by Communist elements, said "maybe they don't want anything," and added that the shift away from recognized opposition leaders may eventually discredit the movement.

Any discussion of the internal stability of South Korea returns to the question of North Korea. North Korea is perceived as such a threat that any political differences are secondary. While North Korea would like to share in some of the Olympic activities, the South remains wary of any dealings with the North.

As recently as 1983, four members of the South Korean cabinet and 13 other government officials were killed in a bomb blast in Rangoon, Burma, that was linked to North Korea. In 1984, four North Koreans were killed in a border clash when a defector ran across the demilitarized zone. So the threat remains very real.

But South Koreans also take comfort in the fact that there are 43,000 U.S. troops stationed in their country. When President Carter suggested in the late 1970s that the United States reduce its presence in the country, it touched off an outcry from South Korea and the plan was quietly dropped.

Japanese makers gain market share in Europe

By Richard Feast

The accompanying table indicates why the export-restraint alarm is ringing at Japan's Ministry of International Trade and Industry: Japan improved its new-car market penetration in all 16 countries of Western Europe in the first five months of 1986.

Total car sales in Western Europe this January-May were up 7.5 percent over a year ago. Sales of Japanese makes rose more than 20 percent. Sales of Europe's domestic makes increased less than 6 percent.

The five-month Japanese share was 11.8 percent, a 1.4 percentage point gain over last year. As a group the Japanese are outselling all but the Volkswagen and Fiat groups in Europe. Toyota and Nissan each have 2.9 percent of the market; that's more than such local nameplates as BMW (2.6 percent), Audi (2.5), Volvo (2.4), Alfa Romeo (1.6) and Seat (1.4).

A combination of events has led to Japan's strong showing, including an increase of the yen against the dollar, and U.S. export restraints which led the Japanese to focus more attention on Europe. Also, Japanese domestic demand for cars is flat, while Europe is enjoying a comparative boom.

Another factor is Japanese products themselves. A few years ago Japan was producing mini American-type cars that by their nature were not targeted at European consumers. Today's Japanese cars are as technically advanced as Europe's and are styled more for European — and changed American — tastes.

These events have allowed Japan to make market gains on a total European front. Though some European manufacturers are protected in their domestic markets — Fiat in Italy; Renault and Peugeot in France; Austin Rover, Ford and General Motors in the U.K. — they are still losing out in non-producing nations.

Japan gained 7.9 percentage points in Greece (now 32.6 percent) and 5.3 points in Denmark (35.1 percent). In Ireland's newly liberalized market, Japan added 8.4 points this year to reach a five-month share of 40.9 percent.

In sheer numbers, however, nothing compares with the structural change taking place in West Germany, Western Europe's biggest national market. New-car registrations climbed there almost 30 percent, or 40,700 units above the same period last year. At 14.4 percent, the Japanese share of the West German market is approaching Adam Opel's and has long passed such domestic makers as Ford, Daimler-Benz and BMW.

What worries West German manufacturers is that there seems to be no end in sight. Consumers are turning to Japanese cars, and the country has no trade restrictions on volume.

The Japanese are taking an average market share of more than 18 percent in Western European countries that do not have some form of sales restriction. (Those that do are Italy, France, Spain, the U.K. and Portugal.)

The Japanese have made even greater inroads in the medium-van market. In the first quarter of 1986 they accounted for about one of every four vehicles sold. Their presence will grow in the next few years, thanks to a step-up in selling built-up imported vehicles.

Nissan is developing an important van-production center at its majority-owned Motor Iberica in Spain.

At the same time, companies as diverse as Daimler-Benz and GM's Bedford Commercial Vehicle Division are strengthening their manufacturing links with Japanese companies — Daimler with Mitsubishi in Spain, and Bedford with Isuzu and Suzuki in the U.K. Also, Ford has started selling Mazda-made vans in certain European markets.

Of the nearly 161,000 medium vans sold in Europe in the first three months of 1986, 24.8 percent were Japanese, 15 percent were Volkswagens and 10.5 percent were Fords. Other market shares: Peugeot, 9.5 percent; Fiat, 9.2 percent; Renault, 8.6 percent; Mercedes-Benz, 8.1 percent. ■

Where Japan is Advancing

Western European new-car sales: January-May 1986

Country	Total sales	Japan share	Japan change	Market change
Austria	112,900	28.6	+ 7.5	+ 0.4
Belgium/Lux	205,100	19.8	+12.5	+ 6.7
Denmark	85,800	35.1	+44.3	+22.4

West Germany	1,236,800	14.4	+29.6	+17.1
Total	5,138,100	11.8	+21.5	+ 7.3

So that's *why* Japanese cars are so popular

By Richard Feast

Highway breakdown statistics compiled by the ADAC motoring organization in West Germany provide additional reasons for the growing popularity of Japanese cars there.

Japanese-built models, now accounting for an unprecedented 14.4 percent of Europe's largest national market, proved to be the most reliable cars on the road.

The domestic Mercedes-Benz did well in larger-car categories. But for a country that prides itself on the quality and reliability of its products, the ADAC findings are a heavy blow to West German self-esteem. Such statistics, together with road-test reports published in newspapers and magazines, have a strong influence on West German consumers.

When he was chairman of Ford of Europe, Robert A. Lutz, an automotive executive with a wealth of knowledge about Europe, estimated that the West German customer is the most demanding in Europe, and that its automotive press is the most influential. (Lutz recently joined Chrysler Motors as executive vice president.)

ADAC's ratings are based on cars that break down on highways and are attended to by the organization's patrol vehicles. The number of cars totaled 95,000 last year. A car make's reliability ranking is based on the number of breakdowns per 1,000 of those models on the road.

The most reliable model was the Mercedes-Benz 190D (diesel) at 17.6 breakdowns per 1,000. Least reliable was Fiat Panda at 72.7. Those statistics indicate that every 14th Panda buyer in West Germany is destined to be stranded on the highway, while only one in 57 M-B 190D owners is likely to suffer that fate.

The most frequent breakdowns, reports ADAC, concerned electrical systems and electrical equipment. Engine troubles were the third most common cause.

Results are divided into car categories. In the small-car class, Toyota Starlet (18.7) was best, followed by Honda Civic (20.7). Worst in the class were Panda and Citroen 2CV (70.7).

In the medium-car class, Toyota Corolla (18.3) and Mazda 323 (21.0) were best. Worst were Ford Orion (49.9) and Volkswagen Scirocco (55.9).

Among larger cars, Mazda's 626 (above) was rated second only to the Mercedes-Benz 190D in reliability.

Among larger cars, the Mercedes 190D was followed by Mazda 626 (24.8). At the bottom were Ford Sierra diesel (41.5) and Sierra gasoline (55.1).

In ADAC's very-large-car segment, the Mercedes-Benz 200-300 series was first with its diesel (21.3) and second with its gasoline engine (35.2). Mercedes-Benz S-class (57.2) and Opel Rekord (62.4) were worst.

In another consumer survey, the U.K.'s Consumer Association compiled a list of safe cars. It reports a number of Volvo and Mercedes-Benz models as safest, and the three-wheeler Reliant Rianto as least safe.

"In the absence of any official action," the organization reports, "Consumers' Association has carried out its own safety assessments and come up with some important advice for safety-conscious drivers. These are believed to be the first-ever safety ratings available to European consumers to enable them to compare potential safety designs of recent cars."

Each car in the test fleet was examined for 45 potential safety hazards. Inevitably, heavier (and more expensive) cars had better ratings; so CA divided them by category.

In the simplified results, the only models to gain six points were the Volvo 360 GLE, Mercedes-Benz 190E, Volvo 240 wagon and Volvo 740 GLE. Five points were given to Talbot Solara, BMW 323i and Renault 25 GTX.

Relatively high points (four) went to two cheaper models, the Lada Riva and Toyota Starlet. ■

Decal business is no sticky wicket for Stylistick

A company started less than 10 years ago in a garage in England has come a long way.

Stylistick Auto Ltd. produces adhesive striping for cars. First the company borrowed that idea from the U.S. Now it plans to sell its products here. They currently are exported to more than 60 countries.

Stylistick chairman Michael Person believes his stars and stripes for cars will be marketed in the U.S. within two years, at latest.

The company, with annual sales now topping $3 million, has 50 employees and a modern factory in Great Haseley, not far from the university town of Oxford.

Pearson, 39, learned the art of car customizing in Chicago and on the West Coast, then set up a business in England in 1977.

He recalls, "It was a low-key, low-budget start, but perfectly timed. Within a year we'd done well enough to move to bigger premises. With new ideas and aggressive selling, we soon grabbed the majority share of the market from our competitors. As our confidence grew, so did our output of ideas."

Soon the company started making kits for specific cars, sharpened its marketing skills and looked for opportunities outside of England.

The latest idea was to sponsor a competition for students in an honors degree course in industrial design transportation at Lanchester Polytechnic in Coventry.

As part of the course, the students came up with 600 graphic ideas, and some of them -- sculptures, stripes, symbols — will decorate cars around the world.

The students' work was shown recently in London, will be displayed at the Birmingham auto show this fall, and will be incorporated into Stylistick's product line.

Says Pearson: "Our strength is new designs. We'll pay for the students' ideas; many of them are highly ingenious and commercially viable." ■

— Anne Hope

Among the winners of Stylistick's design competition was this Astra GTE by Mark Goodall.

Japanese production slips again

TOKYO — Production of Japanese vehicles in May dropped to 999,476 units, down 3.2 percent from a year ago. It was the second consecutive month to show a decline from the previous year.

The Japan Automobile Manufacturers Association's preliminary figures also disclosed that domestic sales climbed 7.3 percent to 417,133, while exports decreased 1.0 percent for the first dip in 15 months.

JAMA said car production in May totaled 646,931, up 1.9 percent, from last year. Truck production was 348,871 units, down 10.0 percent, and bus output was 3,674.

Domestic cars sales totaled 223,098, up 7.1 percent; trucks, 194,448, up 7.7 percent; and buses 1,587, down 2.0 percent.

The STARBEAM shines above and beyond conventional "shoebox" fixtures and is 20% more efficient! With its 1000 Watt SUPER METAL HALIDE Vertical Burn Lamp, and matched reflector systems, the STARBEAM outshines the rest and typically does the job using 25% fewer fixtures! Better yet, the light is more uniform — your lot appears brighter and more appealing to the eye.

The STARBEAM means less installation costs, lower maintenance, drastically lower energy costs and a SUPER looking car lot!

April peak for imports

By Jenny L. King
DETROIT REPORTER

Registrations of new imported cars continued at a record pace in April with two relative newcomers joining the top 10 sellers.

Market penetration for the imports was the second highest in history for April.

Figures reported by R.L. Polk & Co. gave imports a 29.37-percent share of the U.S. new-car market in April, based on a record 266,159 registrations. Polk import numbers include Nissan, Honda and Volkswagen passenger cars assembled in this country.

April import registrations were up 23.45 percent from last year's 215,602. Their share of the market was up 6.32 percentage points, to 29.37 percent from 23.05 percent. Record penetration for the month was 30.33 percent in 1981.

Hyundai and Chevrolet Spectrum knocked Mercedes-Benz and Audi out of the Top 10 listing in April. Spectrum replaced Audi in the Top 10 in year-to-date totals.

January-April import registrations totaled 1,039,528, up 23.35 percent from 842,739 in the year-earlier period. Penetration increased sharply, up 5.18 percentage points, to 29.79 percent from 24.61 percent. Hefty sales of imported cars and a stagnant market market for domestics produced the dramatic shift in market share in favor of imports.

Ten makes accounted for 80.60 percent of the import market in April, down from 87.91 percent a year earlier. New imports joining the ranks have raised the import numbers and cut into the penetration power of the older, established Japanese and West German imports.

Japanese-built cars claimed 65.76 percent of the April import total, down from 67.66 percent a year earlier. Cars from West Germany accounted for 13.82 percent, down from 15.12 percent in 1985. U.S.-built imports edged up to 9.73 percent from 9.57 percent. Totals from the nine countries of origin included the following numbers:

	April, 1986	April, 1985
Japan	175,023	145,867
West Germany	36,778	32,597
United States	25,896	20,642
Sweden	13,637	11,946
Korea	8,994	—
Great Britain	2,128	1,778
Yugoslavia	1,645	—
France	1,283	2,055
Italy	775	717
TOTAL	266,159	215,602

Cars from Japan represented 68.94 percent of the four-month market, down from 70.24 percent in 1985. West German products claimed 13.20 percent, the U.S.-sourced models had 9.60 percent, and 4.74 percent were from Sweden. Year-to-date numbers from exporting countries were:

	4 Mos., 1986	4 Mos., 1985
Japan	716,633	591,975
West Germany	137,222	117,720
United States	99,794	71,421
Sweden	49,307	44,657
Korea	13,915	—
Yugoslavia	7,658	—
Great Britain	7,276	6,273
France	5,368	8,471
Italy	2,355	2,222
TOTAL	1,039,528	842,739

Import truck registrations were up 9.27 percent April to April, to 87,763 from 80,315. Numbers for the major truck importers were as follows:

	April, 1986	April, 1985
Toyota	31,332	30,533
Nissan	20,513	22,399
Mazda	12,714	8,078
Isuzu	8,015	6,766
Others	15,189	12,539
TOTAL	87,763	80,315

Import registrations for trucks at the end of the first four months of 1986 totaled 320,318, up 5.07 percent from 304,853 last year.

	4 Mos., 1986	4 Mos., 1985
Toyota	124,047	113,440
Nissan	69,372	89,508
Mazda	42,057	34,089

Mazda net income drops 54 pct. for half

TOKYO — Mazda Motor Corp. reported that its ordinary income for the first six month of fiscal 1986 (November-April) declined 51.9 percent to $95.2 million from $198.0 million for the like period the year before.

Ordinary income is defined as income before income taxes and extraordinary items.

Net after-tax income totaled $40.8 million, down 54.7 percent from $90.2 million the year before. Revenues amounted to $4,983.4 million, up 11.0 percent over the previous year's $4,489.1 million, Mazda said.

Mazda attributed the profit decline to the rise in the yen's value against the U.S. dollar and other currencies, which eroded export profits.

Mazda said dollar equivalents were computed at 168.40 yen to the U.S. dollar, the exchange rate quoted on the Tokyo Foreign Exchange Market on April 30, 1986, the end of the first half of fiscal 1986.

Despite such problems as sluggish domestic demand and increased competition, total factory sales during the six-month period showed an 8.3 percent increase over the year before to 711,967 units, including 453,363 cars, up 6.1 percent, and 258,604 commercial vehicles, up 12.5 percent.

Exports increased 13.1 percent to 532,654 units, while domestic shipments to domestic dealers declined 3.7 percent to 179,313 units, Mazda said.

For the whole year, Mazda said it expects to suffer a foreign-exchange loss of $599.88 million if the yen's value averages 170 to the dollar.

Missouri, Oklahoma back CAFE rollback

By Helen Kahn
WASHINGTON BUREAU CHIEF

WASHINGTON — Missouri and Oklahoma have filed friend-of-the-court briefs supporting NHTSA in the case brought against the safety agency over its rollback of the 1986 passenger car Corporate Average Fuel Economy.

The CAFE standard was reduced from 27.5 mpg to 26 mpg for the 1986 model year.

Plaintiffs in the suit are Public Citizen, the Center for Auto Safety and other consumer groups.

The states said their interests in retaining the availability of big cars and smaller cars with big engines are not thus far represented.

That is despite the fact that the states of California and New York and the cities of New York, Chicago, Boston and Los Angeles have joined the plaintiffs and that the Automobile Importers of America, General Motors and Ford Motor Co. have intervened on NHTSA's side.

Chrysler Corp. recently filed a friend-of-the-court brief on the side of the plaintiffs.

One of NHTSA's reasons for the rollback was that GM and Ford said that the only way they could meet the 1986 fuel-economy standard would be to curtail production of certain big cars and the use of engines bigger than four cylinders.

Missouri, noting that it produces more cars than any state except Michigan, pointed to the Ford plant in St. Louis, which employs 2,500 workers and assembles the full-sized Ford Crown Victoria and Mercury Grand Marquis models.

In addition, a plant in Wentzville, Mo., employs 6,700 workers and makes Oldsmobile 98s and Buick Electras. Missouri added that it has another 5,200 citizens working in the nearby Fairfax, Kan., plant making full-sized Chevrolet Caprice, Pontiac Parisienne, Oldsmobile Delta 88 and Buick LeSabre models.

People in the middle of the nation, "particularly Missourians, need and want big American cars," Missouri said. It said that maintaining the 27.5- mpg standard "is likely to frustrate Missourians, whether through higher prices to purchasers or from product unavailability."

What Missouri failed to mention — obviously partly because Chrysler is on the other side — is that Chrysler has two plants in St. Louis. One makes its big eight-cylinder cars, Chrysler Fifth Avenue, Plymouth Gran Fury and Dodge Diplomat, which are expected to move to Kenosha, Wis., to be made by American Motors.

Oklahoma said it is one of the few states producing oil and thus knows the unpredictability of oil prices. Because of the recent drop in oil prices, Oklahoma faces a projected budget shortfall in excess of $450 million. Its unemployment rate is about 8 percent, about 0.5 percentage point higher than the national average.

One of its few "bright spots" is the GM Oklahoma City plant, which employs nearly 7,000 people making mid-sized Chevrolet Celebrity and Buick Century models. Nearly half of those cars have six-cylinder engines; to the extent that they use four-cylinder engines, GM will produce fewer cars in Oklahoma, the state said. While the layoffs may not be as extensive as in Missouri, "any cutbacks will cause egregious harm."

Oklahoma said that in addition to the direct economic impact, any shutdown will spill over onto industries related to automaking and can only lead to a higher national unemployment rate.

PRODUCTION

June output moves up

By Kathy Boyer
DETROIT REPORTER

Domestic auto production in June totaled 723,288, the highest for that month since 1979 when 826,678 cars were assembled.

The month's output was 4.05 percent more than May's 695,116 and 4.20 percent more than the year-ago month's 694,122.

Because of the holiday week and because all Ford Motor Co. plants except Dearborn were closed for vacation, last week's scheduled production of 103,967 cars dipped 40.83 percent from the previous week's 175,718.

Last week's output was 21.83 percent more than last year's holiday-week total of 85,337.

So far this year, 4,361,712 cars have been built, 3.01 percent below the 4,497,106 completed last year at this point.

Companies shared last week's production as follows: General Motors, 70.76 percent; Chrysler Motors, 20.58 percent; New United Motor Manufacturing Inc., 3.69 percent; Ford, 3.43 percent; and Volkswagen of America, 1.54 percent.

Nissan Motor Manufacturing Co.'s car line in Smyrna, Tenn., remains down for model changeover. American Motors' Kenosha, Wis., plant was idle for inventory adjustment last week.

Honda of America Manufacturing Inc.'s plant in Marysville, Ohio, resumes production today (July 7). Production had been halted for one week for plant maintenance.

Due to Independence Day, no Saturday overtime was scheduled at any assembly plant.

Canadian cars top 600,000

Canadian auto makers built their 600,000th car on Tuesday, July 1 — 24 days ahead of 1985.

So far this year, 611,453 cars have been built, 8.73 percent more than the 562,355 assembled last year at this time.

Production of 101,170 cars in June was 1.38 percent more than May's 99,792 and about even with (up 0.11 percent) the year-ago month's 101,054.

Output of both cars and trucks dipped last week due to plant closings on July 1 in observance of Canada Day.

Scheduled production of 19,805 cars last week was 19.36 below the previous week's 24,560 but 32.40 percent above the year-ago week's 14,958 — also a holiday week.

Truck output of 72,279 units in June was 6.49 percent below May's 77,301 and 5.66 percent below the year-ago month's 76,619.

Estimated production of 14,179 trucks last week was 14.39 percent below the previous week's 16,564 but 22.35 percent more than the year-ago week's 11,588.

Year-to-date, 489,578 trucks have been built, 3.31 percent more than the 473,878 assembled last year at this point.

June truck output steady

United States truck production of 315,435 units during June was 1.32 percent below May's 319,659, but it was 4.01 percent above the year-ago month's 303,360.

Due to the holiday, last week's output of 36,006 trucks fell 51.86 percent from the previous week's 74,803, but it was 39.27 percent more than the year-ago holiday week's 25,852.

Year-to-date, 1,888,212 units have been assembled, 3.98 percent more than the 1,815,929 trucks built at this time in 1985.

As previously reported, all Ford truck plants except Wayne, Mich., are closed until July 14 for vacation.

Because of the holiday, no Saturday (July 5) overtime was slated at any truck plant.

Australian signs deal on engine

By Roger Rowand
ENGINEERING EDITOR

An Australian outfit that has been knocking on Detroit doors for years with an engine under its arm finally is making headway.

It has signed a long-term licensing agreement with Outboard Marine Corp. for manufacturing its unusual power plant.

Orbital Engine Co., Perth, is the developer of a lightweight engine for which it makes claims of dramatically improved fuel economy, reduced emissions and smooth running.

The orbital system is based on pneumatric atomization of direct-injected fuel.

Ralph Sarich, 46-year-old self-taught engineer and the engine's inventor, said the OMC contract could launch the engine's push into automotive applications.

OMC, of Waukegan, Ill., is one of the world's largest makers of outboard boat motors. Its nameplates include Evinrude and Johnson.

OEC is owned jointly by Sarich Technologies Trust, whose Ralph Sarich invented the engine and the OEC fuel systems, and BHP (formerly Broken Hill Proprietary Ltd.), a widely diversified mining and manufacturing company which is Australia's major steel producer.

Orbital Engine also recently launched a jointly owned development venture with Walbro Corp., Cass City, Mich., primarily a maker of small-engine carburetors. That agreement involves development of OEC fuel delivery systems.

In recent years, Walbro has become an automotive supplier with such things as throttle bodies for Buick Motor Division and electric fuel pumps used with injection systems to Ford Motor Co. and Chrysler Corp.

If production were to start, there would be royalty payments to the Australian concern, Outboard Marine attorney Warren Comstock said. He declined to describe them. The Australian press, however, pegged royalties at $25 to $50 per engine, depending on size.

Strike looms, GM kills order

General Motors has canceled steel shipments from U.S. Steel for August and has appointed other steel companies to fill those orders.

GM's move was taken because U.S. Steel faces an Aug. 1 strike deadline with the steelworkers union.

"We must protect ourselves so we have steel to begin the production of new models," a GM spokesman said. GM uses eight or nine steel suppliers.

GM said the diversion of orders to other domestic steel mills was for August only.

Meanwhile, Ford Motor Co. has asked U.S. Steel to supply the automaker with 30 days more than its usual inventory of steel.

Ford said it would continue to assess the "the probability of a strike at U.S. Steel, including its duration and whether or not that would affect September availability of steel."

Chrysler Corp. said it does not comment on dealings with its suppliers. However, sources say Chrysler has stockpiled at least 30 days' worth in case of a strike.

Big Three economists hot on '86

By Michelle Krebs
FINANCIAL EDITOR

Corporate economists for the Big Three automakers have upgraded their forecasts for 1986 vehicle sales as a result of a strong first half.

All three economists predicted that new-vehicle sales in 1986 will exceed 15 million. It would be only the third time sales have reached that level; the other years were 1977 and 1985.

General Motors and Ford Motor Co. predict that sales will total 15.5 million units this year — 10.9 million cars and 4.6 million trucks. Chrysler puts total vehicle sales at 15.3 million — 10.7 million cars and 4.6 million trucks.

In January, GM was the only company to predict vehicle sales would reach 15 million units. Car sales for the first half of 1986 ran at a 10.9-million annual rate and trucks at a 4.6-million rate.

"The year is turning out as we had expected," said GM economist David C. Munro. "Some of the surrounding risks, including the financial markets, have turned out better than anticipated."

Ford economist John V. Deaver said that even though the general

GM plant is axed in zoning tiff

By Abe Plotkin
STAFF CORRESPONDENT

FRAMINGHAM, Mass. — General Motors has scratched its proposal to build a $60 million plant here to make plastic body panels for its new minivan.

The company's decision followed an unexpected refusal by the town to rezone 14 acres of state-owned land for future employe parking and the town's insistence on a time-consuming study of environmental impact on traffic, air quality, water supply, sewerage and drainage. GM had planned to build the plant adjacent to its existing A-body assembly plant.

GM had insisted it needed a firm decision by this summer so that construction could start. It would have employed 1,000 to produce plastic panels for 200,000 minivans a year, starting with the 1989 model.

A Chevrolet-Pontiac-GM of Canada spokesperson said that building a contiguous plastic parts plant in Framingham "is a dead issue."

But the door has not been closed on the possibility that such a plant might be located nearby in Massachusetts or New Hampshire.

An aide to Gov. Michael Dukakiss, who has strongly supported the Framingham proposal, said he has proposed alternative sites in southeastern and north-central Massachusetts — the latter a long-established center for small plastic component production.

GM is "reviewing the whole plan," the spokesperson said. "We're looking at all our options. A lot of spadework has been done and new decisions will have to be arrived at very quickly — in the next few weeks."

The existing Framingham plant assembles 736 Chevrolet Celebrity and Pontiac 6000 cars a day. An adjacent $240 million automated paint facility is under construction.

John Judge, Dukakiss' aide for Economic Development Affairs, said the refusal of Framingham — a booming town of 70,000 located 20 miles west of Boston — to welcome GM's plastic plant proposal "could not have happened anywhere else in the United States." He referred to extraordinary efforts by local officials and governors elsewhere to lure new automotive plants.

Judge conceded that Framingham residents still resented the action last year by Dukakiss in helping GM obtain access to 35 acres of land for the new paint plant. There was local reluctance to move as fast as the automaker wanted, and the governor made a political end-run around Framingham by having the state seize the land by eminent domain.

GM settlement on transmissions clears hurdle

By Julie Whitmore
STAFF CORRESPONDENT

CHICAGO — Judge John A. Nordberg gave preliminary approval July 8 to a settlement that would resolve all remaining class-action suits against General Motors involving the THM-200 transmission.

The agreement, signed by the parties June 19, is nearly identical to the draft detailed by Automotive News June 9.

Attorneys said as many as 4 million 1976-1980 GM vehicles may be included in the class. GM will deposit $17 million in escrow to cover repair costs incurred during the first 50,000 miles of use, and an additional $2.5 million if more than the expected number of claimants appear.

The settlement includes several class actions pending since 1979, including Skelton, Newton, Fritz, et al v. General Motors, all filed in the Northern District of Illinois; Attard v. General Motors, New York State Supreme Court; Morgan v. GM, Southern District of

Vintage auto show fills British Columbia Stadium with everything from 1903 Electric phaeton to late-'50s Caddys

Expo: A look forward, a look back

By Matt DeLorenzo
LOS ANGELES REPORTER

VANCOUVER, British Columbia — Seemingly lost among the high-tech gadgetry of space travel, aviation and super trains, the automobile last week became the focus of Expo 86, not with a look forward, but rather a look back.

Billed as the largest vintage car show under one roof, 500 vehicles were displayed at British Columbia Stadium adjacent to the Expo site, kicking off the fifth specialized period during the World's Fair here.

More than seven million people have visited the event since its opening May 2.

Expo 86's look at the auto's future started when the week-long innovative vehicle design competition got under way. Teams from 10 universities around the world are vying for a share of $250,000 in scholarships for the best automotive design. There are four entries from Canada, three from the United States, two from Japan and one from Switzerland.

Aside from those events, autos figure prominently in many of the display pavilions set up by various countries. Perhaps the best for contrasts is Italy's, which has a Ferrari Mondial convertible parked across from an Etruscan-Roman chariot from the seventh century.

GM faces a dealer revolution over cost of incentives

By Edward Lapham
MARKETING EDITOR

Dealer unrest over the General Motors incentive program is growing. Participation costs are the root of the dissatisfaction.

In fact, the dissension is so great that GM dealer groups in the Chicago market last week came very close to collectively rejecting participation in GM's current low-interest-rate program. They nearly told the factory to keep its 1987 co-op ad dollars to emphasize the point.

However, the revolt fizzled as the week wore on and tempers cooled.

"There is no question that dealers are unhappy," said a spokesman for Buick's Chicago Dealer Marketing Group. "But we ultimately left it so that dealers will do as they wish in each individual case."

He said he thought most of the 43 dealers in his group ultimately would decide to sign up for the program.

Earlier in the week, however, he was convinced that the group would "do what it had to do" and reject the program en masse.

Last Tuesday (July 8), a committee of the Buick group voted to recommend the unprecendented actions of refusing, as a group, to participate in the program and to refuse to accept 1987 cooperative advertising funds from the factory. Those funds are spent along with dealer money to purchase regional advertising, largely on television.

Word spread quickly, reaching the local office of Buick's ad agency, McCann-Erickson, which also administers expenditure of the factory ad contributions for regional marketing.

It seemed likely that other dealer groups, notably Oldsmobile, would vote to do the same the next day.

If all of the groups had decided to follow the Buick group's lead, balking at the APR program, it would have meant that the entire Chicago market could have been without a GM sales incentive.

The Buick dealer group spokesman said that although he was certain the factory knew of the impending revolt, no one from Buick, General Motors Acceptance Corp. or McCann-Erickson exerted any pressure on the group.

Two days later, after the committee polled the membership, it was agreed to let each individual make his or her own decision on program participation.

The focus of GM dealer anger is the dealer participation cost, which requires a dealer to forfeit up to half of the 5 percent end-of-model-year carryover allowance and a portion of the finance income in order to use the special GMAC low annual percentage rate financing to attract car buyers.

The current GM program offers 30-month 5.9 APR financing on eight car lines and 6.9 APR financing on most others.

Dealers have been complaining about the participation costs since they were introduced, along with the APR incentives, last year.

In fact, the "unfairness" of the participation costs was a hot topic of conversation in GM make meetings last February at the National Automobile Dealers Association's convention in New Orleans. The protests have increased since.

Even NADA, which normally eschews individual manufacturer or line politics, issued a statement to "object strongly to the manner in which GM has chosen to fund its latest incentive program."

The statement was issued on behalf of the GM line committee, GM members of the executive committee and the chairman of the industry relations committee.

However, GM officials late last week said they expected most dealers to sign up for the July 1-Sept. 24 program by the deadline last Friday (July 11).

"We think that virtually all dealers will sign up," said Robert H. Ogden, director of sales policies and dealer relations.

Ogden said he was aware that some dealers were not pleased with every aspect of the program.

"We hope those dealers will get in the program because we believe it's a good way to move cars," he said. "The public still likes the lower interest rates."

Ogden said he did not know specifically what percentage of GM dealers had participated in earlier programs, but he said most had. However, Ogden acknowledged he is watching this one more closely.

Ford and Chrysler extend incentives; Ford prices up

By Jenny L. King
DETROIT REPORTER

Ford Motor Co. and Chrysler Motors renewed and revised their consumer incentive programs last week, and Ford stapled a price increase to its package.

Chrysler continued to hold the line on prices while adding an extensive round of regional cash-back offers on most models to its record-low-interest-rate program. The Chrysler plan even extends to some early 1987 models.

Ford's low rates on Ford Motor Credit loans, or cash allowances up to $600 per unit, went into effect July 6. The accompanying price increase averaged 2.9 percent on base cars and 3.4 percent on optional equipment.

The company would not put a dollar figure on the boost, but Automotive News estimates that it amounts to $385 on the average-equipped car.

It was Ford's third boost on cars since the end of the 1985 model year. Those increases are estimated to have averaged $760 per car. That compares with $950 for General Motors and $320 for Chrysler Motors on 1986 models.

Ford Motor Co. also announced a new round of consumer incentives effective July 6. Here's how the give-and-take works:

Price increases range from $179 on the Ford Escort L three-door hatchback to $939 on the Lincoln Continental Givenchy four-door sedan. New buyer incentives, which will run through September, feature 6.9 annual percentage rate on contracts up to 36 months on 10 nameplates ranging from Escort to Merkur XR4Ti, plus certain trucks.

The next rate, 7.9 percent for loans up to 48 months, extends to specific Ranger, Bronco II and F-series trucks. There are 8.9 percent loans up to 48 months on 10 nameplates, followed by 9.9 APR contracts up to five years on the 6.9 percent cars and trucks.

Alternative cash allowances on cars and trucks begin with $300 on certain Mustang, Capri, Escort, Escort EXP, Lynx, Tempo and Topaz models and on Ranger and Bronco II trucks with automatic transmissions. Cash returns of $600 can be had on manual-transmission F-series, Bronco II and Ranger trucks and Tempo and Topaz, plus all Thunderbird and Cougar models.

Chrysler, taking advantage of its later (July 10) program expiration, studied the GM and Ford plans and responded with the lowest interest rate available from any of the Big Three. And Chrysler sweetened it with additional regional rebates and no price increase.

Running July 11 through Sept. 6, the company will offer financing beginning at a 5.5 annual percentage rate on selected 1985-87 cars and trucks or cash certificates which could total $1,500, Chrysler said. Excluded are miniwagons, minivans, Omni/Horizon Americas and Conquest and Colt Vista imports.

Chrysler Credit 5.5 APR loans, up to 36 months, apply to models ranging from Chrysler LeBaron GTS and Dodge Lancer to Dodge/Plymouth Colts, plus certain Dodge vans, wagons, pickups and Ramchargers.

Loans up to 48 months at 7.5 APR are offered on an extensive list of cars and Dodge trucks, and 60-month loans at 9.5 APR are available.

Cash-back plans include $400 on Plymouth Turismo and Dodge Charger, $500 on a wider range of car models and up to $750 on trucks and Ramcharger. The rebate is $1,500 on top-line LeBaron GTS and Lancer models.

Fleet and lease vehicles are not eligible. The program runs through Sept. 6.

Regional $400 cash "additives" are available in some states on Fifth Avenue, New Yorker, Ram Van wagons, RamCharger and Ram pickup models. To be eligible, the vehicles must be registered in their qualifying states.

AUTOMOTIVE NEWS/JOE WILLSEN

Rouge River cleanup
Ford workers use log to pry tree from mud beside the Rouge River during Rouge Rescue '86, sponsored in part by Ford Motor Co. Ford workers at the Detroit's Rennaissance Center were given the day off to help clean up the river, then picnic. Ford Division donated $50,000 to the fund. Ford's first such effort was last year's cleanup of Detroit's Belle Isle park; similar programs are being sponsored by Ford in Chicago and Kansas City, Mo.

Chrysler service contract covers other lines

By Arthur Flax
SERVICE EDITOR

Chrysler Motors has expanded its service contract program to include new and used vehicles built by other manufacturers and those purchased from private parties.

Chrysler's "New Direction" service contract program can be purchased for new and used vehicles produced by 22 manufacturers.

Chrysler is offering three-year/36,000-mile service-contract coverage for used vehicles with as many as 50,000 miles, up from a two-year/24,000-mile maximum. The plan is available to persons who have purchased automobiles from sources other than dealers.

The new contract provides the same coverage as Chrysler's existing two-year/24,000-mile service plan and includes seals, gaskets and turbocharger components.

Also new is a "high-tech" equipment package that can be custom-tailored to cover components that are not included in Chrysler's service plans. Those components include such items as electronic instrument clusters, power windows and trip computers.

GM and Iowa in court on incentives

DES MOINES, Iowa — A legal battle in federal district court here between General Motors and the Iowa Automobile Dealers Association may turn out to be more of a tempest in a teapot than a protracted war.

The dispute involves GM's initial refusal to offer its latest round of retail incentives in the state.

The legal maneuvering began when GM, after reviewing Iowa's law barring incentives to rental companies and large independent (non-dealer) leasing companies, decided it might be in violation of the law, which went into effect July 1.

The IADA went into state court and obtained an injunction to force GM to offer the incentives, which include low financing rates.

GM went to federal court to have that injunction dismissed. But almost concurrently, according to a GM spokesman, the company received a letter from Iowa Attorney General Thomas Miller advising GM that it would not be in violation.

Armed with that opinion, GM decided to go ahead and offer the incentives in Iowa.

Both parties are still in court. For GM, the spokesman said, it is a procedural matter. The company wants the injunction officially removed from the record.

But for IADA, there may be more at stake. Martha Martell, a spokeswoman for the dealer association, said that in a counter move, IADA is asking for a permanent federal injunction as well as a declaratory judgment from the court interpreting the law.

Martell said even if IADA loses the injunction battle, it would gain if the court issues a judgment interpreting the law.

The National Automobile Dealers Association is supporting IADA. In a statement issued before GM changed its decision, NADA Executive Vice President Frank E. McCarthy said the national association was disturbed and had asked GM to implement the program in Iowa.

A spokesman for Ford Motor Co. said last week that while the company was initially concerned, it, too, has received a letter from the attorney general and will offer its programs in Iowa.

TRUCK INDUSTRY

Light-duty segment leads the way as trucks wipe out sales records

Paced by the light-duty segment, retail sales of trucks set records for June and the first half.

Through June, 2,393,762 trucks of all types were sold, up 0.6 percent from 2,378,680 in 1985, the previous first-half peak.

In June, retail outlets sold 424,930 trucks of all types, 3.3 percent above the former record of 411,377 in 1978. In June last year, 407,602 trucks were sold.

Light-truck sales set a six-month and June record.

In the first six months of this year, 2,262,500 light-duty Class 1-3 trucks were sold, up 1.9 percent from the former record of 2,235,805 retailed through June a year earlier.

In June, 400,599 light trucks were retailed, 4.6 percent above the previous record of 383,032 set in June 1985.

Medium-duty Class 4-6 sales of 23,275 units through June were down 4.1 percent from 24,273 a year earlier.

In Class 5, first-half sales totaled 2,281, up 1.9 percent from 2,238 a year earlier.

In Class 6, the first-half total of 20,994 dipped 4.7 percent from 22,035 last year.

There were no Class 4 sales recorded.

Heavy-duty Class 7-8 sales of 107,987 units represented a 9.0-percent loss from the 118,602 units sold in the first half of 1985.

In Class 7, 51,108 sales in the first half of 1986 compared with 48,295 sales a year earlier, an increase of 6.0 percent.

In Class 8, 56,879 sales through June represented a 19.2-percent loss from the year-earlier figure of 70,397.

In June, sales of medium-duty trucks totaled 4,575, which was 7.0 percent above the 4,277 sold last year.

Class 5 sales of 730 were off 13.1 percent from the year-earlier mark of 840.

Class 6 sales of 3,845 units were up 11.9 percent.

There were no Class 4 sales recorded.

Sales of heavy-duty trucks in June totaled 19,756, down 2.7 percent from 20,293 sales in June 1985.

Class 7 sales of 9,207 units were up 18.0 percent over the 7,804 units retailed the previous June.

In Class 8, 10,549 trucks were retailed, down 15.5 percent from the 12,489 trucks retailed in the previous June.

In the light-duty segment Ford, Jeep and the imports were running ahead of last year's pace at the half-year mark.

Ford sales of 650,726 were up 3.4 percent and Jeep sales of 92,997 were up 19.6 percent.

Import sales of 442,549 were up 12.4 percent.

Showing declines were Chrysler, Chevrolet and GMC.

Chrysler sales of 286,166 were down 13.6 percent.

Chevrolet sales of 634,639 units were 2.1 percent below last year's total.

GMC sales of 155,423 were down 0.4 percent.

The sales counts are based on manufacturer's reports for light-duty sales and MVMA preliminary reports of medium and heavy-duty deliveries.

*Nissan includes domestically-built units in Tennessee.

Bendix adds unit; Allied sells one

SAN FRANCISCO — Bendix Heavy Vehicle Systems acquired Fleet Tech, expanded its parts inventory and introduced several products at the International Trucking Show.

Separately, Allied Automotive sold its Prestolite Motor and Ignition Division operations to Prestolite Electric Inc.

PEI was formed by a group of investors headed by John M. Goode, its chairman and chief executive officer.

The newly acquired company, headquartered in Toledo, will be known as Prestolite Electric, Inc., and will continue to operate the facilities which formerly constituted PMID.

Meanwhile, Allied Automotive's Bendix acquired Fleet Tech Inc., one of the early developers of on-board driver management computer systems.

The acquisition will strengthen Bendix's position in truck electronics, according to Kurt J. Faxon, vice president, sales and marketing.

Introduced in 1981, Fleet Tech's system has been adopted as the standard driver management system by one of the large oil companies and by several large private supermarket chains.

With the truck market becoming global, Bendix has begun stocking a full range of parts manufactured by sister companies in Allied Automotive Worldwide.

Many of those Allied parts have already begun showing up on trucks imported to the U.S. from Europe, South America and the Far East. Until now, aftermarket availability has been limited.

With $2.6 billion in sales, 90 plants and 22 engineering centers in 11 countries, Bendix and Allied can provide technical support to developing world trucks and worldwide-sourced parts, according to Faxon.

To that end, Bendix has begun a program to identify all Allied Automotive products entering the U.S. on imported vehicles.

From there, as quickly as they become available, the parts are being placed in the extensive aftermarket distribution network operated by Bendix HVS throughout North America, Faxon said.

Bendix is marketing some new products.

It developed a new high-capacity air compressor for off-highway and special application vehicles, such as bulk haulers that unload by means of air-driven blowers.

Called the Tu-Flo 1400, the unit is rated at 31 CFM and uses four in-line cylinders.

Bendix also coupled its Tu-Flo 501 air compressor to its relatively new on/off compressor clutch to create a combination unit called Powermiser 501. It has up to twice the life potential of an unclutched compressor, according to Hopkins.

The Powermiser 501, first available on Detroit Diesel applications, is now available for Mack six-cylinder engines.

Bendix is marketing a new TorqueMaster fan clutch. The bearing rating in the new unit has been increased up to 23 times over the previous design, according to Hopkins.

Bendix also has begun selling a high-purge-capacity air dryer to meet the high-air-consumption duty-cycle demands of city buses.

GMC's promotion centers on this 1987 Silver Aero General

GMC offering incentives on '87 Generals; October driveaway slated for Silverdome

PONTIAC — GMC Truck is offering incentives on its 1987 General heavy-duty model. The program will culminate in an October driveaway from the Pontiac Silverdome.

The incentives are part of a wholesale program that is designed to drum up dealer orders for General models and promote various kinds of equipment.

The Silver Aero General Driveaway Program includes incentives from GMC Truck and various original-equipment suppliers. They apply to dealer orders placed for Silver Aero General models from June 2 to Aug. 31.

The only basic ordering requirements are for the limited edition Silver Aero unit which includes the Rudkin-Wiley aerodynamic fairing package, a special two-tone gray and silver paint scheme with red striping and a chrome front bumper.

It is available with or without a Bentz 42-inch or 60-inch sleeper box.

GMC and supplier incentives range from monetary discounts to extended warranties and added special-value items.

The incentives are available to dealers on the GM air-ride suspension, Detroit Diesel Allison engines, Cummins engines, Caterpillar engines, Bentz sleepers, Schwitzer engine fan drive, Budd disc wheels, Goodyear tires, Michelin tires and any Fuller transmission.

They also take in the Eaton rear-axle combination, Reyco rear-axle suspensions, Neway rear-axle air suspensions, Sheppard power steering, Rudkin-Wiley fairings and a Fontaine Modification Center tractor package.

GMC's driveway is scheduled for Oct. 16 at the Silverdome. It is open to all participating GMC Truck dealerships and company-owned GMC Truck Centers ordering a Silver Aero General.

Vehicles eligible for the driveaway are limited to orders received in June.

SALES

Canadian car, truck sales decline for June

By Jenny L. King
DETROIT REPORTER

June sales of new cars in Canada by the major North American-based manufacturers fell 13.20 percent from their year-ago level.

Trucks failed to surpass the comparable 1985 total for the first time this year.

Car sales of 74,522 were down more than 11,000 units from 85,859 in June 1985.

Volvo, the only maker to report a year-to-year sales increase, was up 2.99 percent, to 757 from 735.

American Motors suffered the greatest loss, down 53.94 percent, to 1,028 from 2,232.

General Motors was off 4.89 percent, to 38,138 from 40,100. Ford dropped 18.10 percent, to 18,288 from 22,329. Chrysler plunged 20.29 percent, to 16,311 from 20,463.

GM earned 51.18 percent of the market, up from 46.70 percent in June 1985. Ford dipped to 24.54 percent from 26.01 percent. Chrysler retreated to 21.89 percent from 23.83 percent. American Motors' share dwindled to 1.38 percent from 2.60 percent, while Volvo grew to 1.01 percent from 0.86 percent.

First-half car sales of 422,713 missed the 1985 mark of 443,725 by 4.74 percent.

Truck sales numbered 32,973 in June, down 8.66 percent from 36,100 a year earlier.

First-half sales, including five months of increases, were up 9.16 percent, to 185,846 from 170,253.

GM truck sales in June fell 6.56 percent, to 13,997 from 14,980.

Ford reported sales of 11,407, down 5.04 percent from 12,013. Chrysler dropped 21.28 percent, to 6,445 from 8,187.

AMC Jeep continued above 1985 numbers with a 22.17-percent increase, to 1,124 from 920.

GM's share of the June truck market moved up to 42.45 percent from 41.49 percent. Ford gained a percentage point, claiming 34.59 percent compared with 33.28 percent a year earlier. Chrysler dropped to 19.55 percent from 22.68 percent, and AMC expanded to 3.41 percent from 2.55 percent.

Where auto market was, June, 1986

South Carolina auction marks 48th anniversary

LEESVILLE, S.C. — Rawls Auto Auction here celebrated its 48th anniversary with the largest sale in its history.

The auction, which advertises itself as the oldest in the nation, is owned and operated by James E. Rawls. His father, the late J.M. Rawls, and S.L. Montgomery, now retired, were partners when the auction opened in 1938.

Steed, Blanchard at AN Congress

The 11th annual Automotive News World Congress will be in session July 27-30 at the Hyatt Regency Dearborn.

Top-level executives from the auto industry, related fields and government will give presentations at the four-day seminar.

Among the 36 speakers will be: NHTSA Administrator Diane Steed; Michigan Gov. James J. Blanchard; Carr Lane Quackenbush, technical director — Norton/TRW Ceramics; and Osamu Nobuto, president, Mazda Motor Manufacturing (U.S.A.) Corp.

Steed will speak on Monday, July 28, on "What's Ahead in Government Safety Regulations."

She became head of NHTSA in 1983. Prior to that, she was deputy administrator of the safety agency.

During her career with the federal government, she has served in senior management positions with the Office of Management and Budget and has been chief of the Regulatory Policy Division of OMB.

Blanchard will speak on Tuesday, July 29, on "Marketing a Mature State to High Tech Manufacturers."

He became governor of Michigan on Jan. 1, 1983, after a public service career that began in 1968 when he was a legal advisor in the Michigan secretary of state's office.

From 1969 to 1974, he was an assistant attorney general for Michigan. He was elected to Congress in 1974 and served for four terms, representing several Detroit suburbs.

He was chairman of the House Subcommittee on Economic Stabilization and authored the Chrysler Loan Guarantee Act. He also served on the House Banking, Finance and Urban Affairs Committee and the House Science and Technology Committee. He was also the Democratic Whip for the Michigan congressional delegation.

Blanchard also served as a member of the President's Commission on the Holocaust.

Quackenbush will also speak on Tuesday, July 29. His topic will be "Ceramics Development for Automotive Use."

He was named to his present position shortly after the formation of the Norton/TRW Ceramics partnership in October 1985.

He began his career as an assistant professor at the University of Erlangen-Nurnberg, Erlangen, Germany. He then joined GTE Corp. and served in technical management and product development posts.

Steed

Blanchard

Quackenbush

Nobuto

Quackenbush holds two basic materials patents in silicon nitride and has written extensively in the field of high-performance ceramics.

Nobuto will speak on Wednesday, July 30. His topic will be, "Flat Rock, Michigan: Mazda's Showcase Takes Shape."

The new firm, which he has headed since May 1985, will build and later operate Mazda's automobile facility in Flat Rock.

Nobuto continues as manager of the U.S. Plant Planning Office and a member of the board of directors of Mazda Motor Corp., Hiroshima, Japan.

He began his career with Mazda in 1959 as a chassis design engineer. He later served as manager of the Special Vehicle Design Department, project leader of small-car planning and development and manager of the Office of Rotary Engine Planning.

In 1977, he moved to the United States as general manager of Mazda Technical Center, Inc., Irvine, Calif. He returned to Hiroshima in 1978 as manager of the Cost Control Division and in 1979 was named manager of the Office of International Business Development.

Registration for World Congress attendees is $490, unchanged from last year.

If you register for the World Congress but have a change in plans, you may designate someone else to attend. For full cancellations, $100 will be charged.

The World Congress registration includes access to 33 sessions, early morning coffee and rolls, two luncheons, three dinners including a Tuesday Evening Gala, hosted cocktail receptions and a detailed work book.

For further information, mail in the accompanying coupon or contact Automotive News World Congress: Telephone (313) 446-6000; cable address—810-221-5122 AUTNEW.

Big 3 profits expected to dip 12 pct. for quarter

By Michelle Krebs
FINANCIAL EDITOR

The Big Three automakers will report combined profits of approximately $2.2 billion in the second quarter.

The projection is based on an average of forecasts by automotive analysts. The manufacturers will begin announcing second quarter results the week of July 21.

The second-quarter estimate represents a 12 percent decline from the $2.5 billion earned by the Big Three in the second quarter of 1985. The record for the quarter was $3.3 billion, earned in the 1984 second quarter.

The Big Three had profits of $2.1 billion in the first quarter. The second-quarter figures would bring combined first-half profits to $4.3 billion. That compares with $4.8 billion in 1985 and the record $6.5 billion in 1984.

For the year, the Big Three will earn approximately $7.1 billion, analysts say. That compares to combined profits of $9.0 billion in 1985 and a record $9.8 billion in 1984.

General Motors will earn approximately $954 million for the second quarter, based on an average of analysts' projections. The analysts' forecasts ranged from $825 million to $1.07 billion.

That would bring GM's first-half profits to just over $2 billion. GM earned $1.2 billion in the second quarter of 1985 and $2.2 billion for the first half of 1985.

GM's best-ever second quarter and first half were in 1984, when it earned $1.6 billion in the quarter and $3.2 billion in the half.

Analysts said GM's earnings are the most difficult of the Big Three to project, in part because manufacturing costs are so volatile. Analysts continue to wait for GM's announced cost-control efforts to materialize in the bottom line.

Analyst Arvid Jouppi, Arvid Jouppi Associates Inc., points out that GM's profit margin is dwindling. He predicts GM's margin will drop to 3.9 percent versus 4.6 percent in last year's second quarter.

"GM, for the first time, is willing to sacrifice its most prized possession in order to prepare for the future by spending for the 1990s and to hold market share," Jouppi said.

For the year, GM is expected to report profits of about $3.2 billion. The estimates range from $2.9 billion to $3.4 billion.

GM earned $4.0 billion in 1985 and a record $4.5 billion in 1984.

Meanwhile, Ford has a shot at setting a new second-quarter profit record this year.

Ford, based on the average of analysts' predictions, will earn about $918 million in the quarter. The analysts' forecasts ranged from $810 million to $1.1 billion for the quarter. Ford earned $699 million in the year-ago second quarter.

Record quarterly earnings would give Ford first-half earnings of $1.6 billion compared with $1.5 billion in the first half of 1985.

Ford's best-ever second quarter and first half were in 1984. It had profits of $909 million for the 1984 quarter and $1.8 billion for the half.

Much of Ford's anticipated strong performance will come from overseas, particularly Europe, analysts say.

Analyst Jean-Claude Gruet, Salomon Brothers Inc., expects Ford's overseas sales in the second quarter to be up 18 percent from 1985.

Most analysts have upgraded their forecasts of Ford earnings for the quarter and the year.

Gary Glaser, First Boston Corp., estimates Ford's production will be up 2 percent in the second half of 1986. Earnings could be up 10 percent in the third quarter.

Jouppi noted that Ford's profit margins are improving at 5.4 percent for the second quarter compared with 5.1 percent in the year-ago quarter.

For the year, Ford is expected to earn about $2.7 billion. Forecasts range from $2.4 billion to $3.0 billion.

Ford had profits of $2.5 billion in 1985 and a record $2.9 billion in 1984.

Chrysler will earn approximately $325 million in the second quarter. The analysts' forecasts ranged from $300 million to $345 million.

Chrysler earned $357 million in the first quarter, which would put the automaker's first-half earnings at $682 million.

Chrysler earned $596 million in the second quarter a year ago and $1.1 billion for the first half.

Chrysler's best-ever second quarter and first half were in 1984, when second-quarter earnings hit $804 million and first-half profits totaled $1.5 billion. However, Chrysler was not paying taxes at that time.

Analysts also find Chrysler's earnings difficult to project because of the unknown costs relating to upcoming new models and the effect of closed plants.

For the year, Chrysler will earn approximately $1.2 billion. The forecast ranges from $1.0 billion to $1.3 billion.

Chrysler had profits of $2.5 billion in 1985 and $2.4 billion in 1984, but the automaker paid no taxes in 1984 and for only part of 1985.

American Motors is expected to lose between $16 million and $20 million in the second quarter. That compares to a loss of $70 million in the same quarter a year ago.

The second-quarter loss will bring AMC's losses for the first half to between $35 million and $40 million, better than the loss of $99 million in the year-ago half.

UPGRADE

FROM PAGE 1

economy was weaker than predicted in the first half, car sales benefited from declining interest rates and aggressive financing incentives along with lower gas prices.

Chrysler economist Donald P. Hilty said he upgraded his forecast because financing incentives have been more aggressive than expected.

"The economy is where we targeted," Hilty said. "The incentives are more than we anticipated, brought on by aggressive production programs, which have led to high inventories."

The economists see many of the factors that made the first half a strong one for the automotive industry remaining in effect for the second half of the year.

Consumer sentiment will continue to be strong, the economists said. The consumer's balance sheet is stronger because of a bullish stock market and lower interest rates. In addition, consumers appear willing to buy and take on more debt.

The economists predict interest rates will remain flat throughout the year. Inflation will stay in check and, as measured by the Consumer Price Index, it may turn out to be lower than they predicted earlier this year.

Unemployment will remain fairly flat or will gradually increase, they said, and the U.S. dollar could depreciate somewhat further against foreign currencies.

Yet, overall economic growth will be sluggish. As measured by the Gross National Product, growth will be no more than 3 percent, according to the economists.

As for next year, the economists see nothing to indicate that 1987 won't be more of the same.

Munro predicts a slow, steadily growing economy for 1987 with an introduction similar to 1986's. Hilty sees more evidence of a correction in the economy, but a modest correction.

Deaver predicts greater economic growth in 1987. However, he anticipates vehicle sales will be lower than in 1986 as a slower economy catches up to the automotive business. In addition, marketing incentives may outlive their usefulness by 1987.

At the same time, some worrisome signs dot the economic landscape, the economists say.

Chrysler's Hilty points out that basic economic indicators — inflation, interest rates, gas prices and the U.S. dollar — are positive. The negative signs — rising unemployment and a shorter work week — suggest the business cycle is topping out. The present economic recovery is 53 months old. The longest post-war recovery was 57 months, around 1960.

"We're paying attention to the turning point," he said.

GM's Munro said previously worrisome spots have turned out better than expected. Though some of the weak signs still exist, he doesn't see any snowballing effect.

Munro said a developing pattern — for example, four to six months of increased inflation — could pose a risk. "That would take a six-month gestation period, but we see no sign of it yet," he said.

"The one risk being watched now is the financial markets possibly getting cold feet," Munro said. However, he pointed out that the financial market risk is offset by a stronger base. When Munro made his economic forecast in January, the Dow Jones industrial average was at 1,600. Today it is over 1,800.

Federal budget deficits and trade deficits continue to be a concern to economists.

Hilty said the twin deficits may cause some problems next year. Munro said he would be more concerned if there were indications that Washington was giving up the deficit struggle, which doesn't appear to be the case.

Deaver said the trade deficit in particular has been worse than anticipated and it may take a year or two more for the shift in the currency markets to have an effect.

In addition, Deaver said the proposed tax reform already has dampened corporate investment because of the expected elimination of the investment tax credit. Tax reform, likely to become law, will seriously depress investment in 1987, he said.

Flag raising at Ford World Headquarters by Kia President Kim Sun Hong; Ford Chairman Donald Petersen, left

Ford finalizes Kia buy-in

By Dave Zola
DETROIT REPORTER

DEARBORN, Mich. — Ford Motor Co.'s $30 million purchase last week of 10 percent equity in South Korean partner Kia Motors Corp. marked a small breakthrough for Ford.

The purchase — approved two weeks ago by Kia shareholders — makes Ford one of Kia's largest shareholders. It represents the first time Ford has purchased a minority interest in a South Korean auto firm.

"Not too many years ago, Ford would invest in other companies only if it could acquire either 100 percent control or at least a majority interest," said Donald E. Petersen, Ford chairman. "Today, powerful winds of change are challenging companies such as Ford to modify such outdated business attitudes.

"As a result, minority equity positions, joint ventures and more inter-company programs have become signs of the times and of new and necessary business relationships."

Other top shareholders in Kia include Seoul Bank and Trust, 15 percent; Mazda Motor Corp., 8 percent; and C. Itoh & Co., 2 percent.

The equity purchase was seen as solidifying the Ford-Kia-Mazda long-term relationship, which includes plans for Kia to supply Ford with a Mazda-designed small car for sale in the United States.

Kia said it would use the $30 million from the stock sale for research and development and to complete the final investment phase for production of the car for Ford.

The vehicle, called Festiva, is a hatchback smaller than the Ford Escort. The car, equipped with a 1.1-liter or 1.3-liter engine, already is being produced by Mazda for sale by Ford in Japan.

Kia expects to build 120,000 to 150,000 Festiva models annually. The cars will be sold in Korea as well as in the United States.

Petersen said U.S. sales of the Festiva would range from 50,000 to 75,000 annually. The car will be marketed only by Ford Division and will be targeted at entry-level buyers, he said.

The Festiva is expected to go on sale in mid-1987 as a 1988 model, Petersen said.

The equity purchase gives Ford one seat on Kia's 25-member board of directors.

The Kia deal is only one of many international joint ventures Ford is looking at, including a possible link with Alfa Romeo in Europe and Volkswagen in South America, Petersen said.

"It is interesting to note that Ford is discussing potential cooperative ventures, large and small, with numerous companies around the world," he said. "Others you may hear about in the future."

Kia, which last year boasted a $22 million profit on sales of $550 million, said it does not expect to set up a U.S. dealer network of its own in the near future.

INVENTORIES

Domestic stockpile cut

By Kathy Boyer
DETROIT REPORTER

Although June sales trailed the May total, inventories of new domestic cars dipped slightly on July 1 as model changeovers and vacations cut production.

The month opened with 1,859,576 cars in stock. A month earlier, the total was 1,866,853, and on July 1, 1985, the count was 1,576,762.

The July 1 inventory amounted to a 63-day supply, little changed from the 62-day figure on June 1. There was a 58-day supply of new domestic cars on hand on July 1, 1985.

American Motors, Chrysler Motors and American Honda reduced their days' supplies during June. Ford Motor Co. was unchanged, and there were slight increases for General Motors, Volkswagen and Nissan.

Companies shared the July 1 inventory as follows: GM, 59.96 percent; Ford, 21.21 percent; Chrysler, 15.63 percent; American Motors, 1.79 percent; Volkswagen, 1.14 percent; Honda, 0.26 percent; and Nissan, 0.01 percent.

On June 1, the split was: GM, 60.02 percent; Ford, 21.18 percent; Chrysler, 15.60 percent; American Motors, 1.76 percent; Volkswagen, 1.08 percent; Honda, 0.34 percent; and Nissan, 0.02 percent.

The shares by size class on July 1 were: Subcompact: 17.77 percent; compact, 20.82 percent; intermediate, 37.13 percent; standard, 13.52 percent; and luxury, 10.76 percent.

The month opened with a 60-day supply of subcompacts. Days' supplies by nameplates were: Accord, 7; Sentra, 19; Horizon, 23; Omni, 27; Escort, 49; Lynx, 71; Chevette, 81; Golf/GTI, 82; Nova, 91; Turismo, 94; Charger, 94; Fiero, 96; Daytona, 96; Pontiac 1000, 121; Alliance, 125; Shadow, 128; Laser, 148; Encore, 272; and Sundance, 325.

There was a 56-day supply of compacts: Cavalier, 43; Mustang, 45; Sunbird, 47; Reliant, 48; Firebird, 51; Topaz, 53; Aries, 59; Camaro, 63; Tempo, 70; LeBaron, 73; Skyhawk, 79; Firenza, 82; Capri, 93; Cimarron, 98; and Eagle, 116.

The supply of intermediates was good for 63 days: Grand Am, 22; Sable, 34; Somerset Regal, 42; Taurus, 44; LTD, 47; Marquis, 52; Caravelle, 52; Cougar, 56; Celebrity, 56; Calais, 56; Dodge 600, 60; Cutlass Supreme, 64; Cutlass Ciera, 68; Citation, 76; Bonneville, 79; Pontiac 6000, 79; Century, 80; Monte Carlo, 81; Thunderbird, 88; Regal, 92; Grand Prix, 94; New Yorker, 106; LeBaron GTS, 139; and Lancer, 144.

The 68-day supply of standards was split this way: Grand Marquis, 51; Diplomat, 56; Crown Victoria, 57; Plymouth, 59; Parisienne, 59; Chevrolet, 59; LeSabre, 66; and Oldsmobile 88, 98.

The luxury-car supply was 79 days: Lincoln, 57; Corvette, 61; Oldsmobile 98, 66; Mark VII, 70; Continental, 71; Fifth Avenue, 77; Electra, 77; Cadillac, 77; Eldorado, 164; Riviera, 187; Toronado, 198; and Seville, 224.

Import-car inventory rises

By Kathy Boyer
DETROIT REPORTER

The inventory of new imported cars on July 1 was the highest in 47 months.

The month opened with a stockpile of 400,106, the highest since Aug. 1, 1982, when 429,663 units were reported.

On June 1, the total had been 387,911. On July 1 a year ago the count was 310,221.

There was a 40-day supply of cars on July 1, the highest since March 1, 1983, when it was 41.

The import truck inventory of 193,608 on July 1, was the highest since Automotive News began breaking out car and truck totals in April 1982.

There was a 64-day supply of trucks on July 1, the highest since the 78-day supply on May 1, 1983.

On June 1, the figure was 51 and on July 1, 1985, it was 36.

The combined imported car and truck total of 593,714 on July 1, was the highest since the 600,632 reported on Aug. 1, 1982.

A month earlier, the total was 565,699 and a year earlier it was 404,926.

Days' supply of cars and trucks on July 1 was 46.

A month earlier it was 41 and a year-earlier it was 32.

Car inventories on July 1 were split this way: Japan, 69.44 percent; Germany, 19.46 percent; and other countries, 11.10 percent.

Days' supply for imported cars by country of origin on July 1 were: Japan — Honda, 10; Toyota, 21; Mazda, 29; Subaru, 31; Acura, 33; Nissan, 38; Mitsubishi, 58; Chevrolet, 89; Chrysler, 102; and Isuzu, 112.

West Germany — Mercedes-Benz, 29; BMW, 30; Porsche, 39; Volkswagen, 63; Merkur, 78; and Audi, 100.

Other countries — Jaguar, 26; Alfa Romeo, 31; Saab, 39; Volvo, 47; Yugo, 66; Peugeot, 80; and Renault, 263.

Fuji-Isuzu plant scouts slated to visit Missouri

By Jack Bernstein,
Francis J. Gawronski
and Kathy Boyer
AUTOMOTIVE NEWS STAFF

Representatives of Fuji Heavy Industries and Isuzu Motors are expected to visit Missouri this week to confer with Gov. John Ashcroft and look over several plant sites.

A site in St. Charles County, west of St. Louis, and two cities in southwest Missouri, Springfield and Joplin, are expected to be scouted for the joint venture that will build vehicles for both Subaru and Isuzu.

In Tokyo, a Fuji spokesman said executives from Fuji and Isuzu are scouting five other states, as well: Ohio, Indiana, Kentucky, Tennessee and Arkansas. The plant site will be selected before the end of the year.

A U.S. source involved in the selection said the six candidates will be narrowed to three in the next round.

State officials have said they believe Indiana and Missouri are among those that have the inside track at this point. They based their projection on the pattern that appears to be developing among the Japanese automakers building plants in the United States: Each of the five has chosen a different state in which to set up assembly.

Missouri is a right-to-work state and already a leading state in automobile manufacturing.

Another plus for Missouri is a new job development fund bill, which provides an initial $6 million general revenue appropriation.

The joint-venture plant will be 51 percent owned by Fuji and 49 percent owned by Isuzu, with Fuji chiefly in charge of plant management.

The companies plan to construct a $480 million plant with an annual capacity of 120,000 vehicles, with the potential to double that.

The plant will assemble Subaru four-door sedans and station wagons for Fuji, and the small four-wheel-drive Trooper II utility vehicles and the P'UP pickup for Isuzu.

Separately, there also are reports that Illinois may have been selected by another large automotive employer. Springfield, the state capital, has been mentioned, as well as a site in the metropolitan St. Louis area.

Goodyear revamps Luxembourg center

AKRON, Ohio — Goodyear Technical Center Luxembourg has been reorganized.

Jack Davisson, vice president of international tire technology, will have three Luxembourg-based directors and one Akron-based director reporting to him.

In Luxembourg, they are John Bauer, formerly manager of tire engineering, who becomes director of tire development; Bryan L. Kinnamon, formerly director of manufacturing for Goodyear Technical Center Akron, who becomes director of manufacturing technology; and Joe Kneip, who earlier had been named director of automotive engineering there.

Kevin O'Neil, headquartered in Akron, is director of the international tire program.

SETTLE

FROM PAGE 1

New York; and Haskins and Groupe v. GM, filed in the Circuit Court of Cook County, Ill.

"As far as General Motors is concerned, this agreement provides a global settlement of the THM-200 issue," attorney William R. Jentes said following the hearing.

A hearing on the fairness of the settlement will be held either Sept. 22 or Oct. 30, depending on how quickly transfer of the other cases can be accomplished. Although Morgan v. GM was formally consolidated with these cases last fall, through clerical error it was sent to federal archives in New Jersey, where a search is now under way, attorneys told Judge Nordberg.

GM agreed to pay interest at 8 percent, compounded quarterly, on the escrow funds, from July 16 until the effective date of the settlement. The money will be deposited in an account at American National Bank and Trust, Chicago. Investment of the funds during the settlement process is still to be ruled on by Judge Nordberg.

Beverly C. Moore, attorney for the Washington, D.C., plaintiffs, urged the court to consider investment in Government National Mortgage Association (Ginnie Mae) mutual funds, which Moore said are now earning 5 percent more than Treasury bills. This rate when compounded could add as much as $850,000 to the fund over one year, Moore said. Nordberg said he is not yet convinced of the safety and soundness of such funds.

Attorney Lowell E. Sachnoff, lead counsel for the Skelton class, said that, using claim-rate estimates derived from previous similar cases, individual claimants should receive between $375 and $400, or approximately the amount of their actual losses, before attorneys fees. Sachnoff said his estimates are based on a 10-percent failure rate and a 25-percent total claim rate — far higher than usually experienced.

Under the agreement, GM will reimburse documented repairs at 90 cents on the dollar for the period up to and including 24,000 miles, 80 cents on the dollar between 24,000 and 36,000 miles and 60 cents on the dollar between 36,000 and 50,000 miles.

Moore suggested attaching a claim form to the first notice, to gain earlier indications of the number of claimants.

GM agreed to send notices by first-class mail to original purchasers of the vehicles at their address when the purchase was made. Notices also will be published in USA Today and TV Guide. Because the notices will be sent to previous, not necessarily current, addresses, between one-quarter and one-third will be returned, Moore contends.

"This would never have happened in a safety recall," he said.

The issue of legal fees and how they will be paid has not been settled. Nordberg said the Center for Auto Safety, in a letter to the court, has objected to legal fees being paid from the escrow fund.

In announcing his approval, Nordberg acknowledged the safety group's and Moore's concerns, but said he believes that the ongoing GM arbitration effort, arranged with the Federal Trade Commission in 1983, may mitigate the numbers of claimants. An April letter from FTC staff expressed satisfaction with the proposed settlement, he noted.

PRODUCTION

Auto output off 3 pct. for quarter

By Kathy Boyer
DETROIT REPORTER

U.S. auto production of 2,158,285 cars for the second quarter was 3.15 percent below the 2,228,685 completed during the second quarter of 1985.

During the first half, 4,286,352 cars were built, 2.83 percent below the 4,411,621 assembled in the first half of 1985.

The makers estimated that 1,774,707 cars will be assembled during the third quarter, compared with the 1,804,335 built during the same period of 1985.

With a number of plants down for model changeover, last week's scheduled auto production of 102,408 fell 6.73 percent from the previous week's 109,799 (a holiday week).

Last week's targeted output was 22.73 percent below the year-ago week's 132,539.

So far this year, according to adjusted figures, 4,498,559 cars have been assembled, 2.95 percent below the 4,635,751 completed last year at this point.

Companies split last week's targeted production as follows: General Motors, 69.69 percent; Chrysler Motors, 14.26 percent; Ford Motor Co., 4.48 percent; Honda of America Manufacturing Inc., 4.42 percent; New United Motor Manufacturing Inc., 3.74 percent; Volkswagen of America, 1.95 percent; and American Motors, 1.46 percent.

Nissan Motor Manufacturing Co.'s car line in Smyrna, Tenn., remains idle for model changeover.

American Motors' Kenosha, Wis., plant resumed production last Monday (July 7).The plant had been down for two weeks for inventory adjustment.

GM's Willow Run, Mich., plant was down last week because of a parts shortage. It is scheduled to resume production today (July 14).

GM's Pontiac, Mich., andLakewood, Ga., plants have been idle since July 3 for modelchangeover. Both plants are expected to resume production Aug. 4.

GM's Pontiac Fiero plant will be closed from July 15 to Aug. 18 for model changeover.

Chrysler's Jefferson (Detroit) and Newark, Del., plants are down for model changeover.

The Jefferson plant will resume output July 28, and the Newark plant is scheduled to resume Aug. 4.

Chrysler's St. Louis (No. 2) plant is closed for vacation and will resume production July 21.

All Ford plants that were down for vacation resume production today.

Ford has slated daily overtime at all of its car plants this week.

Chrysler scheduled Saturday (July 12) overtime and daily overtime this week at its Belvidere, Ill., plant.

Truck output up for quarter, half

Domestic truck makers built 961,376 units during the second quarter, 3.79 percent more than the 926,232 assembled in the same period last year.

First-half production of 1,858,187 trucks was 3.75 percent more than the 1,790,883 built in the first half of 1985.

With several plants on vacation, last week's scheduled output of 38,836 dipped 1.43 percent from the previous week's 39,398 (a holiday week).

Last week's estimated production was 10.05 percent below the year-ago week's 43,175.

Year-to-date, 1,936,421 trucks have been assembled, 4.25 percent more than the 1,857,432 built last year at this time.

Production was halted at Ford's Wayne, Mich., plant on July 7 for two weeks' vacation.

All Ford Motor Co. plants that closed for vacation June 30 resume production today (July 14).

Nissan Motor Manufacturing Co.'s plant in Smyrna, Tenn., closed last week (July 7) for two weeks' vacation.

Navistar International's plant in Springfield, Ohio, is down for vacation until July 28.

GM scheduled Saturday (July 12) overtime at its Baltimore plant.

All Ford plants except the van line in Lorain, Ohio, are slated for daily overtime this week (July 14).

Chrysler's Warren, Mich., plant is scheduled for Saturday overtime and daily overtime this week.

Chrysler renovating St. Louis auto plant

ST. LOUIS — Chrysler Motors begins a $210 million renovation of its St. Louis No. 1 assembly plant Friday (July 18) that will prepare it to build the new Chrysler LeBaron ardtop and convertible and odge Daytona.

Changeover will take 13 weeks. The renovation is part of a $466 million program.

Chrysler has added 136,400 square feet of manufacturing space to its existing 2.3 million square feet at St. Louis No. 1. It will also add 125 robots, bringing the plant's robot force to 196.

The facility employs about 4,400 hourly workers, 3,900 of whom will be on temporary layoff and receive 95 percent of their after-tax pay.

Canadian auto output rises a tad in second quarter

Second-quarter Canadian auto production of 311,313 units was 1.51 percent more than the 306,663 cars built in the second quarter of 1985.

The automakers assembled 585,781 cars during the first half of this year, 6.07 percent more than the 552,249 completed in the same period last year.

Because of vacations and model changeovers, last week's scheduled production of 10,225 cars was 45.90 percent below the previous week's 18,901 — a holiday week.

The estimated build last week was 28.56 percent below the year-ago week's 14,312.

So far this year, 614,907 cars have been assembled, 6.70 percent more than the 576,275 built last year at this time.

Truck makers produced 238,789 units in the second quarter, 2.07 percent more than the 233,942 completed in the same period last year.

First-half truck output of 474,558 was 2.75 percent more than the year-ago period's 461,814.

Targeted production of 11,981 units last week was 4.89 percent below the previous week's 12,597 and 10.03 percent below the year-ago week's 13,316.

Year-to-date, 499,136 trucks have been assembled, 2.56 percent more than the 486,654 completed last year at this time.

General Motors Ste. Therese, Quebec, plant is down for vacation and model changeover.

The plant is expected to resume production Aug. 18.

Ford Motor Co.'s St. Thomas, Ontario, and Oakville, Ontario, plants are down for vacation until July 21.

Chrysler Motors' Windsor, Ontario, plant was down last week for inventory adjustment. The plant will be down for vacation from July 14 until July 28.

Bumpy road is faced by VW Mexico

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — On the morning after the settlement of the first strike since he became president of Volkswagen de Mexico last February, Martin Josephi admitted that his workforce was still underpaid.

"We are well aware that this agreement is not enough for the workers to recover their purchasing power," he said of the seemingly huge 71-percent wage increase.

"They are still below inflation — which was 40.7 percent in the first six months of 1986 — and this is a situation that worries us," he said.

Josephi

"The understanding of the unions has helped us to come to this agreement. But the day is not far off, we feel, when they will have to stop losing real income."

Under Josephi, 44, VW de Mexico is investing $100 million in plant improvements this year, mostly for its export program.

"We are expanding our water-cooled engine production," he said. "We have a capacity of 1,600 engines a day, and this will be expanded to 2,100 engines a day by June 1987. We are modernizing our finishing lines and paint shop."

The company's goal, he said, is for exports to represent 40 percent of total sales by the end of next year, as compared with this year's 30 percent. Total national and international sales this year will be the equivalent of about $700 million.

Josephi said the company's agreement with VW's 13,000 factory workers — 2,500 of them temporary — that ended the nine-day stoppage makes special mention of the VW export campaign and the need to improve quality.

"Our export success will depend on the degree to which we improve our quality, rather than price competitiveness," he said.

Josephi said that VW is changing its philosophy on exports. "We are exporting mostly components, with less emphasis on car exports," he said.

For example, the company is exporting about 1,200 Golf and Jetta engines per day to the United States, Europe and Brazil and is exporting rear axles to the United States and Germany. Sheet-metal parts are shipped to the United States and Europe.

Exports of the Beetle have fallen this year. "Last year, we exported about 5,000 Beetles, mostly to Austria, Italy and Germany," Josephi said

Industry Minister S. Hartarto opens Indonesia Auto Show

Indonesian industry eyes export potential

By Andrew Tank
STAFF CORRESPONDENT

JAKARTA, Indonesia — The world's fifth most populous country — Indonesia — is on the verge of developing a fully integrated automotive industry that could become a potent force in world markets in the 1990s.

Its first major auto show was held last week in Jakarta, the capital. In opening the show, Industry Minister S. Hartarto told Automotive News:

"I think we will be able to export small commercial cars. The appreciation of the yen makes some of our vehicles cheaper than Japan's." He declined to forecast an export target and admitted that "exporting will demand a big effort."

Soebronto Laras, chairman of GAIKINDO, the Indonesian vehicle manufacturers association, said, "We are watching South Korea and Taiwan very closely. In 10 years, Indonesia will be a major exporter of vehicles. Annual production could easily be 600,000 vehicles since we're still just tapping some of the local market."

Soebronto, who is also president-director of the local assembler of Suzuki, Mazda and Hino vehicles, returned recently from Japan, where he talked with Suzuki in the wake of a 40 percent appreciation of the yen against the Indonesian currency, the rupiah, since last November.

He said, "There is now a chance to export from Indonesia."

The most likely product is a commercial vehicle with a 1.0-liter engine which can be produced as a pickup, van or minibus. Soebronto said his plant can make it

Battle lines drawn in auto finance war

By Michelle Krebs
FINANCIAL EDITOR

Banks and credit unions have challenged the domestic auto manufacturers over their low-interest-rate financing programs, claiming that the manufacturers are monopolizing the automotive financing market.

The Consumer Bankers Association has sent letters to the attorneys general of 13 states, asking them to look into the exclusive nature of the low-interest-rate financing programs offered by the auto manufacturers.

At the same time, the Credit Union National Association is hiring economists and lawyers to examine whether the auto companies are in violation of federal antitrust or truth-in-lending laws.

The bankers say that if General Motors, for example, pays a subsidy to its finance company, General Motors Acceptance Corp., it should pay the same subsidy to credit-unions, savings and loan associations and commercial banks. That way, other financial institutions could compete on an equal footing.

"The intent is not to shut subvention down," said Thomas Honey, president of the bankers' group. "The consumer ought to have more lenders that could offer these low rates."

In a letter to the California attorney general's office, the association claimed that the so-called subvention programs violate state laws.

Its letter said that GM advertises an interest rate to consumers of 7.9 percent or lower, which is well below GM's cost of funds. Then, GM pays a subsidy to GMAC to make the loan.

GM refuses to pay the subsidy to credit unions, savings and loan associations and banks, making it impossible for those other traditional sources of consumer financing to compete with GMAC, the letter said.

The many months of subvention, the letter said, block out credit unions, savings and loans and banks from participating in the automotive financing arena.

The bankers' letter to California claimed that state law prohibits an automobile manufacturer from paying a subsidy to any lender and prohibits a lender from accepting such a subsidy if the effect is to lessen competition or tend to create a monopoly.

"Not only is such monopolistic conduct illegal," the letter said, "but it is extremely imprudent for many reasons of public policies."

The association is working through the states rather than the federal government because last year the trade association investigated whether low-interest-rate financing was in violation of federal antitrust and unfair-trade-practice laws. No evidence was found.

However, when state laws were examined, 13 states were found to have laws that appeared to prohibit the practice. The states are Arkansas, California, Colorado, Florida, Hawaii, Idaho, Louisiana, Nevada, New Mexico, Ohio, Tennessee, Utah and Wisconsin.

The Credit Union National Association is concentrating its efforts on possible federal law violations by the auto manufacturers.

"We don't have the facts to say for sure yet," said CUNA spokesman Howard Cosgrove, "but we

How GM prepared for reorganization

By Noel M. Tichy
and Mary Anne Devanna
Copyright, 1986, John Wiley & Sons

On Jan. 10, 1984, General Motors Chairman Roger B. Smith and President F. James McDonald announced the corporation's most massive reorganization since the days of Alfred P. Sloan.

The goal was to make GM more responsive to consumer and competitive pressures.

It resulted in the creation of two new car groups — the Chevrolet-Pontiac-GM of Canada group and the Buick-Oldsmobile-Cadillac group — and dissolved the Fisher Body, GM Assembly and Guide divisions.

The transformation of GM — before and after the Smith-McDonald announcement — provides an important lesson in organizational change, especially regarding the people affected by such change.

A full year before the GM reorganization, then Vice President and Group Executive Alexander Cun-

GM strives for variety in styling

By Dave Zola
DETROIT REPORTER

General Motors may not agree that all its cars look alike, but the automaker is taking that popular complaint quite seriously just the same.

That criticism was dramatized in a biting Lincoln-Mercury commercial in which a valet parking attendant and several "GM owners" were confused about which car belonged to which driver.

GM is painfully aware of the contention that its cars suffer from a cookie-cutter approach to design, and says it is committed to changing that perception in the minds of the car-buying public.

Rouge Steel workers from UAW Local 600 picketed UAW's Solidarity House last week

AUTOMOTIVE NEWS-JOE WILSEHH

Ford Rouge Steel workers to take strike vote today

By Mary Connelly
DETROIT REPORTER

An estimated 4,000 workers at Ford Motor Co.'s Rouge Steel plant will vote today (July 21) on whether to authorize a strike against the automaker.

A contract covering the employees, who are members of UAW Local 600, expires July 31.

If a strike occurs, it is possible that an additional 9,000 UAW Local 600 members at the Rouge manufacturing complex could also walk off the job because they are not covered by a signed agreement. Ford confirmed that a contract was negotiated in 1984 but was never signed.

Forty percent of the Rouge plant's steel production is used by Ford although sources indicate the company has stockpiled a steel supply.

Negotiators for Ford and UAW Local 600, which represents workers at Rouge Steel, met Thursday and discussed non-economic issues.

At presstime, no date had been set for another main-table meeting, although bargaining was continuing on the local level.

UAW Local 600 President Bob King said the union's chief concern is the future of the steel plant, which Ford has said it would consider selling. Earlier this year, union sources said Rouge Steel Co. lost $90 million in 1985, although Ford had projected the operation would make about $5 million.

"We told the company very strongly they have to make a decision on what they are going to do with Rouge Steel," King said. He said UAW members will no longer tolerate being left "hanging" regarding the plant's future.

King said that if Ford decides to retain the plant, the union is willing to work toward an agreement making Rouge Steel the "best operation possible."

"The union has been ready and willing for over a month to get into the meat of the negotiations. The company has been dragging its feet, and we're not real happy with that," King said.

King said no progress was made during the maintable bargaining session Thursday and that Ford had not yet responded to the union's economic demands. A Ford spokesman confirmed that the company had not yet made an economic offer.

The union did not set a strike deadline in the event of a strike authorization vote. A strike would require approval by the UAW's international executive board.

Asked if union workers at the Rouge complex who are not part of Rouge Steel would walk out in the event of a strike, King said, "We're close in this local. Everybody in the local helps one another."

The Rouge complex includes Ford stamping, frame, glass, engine and assembly plants.

According to a newsletter distributed by Local 600 to its members, a strike at the entire Rouge complex would halt production of Mustang and Capri, frames for Ford's largest models, windshields for the new Taurus and Sable models and engines.

The plant produces 1.9-liter, 4-cyclinder engines for the Escort/Lynx and an electronic fuel injection version of the 1.9-liter engine. In addition, the plant supplies 96 percent of the fuel tanks for Ford autos.

Study finds Japan ready to take over U.S. supplier field

By Scott Miner
DETROIT REPORTER

A new automotive study concludes that the Japanese will soon complete the third phase of a long-planned attempt to take over the U.S. automotive supplier business unless trade talks with Japan result in restrictions.

The study was quoted by the Automotive Parts and Accessories Association. It details how domestic auto manufacturers are increasingly using foreign-supplied parts, mostly from Japanese companies, in new cars.

The study was conducted for the U.S. embassy in Japan by Heuristic Associates, Tokyo.

APAA officials commented on the Heuristic study during a briefing at the Detroit Press Club. APAA officials at the briefing were Julian C. Morris, president; Lee Kadrich, managing director for government and trade; and Judy Broseker, managing director for market research.

Top-level trade talks between Japan and the United States will take place in August in Tokyo and will include the export of auto parts to the United States.

The study said that 300 Japanese parts makers are poised and ready to build plants in the United States by 1988 barring any U.S. restrictions.

That "import invasion" is the third step in a plan to totally conquer the American parts business, the study said.

The first wave was the era of captive imports, when U.S. car firms bought substantial shares of Asian car companies, such as General Motors' investment in Suzuki and Isuzu, Chrysler's investment in Mitsubishi and Ford's in Mazda.

U.S. carmakers have also moved into South Korea, Mexico, Taiwan and elsewhere with similar investments. That took place when U.S. automakers decided they couldn't produce small cars profitably in this country, the study said.

Phase Two took place when the Japanese moved some assembly operations to the United States. Kadrich said that was done to "skirt politically sticky issues such as quotas and the perennial domestic-content debate."

He added that "those roots remain shallow and have not tapped deep into (U.S.) supply lines."

Kadrich said the GM-Toyota joint venture is an example of Japan controlling what supplier companies will be used.

In the third phase of the Japanese parts takeover, more than 300 Japanese supplier companies would build plants in the United States, according to the study.

"When they arrive, all remaining distinctions will blur and the domestic content used in transplant and hybrid production will soar," Kadrich said.

He said that all subcomponent assembly work would be done overseas; only final assembly of the parts would be done in the United States plants. He said all materials would be brought from overseas.

If that last phase is completed, the APAA estimates that employment at present U.S. supplier companies would drop 25 percent.

The study estimated that by 1989, domestic content of cars built in the United States will be 42 percent while Japanese content will be 50 percent. Eight percent would come from other foreign firms.

Cars made in the United States in plants owned by a foreign company will have 70 percent foreign content by 1989, the study said. Captive imports — cars assembled offshore and imported for sale under a U.S. nameplate — will have an estimated 95 percent foreign content by 1989.

The United States represents a major growth area for Japan. "Japan is moving to fill a major market vacuum left by American car makers" who have shed unprofitable small-car models, Kadrich said.

"The U.S. move has paved the way for peaceful coexistence and profitable partnership between automaking industries," he said. "This has played into the hands of Japanese carmakers and their supplier families, long bent on controlling the equipment markets for all cars sold in America."

Morris said that Japanese companies producing in the United States would help curb the parts trade deficit, "but at the cost of further deterioration of our balance of payments account to Japan."

Raymond Loewy; gave Studebaker sleek look

OBITUARIES

MONTE CARLO, Monaco — Raymond Loewy, designer of the svelte Studebaker Hawk and Avanti, the 1947 Studebaker Champion and Commander, the International Harvester logo and a host of other items associated with modern life, died July 14 at the age of 92.

Loewy

Throughout his design career, which began in 1918 after his graduation from the Ecole de Lanneau in France, he emphasized clean, smooth lines based on sleekness and simplicity.

In 1979, Life magazine named him "One of 100 Who Shaped America." Ten years earlier, the London Times called him "One of 1,000 Makers of the Twentieth Century."

Mr. Loewy, among the few who could see beauty in a locomotive, was the author of "The Locomotive — Its Aesthetics." He designed the streamlined steam engines that were the trademark of the Pennsylvania Railroad in the 1930s.

He also designed cigarette packages and vacuum cleaners as well as cans, bottles, packages and cartons used for food and beverages.

Born and raised in Paris, he served as a liaison officer with the Allied forces in France in World War I. After the war, he moved to the United States and took up fashion illustration. He became a naturalized citizen in 1938.

He formed Raymond Loewy Associates in 1945, and the design firm quickly expanded to offices in New York, Chicago, Los Angeles, London, Paris, Fribourg, Switzerland; and San Paulo, Brazil.

Mr. Loewy became a consultant to the National Aeronautics and Space Administration in 1967 on Skylab, the recoverable earth shuttle orbiter, and Saturn-Apollo applications. In 1974, he became a design consultant to the Committee for Science and Technology of the Soviet Union.

In 1975, the Smithsonian Institution staged a special Raymond Loewy exposition.

He was a director of the Art Center College of Design in Los Angeles.

Mr. Loewy was a decorated grand officer of the French Legion of Honor, with four citations for the Croix de Guerre. He won many other honors and prizes in the design world and lectured at Massachusetts Institute of Technology, Harvard, New York University, Columbia, Pratt Institute and The Royal Society of Arts in London.

Mr. Loewy and his wife had lived in Monaco for the past six years.

Walter J. Simons

DETROIT — Walter J. Simons, 73, retired Chrysler Corp. vice president of corporate finances, died July 14. Mr. Simons joined Chrysler in 1943. He became director of pensions and group insurance in 1950, assistant treasurer in 1952, treasurer in 1955, vice president-treasurer in 1969 and vice president of corporate finances in 1975. He retired in 1976.

Flax, left, and Snyder trouble-shoot a Plymouth Reliant

Winning team of Frank Rodgers, left, and Robert D. Ruppert, with John C. Ruppert, their shop instructor

Trouble Shoot starts youths on auto careers

Trouble Shoot participants compete in the shadow of the nation's Capitol

By Arthur Flax
SERVICE EDITOR

WASHINGTON — There was a time when the stuff under the hood of an automobile resembled a steamship anchor and was, for the mechanically inclined, as easy to fix.

The stuff under the hood of today's automobile resembles more the innards of an IBM PC. But for the electronically inclined, it can also be easy to fix.

At the 1986 Plymouth/American Automobile Association Trouble Shooting Contest, the top high school mechanics from 50 states had a chance to show their skill in diagnosing pre-planted electronic and mechanical bugs in identical 1986 Plymouth Reliants equipped with 2.5 liter, fuel injected engines.

The participants — two-member teams from each state — were high school seniors who had won events in their home states.

The young technicians, raised in an era of personal computers and video games, had little trouble with the new electronically controlled automobiles.

Members of the news media also were invited to show their skills. The changing of the guard — from mechanical to electronic technicians — was apparent.

As Automotive News service editor, it was my task to uphold the honor of the publication. Charles Snyder, Kiplinger Letters associate editor, and I bested our competition from Motor Age and Super Service Station magazines.

But with skills learned under a shade tree on older cars, it took us more than an hour to get our car running, and we were the only news media team to accomplish that feat without professional help.

By comparison, the winning student team of Frank Rodgers and Robert D. Ruppert, from Morro Bay High School in California, debugged their car in just over 20 minutes.

Ruppert's father, John C., instructed the winners in auto shop. He said he goes back to school every year and has to "read constantly to stay ahead of the kids who have a lot of questions."

If the truth be told, our success in the news media competition was due in no small part to my pre-contest briefing by Tom Beam, technical editor of Motor Age. Beam, who was stymied during the competition by an unexpected electrical flaw, is an expert in the modern systems and delivered a thorough briefing on the network of sensors and servos common to the 1986 Reliant.

That I was able to pick up on much of the briefing I attribute to a familiarity with basic electronics and computers as much as with automobiles.

According to Gino J. Giocondi, vice president of service and parts operations for Chrysler Motors, one of the goals of the Trouble Shoot is to demonstrate the new skills needed by the modern technician and to encourage young people to enter the field.

"Some 850,000 people claim they can fix cars, and if I said half of them are technicians, I probably would be exaggerating," Giocondi said.

"Many are older; they are never going to change. They can't get comfortable with computers, with electronics. We have a real job in front of us, because there are 130 million cars in the marketplace and too few technicians to take care of them."

He added, "What we have to do is mount a concerted effort to upgrade the image of the auto technician so we can attract younger people into the profession; I don't want to call it a trade. The Trouble Shoot is part of that."

It would seem that in order to work on a 1986 automobile, the technician must be able to combine the traditional intuitive feel for mechanics with a similar savvy in electronics.

For example, the drill to troubleshoot our Reliant required that we first diagnose the lack of spark from the electronic ignition system.

Included in the Trouble Shooting tool kit, in addition to a hand-held diagnostic computer and other electronic tools, was a paper clip.

It was provided to perform a simple trouble-shooting procedure that allowed us to determine if the coil, distributor or ignition computer was bugged. The coil, we found, was bad.

After replacing the coil and adjusting the timing by dead reckoning, our car ran — but poorly. By pulling spark lead one at a time while the engine was running, we were able to identify a bad spark plug and clear out a miss. That is an old trick, one I had learned more than 10 years ago in high school auto shop.

The engine then ran smoothly at idle and low speeds, but we had to use a hand-held computer to determine the cause of a "Power Loss" dashboard warning light.

Provided in the tool kit was the OTC Monitor 2000 diagnostic computer from Sealed Power Corp. Easily plugged into the electronic system of many cars (interchangeable software cartridges make that possible), the small computer is as easy to work as most video games.

When the technician punches in simple codes, the computer cycles the many servos and sensors in a late-model auto.

In the Trouble Shoot, we used the computer to identify a faulty throttle position sensor as the cause of the message sent by the warning light. Unfortunately, the computer will not pinpoint the location of the sensor and, pressed for time, we were not able to find it.

Under certain driving conditions, the judges said, a faulty sensor could cause the car to hesitate.

Finally, contestants were required to precisely adjust the timing. That continues to be a simple procedure accomplished with a timing light. However, contestants had to know that the coolant sensor must be disconnected before adjusting the timing. Fortunately, I had read of that procedure.

In fact, the Trouble Shooting contest puts great emphasis on the contestant's reading skills. Results of a written test are combined with the contestant's trouble-shooting score.

So much importance is placed on the written test that a separate award is presented to the student with the highest score. This year, Lyle Rasmussen, of Sahuarita High School near Tucson, won the Lee A. Iacocca Scholastic Achievement Trophy and a full scholarship to MoTech, Chrysler Corp.'s automotive technician training center.

Rasmussen's partner for the contest was Terri Hauk, the first female student to qualify for the nationals in 24 years.

Though there are many new tricks of the trade, a fast mechanic still must be an organized mechanic.

see SHOOT, page 17

Shop volume rises for May, 5 months

By Arthur Flax
SERVICE EDITOR

Service and parts business at new-car dealerships increased in May and in the first five months of 1986.

According to the Automotive News Service Index, shop business at dealerships in May amounted to 102.4 percent of the volume recorded in May 1985.

In the first five months of 1986, service and parts volume showed a gain of 3.4 percent over 1985.

In May, total labor sales (customer paid and warranty) made the biggest gain, up 5.6 percent over last year.

Gross profit on all labor, parts and accessories sales was up 2.8 percent; sales of all parts and accessories climbed 2.2 percent; and shop parts sales (customer paid and warranty) were up 1.5 percent.

Repair orders written were down 0.2 percent in May 1986.

In addition, parts and accessories sales to off-premises customers were up 0.2 percent in May.

Total labor sales registered the biggest gain for the first five months of 1986, climbing 8.3 percent over the period in the previous year. Other indicators showing gains through May were gross profit on all labor, parts and accessories sales, up 6.7 percent; shop parts sales, up 3.6 percent; and sales of all parts and accessories, up 0.2 percent.

Repair orders written registered a 1.8 percent decline.

Parts and accessories sales to off-premises customers were down 3.0 percent for the first five months of 1986.

SERVICE INDEX
102.4*

	May '86 vs May '85	5 mos. '86 vs 5 mos. '85
Gross Profit on All Labor and P&A Sales	+2.8%	+6.7%
Repair Orders Written	−0.2%	−1.8%
Total Labor Sales (Customer & Warranty)	+5.6%	+8.3%
Shop Parts Sales (Customer & Warranty)	+1.5%	+3.6%
Sales of All P&A	+2.2%	+0.2%

*Indicates by Automotive News shows that dollar volume of service and parts operations in May, 1986, were 102.4 percent of operations in May, 1985. Service operations in the first 5 months of 1986 were 103.4 percent of volume in the corresponding period in 1985.

SERVING UP PROFITS

Dealership service managers expect a heapin' helpin' of profits in the coming year

By Scott Miner

Service managers across the country are confident that higher technology in today's cars will draw work away from independent garages — and bring profits on a silver platter into the waiting hands of auto dealers.

Because of this expected increase in business, most dealers plan to spend more money on new equipment during the coming year.

The high-tech equipment will be used particularly to increase efficiency and profitability of engine-tuneup, wheel-alignment and wheel-balancing operations.

However, investments also are slated to increase for equipment used in engine overhaul, transmission work, frame/body straightening, brake jobs, refinishing/rustproofing and other service functions.

The bottom line of the latest *Automotive News* Survey of Service Managers is that business and profitabil-

SERVING UP PROFITS

Continued from cover page

ity opportunities for new-car dealership service departments are on the rise as the '87 model year approaches.

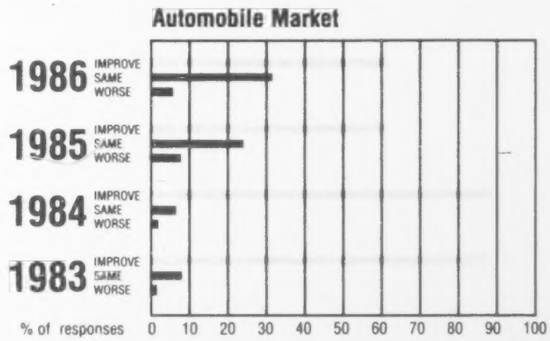
Taken in June 1986, the survey — in questionnaire form — drew responses from new-car dealership service managers throughout the U.S.

While survey results indicate the mood of the nation's dealer service managers definitely continues to be upbeat, it suggests their optimism concerning the overall U.S. automobile market is tempering somewhat.

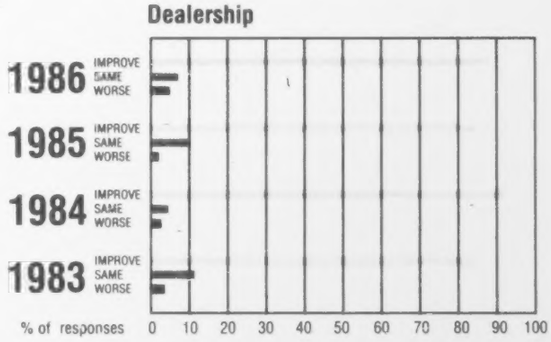
In recent years they projected hefty annual improvements in the automobile market generally. Today the majority of service managers believe the car market will remain on a relatively even keel over the next two years, and there are strong notions that competition will intensify.

A service manager for a dualed domestic-import car dealership in New Haven, Conn., points out: "The sales business, and therefore the service business, of the future will go to those with the best products. I feel that, unless American manufacturers continue to improve their products, the foreign makes will manage to remain ahead of us."

Question 1: **What do you consider the business outlook to be for the automobile market in general and your dealership specifically for the next two years?**

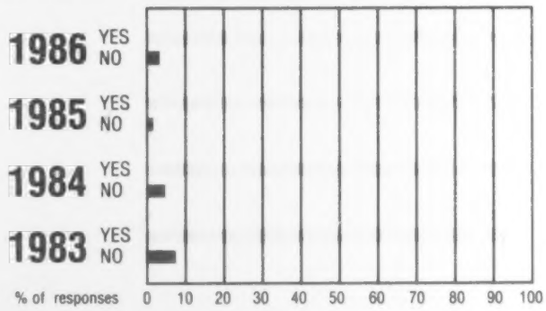


Automobile Market
1986 IMPROVE SAME WORSE
1985 IMPROVE SAME WORSE
1984 IMPROVE SAME WORSE
1983 IMPROVE SAME WORSE
% of responses 0 10 20 30 40 50 60 70 80 90 100



Dealership
1986 IMPROVE SAME WORSE
1985 IMPROVE SAME WORSE
1984 IMPROVE SAME WORSE
1983 IMPROVE SAME WORSE
% of responses 0 10 20 30 40 50 60 70 80 90 100

Question 2: **Do you as a service manager, feel that your service department offers a potential for increased profits in the future?**



Question 9: **Are new model cars more profitable to service than those of previous years?**

COMING AUG. 18: SHOWROOM PROFITS EXTRA

Nonetheless, on their own turf, the service dealers' optimism remains particularly high. They feel very good about the business destinies of their dealership operations, and a clear majority feels their service departments will generate greater profits during the next two years.

In achieving those improved profits, more service managers than last year believe the proof of their success lies mainly in the skilled hands of their technicians.

A respondent in Bakersfield, Calif., notes, "Increasing specialization of vehicles will make dealership experience and service knowledge more important."

He is among the many service managers who believe auto dealerships are providing ample advertising to attract customers to their service bays.

Indeed, many consider their service "reputation" is their best form of advertising, and they do not plan to urge dealership management to boost service-advertising budgets.

Echoing the sentiments of numerous respondents, a service manager in Reading, Pa., points out, "A good service department with a good reputation does not need a lot of advertising."

Among those who want additional advertising and promotion support, direct-mail programs are gaining in popularity.

Service managers also are tightening their grips on service department hiring. When mechanics are hired these days, the survey shows, the service manager has a greater say than ever before.

However, hiring is not always done by the service manager alone, and it still is not uncommon for dealership owners or general managers to be involved.

The big personnel problem: With technology being built into today's cars in increasing measures, service managers are finding it more difficult to get qualified mechanics.

A service manager on the East Coast sums up the thoughts of many others: "The lack of trained technicians is creating such a problem that the hassle for a service manager is beyond comprehension. It's just not worth the aggravation anymore."

Hassle or not, service managers are still kings when it comes to buying service equipment for their shops. For the second straight year, 100 percent of respondents indicate they are involved when their dealerships buy new service equipment.

What kind of equipment will they buy in 1986? According to the survey, a lot of it will be equipment used in engine tuneups, wheel alignments, wheel balancing, engine overhauls, transmission work, brake jobs and refinishing/rustproofing.

On the one hand, while service managers believe their operations will be more profitable in the future, on the other hand they generally feel that 1986 model cars offer no more service-profit potential than those of previous years.

Contributing to that, a number of service managers note, are extended warranties and longer service intervals which prolong intervals between visits to dealer service departments by new-car owners.

A Denver, Colo., service manager sums it up: "No, new cars are not more profitable because of the duration between servicings and because less service is required in the first year."

Besides that, comments a service manager in Erie, Pa., "There are too many comebacks. The newer the car, the harder it is to repair the first time because of intermittent problems due to all the electrical devices."

This year's survey indicates dealer service operations are open fewer hours per week than in recent years. An unprecedented percentage of them are open just

Franchised New-Car Dealers Service & Parts Sales ($ Millions)

Source: NADA Industry Analysis Division

45 to 50 hours a week.

As service departments reduce the number of hours they are open, the average shop is employing fewer people. This is due mainly, it appears, to a relatively high increase in the number of medium-size operations.

Meantime, more service managers indicate an upswing in brake work, collision repair, wheel balancing and engine overhaul as their most profitable operations this year.

A service manager from Manchester, N.H., says his most profitable operations are tuneups, brakes, wheel balancing and wheel alignments because "they are repetitive jobs that offer an opportunity to sell easily installed items."

Another from Meridian, Miss., spells out what he considers his most important service job: "Any maintenance-type operation is more profitable than heavy repair work because only a semi-skilled technician is needed to perform maintenance work and it is highly profitable."

Another in Los Angeles describes profitable operations as those that entail "a lower degree of difficulty with less chance for problems."

Warranty and extended service work are paying off in their departments, say the service managers, but not at the level of recent years.

As for service managers themselves, survey results show that they are now younger on average than in previous years. A clear majority of them are below 44 years of age, because of a slight rise in the percentage of service managers between the ages of 18 to 24.

In keeping with managers being younger, most have been in their profession only four-to-seven years. The next-highest percentage is one-to-three years.

Also, service managers tend more and more to be coming directly out of the mechanics side of the business, rather than from the write-up side.

While service managers are getting younger, their pay is getting better. Most are earning between $35,000 and $44,999 a year. Last year most were in the $25,000-to-$29,000 category.

In the highest-pay category of $50,000 or more, the percentage rose several points from last year and previous years.

There was also an increase in the less-than-$15,000-salary range — possibly reflecting the youth trend in the business — but several respondents in this salary range said they earn additional salary by doubling as parts managers.

To earn bigger bucks, most service managers get some sort of bonus or incentive package. A manager in Boston, who enjoys an unusual benefit, says, "My commuting expenses are also covered."

Stock options and/or a percentage of the service department's profits are the most common supplement to salaries.

While service managers are younger on average, are making more money and working fewer hours, just under half believe their salary and benefits are not proportionate to their professional experience. ■

Automotive News Survey of Dealer Service Managers

Note: Figures indicate percent of total responses for each question, each year; in some cases, totals add to more than 100 percent because of multiple responses to a question.

Question 1: What do you consider the business outlook to be for the automobile market in general and your dealership specifically for the next two years?

Automobile Market	1986	1985	1984	1983
Improve	61.2	64.9	89.7	89.1
Same	32.6	25.7	7.6	8.6
Worse	6.2	9.4	2.7	2.3
Dealership	**1986**	**1985**	**1984**	**1983**
Improve	88.0	86.9	92.1	86.6
Same	8.0	10.2	5.3	10.5
Worse	4.0	2.9	2.6	2.9

Question 2: Do you as a service manager feel that your service department offers the potential for increased profits in the future?

	1986	1985	1984	1983
Yes	98.0	98.6	97.2	96.1
No	2.0	1.4	2.8	3.9

Question 3: Do you feel that your dealership management believes the service department offers the potential for increased profits in the future?

	1986	1985	1984	1983
Yes	96.0	97.1	94.4	95.2
No	4.0	2.9	5.6	4.8

Question 4: Do you as service manager believe your dealership is spending enough on advertising and promotion to improve your service business?

	1986	1985	1984	1983
Yes	74.0	72.3	74.3	66.4
No	26.0	27.7	25.7	33.6

Question 5: Who hires the mechanics in your service department?

	1986	1985	1984	1983
Dealership owner	11.5	15.7	17.8	12.3
Dealership manager	1.9	5.7	6.7	6.2
Service manager	86.6	78.6	75.5	81.5

Question 6: When your dealership buys new service equipment are you involved?

	1986	1985	1984	1983
Yes	100.0	100.0	97.2	98.4
No	0.0	0.0	2.8	1.6

Question 7: Which statement below best describes your involvement in buying new service equipment?

	1986	1985	1984	1983
Original purchase request	62.0	62.9	39.9	38.1
Approve make selected	48.0	38.6	24.3	24.0
Negotiate terms	28.0	22.9	3.7	5.4
Give advice on needs	58.0	37.1	53.5	57.7

Question 8: What type of service equipment does your dealership plan to buy this year?

	1986	1985	1984
Tuneup	24.5	21.4	27.7
Wheel alignment	26.4	18.6	21.3
Wheel balance	11.8	10.0	14.9
Collision repair	1.8	10.0	12.8
Brakes	7.1	5.6	10.6
Transmissions	2.9	1.8	4.3
Engine overhaul	3.7	2.9	2.1
Refinishing	1.8	—	—
Other	10.0	29.7	6.3

Question 9: Are new model cars more profitable to service than those of previous years?

	1986	1985	1984	1983
Yes	13.7	11.4	11.8	14.6
No	50.9	54.3	52.9	67.4
Same	35.4	34.3	35.3	18.0

Question 10: How many hours per week is your service department open?

	1986	1985	1984	1983
Less than 40 hours	18.0	18.6	11.1	23.5
45 to 50 hours	60.0	38.6	47.2	40.7
51 to 55 hours	14.0	27.1	19.4	19.5
56 to 60 hours	6.0	11.4	8.3	9.3
More than 60 hours	2.0	4.3	14.0	7.0

Question 11: How many employees are there in your service department including parts and service personnel?

Number of employees	1986	1985	1984	1983
1 to 10	28.0	25.7	33.3	27.4
11 to 20	18.0	28.6	27.8	25.7
21 to 30	36.0	15.7	13.9	19.5
31 to 40	8.0	17.1	11.1	13.3
More than 40	10.0	12.9	13.9	14.1

Question 12: What is your most profitable service operation?

	1986	1985	1984	1983
Tuneups	24.0	40.3	39.8	39.1
Brakes	25.3	20.4	25.6	23.5
Wheel alignment	6.6	9.0	11.3	8.5
Transmissions	6.6	10.4	8.4	10.3
Collision repair/refinish	9.3	6.1	7.7	5.9
Wheel balance	4.0	1.8	2.7	3.0
Engine overhaul	13.3	3.3	1.8	4.4
Other	10.6	8.7	2.7	5.3

Question 13: How much do the following contribute to your service profits?

1986	Significantly	Some	None
New car warranty work	40.8	48.9	10.2
Extended service contracts	27.0	66.6	6.4
1985	**Significantly**	**Some**	**None**
New car warranty work	44.3	48.6	7.1
Extended service contracts	17.1	67.3	15.6
1984	**Significantly**	**Some**	**None**
New car warranty work	48.8	43.9	7.3
Extended service contracts	8.6	74.3	17.1
1983	**Significantly**	**Some**	**None**
New car warranty work	38.2	52.3	9.5
Extended service contracts	23.4	60.9	15.7

Question 14: What is your age?

	1986	1985	1984	1983
18 to 24	4.0	0.0	0.0	0.7
25 to 29	16.0	15.7	9.8	8.5
30 to 34	16.0	11.4	19.5	13.3
35 to 39	26.0	18.6	29.3	22.8
40 to 44	16.0	22.9	7.3	19.6
45 to 49	10.0	12.9	4.9	10.9
50 to 54	2.0	11.4	12.2	14.1
55 to 59	4.0	4.3	14.6	7.8
60 to 64	6.0	2.8	2.4	2.3

Question 15: Before becoming a service manager at your present or any other dealership, what type of job did you have?

	1986	1985	1984	1983
Write-up man	24.6	31.4	24.4	16.9
Mechanic	43.4	37.2	44.1	38.1
Parts manager	8.6	5.7	9.8	12.2
Other	23.4	25.7	21.7	32.8

Question 16: How many years have you been a service manager (including time as service manager at previous dealerships)?

Number of years	1986	1985	1984	1983
1 to 3	19.6	22.9	22.9	20.3
4 to 7	33.3	21.4	26.6	21.6
8 to 11	17.6	15.7	11.4	15.6
12 to 15	5.8	12.9	15.7	14.1
16 to 19	9.8	11.4	9.2	10.1
20 or more	13.9	15.7	14.2	18.3

Question 17: What was your total compensation last year for being a service manager?

	1986	1985	1984	1983
Less than $15,000	4.1	2.9	2.7	3.1
$15,001 to $19,999	4.1	10.0	8.1	14.0
$20,000 to $24,999	18.7	14.3	16.2	15.6
$25,000 to $29,999	10.4	24.1	27.0	22.1
$30,000 to $34,999	8.3	11.4	13.5	12.5
$35,000 to $39,999	20.8	10.1	10.8	14.8
$40,000 to $44,999	14.5	8.7	6.8	3.9
$45,000 to $49,999	6.2	10.2	9.5	5.5
$50,000 or more	12.5	8.3	5.4	8.5

Question 18: What was your total compensation for being a service manager based on?

	1986	1985	1984	1983
Salary only	9.4	8.6	11.8	14.1
Salary + overtime	1.8	1.9	2.9	2.3
Salary + bonus	26.7	38.6	41.2	29.7
Salary + incentive	43.6	45.2	35.3	42.2
Salary + other	18.5	5.7	8.8	11.7

Question 19: Do you believe your salary and benefits are commensurate with your experience?

	1986	1985	1984	1983
Yes	48.9	54.2	63.6	59.7
No	51.1	45.8	36.4	40.3

The Leader In Incentive Travel

Early-July sales increase 8.8 pct.; 189,516 total is best since 1978

By Jenny L. King
DETROIT REPORTER

Continuing to respond to incentive programs, domestic new-car sales climbed 8.81 percent in early July. It was the fourth consecutive period of increase and was the best July 1-10 since 1978.

Domestic sales the first 10 days of July totaled 189,516 — up 8.81 percent from 174,176 a year earlier — and were the strongest for the period since the 209,964 reported in 1978.

With eight selling days in the period this year and last, the daily average of 23,690 was up 8.81 percent from 21,772 in 1985. The early-July daily rate was down 28.76 percent from the spectacular 33,253 rate for June 21-20.

The July 1-10 total included sales gains for the Big Three and Volkswagen. Honda was down slightly, American Motors tumbled 55.88 percent and Nissan sales were strangled by the months-long changeover for production of the 1987 Sentra four-door sedan at the Smyrna, Tenn., facility.

Chrysler Motors reported a 25.62-percent sales jump, to 29,686 from 23,631 last year. Ford Motor Co. was up 8.83 percent, to 49,848 from 45,803. General Motors sales of 103,896 were up 7.76 percent from 96,410.

VW enjoyed a 49.96-percent gain as its sales rose to 1,858 from 1,239. Honda was off 1.06 percent, to 2,803 from 2,833. AMC plunged 55.88 percent, to 1,350 from 3,060, while estimated Nissan sales of 75 compared with 1,200 a year earlier.

The market shares shifted in favor of Chrysler, which climbed to 15.67 percent from 13.57 percent. Ford retained its 1985 share of 26.30 percent. GM slipped to 54.82 percent from 55.35 percent.

VW moved up to 0.98 percent from 0.71 percent as Honda went to 1.48 percent from 1.63 percent. AMC earned 0.71 percent compared with 1.75 percent a year earlier, and Nissan held just 0.04 percent, down from 0.69 percent.

At Chrysler Motors, July 1-10 brought a 32.44-percent increase for Plymouth, a 28.39-percent jump for Chrysler and an 18.50-percent improvement for Dodge. Ford was up 15.30 percent to offset a 3.25-percent drop for Mercury and a 2.26-percent decline for Lincoln.

At GM, Buick sales were up 12.96 percent, Chevrolet was up 3.77 percent and Pontiac was up 39.61 percent. Cadillac plunged 19.46 percent and Oldsmobile missed its year-ago mark by 0.60 percent.

Year-to-date sales through July 10 totaled 4,329,495, down 3.55 percent from 4,488,843 last year.

Ford Escort/EXP, at 9,750, was the top-selling nameplate July 1-10, followed by Chevrolet Cavalier, 9,610; Chevrolet Celebrity, 9,459; Oldsmobile Cutlass Ciera, 6,919; and Ford Tempo, 6,087.

Auto analysts slate meeting

DEARBORN, Mich. — A steering committee of a newly formed group, the Society of Automotive Analysts, will meet July 29 during the Automotive News World Congress.

Martin Stein, of ABT Associates Inc., Washington; Al Warner and Ed Leviton, of the U.S. Department of Commerce; and Michael Luckey, auto analyst with Shearson Lehman Brothers, are spearheading the group.

It is being formed to promote professional interaction among automotive analysts from government, industry and Wall Street.

Initially, the society will sponsor an annual program and a newsletter. Activities being considered include a membership directory, plant tours, local chapters, industry briefings, conferences and a job bank.

The steering committee will meet for breakfast at 7:30 a.m. July 29 at the Hyatt Regency Dearborn.

For information, contact: Martin Stein, Society of Automotive Analysts, 4250 Connecticut Ave. N.W., Suite 500, Washington, D.C. 20008 or call 202- 362-2800.

Ford returns, U.S. rebounds

With all Ford Motor Co. plants back from vacation, last week's targeted U.S. auto build of 140,026 rebounded 30.79 percent from the previous week's 107,062.

But last week's output was 14.26 percent below the year-ago week's 163,310.

So far this year, 4,643,239 cars have been assembled, 3.26 percent fewer than the 4,779,756 built last year at this time.

Companies shared last week's scheduled car production as follows: General Motors, 56.46 percent; Ford, 28.30 percent; Chrysler Corp., 9.14 percent; Honda of America Manufacturing Inc., 3.36 percent; and New United Motor Manufacturing Inc., 2.74 percent.

American Motors' Kenosha, Wis., plant was down last week for inventory adjustment. Production is scheduled to resume today (July 21).

Volkswagen of America's plant in Westmoreland, Pa., was closed for model changeover last week. It is slated to resume production Aug. 18.

Nissan Motor Manufacturing Co.'s car line in Smyrna, Tenn., remains idle for model changeover.

Ford has scheduled daily overtime at all of its plants this week.

Chrysler slated two nine-hour daily shifts this week at its Belvidere, Ill., and St. Louis No. 2 plants.

Chrysler's St. Louis No. 1 plant is down this week for model changeover. Production is scheduled to resume the week of Oct. 20.

No Saturday overtime has been scheduled at GM plants.

GM's plants down for model changeover week include: Orion Township, Mich., until Aug. 5; Leeds, Mo., until Aug. 5; Lordstown, Ohio, until Aug. 13; Doraville, Ga., until Aug. 4; Norwood, Ohio, until Aug. 5; and Van Nuys, Calif., until Aug. 18.

Truck schedule climbs

Last week's scheduled domestic production of 63,546 trucks climbed 69.88 percent from the previous week's 37,407.

The increase was due to Ford Motor Co. plants returning from vacation.

But last week's output was down a bit (0.82 percent) from the year-ago week's 64,070.

Year-to-date, 1,998,538 trucks have been built, 3.98 percent more than the 1,921,967 assembled last year at this point.

General Motors slated two overtime shifts Saturday (July 19) at its Baltimore plant.

Ford plants slated for Saturday (July 19) overtime were: Norfolk, Va.; Twin Cities; Louisville, Ky.; and St. Louis.

Ford has scheduled daily overtime this week at all its truck plants except Lorain, Ohio.

Saturday (July 26) overtime is slated at Ford's Louisville and St. Louis plants.

Holiday cuts Canadian output

With several plants on vacation, last week's scheduled Canadian production of trucks was the lowest this year. Car output was the lowest since the holiday week ended Jan. 5.

The targeted truck build of 6,367 units last week trailed the previous 1986 low of 7,665 for the week ended Jan. 5.

Last week's truck output was 44.90 percent less than the previous week's 11,555 and 49.83 percent below the year-ago week's 12,691.

But total truck production for 1986 passed the 500,000 mark last week, reaching 505,077.

The year's total is 1.04 percent better than the 499,869 trucks assembled last year at this time.

Navistar International Corp.'s Chatham, Ontario, plant closed for vacation last week.

Targeted auto production of 9,948 units last week was the lowest since the week ended Jan. 5, when 6,175 cars were assembled.

Last week's output dipped 1.87 percent from the previous week's 10,138 and was 4.11 percent below the year-ago week's 10,374.

So far this year, 624,768 cars have been assembled, 6.46 percent more than the 586,847 built last year at this time.

GM eyes its minivan plant options

General Motors Corp. is re-evaluating plans to build a plastic-bodied minivan at its Framingham, Mass., assembly plant.

The plans are being reconsidered because of the UAW local's refusal to renegotiate a labor agreement and the town's refusal to rezone a parcel of land for a plant to make the plastic body panels.

GM confirmed alternative plants are being considered.

GM has not reached a local contract agreement with UAW Local 422, and a union spokesman has said it will not reopen the present contract.

The town board last week refused to allow a rezoning of 14 acres of state-owned land for a $60 million facility to make plastic body panels. GM had wanted a that plant adjacent to the assembly plant.

The Framingham plant now produces the A-body Chevrolet Celebrity and Oldsmobile Cutlass Ciera models.

It's off to Japan for Mazda staff

An initial group of 37 American employees of Mazda Motor Manufacturing (USA) Corp. have begun a month-long training program at Mazda plants in Japan.

Mazda expects to train 400 American employees in Japan through a program scheduled to conclude in April 1987.

The company expects to begin production in September 1987 at its $450 million plant under construction in Flat Rock, Mich.

The first trainees traveling to Japan are primarily leaders from maintenance operations.

Assembly employees will begin Japanese training sessions in the fall.

The trainees will visit Mazda's headquarters and plants in Hiroshima. They will also spend time at the Hofu plant, which serves as a model for the Flat Rock operation, Mazda said.

Training will include classroom instruction, instruction in the operation of production machinery and on-the-job experience at Hofu.

The Flat Rock plant is expected to produce 240,000 vehicles annually at full capacity.

Big Three eye spinoff in finance

By Michelle Krebs
FINANCIAL EDITOR

For the past year, there has been much talk about the Big Three automakers spinning off their finance subsidiaries into separate companies with their own stock.

It may be just that — talk.

So far, there's been no action, though all three companies have considered the possibility.

Analysts say Ford is the most likely candidate.

Kenneth Merrill, Ford executive director of business planning and trust management, said Ford is interested in the possibility.

"We have done a number of studies and we have had a number of discussions," Merrill said, "but we have not decided to do it or not. Nothing is imminent."

Merrill said if Ford decides to do so, it will spin off only perhaps 10 percent of Ford Motor Credit Co. It may also wait until its financial services are more diversified.

Merrill noted that Ford has been looking at ways to draw visibility to its financial services and aerospace operations and to boost Ford Motor stock at the same time.

General Motors officials recently told an auto analysts' meeting that GM has no plans to spin off General Motors Acceptance Corp. Some analysts don't believe them; they think GM will do it in conjunction with a major financial services acquisition.

Ronald Glantz, a Montgomery Securities analyst, said GM may well be preparing for such an action with its low-interest-rate financing programs. Not only do they boost vehicle sales, he noted, they take away market share from other lenders while GMAC grows.

GM said the company has no plans to spin off GMAC at this time. However, in the past, company officials have said it is a possibility for the future.

For the present, GMAC just keeps growing. Last week it moved into marine financing by offering retail and inventory financing and capital loan services to Sea Ray dealers throughout the world and to the Florida Boston Whaler dealers.

Analysts admit Chrysler Financial Corp. is the least likely candidate for a spinoff. Robert S. Miller, Chrysler Corp. vice chairman and Chrysler Financial Corp. chairman, said Chrysler Financial is years away from any such action because it is in the midst of diversification.

The theory is that spinning off a finance subsidiary would draw more attention from Wall Street to auto stocks. The makers complain that Wall Street undervalues their stock by viewing it as automotive stock and not looking at the other

Ford workers on strike in Atlanta
UAW Local 882 members at Ford's Atlanta assembly plant walked off the job July 19 to protest working conditions. The plant is one of two producing Ford Motor Co.'s popular Taurus and Sable models, which are already in slim supply. **More on the work stoppage, Page 47.**

Vast change, stiff competition forecast in Congress keynotes

Industry warnings were sounded last night at the opening session of the 11th annual Automotive News World Congress.

In remarks prepared for delivery before the international audience, keynote speaker Roger B. Smith, General Motors chairman, said "the super-heated competition of the next decade will change the very structure of the industry."

Edward L. Hennessy Jr., chairman of Allied-Signal Corp., declared in his prepared remarks that, with increasing globalization of the automotive industry, suppliers face their most intense competition in this century.

The 1986 World Congress is being held July 27-30 at the Hyatt Regency Hotel, Dearborn, Mich.

Smith said that the North American auto industry is experiencing a "technology backlash" in the wake of the enormous effort manufacturers have made to modernize a 50-year-old industrial base with state-of-the-art technology.

"Technology alone will not get the job done," Smith said. "Human resources will be equally important. The key is to integrate them effectively."

As a result of recent experiences at GM, Smith said, there will be at least three basic changes in the development of future technology.

He said technology will be introduced "in concert with" a fully developed human resource system; it must be coordinated and integrated effectively into company systems; and manufacturing must change its focus from "improving controls to improvements in

Iacocca details Chrysler's second-quarter earnings
With great fanfare, Chrysler Corp. Chairman Lee Iacocca last week reported Chrysler's second-quarter earnings of $488.2 million. However, Ford Motor Co. was the winner in the Big Three profits race with its three-month earnings of $1.078 billion — the first time its quarterly earnings topped $1 billion. **More on industry earnings, Page 50.**

GM turning to Volvo on heavy trucks

By Joseph Bohn
TRUCK EDITOR

General Motors has found the interested heavy-truck venture partner it has been seeking, and discussions between GM and Volvo AB of Sweden have entered a serious stage, according to informed European sources.

Meanwhile, GM also plans to assign management of its medium-duty import trucks to Isuzu of America, beginning in September.

The moves reflect GM's desire to reduce its stake in the medium/heavy truck market while protecting its dealer body.

The attitude within Volvo, according to overseas sources, is that a deal will be made.

They anticipate the venture will begin as a cooperative marketing arrangement, allowing the companies to study further combinations.

The pattern would be similar to that followed by Detroit Diesel Allison and Deere.

Volvo has been a real comer in Europe and in the United States, while GM's share of the heavy-duty truck market has declined.

Volvo's Class 8 sales in Western Europe were up 2 percent last year, and its market share increased to 14.5 percent. Volvo White's U.S. Class 8 market share reached 9.6 percent in the first six months of this year. In 1980, the share for Volvo and White was 7.2 percent.

GM's U.S. Class 8 market share fell from 16.9 percent in 1980 to 7.2 percent during the first half of 1986, according to MVMA.

GM has been stymied in its efforts to strengthen its European truck operations, running into political resistance from the British government when it tried to strike up deal with Leyland and running aground again with ENASA in Spain.

GM plans to assign importation of Chevy Forward and GMC Tiltmaster Isuzu Trucks to Isuzu of America. Isuzu has already notified its dealers of a pending new setup with GM.

Essentially, Chevy and GMC will still market the vehicles and maintain their dealer relationships, but Isuzu will take over such things as ordering, shipping and stocking the trucks.

Isuzu markets those vehicles through its own separate franchise.

Desta would help troubled Greece

By Andrew R. McGill
EDITOR OF AUTOMOTIVE NEWS

ATHENS, Greece — The troubled Greek economy, ravaged by the scarcity of big-spending American tourists, could bounce back in the dollar column in an unusual way — by exporting its manufactured wares, especially cars, to U.S. shores.

Most Western automakers abandoned their manufacturing operations in Greece after socialist Prime Minister Andreas Papandreou took over in 1981, fearing possible nationalization and probable declines in productivity.

"Worker productivity wasn't that good to start with," recalls one former Greek trade official. "And things could only get worse in a socialist government. So the Americans and most Europeans pulled out."

After five years, the worst fears have not ma-

U.S.-built Civic starts as an '86

By Kathy Boyer and Joe Wilssens
AUTOMOTIVE NEWS STAFF

MARYSVILLE, Ohio — Who would begin production of a 1986 model at the end of July? Honda of America Manufacturing Inc., that's who.

The first 1986 four-door Civic sedan model made in the United States was completed Thursday (July 24) at Honda's assembly plant here.

Ed Buker, senior manager of assembly, said that was the earliest Honda could get the line up to speed.

One may wonder why Honda didn't just introduce a 1987 model. "We follow a basic schedule, and model changeover is not scheduled to take place until September," he said.

With a track record like Honda's — a mere seven day-supply of domestic Accords on July 1 — selling the 1986 Marysville Civics should be no problem.

The Civic addition was "simple" because the car has fewer process steps than current Accord models, Buker said.

Currently, local content of the U.S.-built Civic is 50 percent, but that will increase to 60 percent when assembly of the Civic 1.5-liter engine begins at Honda's engine plant in Ohio this fall.

AUTOMOTIVE NEWS/JOE WILSSENS

Honda's Ohio workers build Civics and Accords on the same line

Local content is the only difference between the Civics built in the United States and in Japan.

Honda, which has been producing Accords in Marysville since 1982, was the first Japanese firm to build cars in the United States.

During the 1985 calendar year, the company sold 208,031 Civics in the United States.

First-half Civic sales in the U.S. stood at 114,939.

There are two production lines at the plant. At present, Line One assembles only Accords and the second line produces the Accord hatchback and the Civic sedan.

Sales projections indicate that for a while, Honda will have to continue running Accords and Civics together on the second line, the company said.

Output at the Marysville plant should soon reach 1,330 cars per day, 700 on Line One and 630 on Line Two, according to Buker.

Civic production is scheduled at about 335 units per day, depending on customer demand.

Last year, 145,337 cars were built at the Marysville plant. Honda anticipates production of 360,000 cars a year by 1988.

Domestic-car points lose 102 in 1st half; total is now 20,571

By John K. Teahen Jr.
SENIOR EDITOR

A deluge of incentive programs couldn't keep the nation's domestic dealer population on an even keel during the first six months of 1986.

The semiannual Automotive News census found 20,571 outlets handling domestic cars on July 1, a decline of 102 from the 20,673 in operation at the beginning of the year.

The domestic market was flat throughout the first half. The incentives may have staved off a more serious decline in the dealership total, but they apparently didn't bring in enough new-car buyers to hold it steady.

The first-half dip of 102 establishments was a bit less than the year-earlier drop of 115. But it made 1984 merely a fond memory: There was a gain of 54 outlets during the first half of that year.

Going back a bit farther, one might say that dealers trod the glory road this year in comparison with the horrendous days of the early-1980s recession. There were first-half losses of 556 dealerships in 1982, 325 in 1981 and 930 in 1980.

U.S. CAR OUTLETS

	Jul. 1, 1986	Jan. 1, 1986
American Motors-Renault	1,371	1,421
Chrysler Motors	4,000	4,003
Ford Motor Co.	5,482	5,517
General Motors	9,805	9,830
Volkswagen	878	877
TOTALS	21,536	21,648
Minus Intercorporate Duals	965	975
NET OUTLETS	20,571	20,673

Copyright, 1986, Automotive News

Four of the five companies included in the domestic census showed losses in the first half of 1986, although the dip for Chrysler Motors was hardly worth tabulating. Chrysler was down three outlets. There were downturns of 25 for General Motors, 35 for Ford Motor Co. and 50 for American-Motors-Renault.

Volkswagen was the only gainer; it was up one.

That combined loss of 112 stores

see CENSUS, page 47

Mid-July sales plunge

By Jenny L. King
DETROIT REPORTER

Domestic new-car sales plunged 18.01 percent in mid-July, snapping the four-period winning streak that began in early June.

On a daily-rate basis, July 11-20 sales were down 7.83 percent from 1985. There were eight days in the mid-July period this year compared with nine in 1985.

The daily selling rate of 22,217 also was off 6.22 percent from the July 1-10 average of 23,690.

July 11-20 sales by the major U.S. makers totaled 177,734, down 18.07 percent from 216,938 a year earlier.

On a straight numerical comparison, only Honda showed a gain; on a daily-rate basis, Chrysler also was up. General Motors was down 19.87 percent, to 96,251 from 120,124 (down 9.86 percent daily rate). Ford Motor Co. reported sales of 47,708, off 15.88 percent from 56,716 (down 5.33 percent daily rate).

Chrysler Motors was off 7.47 percent, to 27,526 from 29,749 (up 4.11 percent daily rate). American Motors had estimated sales of 1,500 passenger cars, down 59.79 percent from 3,730 a year ago (down 54.59 percent daily rate).

Honda sales of 3,705 were up 2.83 percent from 3,603 (up 15.75 percent daily rate). Nissan sales were estimated at 75 units, down from 1,200 a year ago.

GM earned 54.15 percent of the mid-month market, off from 55.37 percent a year earlier. Ford had 26.84 percent, up from 26.15 percent. Chrysler's share of 15.49 percent was up nearly two percentage points from 13.71 percent.

Honda earned 2.09 percent, up from 1.66 percent. AMC's 0.84 percent share was down from 1.72 percent. VW had 0.55 percent, down from 0.84 percent, and Nissan tumbled to an estimated 0.04 percent from 0.55 percent.

Honda, up 2.83 percent, showed the only increase among the domestic makes.

Plymouth was off 2.04 percent; Dodge, 3.16 percent; Lincoln, 12.38 percent; Pontiac, 13.93 percent; Ford, 14.50 percent; AMC, 16.67 percent; Chrysler, 17.02 percent; Oldsmobile, 18.81 percent; Chevrolet, 18.86 percent; Mercury, 20.28 percent; Buick, 21.23 percent; Cadillac, 39.51 percent; Volkswagen, 45.71 percent; and Renault, 63.56 percent.

Nissan, finishing its Sentra 1987 model changeover, is not reporting 10-day sales this month.

Year-to-date sales of 4,507,229 were down 4.22 percent from 4,705,781 in 1985.

Chevrolet Cavalier was the best-selling domestic nameplate July 11-20. Cavalier's 9,050 total was followed by Ford Escort/EXP, 8,665; Chevrolet Celebrity, 7,954; Oldsmobile Cutlass Ciera, 7,289; and Oldsmobile 88, 6,192.

Huge auction link dies

By Jenny L. King
DETROIT REPORTER

Anglo American Auto Auctions Inc. will not become part of Cox Communications' Manheim Auto Auctions.

Anglo American officials learned July 18 that the Cox offer to buy was thwarted when the two transactions involved failed to dovetail.

Manheim had agreed in principle to purchase 73 percent of Sandgate Corp., the holding company of which AAAA is a part, from the controlling stockholder, British Car Auction Group plc, and the remaining 27 percent from private stockholders. The price was set at $18 a share, or $27 million, when the sale process began last May.

Anglo American, headquartered in Nashville, operates 12 U.S. auto auctions. There are 17 North American outlets in the Atlanta-based Manheim chain.

The purchase was to have been completed by early August, according to AAAA President Michael J. Richardson. Various governmental agencies delayed the private-stock tender offer, he said.

He said that Cox Communications insisted the two purchases be intertwined, and when it refused to unscramble them, the $18 a share was no longer deemed a fair price. The resulting Manheim chain of auctions would have been the largest of its kind in the world.

"We had a very good third quarter," Richardson said of Anglo American. "In fact, it was so good, it drove the stock price up to 19½." At that point, he said, he began to sense the deal might not go through.

Manheim President Warren Young summed up his company's reaction to the termination of negotiations in two words: "very disappointed."

"We developed a very high regard for Anglo American . . . a merger would have been beneficial to the entire auto auction industry," Young said late last week.

In spite of a good interim working relationship with Manheim, Richardson said he and Anglo American staff people have "an enormous feeling of relief."

British Car Auctions is tendering the remaining 27 percent of Sandgate at $18 a share, and taking it private, according to a statement.

Richardson said he plans to continue to pursue a new Anglo site in the Los Angeles area.

Nissan increasing automation at U.S. plant

By Scott Miner
DETROIT REPORTER

Nissan Motor Manufacturing Corp. U.S.A. plans to increase the number of robots at its Smyrna, Tenn., plant by nearly 50 percent as it brings production up to capacity. The plant assembles pickups and Sentra cars.

Currently the plant has 239 robots and is producing 15,000 trucks a month. When it resumes Sentra production Aug. 12, it will have 313 robots. When the truck model changeover is finished in December, the plant will have 351 robots and will be running at a maximum capacity of 240,000 vehicles a year.

"We're upgrading our operations as we go along," said President Marvin Runyon. "We've been tooling for a little over five years for most of the operations we have in the plant."

Runyon said the plant is "very far advanced as far as technology is concerned. I don't think we are light years ahead of anybody. Most of it is bought off the shelf."

He added, "People are our most important resource, not necessarily technology. Technology is nice. If you need it, you should have it. But people are what make the technology work."

Nissan began building Sentras at Smyrna early in 1985. "The tooling we put in at that time was not the most automated," Runyon said. "It's impossible to get the right kind of tooling on short notice."

Runyon said that when the new equipment is installed, it will be possible to make a model change in a weekend. By comparison, the Sentra assembly line has been down since March 31 to prepare for the addition of the four-door sedan.

Most of the robots in the plant are from Japan and were produced under a license agreement with the United States. Most will be in the body shop, with others in welding operations.

". . . The technology originated in the United States," Runyon said. "Americans are excellent innovators. Japanese are excellent implementers. That's the story of robots.

"Robots were started and conceived in the United States and they just sort of sat there," he said. "The Japanese looked at them and said, 'We like that,' and they put them in."

SPIN OFF

FROM PAGE 1

pieces of the auto companies.

The automakers recognize the importance of their highly profitable financial subsidiaries, which are positioned for enormous growth. However, auto executives think Wall Street fails to appreciate their importance since the finance companies' earnings are buried in the auto companies' earnings.

The thinking goes that if the financial subsidiary is spun off — at least in part — and a special class of stock is created, much as GM did with the purchase of Hughes Aircraft Co. and Electronic Data Systems Corp., then Wall Street would be forced to take notice.

Some analysts think talk of possible action is just to gain the extra valuation in the auto companies' stock.

"They won't do it," said Wendy Beale, of Smith Barney, Harris Upham & Co. "Their stock got the credit for the finance subsidiaries with all the talk of spinning them off so why bother doing it?"

Great debate rages among Wall Street analysts about whether the auto companies will or won't set up the finance subsidiaries as separate companies.

"They absolutely will do it," asserted Gary Glaser, First Boston Corp. "Ford will be the first. I expect it to happen in 1986 and it could happen at any moment."

Scott Merlis, of Morgan Stanley, said all have potential in the next two to three years, but it's not likely in 1986.

"You have to wonder if it's going to happen since it hasn't happened by now," said David Healy, of Drexel Burnham Lambert. There also is great debate as to whether it's a good idea or a bad one.

"It doesn't make sense," insisted Jean-Claude Gruet, of Salomon Brothers Inc.

Gruet contends it makes no sense to spin off the "crown jewel." The auto companies risk losing more on the auto side the value that can be added through the new stock. Once the finance company is spun off, the parent company loses its earnings, he noted.

Ann Knight, PaineWebber Inc., said the theory makes some sense. Often, she said, a conglomerate's stock is not as highly valued as its individual parts.

However, she doubts the auto companies are in a hurry to spin off their finance companies. "The practical decision of the undertaking is enormous," she said.

The prevailing consensus is that if the auto companies were to spin off the finance subsidiaries, they would only spin off part of them, probably 20 percent.

That would mean that the rest — 80 percent — of a finance company's earnings would still be counted in the auto company's total earnings. That's particularly important since the automotive industry has matured and automakers will be looking to their non-automotive businesses for future growth.

"I think that's an idea whose time will come," said Chrysler's Miller. However, he said, Chrysler Financial will stay — in total — a part of Chrysler Corp. at least until Chrysler Financial's diversification plan is complete.

"We're somewhere between 25 to 30 percent diversified," Miller said. "Because the business is still so dominated by auto loans, it does not yet have the credibility in the capital markets to be a truly independent business in the way that Hughes Aircraft is independent from GM."

Miller said that if Chrysler Financial's diversification succeeds, Chrysler Corp. would consider a separate class of stock or an entire spinoff.

Infant among giants: AMC Financial grows

By Michelle Krebs
FINANCIAL EDITOR

American Motors Financial Corp. is an infant among the domestic automakers' finance subsidiaries.

The company is only four years old, while its counterparts range from 21 to 67 years old.

AMC established its financial subsidiary in February 1982 when competing manufacturers' finance companies refused to provide either wholesale or retail financing on vehicles other than those produced by their parent companies.

AM Financial develops its own financing programs, but it has an agreement with Chrysler Financial Corp. to provide services through Chrysler's nationwide branch network.

Despite AM Financial's tender age, the company is growing and its parents have grandiose plans for it.

Geoffrey Banks, AM Financial president, said, "1985 was another crackerjack year. Everything met our projections and the numbers that didn't were better than projections."

The subsidiary closed out the year with receivables outstanding at $600 million, up from $460 million in 1984. Earnings were $6.9 million, up from $4.7 million.

The number of dealers using AM Financial rose to 253 from 227. AM Financial financed 22 percent of AMC and Renault vehicles sold, compared with 19 percent in 1984.

"Every dealer knows of our services," Banks said, "and we've dealt with more than half of the dealers in one way or another. Now, we need to build up the frequency of use.

"We're looking for relationships rather than just placement of dollars," he added.

For 1986, Banks predicts some growth but at a slower rate than in previous years.

"In 1986, we'll continue to increase our penetration," he said. "We will improve our dealer count. But when the new vehicles come on stream, we'll see a kick-up in terms of growth again."

In 1987, AMC will introduce three new families of products which will increase the level of dealer inventory to be financed, Banks said.

Beyond that, Banks would like AM Financial to be financing 50 percent of AMC and Renault dealers in five years.

"It's an ambitious target, but that's our guiding light, where we would like to be," he said.

Banks said the game plan is to concentrate on the basic services AM Financial now offers. The subsidiary, unlike those of the Big Three, is not looking for acquisitions or diversification.

REGISTRATIONS

Registrations at '86 peak

By Jenny L. King
DETROIT REPORTER

New-car registrations in the U.S. reached their highest total of the 1986 calendar year in May. But the figure was only the fifth best for a month that traditionally has strong domestic and import sales.

May registrations of 917,579 were up less than one percent from 911,932 a year earlier and were up 1.25 percent from 906,271 in April, according to figures from R.L. Polk & Co.

Imports rose to 28.32 percent of the market, up 5.18 percentage points from 23.14 percent last year.

Domestic registrations for the month numbered 657,742, up 2.75 percent from 640,112 in April, but down 6.16 percent from 700,907 in May 1985. Incentives offered by the domestic makers had yet to take hold of the market in May.

As has been the pattern this year, the U.S. makers lost ground in May to the imports, which posted record registrations of 259,337, up 23.13 percent from 211,025 a year ago.

The imports' 5.18 percentage-point gain resulted in market-share losses for the domestic makers. General Motors was down 2.91 percentage points; Ford Motor Co. was down 1.39 percentage points; Chrysler Motors was down 0.26 percentage points; and American Motors, was down 0.62 percentage points.

Imports earned the largest portion of May's registrations, followed by domestic intermediates at 27.83 percent, compacts at 16.36 percent, subcompacts at 10.89 percent, standards at 9.38 percent and luxury models at 7.22 percent.

Without imports, the May market included: intermediates, 38.83 percent; compacts, 22.82 percent; subcompacts, 15.20 percent; standards, 13.08 percent; and luxuries, 10.07 percent.

Exports up for 2 in Japan

TOKYO — Toyota Motor Corp. and Nissan Motor Co. reported record exports during June despite increased overseas competition resulting from the yen's sharp appreciation against other currencies.

Toyota said its vehicle exports in June increased 3.6 percent from the year-ago total to 179,294 units, exceeding the previous June record of 173,144, set in 1985.

Nissan also exported a record June high of 136,673 units, an increase of 4.3 percent from the year-earlier total.

Toyota said its June exports marked the first increase over the year-earlier month in four months. It said the increase was due to good sales in North America and Europe.

A breakdown of Toyota's June exports included 118,385 cars, up 12.6 percent from the year-ago total, and 60,909 trucks and buses, down 10.4 percent.

Toyota said its shipments to the United States jumped some 20 percent to 103,009 in June despite price increases since last September.

Nissan's exports to the United States in June increased 20.2 percent over last year's total to 77,771 units.

Toyota said production for June rose 3.1 percent to a record for the month of 314,306 units, beating the previous June mark of 304,881 set in 1985.

Nissan said its production for the month declined 4.3 percent to 208,587.

Jobless rate dips in Japan

TOKYO — Japan's seasonally adjusted unemployment rate in May fell 0.2 percent from April to 2.7 percent.

According the the Japanese government's Management and Coordination Agency, the April jobless rate of 2.9 percent matched the highest rate on record, set last December.

May saw the number of unemployed fall to 1.62 million from 1.82 million in April but registered an increase of 90,000 compared with May 1985, the government said.

The agency also announced that 59.21 million people were working in May, about 200,000 more than in the same month last year.

The number of workers in the service and construction sectors increased from April, while those in manufacturing and agriculture declined, the agency said.

The yen's appreciation against the U.S. dollar and other currencies continued to affect employment in the manufacturing industry, the government said.

AUCTION DATES

American Motors

July 29 — Aptco Auto Auction, Taylor, Mich., and D-A Auto Auction, New Stanton, Pa.

July 30 — Kansas City Auto Auction, Kansas City, Mo., and Metro Milwaukee Auto Auction, Caledonia, Wis.

NHTSA gives insurers timetable on theft data

By Geoff Sundstrom
WASHINGTON REPORTER

WASHINGTON — When the insurance industry went to bat for a motor-vehicle anti-theft standard in the early 1980s, it took a strike and then hit a home run.

Congress told the insurance companies they would have to compile, on an annual basis, all manner of data on motor-vehicle thefts and supply it to the federal government. Lawmakers then passed the Motor Vehicle Theft Law Enforcement Act of 1984, also known as the parts-marking law.

Now, as auto manufacturers are scrambling to label vehicle parts with Vehicle Identification Numbers for the 1987 model year, insurance companies are gearing up for the reporting requirements. NHTSA has proposed that insurers submit their first vehicle theft reports in October.

The reports must include information on the thefts and recoveries of stolen vehicles insured by each company; the rating rules they use to establish premiums for comprehensive insurance; the premium penalties for vehicles considered more likely to be stolen; and actions taken to reduce premiums if the rate of theft drops.

The government also wants to know what insurers are doing to help reduce thefts.

NHTSA is charged with digesting that material for a report to Congress in October 1987.

Congress stipulated that only the largest of the insurance companies are to be subject to the reporting requirement. NHTSA has proposed that 31 insurers be covered by the rule and that the remainder, all small insurers, be excused from collecting data.

NHTSA said it would take comments on its proposal until July 25.

CONGRESS

FROM PAGE 1

work tools themselves."

In assessing the current U.S. market, Smith said the industry "still is on track" for 15.5 million new-car and truck sales in the U.S. in 1986, "close to last year's record of 15.7 million."

Hennessy noted that "many U.S. suppliers are feeling the heat."

He referred to a recent industry study that projects 20 percent of domestic suppliers will go out of business within 10 years because of offshore sourcing by domestic vehicle manufacturers.

"Detroit's loss of U.S. market share to Japan has hurt American suppliers," Hennessy said. "Japanese automakers have preferred to use their traditional suppliers, both in Japan and here in the U.S. — where some 50 Japanese firms have now set up shop."

While European suppliers have been largely shielded from Japanese competition by trade barriers, Hennessy said, "now they, too, are struggling to measure up to the new cost and quality standards."

To turn difficulties into opportunities, Hennessy said, the domestic supplier industry must follow the lead of Detroit vehicle manufacturers in "renewing our businesses from top to bottom."

The Allied-Signal chairman suggested a five-pronged thrust by suppliers.

It includes: Entering into new partnerships with automaking customers; becoming truly international in marketing and production capabilities; creating automated factories focused on flexible production rather than volume output; getting all supplier company people working together; and developing more sophisticated research and engineering skills.

Hennessy stressed that suppliers who want to succeed in today's automotive industry must have global manufacturing positions; be able to guarantee rapid deliveries anywhere in the world; and be located in areas that help keep production costs at an absolute minimum.

He cited the need for worldwide computerized networks that link machines with data bases, production systems with business systems and design and manufacturing functions with personnel and distribution functions.

On the theme of product innovation, Hennessy said today's average car contains $625 worth of electronics, and predicted the figure "could reach $1,400 by 1995."

Hennessy said Allied-Signal will invest $200 million during the next few years to strengthen its multinational capabilities in electronics systems and is looking for acquisitions to "fill out and extend our product lines."

He said Allied-Signal wants its Bendix Electronics operation "to be a $1 billion company by 1990."

Ward's to launch international issue

Ward's Communications Inc. later this year will launch a new publication called Ward's Automotive International.

The publication will be headquartered in Detroit. Editor will be Mike Sheldrick, former Detroit bureau chief for Business Week.

Ward's, a subsidiary of Thomson International, already has several auto products, including newsletters, statistical services and Ward's Auto World magazine, a controlled-circulation monthly. The company also plans to launch a dealer magazine, according to one source involved in the planning.

AHA Fleetmaster — the first step in 'Project Big Yellow'

AHA to bring back the taxi

AHA Automotive Technologies Corp. is introducing a taxi which it calls the first step in its "Project Big Yellow" program to build a cab it hopes will fill the void left when Checker abandoned taxi production.

The AHA Fleetmaster — a new six-passenger taxi — is making its debut at the Automotive News World Congress.

The company, whose shares are traded on the Toronto Stock Exchange, is located in Brampton, Ontario.

Company President Melvyn A. Stein said that the modified Mercury Grand Marquis accommodates six passengers on two facing seats in the rear compartment. A separate compartment next to the driver — instead of a seat — provides additional luggage space.

"The major difference with this taxi is that it holds six passengers as opposed to three," Stein said. The vehicle's wheelbase has been extended 36 inches, and it has upgraded suspension, a heavy-duty cooling system and oversized tires.

The taxi will sell for "under $20,000," Stein said.

AHA will begin building the Fleetmaster during the 1987 model year, with a target of 1,000.

AHA also builds standard and stretch limousines, ambulances, vans and motor homes.

CENSUS

FROM PAGE 3

was reduced to 102 by a change in the number of intercorporate duals.

All figures in this article and in the accompanying tables signify the net change in dealer totals, both for the individual corporations and car lines and for the domestic industry as a whole.

This year's quarterly breakdown of census figures was discouraging. The domestic industry lost 25 outlets in the first quarter, but that number tripled to 77 for the April-June period.

On the franchise side, six of the 14 makes showed gains for the first half, six were down and two were unchanged. The declines outnumbered the gains.

There were advances of 10 franchises for Oldsmobile, eight for Lincoln, five for Pontiac, four for Plymouth, three for Dodge and one for VW.

Declines amounted to 43 for Ford, 42 for Renault, 18 for AMC, five for Buick, five for Chevrolet and one for Chrysler. The Jan. 1 and midyear franchise totals were unchanged for Mercury and Cadillac.

Chrysler Motors had 4,000 car dealers on July 1, down three from the beginning of the year. There was a gain of two in the first quarter and a loss of five in the second.

The second-quarter ended a string of 14 consecutive quarters in which the company's dealer total had either risen or stayed the same.

Franchise figures on July 1 were Chrysler, 3,048; Plymouth, 3,013; and Dodge, 2,930.

In addition to its 4,000 car dealers, Chrysler Motors has three that handle only Dodge trucks. They are not included in the Chrysler Motors car dealership total or in the Dodge car franchise total.

Ford Motor Co. had quarterly slips of 16 and 19 as its car dealer total fell to 5,482 from 5,517. In 1985, Ford showed a decline of 20 for the first half.

Franchise totals on July 1 were Ford, 4,639; Mercury, 2,477; and Lincoln, 1,606.

Ford Motor has 113 dealers that handle only Ford heavy-duty trucks. They are not included in the company's car dealer total or in the Ford Division car franchise total.

GM had a first-half drop of 25 dealerships, five in the first quarter and 20 in the second. The July 1 total was 9,805. The decline was 55 in the first half of 1985.

Midyear franchise figures were Chevrolet, 5,045; Oldsmobile, 3,200; Pontiac, 2,985; Buick, 2,955; and Cadillac, 1,615.

Adding in the GMC Truck outlets that do not handle any of the corporation's car lines, the GM dealer total is 10,375.

AMC-Renault was steady in the first quarter with a dip of only one outlet, but the second quarter brought a drop of 49. The July 1 count was 1,371. In the first half of 1985, AMC-Renault was down 26.

Franchise totals on July 1 were AMC, 1,350; Renault, 1,276.

Nearly all the AMC-Renault dealerships handle both lines — 1,253 of the 1,371, or 91 percent.

AMC has 7: ! duals with Big Three Makes, and Renault is included in 91 percent of them.

Volkswagen showed no change in the first quarter and added one dealer in the second for a midyear total of 878. In the first half of 1985, VW lost 15. VW has an estimated 150 duals with AMC-Renault and Big Three makes.

The latest count of 20,571 domestic-car dealerships is down 216 from the 20,787 in operation on July 1, 1985.

Atlanta strike halves Taurus/Sable output

By Mary Connelly
DETROIT REPORTER

A strike at one of the two plants producing Ford Motor Co.'s hot-selling Taurus and Sable models may put a further pinch on already slim supplies.

UAW Local 882 at Ford's Atlanta assembly plant walked off the job to protest working conditions. The strike began at 12:01 a.m. Saturday, July 19, prior to the 2:30 a.m. end of the scheduled shift.

Last Thursday (July 24), a Ford spokesman said no negotiations had been held since the strike began. No talks were scheduled at presstime.

Two eight-hour overtime shifts were scheduled Saturday at Ford's Chicago assembly plant which has been producing 50 percent of the Taurus and Sable sedans and wagons.

Both plants produce at a rate of 63 cars per hour and 1,000 units daily.

On July 1, inventory figures showed a 44-day supply of Taurus and a 34-day supply of Sable models. A 60-day supply is considered normal.

A spot check of Ford and Lincoln-Mercury dealers throughout the country indicated that, for many, consumer demand outstrips supply. The Atlanta strike can only worsen the situation.

"The supply is a big zero," said Ricco Arce, general manager of Northstar Lincoln-Mercury, Poughkeepsie, N.Y.

"I don't have one car in stock, not a demo, nothing. It's a fabulous car, we just don't have it.

"People are coming in asking, 'Where is Sable?' I show them brochures or pictures.

"I have retail orders in my order bank and I cannot supply them. I have a lot of mad customers here right now," Arce said.

"That car is in critical supply," said Gary Collins, president of Downtown Ford, Louisville, Ky., referring to the Taurus.

"We could sell five times what we're getting," he said.

"A strike concerns me but it doesn't upset me," Collins said. "Getting one less a month will not put us out of business. We've got other products just as good."

"Supply is pretty severe," said Dale Nasser, general manager of Fortune Lincoln-Mercury, El Paso, Texas.

"Ford has to do something. We're losing quite a bit of business."

Nasser said he has five Sable models in stock. Three retail units have been on order two months and he expects an additional three-week wait before delivery.

The strike at the Atlanta plant is allowed under the national agreement between Ford and the UAW, which permits employees to strike over health and safety issues.

Sid Hamby, president of UAW Local 882, which represents 3,000 unionized workers at the plant, said members of the Atlanta bargaining committee are scheduled to meet Tuesday in Detroit with Stephen Yokich, head of the international union's Ford department.

Hamby said the issues which prompted the strike include "severe heat problems" in the plant, "poor ventilation," noise levels in excess of federal regulations and hazardous asbestos fibers in working areas.

Ford declined to comment on the union's allegations.

The two sides had been discussing the issues for three months and continued negotiating until the walkout.

"We very much regret the work stoppage," Ford said. "We hope for a quick resolution of the issues and will continue to work toward an early settlement that is fair to both parties.

"Then we can get back to doing what we do best — building the Ford Taurus and Mercury Sable, both of which remain in strong demand throughout North America."

Taurus and Sable represent a $3 billion investment for Ford. Production at the Atlanta plant began Oct. 14 and public introduction followed Dec. 26.

Ford said it spent $250 million modernizing the Atlanta plant, adding a new paint facility and expanding the body shop to add 100 robots in preparation for the Taurus/Sable launch.

Ford Steel strike OK'd

By Mary Connelly
DETROIT REPORTER

Ford Motor Co. has a one-month supply of steel from Rouge Steel and is studying contingency plans in case its steel-producing subsidiary is closed by a strike.

Members of UAW Local 600 approved a strike authorization vote at the Rouge Steel plant last week. No strike deadline has been set. A contract covering 4,000 employees expires Thursday (July 31).

The Rouge plant supplies 40 percent of Ford's steel requirements.

If a strike occurs, it is possible that an additional 9,000 members of UAW Local 600 at the Rouge manufacturing complex could also walk off the job because they are not covered by a signed agreement. Ford has confirmed that a contract was negotiated in 1984 but was never signed.

Negotiators for Ford and the UAW met at two brief main-table meetings last Wednesday and Thursday. Ford characterized those 35-minute and 15-minute sessions as "congenial."

No additional main-table sessions were scheduled at presstime, although subcommittee meetings were continuing.

The UAW said Ford has failed to address the union's chief concern — clarifying the future of the steel plant which the company has said it would consider selling. A Ford spokesman said the outcome of the current negotiations will "play a role" in determining the future of the steel operation which union sources said lost $90 million in 1985.

"The company has made an economic proposal and we're looking at it," the UAW said last week. "It failed to address one of the key questions — clarification of the future of this plant. All of that affects what kind of contract would be in the best interest of Rouge Steel workers."

The union has not made a formal counterproposal to the company's economic proposal.

Ford described its economic offer as "fair and realistic, especially in view of the unsettled conditions in the U.S. steel industry and the competitive realities of the marketplace."

PRODUCTION

Auto production sliced by summer downtime

By Kathy Boyer
DETROIT REPORTER

With several plants down for model changeover and vacation, last week's scheduled domestic auto output fell to 112,015 units.

The figure was 16.86 percent below the previous week's 134,730 and 27.72 percent below the year-ago week's 154,974.

Nissan Motor Manufacturing Co.'s car line in Smyrna, Tenn., remains idle for model changeover.

American Motors' Kenosha, Wis., plant was closed for vacation last week. It is scheduled to resume output today (July 28).

Volkswagen of America's plant in Westmoreland, Pa., will be idle until Aug. 18 for changeover.

Beginning today, three more GM plants are closed for changeover: Fairfax, Kan., until Aug. 5; Flint, Mich. (Buick City), until Aug. 7; and Willow Run, Mich., until Aug. 14.

Other GM plants down for changeover are: Orion Township, Mich.; Leeds, Mo.; Lordstown, Ohio; Doraville, Ga.; Norwood, Ohio; Pontiac, Mich.; and Van Nuys, Calif.

Taurus-Sable production at Ford's Atlanta plant was halted July 19 by a strike over working conditions.

Saturday (July 26) overtime was scheduled at Ford's Chicago plant, the other Taurus-Sable facility.

Ford has slated daily overtime this week at all plants except Wixom, Mich.

Chrysler scheduled overtime last Saturday at its Belvidere, Ill., plant.

Daily overtime this week is slated at Belvidere and at Chrysler's St. Louis (No. 2) and Sterling Heights, Mich., facilities.

2-millionth truck produced

Domestic makers assembled their two-millionth truck of the year last Monday (July 21), nine days ahead of the 1985 pace.

Last week's targeted production of 68,987 trucks was 3.91 percent more than the previous week's 66,391 and 0.80 percent more than the year-ago week's 68,439.

American Motors' Toledo, Ohio, plant, which assembles Jeeps, closed for vacation July 21. It will reopen Aug. 11.

Navistar International's plant in Springfield, Ohio, resumes production today (July 28). It had been closed for vacation since July 14.

Daily overtime is slated this week (July 28) at all Ford plants except Lorain, Ohio.

Overtime is scheduled Saturday (Aug. 2) at Ford's Twin Cities plant.

Canadian trucks at '86 low

Car-and-truck production in Canada continued to be affected by plant vacations last week.

The truck production estimate of 3,857 units was the lowest of any week this year.

Output was 43.35 percent below the previous week's 6,808 and 53.68 percent below the year-ago week's 8,327.

Scheduled output of 9,132 cars was 2.04 percent more than the previous week's 8,949 but 53.72 percent below the year-ago week's 19,730.

General Motors' Ste. Therese, Quebec, plant remains closed until Aug. 18 for vacation.

Ford Motor Co.'s St. Thomas, Ontario, plant resumed production last week (July 21). It had been closed for vacation since July 7.

Chrysler Motors' Windsor, Ontario, plant resumes production today (July 28), ending a vacation that began July 14.

Accord seen on Jefferson labor pact

By Mary Connelly
DETROIT REPORTER

Chrysler Corp. and the UAW are expected to reach agreement this week on the type of labor contract needed to ensure construction of a new Jefferson Avenue assembly plant in Detroit.

Chrysler has said it will invest up to $1.2 billion to build a new Jefferson Avenue plant and produce a new pickup truck there if it can achieve a modern labor agreement with the UAW and capture state and city tax incentives.

Last week, Chrysler Chairman Lee Iacocca and a local union official predicted success in the negotiations. The deadline is July 30.

"I think we'll bring it all together," Iacocca said. "That was our hope going in and it seems to be going OK."

"If Chrysler shows good faith, we're going to end it by Monday (July 28)," said Wolf Lawrence, president of UAW Local 7.

Negotiations were scheduled on Saturday and Sunday and were expected to cover such major issues as reduction of the 97 job classifications and management style at the aging plant.

The union has said it is seeking to reduce "needless layers of management" and to reach an agreement achieving more worker participation and Japanese-style management methods at the plant.

Lawrence said work rules and administrative plant rules have already been discussed.

"This union is ready to give Chrysler a good, workable agreement. They have to be ready to give the union something," Lawrence said, citing job security, maintenance of the seniority system and health and safety items.

Iacocca indicated that Chrysler must also have state and city tax breaks before it would invest $1 billion to $1.2 billion between 1987 and 1991 to build a new Jefferson Avenue plant.

"We still have a lot of work ongoing with the state and city," he said. "This should all come together within 30 days."

Chrysler's plan calls for car production at Jefferson Avenue to cease in 1987. Pickup truck assembly would begin in 1988 in a refurbished plant while a new complex is under construction.

There are 4,800 workers employed at the Jefferson plant, which now assembles Plymouth Reliant and Dodge Aries models. No product had been slated after the 1987 model year.

Chrysler and UAW negotiators are working to reach plant-saving agreements by July 30 at Jefferson, the Trenton, Mich., engine plant and the Huntsville, Ala., electronics plant.

Iacocca described the negotiations at Trenton engine as proceeding "very well."

The union has said 1,600 jobs are at stake at the plant. Chrysler will invest $280 million to build a new V-6 engine if a new operating agreement is reached.

At Huntsville, Chrysler has said it will invest $60 million to build a plant that would serve as the hub of the company's automotive electronics operations if a new agreement is achieved. Chrysler employs 2,765 workers at its Huntsville electronics operation.

World Congress reveals urgency

By Kathleen Hamilton
MANAGING EDITOR

The 11th Automotive News World Congress revealed an automotive industry quickly girding itself for a worldwide competitive battle that will bloody and perhaps even destroy the inefficient and producers with mediocre quality.

The themes iterated by industry and government speakers at the conference this year were not new — globalization, cost cutting, quality, competitiveness. What was new was the degree of commitment and the sense of urgency expressed by speakers and participants alike.

Inside:
Complete report on the World Congress

And while the issue of international harmonization of standards is not new, it clearly emerged as the next hot trend. Again and again, speakers called for rules that would allow the same components to be used across national borders. The issue has taken on new urgency as companies search for every opportunity to cut production costs and increase efficiencies of scale.

Perhaps because of the industrywide feeling of an impending shakeout, or perhaps because of the increasing power held by megadealers, there appeared to be a resurgence this year in dealer interest in the Congress. The traditional distribution system is indeed on the verge of a shakeup if not a shakeout, according to the trends and forecasts cited by industry leaders last week.

After four years at Detroit's Westin Hotel, the Automotive News World Congress returned to the Hyatt Regency Hotel in Dearborn. Attendance increased by more than half this year, to 480. The Tuesday Evening Gala, addressed by Porsche AG Chairman Peter Schutz and Chrysler Corp. Design Vice President Thomas C. Gale, was limited to 820 persons by room capacity.

People — and good people-management — far outweigh the importance of manufacturing systems or technology, according to Schutz, the man who heads a company best know for its cutting-edge technology.

"You don't attract and hold the best people with money," he said. "You do it with exciting work and the chance to become winners."

It was a message echoed by the convention's closing speaker, Osamu Nobuto, president of Mazda Motor Manufacturing U.S.A., which is in the midst of setting up U S. assembly in Flat Rock, Mich.

A work environment with stable, fulfilling jobs will be as important as the plant's novel layout and its 330 robots, according to Nobuto.

AUTOMOTIVE NEWS JOE WILKENS

Faces of the World Congress, from top: Lloyd Reuss of GM, a panel discussion, Allan Gilmour of Ford and Peter Schutz of Porsche. Below is Thomas Gale of Chrysler.

Asked after his speech about the biggest differences he has seen so far between American and Japanese workers, Nobuto said Americans tend to do their assigned jobs, Japanese try to improve their assigned product or process.

Opening night speakers Edward L. Hennessy Jr., chairman of Allied-Signal, and Roger B. Smith, chairman of General Motors, also put employes high up in their formulas for success in the increasingly competitive marketplace.

But Smith — and, later in the week, GM Executive Vice President in charge of North American cars Lloyd E. Reuss — emphasized GM's commitment to pushing manufacturing technology in order to get competitive.

They acknowledged GM ran into problems trying to automate plants. "By attempting as much as we

Ford chooses IBM for $300 million computer system

By Jake Haas
SPECIAL CORRESPONDENT

Ford Motor Co. confirmed that it has chosen IBM to develop a comprehensive, $300 million to $400 million, company-wide integrated office automation and communications system for its North American operations.

The program will help slash its 170,000-person white-collar work force by approximately 35 percent over the next five years, while adding 30,000 office work stations, doubling the number the company already has.

But Ford is still on the prowl for automation expertise. The company reportedly is now looking for bids from software developers to come up with company-wide programming integration to tie in Ford's 20 systems organizations scattered throughout the world.

It also approached IBM for a proposal on that. However, Ford sources emphasize that no contract has been signed or written, pending negotiations with IBM over the next 90 days to work out the details.

Although it is seen as unlikely, Ford could change vendors if negotiations with IBM break down.

Said a company insider, "We do not have a contract with IBM. We do not have an agreement with IBM. What we have done is decide it makes sense to standardize on one manufacturer. All we've done is decide our preferred manufacturer will be IBM. We've just begun negotiations."

Besides desktop hardware and software prices and specifications, networking work stations and micro-to-mainframe links will be included. Also of primary concern are incompatibility solutions and responsibilities between Ford's four office automation vendors, IBM, Digital Equipment Corp., Wang Laboratories and Fortune Systems Corp.

Losing out in the office automation scramble that began in May were Digital Equipment Corp. and Wang Laboratories, which have large installed bases at Ford. Other computer vendors, including a miffed Burroughs Corp., which also has installations at Ford, were not permitted to bid because in the automaker's judgment they lacked the size, breadth and depth to do the job.

Ford began taking bids about two months ago. IBM won primarily because of its presence in the company. Half the company's office work stations, 15,000, are IBM units.

"One of the considerations we are looking at is that less people will have to change systems," explained a Ford spokeswoman. "There were no overwhelming considerations because the three

Chrysler America up $300; '87s rise 2 pct.

By Mary Connelly
DETROIT REPORTER

Chrysler Corp. has added $300 to the price of its America subcompacts, which Chairman Lee Iacocca has touted in a national advertising campaign as the lowest-priced domestically built cars.

The base retail price of Dodge Omni and Plymouth Horizon America models was increased to $5,799 effective with shipments of Aug. 1.

Chrysler Motors Chairman Gerald Greenwald said that despite the price hike, the America models remain the lowest-priced American or Japanese four-door sedans available.

Chrysler last week also announced tentative prices of some 1987 cars and said the increase for the whole car line averages less than 2 percent over prices of comparably equipped 1986 cars.

Chrysler announced no dollar figure, but Automotive News estimated that a 2 percent increase would average about $240.

Included in the announcement were the new Dodge Shadow and Plymouth Sundance. Two-door models start at $7,499 for Shadow and $7,599 for Sundance.

The 1987 Dakota, a new mid-sized pickup truck, has a base price of $7,338, Chrysler said.

The tentative prices are effective with shipments of new models to dealers. Chrysler estimated that 90,000 1987 vehicles would be in dealer stock by Aug. 15.

According to dealer sources, the Aries and Reliant compacts will be offered in only two two-door and four-door versions in the 1987 model year instead of three, and the wagon will be available in only one version instead of two.

Chrysler did not announce the Aries and Reliant prices. However, dealers said the tentative 1987 re-

Two-tone 1935 Mercedes-Benz 500K Cabriolet at Meadow Brook Hall entrance

AUTOMOTIVE NEWS:Jenny King

Mercedes featured at Meadow Brook

By Jenny L. King
DETROIT REPORTER

ROCHESTER, Mich. — One of the most elegant of settings was graced with some of the most extravagent cars ever built as the eighth annual Concours d'Elegance.

Meadow Brook Hall, once the private home of Alfred and Matilda Dodge Wilson, was both host and beneficiary of the Concours. The 100-room hall and surrounding 1,400 acres opened Sunday (Aug. 3) for public viewing of the magnificent building and some 200 collector cars from 17 states and Canada.

This year's Concours honored the centennial of Mercedes-Benz' 1886 engine-driven three-wheeler. Keith E.Crain, publisher and editorial director of Automotive News and honorary Concours chairman, said the most spectacular array of Mercedes automobiles ever assembled in North America was on display.

Auto chiefs pleased by market strength

By Al Fleming
INDUSTRY EDITOR

Presidents of U.S.-based auto companies are pleasantly surprised by the continuing strength of this year's auto market.

And they are now convinced that new car and truck sales in the U.S. will proceed at, or close to, the same robust pace in 1987.

Exclusive interviews of chief operating executives by Automotive News indicates they expect industry sales of 10.3 million to 11.0 million cars and 4.5 million to 4.7 million trucks in calendar 1986.

The most bullish, Ford Motor Co.'s Harold A. Poling, said, "We recently increased our estimate for 1986 calendar year sales from 10.7 million to 11.0 million cars, and from 4.6 to 4.7 million trucks."

Noting a continuing high level of consumer confidence, low rate of inflation and low fuel prices, Poling stressed, "The general buying public seems to be in the mood to purchase vehicles."

While granting there could be a "tapering off" next year, Poling said, "If it were 500,000 units below this year for the industry, I'd still consider '87 a very good year."

F. James McDonald, president of General Motors, sees industry sales of 15.4 million to 15.5 million cars and trucks in 1986. "The markets are still very strong," he said.

McDonald also sees clear sailing ahead. "There are many pluses — low inflation; the dollar's relationship to other currencies; no big jump anticipated in the price of gasoline," he said.

Harold K. Sperlich, president, Chrysler Motors, forecasts 1986 industry sales of 10.6 million cars and 4.5 million trucks.

As for next year, he said, "We're more optimistic now about 1987 than we were six months ago."

Sperlich explained, "We all surprised ourselves that the recovery has lasted as long as it has. With the cost of money down, gas prices down, consumer confidence at near-record highs, credit available, the prospect of a tax bill that may enthuse the masses, plus an awful lot of good product coming to market, we've become more bullish about 1987."

Volkswagen of America looks for industry sales of 10.7 million cars in 1986. However, VWoA projects a slight decline in 1987 to 10.2 million to 10.5 million units.

Calling that "a fairly marginal decrease," VWoA President Noel Phillips questioned whether the economy can sustain its current pace through next year.

"In addition," he said, "you have the fact that a lot of vehicles have gone up in price. That must have some effect on the market."

Tetsuro Chino, president, American Honda Motor Co., noted the "total market is still strong," but said, "I don't see any drastic decline of car sales. Maybe they will reach over 10.3 million for 1986. For 1987, I see it continuing at the same level."

Likewise, Joseph Cappy, president, American Motors, anticipates "a pretty decent '87 for passenger cars, trucks and four-wheel-drive units."

Cappy said, "Industry will be between 10 and 11 million cars, around 3 million light trucks and about 1.5 million 4x4s."

The presidents concur that financing incentives are an irksome aspect of the 1986 market. While they wish incentives would end, most say that will depend on GM.

Said Cappy: "Incentives don't make any sense because none of us is selling any more cars or trucks than we would have sold without them. We're selling the same number and are making less money."

He added: "As soon as the big guy stops, we can stop . . . Everybody's following GM's lead."

Noting that Ford's car inventory has been consistently below the 60-day level this year, Poling said, "We really didn't need incentive programs. But when your major competition initiates these programs, you have to compete."

As a result of incessant incentives, Phillips said, "The competitive pressure has been a lot greater than people expected it to be. It's become a very tough market. I don't know if the incentive route is needed to keep the market going. But it appears necessary . . . for some of the major manufacturers to keep their (sales) volumes up."

Phillips added: "I would suspect there will be a substantial degree of that next year."

And what about GM, target of the incentive ire?

McDonald said, "You always hope you can get out of incentives and back to a normal market. Now, incentives are working."

As for their future, McDonald said, "If interest rates ever got really low, retail-rate support programs would go away. They'll work their way out eventually."

GM offering alternative incentives

DETROIT — General Motors joined its domestic competition last week by offering customer rebates.

Like Ford Motor Co., Chrysler Motors and American Motors, GM is offering the rebates as an alternative to several low-interest-rate loan programs.

Through Aug. 31, customers may take $500 in cash rather than GMAC loans on Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Ciera and Buick Century models. Current incentives include 5.9 annual percentage rate loans for 30 months, 6.9 APR for 36 months, 8.9 APR for 48 months and 9.9 APR contracts for up to 60 months.

Through Sept. 24, Oldsmobile Firenza, Buick Skyhawk and Cadillac Cimarron have been added to the GMAC program at 6.9 APR on 36-month loans, 8.9 APR on 48-month loans and 9.9 APR on 60-month loans. Those lines were not included in the original mid-summer program announced at the end of June.

That program, offering cut-rate loans on nearly all 1986 passenger cars and many light trucks through Sept. 24, remains the same, GM said.

Cadillac dealers participating in the GMAC financing programs were eligible beginning July 23 for cash incentives of $1,000 and $2,000 on Eldorado and Seville models sold from stock. The program runs through Sept. 24, a Detroit-area dealership spokesman said, with incentive amounts based on numbers of cars sold.

$356 million riding for GM on CAFE decision

WASHINGTON — Some $356 million of General Motors' money is riding on how NHTSA sets 1987 and 1988 model-year fuel-economy standards.

The safety agency's decision, in turn, is riding on whether the level of "maximum feasible average" fuel economy includes multiyear carry-back credits, as GM wants, or whether it is based on a single year, as NHTSA has tentatively decided.

GM is currently the only company facing big-money civil penalties under the 1975 law.

Altogether, GM owes some $446 million because it failed to meet fuel-economy standards in the past. Government estimates of GM liability are some $46 million from non-compliance with the 1984 CAFE and some $400 million from the 1985 CAFE. Offsetting those, however, is about $90 million that GM will earn from exceeding the 26.0 mpg level of the 1986 CAFE.

Under the law, all companies can carry forward or carry back for three years credits earned from exceeding the fuel economy standards.

Of greater importance than GM's millions, however, is NHTSA's desire to bolster its own tentative decision in case GM goes to court.

NHTSA already knows that Chrysler disagrees with GM, but it wants to smoke out other legal positions, especially from Ford, a full-line company that has failed to meet fuel-economy standards in the past and may again in the future.

Right now, Ford appears safe. It still owes about $55 million for noncompliance with the 1985 CAFE, but it expects to earn enough credits from the 1986 CAFE standard (which was lowered to 26.0 mpg) to wipe out its liability. Ford's current estimated CAFEs for 1987 and 1988 models are 27.1 mpg and 26.3 mpg, respectively. NHTSA has proposed setting standards for those two model years somewheee between 26.0 and 27.5 mpg.

It is not only unusual for NHTSA to issue a supplemental notice to any pending rulemaking, but highly unusual to give only a 15-day response period, as it did last week. NHTSA wants to be able to issue its CAFE decision by the start of the model year.

Also unusual is NHTSA's query about the legal effect of issuing a CAFE below 26.0 mpg. This informs the public indirectly that NHTSA is now considering something above 26.0 mpg. Because of the statutory language, NHTSA would not have to raise the issue of multiyear credits if it were thinking of continuing the 26.0 mpg level, just as it did not when it set the 1986 CAFE standard at 26.0 mpg.

In addition, the query tips off the public that GM needs a standard below 26.0 mpg to accumulate enough credits to wipe out its potential fines. (GM's own CAFE estimates, which may need a bit of updating, are 26.3 mpg for 1987 models and 26.9 mpg for 1988 models.)

Subaru distributor expands

ORANGEBURG, N.Y. — Subaru Distributors Corp. has opened its $4.5-million Boston port facility. The company has a long-term land lease with the port authority in Boston.

Thomas O'Hare, president of SDC, said the company, which has been using the Boston port, has now found a permanent home. The firm distributes Subaru cars and parts in New York and northern New Jersey.

O'Hare said his company will lease the 12-acre site and is negotiating for another five acres as well as options on 10 more acres. The lease period is 20 to 30 years, he said.

The processing of the cars will be handled in a joint venture with Automotive Processors Inc., of Boston. SDC will share a 72,000-square-foot building with Subaru of New England.

To officially open the new facility, Subaru Distributors hosted an open house for its 60 dealers.

Sales peak for imports

By Jenny L. King
DETROIT REPORTER

May imported-car registrations were up 23.13 percent from the same month a year earlier, climbing to a record total for the month and 28.32 percent of the U.S. market.

Figures compiled by R.L. Polk & Co. showed May import registrations up almost 50,000 units over the year-ago total. Imports gained 5.18 percentage points in the overall market as domestic registrations stayed around their 1985 level.

The May import sum of 259,837 was a record for the month and was 23.13 percent ahead of last year's 211,025.

Total registrations of 917,579 in May were up a scant 0.62 percent from 911,932 for the same month in 1985.

Two relative newcomers moved into the top 10 import list for May, Hyundai in seventh and Chevrolet Spectrum in tenth place. West-German imports Mercedes-Benz and Audi were pushed out of the top 10 by the South Korean and Japanese-built cars.

Ten makes accounted for 81.65 percent of the import total this May, down seven percentage points from 88.73 percent last year.

At the end of five months, Honda remained on top of the import list although it continued to lose ground.

Ten makes claimed 81.87 percent of the market, down from 88.25 percent the preceding year.

January-May import registrations were up 23.31 percent, to 1,299,365 from 1,053,764. They accounted for 29.48 percent of the total five-month U.S. market, an increase of 5.18 percentage points over 24.30 percent in 1985.

The Japanese share of the May market dropped to 65.97 percent from 67.44 percent. West Germany's share dipped to 13.77 percent from 15.34 percent, while U.S. cars were down to 8.78 percent from 9.71 percent. Comparison totals for May were as follows:

	May 1986	May 1985
Japan	171,418	142,310
West Germany	35,779	32,367
United States	22,822	20,487
Sweden	13,513	11,463
South Korea	10,989	—
Britain	1,950	1,495
Yugoslavia	1,507	—
France	1,076	2,210
Italy	783	693
TOTAL	259,837	211,025

Japanese-built cars claimed 68.34 percent of the January-May import market, down from 69.68 percent in 1985. German products had 13.31 percent, down from 14.24 percent, while U.S. imports were up to 9.44 percent from 8.72 percent. The breakout included:

	5 Mos. 1986	5 Mos. 1985
Japan	888,051	734,285
West Germany	173,001	150,087
United States	122,616	91,908
Sweden	62,820	56,120

Yugoslavia	9,165	—
France	6,444	10,681
Italy	3,138	2,915
TOTAL	1,299,365	1,053,764

Registrations of imported trucks in May were up 16.65 percent over last year, following year-to-year gains of 9 percent in April and 3 percent in March. The May total reached 83,768 compared with 71,811 a year earlier. Numbers from the major manufacturers included:

	May 1986	May 1985
Toyota	29,558	26,800
Nissan	18,091	19,738
Mazda	13,427	7,611
Isuzu	6,696	6,187
Others	15,996	11,475
TOTAL	83,768	71,811

Year-to-date truck registrations of 404,086 were up 7.28 percent from 376,664 in 1985. The breakout included:

	5 Mos. 1986	5 Mos. 1985
Toyota	153,605	140,240
Nissan	87,463	109,246
Mazda	55,484	41,700

Auto pioneers' mansions open for tours

By Scott Miner
Detroit Reporter

Mansions once owned by four Detroit auto magnates or their families are now open to the public and visits are combined in a single tour.

The tour, called "Homes of the Auto Barons," includes the multimillion-dollar homes of Ford Motor Co. founder Henry Ford; Edsel Ford; Lawrence P. Fisher, of the Fisher Body family; and Matilda Dodge-Wilson. The Wilson home is called Meadow Brook Hall. Mrs. Wilson was the widow of John F. Dodge.

At the inaugural tour, members of each of the families were present and spoke about their relatives' homes.

The family members included Alfred Brush Ford, great-grandson of Henry Ford; Richard Wilson, son of Matilda Dodge-Wilson; Paul D. Alandt, grandson-in-law of Edsel Ford; and Thomas K. Fisher, nephew of Lawrence P. Fisher.

Also on hand was Elisabeth Reuther Dickmeyer, daughter of Walter Reuther, former UAW president. Alfred Ford and Elisabeth Dickmeyer bought the Fisher mansion in 1975 and donated it to the International Society for Krishna Consciousness, which now owns and operates it as a cultural center.

The Travel & Tourist Association of Southeast Michigan developed the idea and is working with managers from the four mansions. Guided and self-guided tours are available in all the homes.

South Africa rebounds from auto sales slump

By Jeremy Sinek

South African auto sales took a turn for the better in June, leading to renewed optimism that the industry's slump has finally bottomed out.

The total of 15,769 new cars sold was a 14.65-percent improvement on May, and was 13 percent better than the monthly average for the first five months of '86. It was also a slight improvement over sales in May '85.

Truck and bus sales also were up. Sales of light commercial trucks increased 7.7 percent over May; mediums showed a 16.4-percent gain; and heavies were up 13.1 percent.

But these improvements have to be viewed against a backdrop of exceptionally low sales during the first part of 1986. Overall passenger-car sales for the year to date are still down 13.3 percent from the same period last year. And sales of light, medium and heavy commercial trucks are down by 8.8, 7.2 and 32.5 percent respectively.

Automakers attribute the June boost to a combination of new models coming on stream — Ford registered 1,124 sales of its new Laser/Meteor subcompacts, for example, compared with only 199 of the outgoing Escort in May — and to deliveries of government tender vehicles that had been ordered in April.

Still another reason cited is public perception of greater political stability and some return of economic confidence triggered by the South African government's recent stimulatory package.

It was too early for the government's mid-June economic stimulation package to have had much direct influence on that month's sales, but Nico Vermeulen, director of the Association of Automobile Manufacturers, predicted that the government's measures will continue to underpin demand at current levels in coming months.

"New motor car sales are likely to gain further momentum during the second half of 1986 once the new basis of valuation of company-owned motor cars, for purposes of fringe benefit taxation, is officially implemented," he said.

A new and much less-stringent "perks tax" scheme is due to take effect Sept. 1.

Industry sources estimated that new-car sales would average over 15,000 units a month for the rest of the year, but that would still mean a total market of only about 180,000 units, well down on last year's 204,000.

Manufacturers are optimistic about commercial-vehicle sales. In particular, they expect that the R750 million (U.S. equivalent: $300 million) to be pumped into the building industry as part of the government economic stimulation program will inject new life into light-truck sales.

June was a bumper month for Samcor (Ford/Mazda/Mitsubishi), which topped the sales table with 4,009 units. Samcor recorded gains in Ford Sierra, Mazda 323 and 626 sales, as well as the new Laser/Meteors. Its market share for the first six months, however, remained virtually unchanged from the 1985 full-year figure, at 20.5 percent.

Toyota, shoved into an unfamiliar second place, sold 3,867 cars in June, down 1.4 percent from May; light-truck sales were down, too. But year-to-date figures still leave Toyota comfortably in front with a 26.8-percent car market share. For the whole of 1985 its share was 23.9 percent.

VW/Audi also slipped slightly in June with 2,575 cars sold — down 4.7 percent from May — and 6.5 percent fewer trucks and buses sold. But the January-June figures still leave VW/Audi securely in third place with 17.3 percent of the passenger car market, up from 14.4 percent in 1985.

Mercedes-Benz/Honda held on to fourth despite a disappointing June total of only 1,323 cars sold — 15.1 percent fewer than in May. It was the only automaker to sell fewer cars in June than it had averaged over the previous five months, which the company blamed on supply difficulties arising out of labor problems at the East London factory. For the year to date, Mercedes had 9.7 percent of the market compared with 10.7 percent through 1985.

A 16.2-percent boost was sufficient for GM to push Nissan from fifth to sixth place in June. But even though this is the fifth consecutive month that GM has improved its sales since a catastrophic January, it still placed last in the year-to-date table with 7.1 percent of the market. GM's share last year was 9.3 percent.

Nissan sales were up 8.2 percent from May to June, and over the first six months Nissan remained fifth in market share with 8.1 percent. Nissan's share in 1985 was 6.8 percent.

That leaves BMW sixth for the year-to-date total with 7.6 percent of the market, compared to 6.3 percent last year. In June BMW's sales of 1,211 cars was an 18.7-percent gain on May. ■

PRODUCTION

Auto production dips; week's total is 94,914

By Kathy Boyer
DETROIT REPORTER

Model-changeover closings cut last week's domestic auto production to the lowest level since the first week of the year, which was a holiday week.

Last week's targeted output of 94,914 cars dipped 16.51 percent from the previous week's 113,681 and was 28.13 percent below the year-ago week's 132,063.

So far this year, 4,846,538 cars have been assembled, 4.69 percent below the 5,084,825 completed last year at this point.

Companies shared last week's estimated production as follows: Ford Motor Co., 39.73 percent; General Motors, 35.58 percent; Chrysler Motors, 14.12 percent; Honda of America Manufacturing Inc., 4.95 percent; New United Motor Manufacturing Inc., 4.04 percent; and American Motors, 1.58 percent.

Nissan Motor Manufacturing Co.'s car line in Smyrna, Tenn., remains idle for changeover. The plant is expected to resume output later this month.

Volkswagen of America's plant in Westmoreland, Pa., remains closed for changeover until Aug. 18.

Ford's Atlanta plant, which assembles Taurus and Sable, remains closed by a strike over working conditions.

Ford's Dearborn, Mich., plant is closed for two weeks' vacation beginning today (Aug. 4).

All other Ford car plants are scheduled for overtime this week.

The following GM plants resume production this week after being idle for model changeover: Fairfax, Kan.; Flint, Mich. (Buick City); Orion Township, Mich.; Leeds, Mo.; Doraville, Ga.; and Norwood, Ohio.

The following GM plants will be closed for model changeover this week (Aug. 4): Wentzville, Mo; Oklahoma City, Okla.; Tarrytown, N.Y.; Framingham, Mass.; and Lansing, Mich. (Nos. 1 and 2).

Canadian car assembly dips

Because of plant vacations, estimated Canadian car production last week was the lowest of any week so far this year.

Last week's output of 9,683 cars was 5.61 percent below the previous week's 10,259 and 32.74 percent below the year-ago week's 14,397.

So far this year, 643,711 cars have been assembled, 3.53 percent more than the 621,746 built last year at this point.

With Chrysler Motors' Windsor, Ontario, plant back from vacation, last week's scheduled truck production of 11,715 units was more than double the previous week's 4,307.

Last week's total was 39.90 percent more than the year-ago week's 8,374.

Year-to-date, 521,540 trucks have been built, 1.04 percent more than the 516,190 assembled last year at this time.

Truck production declines 5 pct.

Scheduled domestic truck production of 66,277 units last week was 5.12 percent below the previous week's 69,855 but was 10.94 percent better than the year-ago week's 59,742.

Year-to-date, 2,137,515 trucks have been built, 4.05 percent more than the 2,054,374 completed last year at this time.

American Motors' Toledo, Ohio, plant remains idle for vacation. Output is scheduled to resume Aug. 11.

All Ford Motor Co. truck plants except Lorain, Ohio, are slated for overtime this week (Aug. 4).

Ford marks 3 milestones

Ford Motor Co. marked three production milestones late last month — the Dearborn, Mich., engine plant built its three-millionth four-cylinder engine; the two-millionth U.S.-produced Ford Escort was built in Wayne, Mich.; and North America's one-millionth Ford Tempo was built in Oakville, Ontario.

The Dearborn plant produced the three-millionth four-cylinder engine built there since the plant's renovation in 1978.

From 1953 to 1978, the plant turned out V-8s, but accurate production data from those years is unavailable. It is estimated that more than 20 million V-8s were produced there before market trends steered it to four-cylinder business.

The plant was built for the U.S. government in 1941 for the production of engines for World War II aircraft. Ford purchased it in 1947 and used it for storage until its conversion to engine production.

The two-millionth U.S.-produced Ford Escort was built at the Wayne, Mich., assembly plant.

Escort has been the world's best-selling car for four years, with a record 420,700 sold in 1985, according to Ford. So far this year, more than 208,000 have been sold.

The milestone Escort is expected to be delivered in California in mid-August.

Ford's Oakville assembly plant, which has produced 437,565 Tempos, had the honor of building the one-millionth Tempo assembled in North America. The balance of the Tempos have been built at Ford's plant in Kansas City, Mo.

Ford to use supercharger from Eaton

Eaton Corp. is not betting heavily on its supercharger, but the company believes it could develop into a nice piece of business in the years ahead, said William E. Butler, president of the Automotive Components Group.

Butler told the Detroit Auto Writers Group, that Ford Motor Co. will install the Eaton supercharger on its 3.8-liter V-6 engine in a low-volume, special-performance car in the 1989 model year. Eaton's principal competitor for that business was Colt Industries, he said.

"If that catches on in the marketplace, it has the potential to grow into a very nice business," he said.

"We're tooling it for 50,000 units. I suspect that if we sold 15,000 the first year, that would be fantastic," Butler said. Ford is making a financial contribution toward the tooling.

In response to a question, he said a price estimate of about $1,000 could be low.

"I think it will be sold as part of a package," Butler said. "You'll buy an automobile that will have all the other accessories that go along with a supercharged car. The $1,000 figure could be low when you get into wheels and tires and steering wheel and all the bells and whistles of a performance car — and it will be a performance car."

Brazil levies stiff new tax on purchases of cars, fuel

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — The Brazilian government has levied stiff surcharges on purchases of new and used cars — 30 percent on prices of new cars and 10 to 30 percent on used cars — as part of a package of measures aimed at reducing consumption and increasing savings.

There also is a surcharge of 28 percent on gasoline and its substitute, alcohol fuel.

The deposits will go into the new National Development Fund and are to be used to finance economic growth.

The surcharges actually are taxes. They will be returned in the form of government "bonds" after three years, adjusted for inflation. But the "bonds" cannot be redeemed for cash.

On car purchases, the "bonds" will go to individual buyers. On motor fuel, the bonds will be issued on an average-per-consumer basis — the amount collected divided by the number of cars.

The surcharges went into effect July 24.

The measures are expected to inhibit demand for autos in the short term, but industry sources were reluctant to make any projections.

"It will take 30 to 60 days for us to have an idea how the market is reacting," said a spokesman for the National Association of Automotive Vehicle Manufacturers (ANFAVEA).

He said that demand had been so high prior to the surcharges that many dealers had illegally charged fees above their markup — that is, charging more than what would be the sticker price in the United States — so that "a compulsory deposit instead of a non-returnable illegal dealer markup may not be much of a discouragement."

But the surcharges are not expected to improve the outlook for automakers in Brazil, where the government has frozen prices, suppliers and dealers are reluctant to take a cut in returns and labor is increasing its demands.

The automakers, meanwhile, cite a need to invest heavily for what all manufacturers see as a major export market.

Some 12,000 unfinished vehicles stand in the yards of Brazil's auto and truck manufacturers awaiting parts. Buyers must wait five months for a new car and two months for a truck. Many dealers refuse to accept orders.

At the same time, "the best the country's automakers can expect this year is to break even," according to Andre Beer, vice-presi-

Volkswagen leads Europe in sales, heading for record

By Jean-Jacques Renaux
SPECIAL CORRESPONDENT

BRUSSELS, Belgium — The Volkswagen Group again was the sales leader in Europe during the first six months of this year, and the Japanese chalked up a gain of 22.9 percent, according to industry estimates compiled by Automotive News.

New-car sales in Europe totaled 6,160,800 for the first half, up 8.3 percent from 5,688,000 in the first six months of 1985. If sales continue at their first-half pace, 1986 will be a record year. The current mark is 10.64 million in 1985.

The VW Group, which includes Volkswagen, Audi and Seat, had

Chevrolet considers $4,995 price tag for 1987 Chevette

By Michelle Krebs
FINANCIAL EDITOR

Chevrolet is considering a plan to market its 1987 Chevette in a manner similar to the way that Chrysler Corp. markets its Omni/Horizon America models but with an even lower price tag — $4,995.

Chevrolet has confirmed that the plan is being considered and said the price is in the $5,000 range. Automotive News sources put the sticker at $4,995.

The least-expensive 1986 Chevette is the two-door hatchback, which has a base price of $5,645. The base four-door is $5,959.

Chevrolet's consideration of an "America" program is a further indication that the battle for the small-car market is heating up, and the predicted price war has begun in earnest.

Auto analysts have said the battle for the U.S. small-car market will become more intense throughout the decade as more overseas companies bring in low-priced vehicles. Yugo kicked off the competition with its $3,990 Yugoslavian-built model. The South Korean-built Hyundai entered the fray last winter with its $4,995 Excel.

Japanese automakers, who have concentrated on the more profitable upscale markets in the recent years of import restraints, are taking another look at the small-car market. Sources say they are re-evaluating the pricing of their entry-level models.

U.S. manufacturers also have begun to fight the South Korean and Yugoslavian competition.

Chrysler announced last spring that it would offer America versions of its Omni and Horizon subcompacts to battle the low-priced foreign competition.

Chrysler billed the America models as the lowest-priced domestically built cars. They went on sale May 15 with a base price of $5,499, $710 less than the previous price. Chrysler since has announced a $300 price increase.

Like the Chrysler models, Chevrolet will offer limited options and limited color choices on the Chevette.

Pontiac dealers expect the Chevette's sister car, the Pontiac 1000, to have a base price a few hundred dollars more than the Chevette. The 1986 base prices for the 1000 are $5,749 for the two-door and $5,969 for the four-door.

The 1987 model year will be the last for the Chevette and 1000.

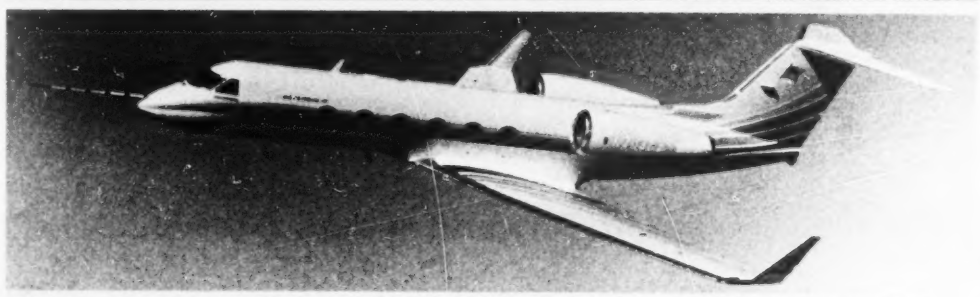
The Chevette was introduced in 1976 and had its best sales years during the recession. Its peak year was 1980 with sales of 369,180.

Sales for the 1986 calendar year to date are 41,985. The bulk of Chevette sales in 1986 were fleet sales for the daily rental market.

Chevrolet plans no direct replacement for the Chevette.

The Isuzu-built Spectrum and Suzuki-built Sprint will fill the void.

The Pontiac 1000 will replaced by the LeMans, an Opel-designed small car built by Daewoo Motor Co., General Motors' affiliate in South Korea. It will debut as a 1988 model.



A Gulfstream jet: Chrysler executives look for the aircraft subsidiary to help the corporation's automotive operations.

Chrysler optimistic on Gulfstream's future

By Mary Connelly
DETROIT REPORTER

In the year since Gulfstream Aerospace became a subsidiary of Chrysler Corp., executives of the auto company appear to have become even more bullish on the $637-million acquisition.

Gulfstream, a manufacturer of corporate and government aircraft, is based in Savannah, Ga.

In interviews, three top Chrysler executives said:

1. Chrysler expects to reap some benefits within the calendar year from an exchange between Gulfstream and the automaker's Huntsville, Ala., electronics operation. The Huntsville plant may do some electronics work for Gulfstream, thus developing Huntsville's military and defense presence.

2. Chrysler Capital Corp. has benefited through involvement in financing programs for Gulfstream planes and is developing a leasing program for Gulfstream customers.

Crash stats on Hyundai out of date

By Helen Kahn
WASHINGTON BUREAU CHIEF

WASHINGTON — Bad news for Hyundai is that in government high-speed crashes, the cars performed marginally in protecting the dummy on the driver's side but did very poorly in protecting the dummy on the passenger's side.

Good news for Hyundai and its customers is that between the time NHTSA bought its 1986 four-door sedan and got around to having it crashed, Hyundai changed the design of the belt system so the teeth grab the belt webbing instead of the belt-spool lockup. This makes the belt lock up faster during sudden deceleration such as would

Inventory is sliced but days' supply increases

By Kathy Boyer
DETROIT REPORTER

August opened with the lowest domestic new-car inventory in seven months, but the days' supply increased.

With several plants closed during July for model changeover, the stockpile of unsold cars on Aug. 1 decreased to 1,725,524.

The count hadn't been that low since Jan. 1, when 1,629,649 cars were reported.

The Aug. 1 inventory compares with 1,859,576 on July 1 and 1,579,595 on Aug. 1, 1985.

However, the Aug. 1 supply was 69 days, compared with 63 days a month earlier and 65 days a year earlier.

Four domestic manufacturers ran against the tide and experienced decreases in their days' supply: Chrysler Motors, Ford Motor Co., American Honda and Volkswagen of America.

Companies shared the Aug. 1 inventory as follows: General Motors, 62.40 percent; Ford, 20.09 percent; Chrysler, 14.58 percent; American Motors, 1.72 percent; Volkswagen, 1.01 percent; Honda, 0.19 percent; and Nissan, 0.01 percent.

On July 1, the split was: GM, 59.96 percent; Ford, 21.21 percent; Chrysler, 15.63 percent; AMC, 1.79 percent; Volkswagen, 1.14 percent; Honda, 0.26 percent; and Nissan, 0.01 percent.

The shares by size class on Aug. 1 were: subcompact, 17.64 percent; compact, 19.83 percent; intermediate, 37.74 percent; standard, 13.93 percent; and luxury, 10.86 percent.

One month earlier the percentages were: subcompact, 17.77 percent; compact, 20.82 percent; intermediate, 37.13 percent; standard, 13.52 percent; and luxury, 10.76 percent.

There was a 61-day supply of subcompacts on Aug. 1. Days' supplies by nameplate were: Accord, 6; Sentra, 21; Horizon, 25; Omni, 27; Escort, 49; Lynx, 63; Golf/GTI, 71; Nova, 81; Turismo, 87; Charger, 88; Daytona, 93; Chevette, 94; Fiero, 104; Pontiac 1000, 125; Laser, 148; Alliance, 150; Encore, 156; Sundance, 186; and Shadow, 216.

The supply of compact cars was 62 days: Mustang, 44; Sunbird, 47; Topaz, 49; Aries, 56; Reliant, 58; Cavalier, 59; Tempo, 60; Firebird, 66; LeBaron, 68; Camaro, 73; Capri, 74; Firenza, 76; Skyhawk, 117; Eagle, 117; and Cimarron, 127.

There was a 73-day supply of intermediates: Sable, 43; Grand Am, 47; Taurus, 50; Marquis, 51; LTD, 52; Calais, 52; Cougar, 54; Caravelle, 59; Cutlass Supreme, 63; Somerset Regal, 65; Celebrity, 71; Cutlass Ciera, 75; Thunderbird, 76; Dodge 600, 78; Bonneville, 85; Regal, 88; Century, 95; Monte Carlo, 97; LeBaron GTS, 101; Pontiac 6000, 104; Grand Prix, 108; Citation, 114; Lancer, 117; and New Yorker, 187.

The supply of standard-sized cars was 74 days: Grand Marquis, 45; Diplomat, 48; Crown Victoria, 49; Plymouth, 50; Parisienne, 62; Chevrolet, 67; LeSabre, 87; and Oldsmobile 88, 111.

There was an 80-day supply of luxury cars: Lincoln, 52; Fifth Avenue, 59; Continental, 63; Mark VII, 65; Oldsmobile 98, 74; Corvette, 76; Electra, 84; Cadillac, 85; Toronado, 142; Eldorado, 160; Riviera, 178; and Seville, 251.

Hoglund details pains of grooming B-O-C

By Michelle Krebs
FINANCIAL EDITOR

Since taking charge of the Buick-Oldsmobile-Cadillac Group in February, William Hoglund's first job has been to "cement" the last parts of the General Motors reorganization that began two years ago.

The B-O-C group is organized into seven business units: the three divisions — Buick, Oldsmobile and Cadillac — and four platform groups responsible for the design and manufacturing of their assigned platform cars.

Originally, each business unit was to be an individual profit center.

"We've been agonizing over the degree of autonomy of the business units," Hoglund said. "We finally came to the understanding that the group has to be the total business unit."

Hoglund said each unit still will have profit responsibility but not in a traditional return-on-investment sense because the business units have different functions.

"The marketing units have the exposure to the market, but they don't have the resource responsibility," Hoglund noted, "whereas the product teams have all the resource allocation responsibility, but they don't have the marketing."

The original thinking was that if each unit competed against each other for profits, it would maximize the profits of the entire B-O-C organization.

"That worked fine for a while," Hoglund said, "but now, the collaboration of the business units is far more important than the competition. It's that collaboration that we look for to maximize the profitability of B-O-C."

Hoglund said his next job is to work with the marketing divisions to focus their product programs and market direction.

All of GM's North American car divisions are involved in a market-segmentation and model-deproliferation program. The plan is designed to force the car divisions to compete against outsiders, not each other, and to reduce the number of models offered by GM to avoid confusion in the marketplace.

In addition to the product focus, Hoglund said, B-O-C looks for massive improvements in the effective use of resources — capital, people and time.

"The real key to our future is getting rid of the waste," Hoglund said. He estimated that GM has 25 percent waste in everything it does.

He noted that the competition pays that kind of attention to detail and has that same drive to eliminate waste.

"That's the mentality we've got to get," he said. "We're making great strides, but it's going to take a little longer than we thought."

GLENN TWEST

William Hoglund: "The real key to our future is getting rid of the waste."

B-O-C runs in red, Hoglund suggests

If General Motors' Buick-Oldsmobile-Cadillac Group were listed in the Fortune 500, it would rank ninth with $30 billion in annual sales.

As an independent company, B-O-C would follow American Telephone & Telegraph on this year's Fortune 500 list and would be ahead of E.I. du Pont de Nemours & Co.

William Hoglund, B-O-C group executive, intimated that B-O-C as a business unit is not yet profitable.

"We're going through some major start-ups and reorganizations," he said. "We sure as heck are going to be profitable."

Saturn plant to be phased in one step at a time

By Roger Rowand and Michelle Krebs
AUTOMOTIVE NEWS STAFF

General Motors' $3.5-billion Saturn plant, which eventually will be a fully integrated manufacturing complex, will be phased in rather than starting every segment at once.

GM President F. James McDonald, speaking at the University of Michigan's annual Management Briefing Seminar in Traverse City, Mich., said the assembly plant, foundry, sheet metal and plastics operations will be phased in rather than started simultaneously.

"It's crazy for anybody to think it would all open up at once," McDonald said. "You only have so much talent to work on a problem. If you're silly enough to create all those kinds of start-ups with the problems that exist, you put at risk every nickel you have invested there."

Suppliers involved with Saturn say a phase-in of the various manufacturing segments has always been the plan.

In addition, GM, following slow, problematic start-ups at its Detroit-Hamtramck and Buick City plants, has vowed to never again try to start every high-tech element of a new assembly plant at once. Rather, high-tech equipment will be phased in gradually.

F. James McDonald: "It's crazy for anybody to think it would all open up at once. You only have so much talent to work on a problem."

McDonald did acknowledge that GM is evaluating all aspects of its operations, including Saturn, to reduce costs and boost profitability.

Throughout the corporation, GM has been looking for ways to cut spending because of less-than-stellar profit performance in recent quarters and an industry slugfest forecast for the years ahead.

McDonald further confirmed that Saturn cars will be sold through a separate franchise system, as originally planned. Rumors have persisted that Saturn had scratched plans for a separate franchise system and had decided to sell the cars through Chevrolet and Pontiac dealers.

However, Saturn has a team of about a dozen GM dealers working on new ideas for distribution and selection of dealers.

Sources familiar with Saturn plans also deny persistent rumors that the car will be an econobox replacement for the Chevrolet Chevette, which will be discontinued after the 1987 model year.

Sources say the Saturn car will be sportier and more upscale than a traditional econobox.

GM has said the Saturn may not necessarily be its lowest-priced car. The Sprint likely will remain as GM's least expensive car, and Saturn may be second.

McDonald said the long-term production goal for Saturn remains at 500,000 cars a year.

Head-hunters for directors turn to auto companies

By Laura Clark
DETROIT REPORTER

When Kerr-McGee Corp., an Oklahoma City oil, natural gas and chemical company, wanted to add prestige to its board of directors, it looked to the auto industry.

After several months of searching, the company asked Chrysler Corp. Vice Chairman Bennett Bidwell to join the board.

Kerr-McGee is one of a growing number of non-automotive companies that have recruited auto executives for their boardrooms.

The exact number of automotive executives who sit on outside boards is unknown because the auto companies do not keep track of such data.

But companies that have successfully courted automotive executives for their boards range from personal products giant Procter & Gamble Co. to Dayton Hudson Corp., a large retailing chain.

"In the last 15 years, there has been a trend toward automotive executives sitting on the boards of profit-making companies," said a General Motors spokesman. "At one time, the automotive industry was criticized for having tunnel vision. Now, these executives are bringing back information from other companies."

GM's three top executives serve as directors of other firms. Chairman Roger Smith is a director of Johnson & Johnson; President F. James McDonald, is a director of H.J. Heinz Co. and Georgia-Pacific Corp.; and Vice Chairman Howard H. Kehrl is a director of Dayton Hudson Corp.

Marina Whitman, GM vice president and group executive of the Public Affairs Staffs Group, is a director of Manufacturers Hanover Corp. and Procter & Gamble. Elmer Johnson, GM vice president and general counsel, is a partner in Kirkland and Ellis, a Chicago law firm.

At Ford Motor Co., Vice Chairman William C. Ford is a director of Manufacturers National Bank and Manufacturer's National Corp.; and Vice President and General Counsel Henry R. Nolte is a director of First Federal of Michigan.

At Chrysler, in addition to Bidwell's association with Kerr-McGee, Vice Chairman Robert S. Miller serves on the board of Moore Oregon Lumber Co. of Coos Bay, Ore.; and Glenn White, vice president of personnel and organization, is a director of Zondervan Corp., a publishing and religious supply firm.

To avoid possible conflicts of interest, the four major U.S.-based automakers have set up guidelines governing what kinds of companies their employees may serve as directors.

Though the definition of conflict varies, one stipulation applies throughout the industry: No employee may serve on the board of a competitor.

"You wouldn't find one of our executives sitting on the board of Ford Motor Co., for example," said a Chrysler spokesman.

Conflict of interest policies are invoked when an automotive executive is asked to join the board of a firm that provides goods or services to his company.

"Obviously, if (the directorship) is with a supplier, you're representing the buyer and the seller and would not look at things objectively," said an American Motors spokesman.

AMC sees a conflict in its executives sitting on suppliers' boards, but a Chrysler spokesman said the extent of the relationship between Chrysler and the company would be taken into consideration.

"You really can't paint it with a broad brush, it depends on the supplier," the spokesman said.

Both Ford and GM spokesmen said an executive sitting on the board of a supplier would generally be considered a conflict of interest, although both companies said each case would be looked at individually.

At Ford, all requests to accept outside directorships must go through the vice president and general counsel, who has the authority to approve or deny the request.

At GM, such requests must be reviewed by the executive committee of the board of directors, which will either approve or turn down the request.

Before a Chrysler executive can accept a directorship outside the company, the request must be approved by a representative of the policy committee in his or her area of the corporation and by the vice president of personnel.

AMC's vice president of personnel and industrial relations reviews requests with the company's chief executive officer.

"If appropriate, they will go to the board to see if there is a conflict of interest, potential for a conflict of interest or if the time consumed would interfere with the officer's duties (at AMC)," said an AMC spokesman.

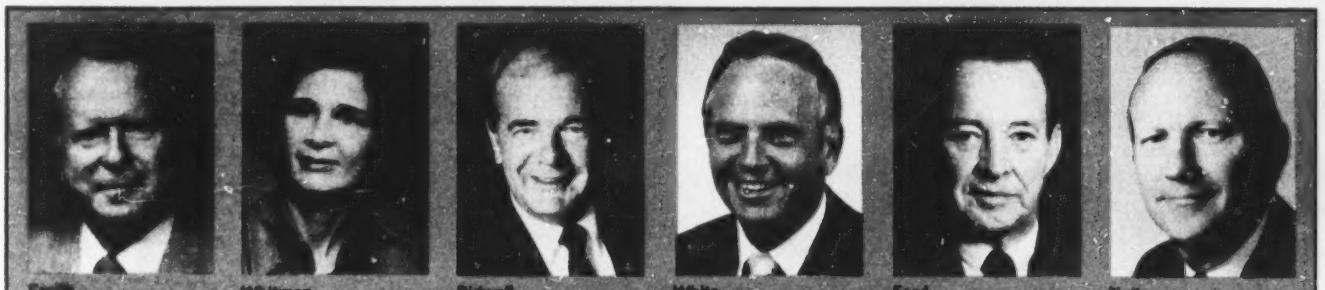
Currently no AMC top executive sits on the board of another company.

Auto executives serving as directors of outside companies receive an annual stipend and usually are paid an additional fee for each board meeting they attend.

For instance, Bidwell receives $12,000 annually from Kerr-McGee plus $500 for every meeting he attends, according to a Kerr-McGee spokesman. Smith receives $35,000 annually for sitting on the Johnson & Johnson board.

Whitman, the GM public affairs vice president, receives $16,000 plus $500 per meeting from Manufacturer's Hanover and $24,000 plus $900 per meeting from Procter & Gamble.

"I don't think they're doing it for the money," said a GM spokesman. "It gives them exposure and the opportunity to communicate with other executives."



SOME AUTO EXECUTIVES WHO HOLD OUTSIDE DIRECTORSHIPS

NAME	POSITION	OUTSIDE BOARD MEMBERSHIPS	FEES RECEIVED IN 1985
Roger Smith	General Motors chairman	Johnson & Johnson	$35,000

Henry Nolte	Ford Motor Co. vice president	First Federal of Michigan	$ 7,500+

GM appoints Mertz to head Buick

By Michelle Krebs
FINANCIAL EDITOR

General Motors has appointed a new general manager for Buick Motor Division in an apparent effort to halt sagging sales.

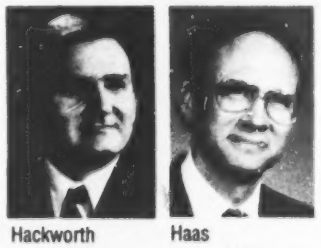
In an unusual move, Donald E. Hackworth, 49, who had been Buick general manager since January 1984, swapped jobs with Edward H. Mertz. Mertz, 49, had headed the Lansing Product Team, part of the Buick-Oldsmobile-Cadillac Group, since August 1985.

Mertz

Before joining the Lansing Product Team, Mertz had been Buick's chief engineer. With his appointment as Buick general manager, Mertz also was elected a GM vice president.

Hackworth has been a GM vice president since 1981, when he became general manager and president of GM of Canada Ltd.

The Lansing Product Team, which Hackworth now heads, is one of four B-O-C product teams.



Hackworth Haas

It is responsible for the design, engineering and manufacture of cars built from the J- and N-body platforms. The J-cars are the Chevrolet Cavalier, Pontiac Sunbird, Oldsmobile Firenza, Buick Skyhawk and Cadillac Cimarron. The N-cars are the Pontiac Grand Am, Oldsmobile Calais and Buick Somerset/Skylark.

A change at Buick had been a topic of speculation among industry insiders. Buick sales for the model year to date are off 20 percent from last year.

GM said the job switch should not be viewed as a demotion for Hackworth, even though his new job was not previously held by a GM vice president. The Lansing Product Team includes 50,000 employees.

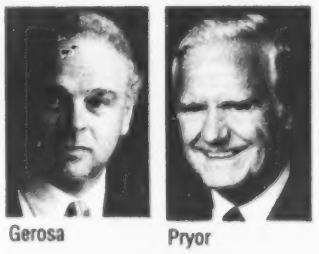
The move does present GM with a dilemma in that Hackworth is the only product team manager who is a GM vice president.

There have been rumblings within the product teams that team managers should have vice president status, as the division general managers have, because they are responsible for organizations that are at least as large.

When the B-O-C and Chevrolet-Pontiac-Canada groups were set up in GM's reorganization two years ago, there were plans to name the product team managers corporate vice presidents, but it never occurred.

GM also announced that Ronald H. Haas, 48, formerly chief engineer of the B-O-C Lansing Product Team, has been elected a GM vice president. He will head the Advanced Engineering Staff.

Haas replaces Robert J. Eaton, who earlier was promoted to group executive in charge of the technical staffs. Haas has held numerous assignments at Oldsmobile Division, ranging from senior project engineer to acting chief engineer.



Gerosa Pryor

Gerosa named

DETROIT — Peter R. Gerosa, 44, has been appointed general sales manager for Cadillac Motor Car Division. He succeeds L.B. "Braz" Pryor, 62, who will retire Dec. 31. Pryor will be on special assignment to Cadillac General Manager John O. Grettenberger until that time.

Gerosa formerly was assistant general sales manager for Oldsmobile Division. He has been in charge of sales in the eastern half of the United States since last March and before that was assistant general sales manager for dealer and marketing activities. Gerosa has been with Oldsmobile for 22 years.

Pryor joined Chevrolet in 1947. He has been with Cadillac since 1973 and has been general sales manager since 1978.

GM engineers leave California

LOS ANGELES — The engineering staff of General Motors' Advanced Concept Center has been transferred to Michigan, and the center is refocusing its efforts primarily on design, Automotive News has learned.

Some engineering staffers have been reassigned already; the others soon will be moving.

The ACC opened nearly three years ago in suburban Thousand Oaks. It was organized to blend design, research and engineering into a single think tank.

Henry Haga, ACC director, said that after the practical experience of having GM engineers working with the center, it has been decided to concentrate primarily on design and rely on outside engineering contracts and the facility's direct computer links with the GM Technical Center in Warren, Mich., to provide engineering support.

As a result, the 10 staff engineers and five support workers have been transferred, and ACC is planning to add to its staff of seven designers.

— Matt DeLorenzo

TRUCK INDUSTRY NEWS

July truck sales decline 4.7 pct.; year's total slips below '85 record

By Arthur Flax
AUTOMOTIVE NEWS STAFF

Truck sales stumbled in July after proceeding at a record pace through June.

In July, 419,106 trucks were sold in the United States, 4.7 percent below the record 439,729 sold a year-earlier.

Through July, 2,812,509 trucks were sold, 0.2 percent below the seven-month record of 2,818,412 set last year.

The sales counts are based on manufacturer's reports for light-duty sales and estimates of medium and heavy truck deliveries.

After setting records for June and for six months, sales in the light-duty segment in July fell 4.6 percent from the 1985 total. This year 396,664 Class 1-3 trucks were sold, compared with the record 415,664 a year earlier.

In the first seven months of 1986, a record 2,658,674 light trucks were sold, 0.3 percent above the previous record of 2,651,472 last year.

Of the light-duty manufacturers, Ford, Jeep and the imports reported sales increases for July and for the year. Sales declined for Chevrolet, Chrysler and GMC.

Ford light-duty sales were up 6.6 percent for July and 3.9 percent for the year; Jeep sales showed an increase of 9.1 percent for the month and 17.9 percent for the year; and import sales were up 6.7 percent for the month and 11.2 percent for the year.

Chevrolet light-duty sales were down 17.9 percent down for July and 4.5 percent for the year; Chrysler sales were down 16.1 percent for July and 13.9 percent for the year; and GMC sales were down 11.3 percent for the month and 2.2 percent for the year.

Sales of full-sized pickups declined appreciably. In July, 101,908 full-sized pickups were sold, down 27.8 percent from the 141,191 sold a year-earlier. Through July, the total was 692,088, down 16.6 percent from 830,035 in the first seven months of 1985.

In the medium-duty Class 4-6 segment, an estimated 4,651 trucks were sold in July, down 7.4 percent from 5,025 last year. Through July, 27,926 medium trucks were sold, down 13.6 percent from 32,335 in the first seven months of 1985.

In the heavy-duty Class 7-8 segment, an estimated 17,922 trucks were sold in July, down 5.9 percent from 19,040 last year. For the seven-month period, 125,909 heavy trucks were sold, down 6.5 percent from 134,605 in 1985.

New Freightliner truck test facility

Freightliner Corp. built this $1.2 million testing facility for trucks at Charlotte, N.C., adjacent to its Charlotte Technical Center. The 49,000-square-foot building will produce prototype parts and assemble prototype vehicles. The prototype assembly was previously handled by Freightliner's truck manufacturing plant in Mount Holly, N.C.

Leasing outlook blends good, bad

MIAMI — The outlook for full-service truck-leasing companies during the last half of 1986 and early 1987 is mixed.

Bowker, Brown & Co., a consulting firm, said commercial truck rentals, which lagged earlier his year, are strengthening. However, there are surplus tractors in rental fleets in the Midwest, mid-South and Texas, the firm said. Bowker, Brown said it anticipates little near-term change in the situation.

One-way and consumer truck rentals continue to be strong.

However, U-Haul's emphasis on rental stores and its failure to renew its fleet, along with the demise of Jartran, has made Ryder the market leader in pricing, the consulting firm said.

Hertz-Penske purchased 1,200 Jartran late-model Ford F-700s from Frank B. Hall Inc. of Westchester County, N.Y., the insurance brokerage firm which had leased the units to Jartran.

One-way and consumer rentals are the most promising growth area of truck rental and leasing for the next 12 months.

Single-source leasing and contract carriage have been explored by virtually every shipper since deregulation to the point where those services will share in the growth, but no longer pose a major threat to full-service lease renewals, Bowker-Brown said.

New lease business will at best follow the gross national product growth of 5 to 6 percent a year, the firm predicted. Given the revenue demands imposed on the major companies — especially Ryder — there is little chance of lease rates reaching profit levels of five years ago. Rate pressures are expected to continue.

Contract maintenance is viewed as having the most promising growth and profit opportunities.

Companies that seriously developed and marketed that service had 20-percent-plus gains in 1985. There is a large market potential in contract maintenance available to leasing companies and truck dealers alike, the firm said.

In addition to the traditional private fleets, the federally induced "privatization" of municipal fleets expands the contract-maintenance horizon beyond any other related service for the foreseeable future.

Caterpillar to offer Belgian-made 4-stroke diesels

By Joseph Bohn
TRUCK EDITOR

Caterpillar Engine's North American mid-range truck business is giving ground to greater powertrain integration by its major customers and the influx of imported trucks.

As a result, Caterpillar is trying to expand its truck market with a family of metric-design, four-stroke diesel engines.

They will become available to commercial markets by January 1988.

The engines will be built in Gosselies, Belgium.

Caterpillar will begin phasing the new engines into its own earthmoving and construction equipment in June 1987.

By the following January, it will begin offering them to the industrial, marine and electric-power-generation markets.

Meanwhile, it is also looking for a home for the new engines among North American chassis manufacturers.

The engines are lighter and more fuel-efficient than the 3208, which Caterpillar sells to Ford and General Motors for their upper-end Class 6 and Class 7 trucks.

The new engines are geared to lighter pickup-and-delivery applications in Class 5 and lower-endClass 6 trucks, where imports are coming on strong.

Caterpillar's 3208 engine sales to Ford and GM have been slipping and are expected to continue to slip.

In 1984, Cat supplied 45 percent of Chevy/GMC Class 7 trucks and 65 percent of Ford Class 7 vehicles.

In 1985, it supplied 44 percent of GM's and 53 percent of Ford's Class 7 trucks.

Ford is pushing hard to make its own Brazilian-produced engines the heavy favorite in its medium-duty trucks. GM has a Detroit Diesel Allison/Deere engine-producing venture that likely will ease Cat out the same way.

At the same time, both Ford's and GM's U.S.-built built medium-duty trucks are giving up market share to imports.

Caterpillar Engine doesn't need an on-highway truck market to support its new powerplants because of its huge captive volume in supplying all its own earthmoving machines.

But, obviously, the economies of scale and profit opportunities of the additional high-volume market are very attractive.

Generally, its new metric-design, four-stroke engines are designated the 1.1-liter family.

Each cylinder displaces 1.1 liters for a total displacement of 4.4 liters (268 cubic inches) in four-cylinder models and 6.6 liters (403 cubic inches) in six-cylinder models.

Cat calls the four-cylinder engine the 3114 and the six-cylinder the 3116.

The engines are offered in naturally aspirated, turbocharged and turbocharged-aftercooled configurations.

Introductory commercial intermittent ratings range from 52 to 172 kilowatts (70 to 230 horsepower) with a broad operating range of 1,500 to 3,000 rpm.

Turbocharged and turbocharged-aftercooled industrial ratings have a 25-percent increase in torque.

Generator sets will be offered in 50- and 60-hertz ratings with standby ratings from 40 to 135 kilowatts and prime ratings from 36 to 123 kilowatts.

Special application ratings will also be available.

Key design features of the 1.1-liter engines include Cat's unit injector fuel system, high-mounted engine camshaft and oscillating roller followers.

AUCTION DATES

American Motors

Aug. 12 — Aptco Auto Auction, Taylor, Mich., and D-A Auto Auction, New Stanton, Pa.

Aug. 13 — Minneapolis Auto Auction, Plymouth, Minn.; Metro Milwaukee Auto Auction, Caledonia, Wis.; and Mid States Auto Auction, South Bend, Ind.

Aug. 14 — Northway Exchange, Clifton Park, N.Y.; Todd Auto Auction, Telford, Pa.; and Evansville Auto Auction, Evansville, Ind.

Big H Auto Auction building new home

HOUSTON — Construction has started here on the new home of Big H Auto Auction.

Located on 48.7 acres, the auction building will cover approximately 35,000 square feet and house five auction lanes, offices, a reconditioning facility and a restaurant. Completion is scheduled for September.

NUMMI solves plant problems

By Scott Miner
DETROIT REPORTER

Early production and component-quality problems at New United Motor Manufacturing Inc. in Fremont, Calif., have been corrected, and NUMMI officials say top-quality cars now are being produced.

The former General Motors plant was chosen as the site for the GM-Toyota joint venture. GM halted production at Fremont in March 1982, and NUMMI began building the Chevrolet Nova there in December 1984.

After GM and Toyota signed an agreement in February 1983, changes were made within the plant to make it more efficient than it had been before. Manufacturing techniques were totally revamped, said Kosuki Ikebuchi, NUMMI vice president for manufacturing.

Ikebuchi discussed the changes during a Detroit conference on U.S.-Japanese technology.

Toyota's first step was to bring its NUMMI manufacturing staff to the United States to study how cars had been built at Fremont by GM. The Japanese did not view the plant as a quality or efficient operation.

Bringing the Japanese style of building cars to the United States showed how manufacturing philosophies differ between the automotive giants. Practically every operation in the plant was changed by the Toyota NUMMI team.

Although there were problems to overcome, Toyota and GM officials now consider the plant a model of efficiency.

The factory's problem areas were boiled down to three groups: poor quality, low efficiency on the assembly line and excess inventory.

Ikebuchi said production quality was hurt because repairs to equipment were considered part of the regular routine. Absenteeism was high; parts were being damaged in transit; and the quality of parts from suppliers was low, Ikebuchi said.

The lack of efficiency on the assembly line was blamed on excessive inventory, poor utilization of equipment, a centrally controlled maintenance group and ineffective job classification.

Poor inventory control was attributed to inadequate parts management, problems with engineering changes and line repair problems. Ikebuchi said workers had too great a variety of parts at their work stations, preventing them from working efficiently. He also said workers were slow to respond to inventory problems.

The flow of parts has been rearranged. Parts now are delivered to the exact section of the assembly line where they are needed. Workers no longer have to chase parts.

Ikebuchi said one of the biggest snags they encountered was "getting the workers to honestly evaluate a problem. They were not used to the 'team concept.'"

Another problem was the poor quality of parts received from U.S. suppliers in comparison with those received from Japanese firms. "We were disappointed at the beginning," Ikebuchi said. "The technology and inspection (quality) was poor. But the gap (between Japanese and U.S.) suppliers is disappearing."

To improve production, Ikebuchi brought to the new company Toyota's method of building cars.

Ikebuchi said the NUMMI plant was built with the latest equipment in automation three years ago, but with automation changing quickly, it may not be as automated as newer plants in Japan.

The Japanese instituted changes in inventory controls and job classifications.

Ikebuchi said problems have been corrected and the plant is running at high efficiency. "Everything is possible in America," he said.

On a visit to the Fremont plant last spring, U.S. Labor Secretary William E. Brock said, "Absenteeism has dropped from 20 to 25 percent to a remarkable 2 to 3 percent."

He added that union grievances have been reduced from almost 1,000 unresolved grievances and 60 contested firings for 2,500 workers to no more than three grievances at any one time.

The NUMMI plant has 2,500 workers. One the management side, there are 35 people from Toyota and 16 from GM.

Prima scores a diesel first

WAYNE, Mich. — After a four-year, $27 million development program, Perkins Engines has unveiled a new diesel designed for passenger cars.

The company said the Prima is the world's first high-speed, direct-injection diesel for autos.

Roger L. Howsman, Perkins president, said the new engine is the result of a joint venture between the Perkins Worldwide Group, based in England, and Austin Rover.

Howsman said there are no plans to offer the new Prima engine for cars or light vans in North America. However, he said that industrial and marine versions of the Prima will be sold in the United States and Canada, beginning in 1987.

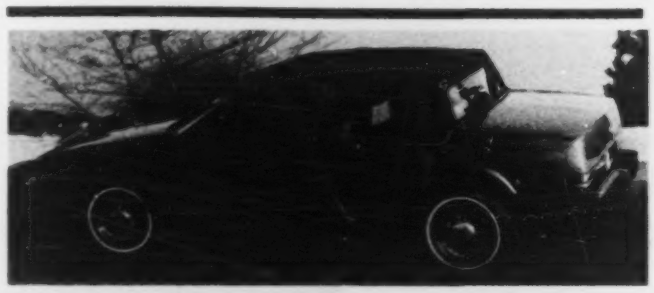
At the heart of the new two-liter engine is the Prima combustion system, which features direct fuel injection and a combustion bowl at the top of the piston.

Perkins said this is the first time direct injection of a diesel has been achieved at engine speeds of around 4,500 rpm, which are required for high-speed applications such as passenger cars. That results in an inherently more efficient engine, providing fuel economy 40 percent better than in gasoline engines, according to Perkins.

As a vehicle or marine unit, the Prima engine will be available in naturally aspirated and turbocharged versions. Horsepower ratings range from 65 to 80.

For industrial applications, hp can be ranged down to 37.5.

The Prima is now in volume production. Perkins and Austin Rover have initial capacity for building 80,000 units year and are capable of expanding to more than 100,000 units.



Cadillac Seville convertible

E&G Classics, Inc., is marketing a convertible top for the 1986 Cadillac Seville. The firm is in Columbia, Md.

Robot keepers trained

DETROIT — There's a growing, oft-stated need in the automotive manufacturing field for people trained in the care and feeding of robots.

That need is becoming more acute as those machines, in turn, grow faster and smarter.

Budd Co. is among suppliers moving ahead in both developing areas of concern.

The company, recognized as being on a par with — or ahead of — carmakers in automation sophistication, has just established a 32,000-square-foot, $1.3 million Automation Research Center in suburban Sterling Heights.

It will have a faculty of 20 manufacturing and training specialists and a goal of accelerating the retraining of Budd workers. The center will have an operating budget of about $1.5 million a year, Budd said.

Russell J. Bennington, manager of research and development in Budd's Stamping and Frame Division, is heading the new center.

"In addition to being a classroom and laboratory for workers and managers, the center will be used to design and evaluate the latest manufacturing technology," Bennington said.

Budd, a subsidiary of Thyssen AG, of Duisburg, West Germany, has annual sales to the auto industry of about $1.3 billion. Stamping and Frame is its largest division.

Budd robot comes unglued, shoots self

DETROIT — Budd Co. claims a first in the field of industrial automation. One of the robots in its North Baltimore, Ohio, plant has committed suicide.

Budd workers are allowed to name their machines and the deceased was Josephine. In her work, she laid down a long and complex bead of adhesive with precision and a neatness that only robots can achieve. Then something happened, said Paul Sichert, vice president, public affairs.

Josephine ignored the glue, picked up a fistful of highly active solvent and shot herself in her electronics-packed chest.

Kablooey! Josephine has been replaced by Ruth.

Jartran loses ad-case plea

SAN FRANCISCO — A federal appeals court here has upheld a $40-million damage award against Jartran Inc., a truck rental firm that is in liquidation proceedings.

The award to U-Haul International Inc. is said to be one of the largest ever in a false advertising case.

U-Haul sued Jartran, charging that Jartran ran false comparative advertising in 1979 and 1980. The ads were aimed directly at U-Haul.

In 1984, a federal district court in Phoenix, Ariz., agreed with U-Haul's claim of injury and awarded the company $40 million in damages.

The Jartran advertising implied that consumers could save money by renting Jartran equipment rather than U-Haul equipment. Jartran's ads also implied that its vehicles were safer and more fuel-efficient than U-Haul vehicles.

The U.S. Court of Appeals for the Ninth Circuit upheld the lower court's award, but said the damages should be distributed in part to U-Haul dealers under a formula to be determined by the lower court.

The appellate court also found the restrictions the lower court placed on future advertising by Jartran to be "over-broad." The court modified those restrictions to prohibit only future false and misleading claims by Jartran, rather than any future comparative claims.

The court also reversed a finding that James A. Ryder, founder of Jartran, is the alter ego of Jartran and thus responsible for payment of damages. The court also refused to award U-Haul attorney fees for the appeal.

Jartran is owned by Frank B. Hall Co., Briarcliff Manor, N.Y., an insurance brokerage concern.

EUROPE

FROM PAGE 1

sales of 898,900 cars, well ahead of 799,000 for second-place Fiat Auto. They held the same positions last year.

But there is no official body that tabulates car sales in Europe. As a result, some estimates put the VW Group and Fiat Auto much closer together for 1986. Some of those estimates do not include 90,700 Seat sales in the VW total, and some sources place Fiat ahead of VW. French industry sources put Fiat on top, and Fiat's own figures also put it in first place.

But all sources agree that the Japanese made a tremendous gain. Sales of Japanese cars in Europe during the first half totaled 727,500, an advance of 22.9 percent over the 592,000 counted in the first half of 1985. Japan's market share was 11.8 percent this year, up from 10.4 percent in 1985.

Seat sales are included in the Volkswagen Group's total for the first time. Two months ago, VW bought 51 percent of the Spanish government's equity in Seat. VW will increase its share to 75 percent by the end of this year and take full ownership by 1990. Seat has been manufacturing Volkswagen cars since 1983.

In the first half of 1986, the VW Group captured 14.6 percent of European new-car sales, followed by Fiat Auto with 13.0 percent. Next in line were the Japanese, 11.8 percent; Ford, 11.6 percent; General Motors, 11.4 percent; PSA (Peugeot-Citroen-Talbot), 11.2 percent; and Renault, 9.9 percent.

Renault was the only one of the leaders to suffer a sales decline. Its sales were down 1.8 percent for the first half. The others were up 6.7 percent to 10.6 percent.

The first half of 1986 was highlighted by the Japanese advance in the European markets. As noted, the Japanese group increased its car sales by 22.9 percent, from 592,000 to 727,000 units.

The Japanese carmakers accounted for 28.7 percent of the total market growth, even though their sales are still restricted in four countries that account for about 50 percent of the total European market.

In Great Britain, a market of some 965,000 cars for the first half, the Japanese still observe a gentlemen's agreement that allows them to take between 10 and 11 percent of the market. They actually took about 10.3 percent during the first half of the year, according to Britain's Society of Motor Manufacturers and Traders.

The French authorities still limit the Japanese market penetration to 3 percent of total sales (of 936,700 cars for the first half), but importers took some 3.4 percent.

In Italy, where the Japanese are allowed to sell no more than 2,000 cars a year, they sold more than that number in the first half.

Spain is still protected from most imports although the country joined the European Economic Community last year. The Japanese carmakers sold about 2,700 cars in the first half, taking nearly one percent of the total of 303,600.

Altogether, the Japanese companies took some 4 percent of the market in these protected countries. In the free markets, however, they took some 20 percent of all sales during the first half.

They made their greatest advance in Germany, the biggest national market in Europe and the one that showed the largest sales gain — up 220,000 cars for the first half. Japan's sales gain in Germany was 51,000 cars.

The Japanese have another stronghold in Europe in the smaller countries, which have no domestic car industry, and mainly in the north of the continent. In markets like Norway, Denmark, Finland, the Netherlands, Belgium, Luxembourg, Switzerland, Austria and Ireland, they increased their sales by more than 63,000 cars to take 27 percent of all sales.

The Japanese market share was 41.6 percent in Finland and 41.3 percent in Ireland. It was between 26 and 37 percent in Norway, Denmark, Greece, Austria and Switzerland.

As they work on increasing their sales volume in Europe, all the Japanese manufacturers also are seeking to build a prestige image. That is part of a plan to go upmarket and sell more profitable cars than they currently do. Until recently, the Japanese makers' success in Europe was based mainly on lower-priced models.

Big European growth seen for 4wd autos

Four-wheel-drive automobile sales in Western Europe will surpass sales of 4wd light utility vehicles within the next five years as the market for non-commercial 4wd vehicles triples, a recent report predicts.

The projection was made by Automotive Industry Data Ltd., a British firm.

It predicted that the European 4wd passenger cars, which accounted for 41.3 percent of the total 4wd market last year on sales of 108,230 units, will grow to almost 60 percent, or 480,000 sales, in an 800,000-vehicle market by 1991.

At the same time, sales of light utility vehicles (such as Land Rover and Jeep) are expected to double their 1985 total of almost 154,000 sales.

From 1979 to 1985, the 4wd market in Western Europe grew from about 65,000 sales to just over 260,000 sales, according to the report.

Notably, the production of 4wd passenger cars in those countries rose from a paltry 2,484 units in 1982 to almost 69,000 units in 1985.

The report predicted a huge increase in European 4wd passenger-car production. By 1991, the report said, European 4wd car production will be slightly more than 600,000 units, compared with 68,700 in 1985. As the Western European market will account for only 480,000 sales, including Japanese imports, much of the production will be exported.

North America is expected to be the main export market and the report predicted that 15 to 20 percent of such imported performance/luxury cars as BMW, Audi and Mercedes-Benz will be equipped with 4wd.

However, the report indicated that Japanese models will dominate the European light-utility vehicle market.

"Light-utility 4x4 sales in Europe expanded 2.6 times from 1979 to 1985, while European production remained fairly static during the period, leaving most incremental sales to imports from Japan."

The researchers predicted that European 4wd light-utility vehicle production would reach 135,000 in a market of 320,000 sales in 1991.

The report covers 15 main European markets on a country-by-country basis.

Switzerland is the leading European country in terms of 4wd market penetration, according to the report. In 1985, 30,000 4wd vehicles, representing 11.3 percent of the market, were sold in Switzerland.

Sales of 4wd passenger cars in Switzerland increased from 2,761 in 1979 to 21,447 in 1985.

Spurring the growth of 4wd vehicles in Switzerland is a government subsidy on vehicles which can be made available for civil defense during times of emergency.

The report is available for $750 from Automotive Industry Data Ltd., 34 St. John Street, Lichfield, Staffordshire WS13 6PB, England.

You're happy.

SALES

Import sales demolish records

By Jenny L. King
DETROIT REPORTER

Imports stole the sales show in July with their best-ever total and a record share of the July market. Domestic sales were up slightly but remained behind 1985 on a year-to-date basis.

With sales of 305,209, imports claimed 32.00 percent of the July market, up from 29.52 percent a year earlier. It was their third deepest penetration into the U.S. market. Six of the 31 makes notched records, and newcomer Hyundai moved up behind Honda as the fourth biggest importer.

Total new-car sales in July were up 6.11 percent, to 953,876 from 898,925 last year. Imports were up 15.00 percent, to a record 305,209 from 265,392 a year ago. The previous alltime high was 286,194 recorded in May of this year.

Domestic sales recovered from their precipitous 18.01-percent, mid-month decline with a 16.11-percent increase the final 10 days of the month. The July total of 648,667 was up 2.39 percent from 633,527 in 1985. Sales rose for five of the seven U.S. automakers.

General Motors, which sweetened its low-interest-rate-loan incentives in late July with rebate offers on certain models, was up 0.99 percent for the month, to 352,389 from 348,936 last year. Ford Motor Co. climbed 2.60 percent, to 169,924 from 165,621. Chrysler Motors was up 12.61 percent, to 98,835 from 87,766.

Honda reported sales of 15,840 new U.S.-built Accords and Civics in July, up from 9,338 a year earlier. Volkswagen was up 3.29 percent, to 6,402 from 6,198. American Motors sales of 5,186 units were off 57.30 percent from 12,144, and Nissan, still strangled by factory changeover, dropped to 91 Sentra sales from 3,524 a year ago.

GM's share of the July domestic-car market slipped to 54.32 percent from 55.08 percent. Ford inched up to 26.20 percent from 26.14 percent. Chrysler drove away with 15.24 percent, up nearly 1½ percentage points from 13.85 percent.

AMC earned 0.80 percent, down from 1.92 percent. Honda had 2.44 percent, up from 1.47 percent. VW moved to 0.99 percent from 0.98 percent, and Nissan plunged to 0.01 percent from 0.56 percent.

Industry sales at the end of seven months were up 1.09 percent, to 6,601,939 from 6,532,562 in 1985. Imports were up 14.45 percent, to 1,813,293 from 1,584,368. Domestics dipped 3.22 percent, to 4,788,646 from 4,948,194.

July 21-31 domestic-car sales were up 16.11 percent, to 281,476 from 242,413 in 1985.

Suppliers slap America price hike

By Roger Rowand
ENGINEERING EDITOR

TRAVERSE CITY, Mich. — Some Chrysler Motors suppliers are asking how the company can increase the price of Omni/Horizon America models by $300. The America rose from $5,499 to $5,799 on Aug. 1.

Suppliers were asked to absorb a 10 percent price cut to support the America program and unions were asked to make concessions.

At an annual University of Michigan supplier-oriented Automotive Management Briefing Seminar here, a vendor asked Chrysler Motors President Harold K. Sperlich how he was able to rationalize the price hike.

Sperlich agreed that supplier and dealer cooperation had been needed. He said the company did not increase prices on 1986 models after its introductory increase last fall and that the hike on its 1987 cars averages less than 2 percent.

"We still have costs coming in the door, notably in the wage, the economic, area," Sperlich said. "You'll find our '87 pricing very responsible. The America still is dramatically lower-priced than it was before we talked to our suppliers, so we think it squares."

Since the start of the America program, Chrysler has asked suppliers for an additional 2 percent price cut. That cut was not tied to America cars, however.

As the seminar progressed, a panel of top auto brass fielded questions — many about prices and the Japanese increases followed by U.S. makers' hikes.

General Motors President F. James McDonald said, "We've made a lot of jokes about the economists but no one has talked about the lawyers. The worst thing you can do is sit up here and talk about prices."

He said GM constantly evaluates its cars and prices against those of competitors. "Then we price accordingly," he said. "That's the only legal answer. That's the only business answer."

PRODUCTION

July production dips to 3-year low

By Kathy Boyer
DETROIT REPORTER

July auto production in the United States was cut by model changeovers and vacations. Output of 512,118 cars was the lowest for any month since July 1983 when 473,239 were assembled.

The month's production dipped 29.20 percent from June's 723,288 and also slipped 17.20 percent below the year-ago month's 618,537.

Changeovers held last week's production to 76,367 cars, lowest of any week so far this year. Last week's targeted build was 23.55 percent below the previous week's 99,895 and 33.87 percent below the year-ago week's 115,481.

So far this year, 4,927,886 cars have been assembled, down 5.22 percent from last year's 5,199,114.

Companies shared last week's estimated production as follows: Ford Motor Co., 43.85 percent; General Motors, 22.58 percent; Chrysler Motors, 19.77 percent; Honda of America Manufacturing Inc., 6.95 percent; New United Motor Manufacturing Inc., 4.89 percent; and American Motors, 1.96 percent.

Volkswagen of America's plant in Westmoreland, Pa. remains idle for changeover until Aug. 18.

Nissan Motor Manufacturing Co.'s car line at the Smyrna, Tenn. plant remained down for changeover last week. Production is scheduled to resume tomorrow (Aug. 12).

American Motors has dropped the Encore nameplate for 1987. The former Encore becomes the Alliance hatchback and the Alliance notchback is now referred to as the Alliance sedan.

GM's Janesville, Ohio, plant closed Aug. 8 for changeover. The plant is expected to resume production Aug. 19.

The following GM plants remain idle for changeover: Wentzville, Mo.; Oklahoma City; Tarrytown, N.Y.; Framingham, Mass.; and Lansing, Mich. (Nos. 1 and 2).

Ford's Atlanta plant remains closed due to a strike over working conditions. The plant assembles Taurus and Sable models.

All Ford car plants except Wixom are slated for daily overtime this week (Aug. 11).

Chrysler's Belvidere, Ill. and St. Louis (No. 2) plants are scheduled for daily overtime this week.

GM trimming capacity at foundry unit

SAGINAW, Mich. — General Motors' Central Foundry Division plans to reduce production capacity.

By the end of August, the division will begin phasing out all operations at its nodular iron casting plant in Saginaw and the die cast and permanent mold aluminum casting operations at its plant in Massena, N.Y. The reductions are scheduled to be completed in two years.

"After careful analysis of our production forecasts, it is clear that we will need less foundry capacity than we now," said George G. Johnson, Central Foundry general manager.

The Massena plant employs 1,329 people to produce aluminum castings for automotive pistons, transmission cases, brake drums and cylinder heads. The Saginaw nodular iron plant employs 1,747 people who make crankshafts, disc brake housings, steering knuckles, exhaust manifolds and other component castings.

"Smaller vehicles with smaller engines require smaller castings," Johnson said. "In addition, we are experiencing fierce competition from foundries outside of GM."

The Massena plant will concentrate on its lost foam cylinder head product line. The lost foam process uses an expendable polystyrene pattern to make each casting.

Approximately 100 Massena plant employees work in the development of lost foam castings. Production of cylinder heads for a 2.0-liter engine for the Chevrolet-Pontiac-Canada Group is scheduled to begin at Massena in September.

Ford begins expansion of St Louis Aerostar plant

DEARBORN, Mich. — Ford Motor Co. has begun site preparation at its St. Louis plant for a $180 million expansion project that will add 243,000 square feet to the plant. Ford said the expansion will provide "a considerable number of new jobs." The plant produces the Aerostar minivan.

Ford has completed a new $78 million 212,000-square-foot paint facility at its Louisville truck plant. Ford builds Rangers and Bronco IIs at Louisville.

Truck output lowest of year

Domestic truck production during July totaled 262,390 units, the lowest monthly output since December when 241,341 trucks were assembled.

July's output was 16.82 percent below June's 315,435 but was 11.33 percent more than the 235,687 produced in July 1985.

Last week's scheduled production of 52,612 was 21.29 percent below the previous week's 66,846 and 16.02 percent below the year-ago week's 62,646.

Year-to-date, 2,190,696 units have been assembled, 3.59 percent more than the 2,114,723 completed last year at this time.

Ford Motor Co.'s Louisville, Ky., plant began production of 1987 Bronco II and Ranger models Aug. 7.

General Motors' Detroit plant closed Aug. 8 for model changeover. The plant is scheduled to resume output Aug. 25.

American Motors' Toledo, Ohio, plant resumed production today (Aug. 11) after being idle since July 21 for vacation.

All Ford plants except Lorain, Ohio, are slated for daily overtime this week (Aug. 11).

Canadian production slides

Canadian carmakers assembled 57,390 units in July, the lowest monthly production since August 1983 when 49,221 cars were built.

July output also was the lowest for that month since 1983 when 54,670 units were assembled.

July's production was 43.27 percent below June's 101,170 and 16.96 percent below the total of 69,110 in July 1985.

Last week's scheduled production of 9,122 cars was down 17.31 percent from the previous week's 11,031 and was 26.49 percent below the year-ago week's 12,410.

Truckmakers' July output of 46,456 was 38.73 percent below June's 75,827 and 9.08 percent below the 51,094 built in July 1985.

Estimated output of 11,151 trucks last week was 11.36 percent below the previous week's 12,580 but was 15.42 percent above the year-ago week's 9,661.

Hyundai franchises offered to dealers in scam

By Matt De Lorenzo
AUTOMOTIVE NEWS STAFF REPORTER
Copyright, 1986, Automotive News

LOS ANGELES — At least 20 U.S. dealers have been offered Hyundai franchises for $5,000 to $2 million by individuals purporting to have connections with Hyundai Motor Co. in South Korea.

Hyundai Motor America Inc., the only U.S. authorized distributor, uncovered the scams recently and obtained a preliminary injunction here against one operator who offered up to 25 franchises across the Sunbelt to an Arizona dealer for $350,000.

Although dealers have placed amounts ranging from $5,000 to $350,000 in cash in escrow accounts to receive the franchises, Hyundai said none have admitted losing any money. Once the scam was uncovered, dealers told Hyundai they were able to recover the monies from escrow.

Hyundai cars barred from Japan, exec says. Story on page 2.

Finbarr O'Neill, Hyundai Motor America vice president and general counsel, said the cases appear unrelated, although documents used in the West Coast incident made their way to Atlanta and were used by people there in approaching dealers.

"A number of dealers have been approached by individuals touting some alleged connection with the Hyundai family," O'Neill said. "They are not at all authorized to represent Hyundai. We've moved promptly against these individuals to get them to cease and desist."

O'Neill said that while the cases have been generally unrelated, the pitches are fairly similar — a dealer is approached by someone who implies that he has some connection with Hyundai or government officials in Korea and can arrange a franchise deal.

"They capitalize on their own alleged connections, which are always sort of vague," O'Neill said.

Although Hyundai Motor America knows of some 20 to 30 dealers who have been contacted by persons promising franchises, it is not known exactly how many operators there are or how widespread the activity is.

"That's the one troubling point; we don't know if this is all there is or if it could be the tip of the iceberg," O'Neill said.

O'Neill stressed that "the only way to be considered (for a franchise) is to apply to Hyundai Motor America. We don't operate through brokers. There's a perception out there that a Korean auto company would somehow operate differently. That's not the case."

Even before Hyundai sold its first car in the United States, people were approaching dealers and offering franchises, according to O'Neill.

The first case was reported in New York during April 1985. Dealers were approached by an individual who promised to deliver franchises for a 15 percent interest in each point. O'Neill said a cease and desist agreement was obtained from that person.

U.S. automakers caught in middle in South Africa

By Jeremy Sinek
STAFF CORRESPONDENT

JOHANNESBURG, South Africa — As battles over South Africa's apartheid policy intensify here and in the United States, America's two largest automakers are finding themselves caught in the middle.

Last week, General Motors and Ford Motor Co. were among corporations here that signed an advertisement urging the South African government to "remove all discriminatory legislation without delay." The ad was sponsored by the American Chamber of Commerce, which represents 305 U.S.-owned businesses that operate in South Africa.

And as talk of economic sanctions against South Africa intensified last week in Western capitals, some commodity markets reacted by driving up the price of two key metals — platinum and gold — because of concern that the South African government could respond to its critics by halting or reducing the exportation of such strategic metals.

South Africa supplies 80 percent of the West's platinum and 60 percent of its gold. Platinum is necessary for catalytic converters in autos and is essential for some military equipment.

Against that backdrop, General Motors and Ford are trying to cope.

Ford has already reduced its exposure in South Africa; 18 months ago, it became a minority partner in South African Motor Corp. (SAMCOR), which builds some Ford sedans and also makes Mazdas and Mitsubishis, some sold with Ford nameplates.

General Motors South African, a wholly owned subsidiary of the parent corporation, is trying to find a similar arrangement. But the two companies, which have built cars in South Africa since the mid-1920s, together still account for 20 percent of the overall vehicle market in South Africa.

SAMCOR was formed by a merger of Ford of South Africa and Amcar Motor Holdings, the automotive subsidiary of South Africa's Anglo American Industrial Corp.

GM has made no secret that it would like a similar tie-up, either with another carmaker — it held abortive talks with BMW late last year — or with a local conglomerate that could open the way into company fleet markets and provide easier access to local borrowing. Such an arrangement also would lessen the potential blow to the corporation in the event of U.S.-imposed sanctions. Like all South African automakers, GM and Ford have to meet regulations requiring 66 percent local content by weight for passen-

Import stocks set record

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

The inventory of new imported cars on Aug. 1 was the highest since Automotive News began reporting the figures in April 1982.

The peak inventory was reached despite the fact that import sales during July were the best ever.

The Aug. 1 stockpile totaled 443,244, but a brisk sales pace kept the days' supply of 40 unchanged from the previous month.

Inventory a month earlier totaled 400,106, and on Aug. 1, 1985, the count was 291,871.

The previous record high was set July 1, 1982, when there were 438,113 cars in inventory.

Volvo, GM OK big-truck link; Volvo to hold 65%

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

General Motors and AB Volvo of Sweden signed a memorandum of understanding Aug. 14, forming a new joint-venture company in the heavy-truck field.

It is called Volvo GM Heavy Truck Corp., and it will handle all of the two firms' North American Class 8 manufacturing, marketing, sales and service operations.

Automotive News first reported an impending deal July 28.

The new company will be based in Volvo White's Greensboro, N.C., headquarters and will essentially be run by Volvo.

Volvo will have at least a 65 percent equity share of the new firm, according to Thomas S. McDaniel, group director, Business Planning Staff, GM Truck & Bus Group.

Volvo will have seven representatives on the new company's 10-member board of directors. GM

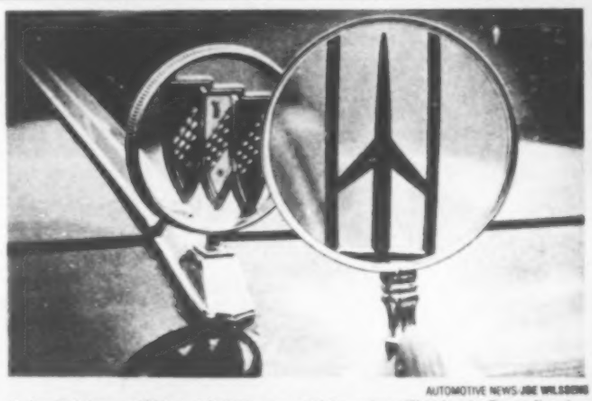
Buick and Oldsmobile are under General Motors' magnifying glass so GM can see where their differences lie.

William Hoglund, GM vice president in charge of the Buick-Oldsmobile-Cadillac Group, said the two divisions are sorting out which markets to go after so they can stop battling each other for the same buyers.

All GM divisions are involved in a program to define their markets and reduce the number of models they offer. The plan is to pit the car divisions against outside competitors, not each other, and to reduce the number of models offered by GM.

see BUICK-OLDS, page 72



AUTOMOTIVE NEWS/JOE WILSSENS

Is it a Buick or an Oldsmobile? The two divisions are still trying to figure it out.

Chrysler-UAW negotiations give new hope to three plants

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Three Chrysler Corp. plants have a chance for a new lease on life following successful negotiations between the company and the UAW in recent weeks.

• UAW workers at the Jefferson Avenue assembly plant in Detroit have ratified a seven-year operating agreement that Chrysler has said it must have before investing up to $1.2 billion to build a new plant and produce a new pickup truck there.

The future of the Jefferson plant now hinges on Chrysler's ability to obtain state and city tax incentives.

• UAW workers at Chrysler's Huntsville, Ala., electronics plant have also ratified a multi-year, "modern" agreement which paves the way for a new plant to be known as Chrysler Electronic City.

• Union members at Chrysler's Trenton, Mich., engine plant were scheduled to vote Sunday, Aug. 17, on a tentative new-style operating agreement that is needed to win a $280 million investment by Chrysler to build a new V-6 engine at the plant.

The agreements are all so-called progressive operating pacts. They call for fewer job classifications, a "pay for knowledge" method of compensation, a team concept of production and a cooperative labor-management philosophy.

The Jefferson agreement, for example, cuts job classifications from about 98 to 10.

The UAW said the pacts also provide for wage increases.

Chrysler hopes to increase the plants' productivity and efficiency, and the union seeks to ensure continued operation of the plants and give workers a greater voice in their working lives.

The agreements are not effective immediately.

In Huntsville, the new contract covering 2,500 members of UAW Local 1413 would take effect in the spring of 1988 when a new plant is scheduled to open. The Trenton agreement would become effective when production of the new V-6 begins.

At Jefferson Avenue, the new agreement would take effect in the spring of 1988 when truck production is expected to begin.

The plant currently assembles Plymouth Reliant and Dodge Aries models.

Chrysler has said that if its conditions are met, it will begin truck assembly in a rehabilitated plant in 1988 and also will construct a new assembly complex.

On Aug. 10, members of UAW Local 7, which represents about 4,000 Jefferson Avenue employees, voted 684 to 316 to ratify the contract.

Chrysler called the ratification a "giant step in the right direction."

"Now the job needs to be completed and that will take an appropriate incentive agreement by the city and state," the company said.

Bieber says transplants could cost 200,000 U.S. auto jobs by 1990

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

UAW President Owen Bieber says the United States could lose 200,000 jobs by 1990 because of an anticipated surge in "transplant" assembly operations.

Transplant operations refer to the vehicle assembly plants in the United States operated by foreign automakers.

The job loss may occur as sales of transplant vehicles in North America displace 2.2 million units of Big Three sales by 1990, Bieber said in a letter to U.S. Trade Representative Clayton Yeutter.

UAW research indicates that by 1990, as many as 13 North American plants will be assembling up to 2.4 million overseas-designed vehicles for the North American market, Bieber said.

He said that while a typical Big Three assembly plant producing 200,000 vehicles annually supports 25,000 "backup" parts and supplier jobs at a level of 95 percent domestic content, the transplant operation using 30 percent U.S. parts generates only 6,700 "backup" jobs.

Bieber made the job-loss prediction in a letter urging Yeutter to support the "broadest possible agenda" on auto parts during upcoming trade talks between Japan and the United States. The Market-Oriented Sector Specific (MOSS) talks open Wednesday in Tokyo.

"We believe the worst possible scenario would be to restrict the MOSS talks to narrow discussions about Japanese government regulations of auto parts imports," Bieber said. The UAW urged "discussions of the impact of Japanese trade and investment on the U.S. auto and parts industry."

Bieber acknowledged that it is "imperative" that the talks seek access to the Japanese market for U.S. supplier firms because U.S. firms must qualify as original-equipment suppliers in Japan in order to source transplant operations in this country.

"We view access and qualification in Japan as a means or bridge to a larger end," Bieber said. "That end is greatly expanded purchases of parts produced by U.S.-based companies for vehicles assembled here by the transplant firms.

"Several U.S. parts producers have tried to get contracts to supply the transplants, but their success has been limited," Bieber said.

UAW studies indicate that transplant assemblers are buying U.S.-made components which are "low value, bulky and costly to transport; components which are highly standardized; and material such as aluminum and plastic which are cheaper here than in Japan," Bieber said.

"Typically, only about 30 percent, by value, of parts in their U.S.-assembled vehicles is sourced from our supplier firms," Bieber claimed. "In general, except for final assembly and body panel stamping, most of the high-value-added and labor-intensive operations are retained in Japan."

He said that in addition to leading to massive job losses, the use of Japanese suppliers increases the trade deficit.

"The use of an average of $3,000 worth of imported parts in each of the 2.2 million additional transplant-assembled units would add $6.6 billion to the automotive trade deficit by 1990," Bieber said.

AUTOMOTIVE NEWS/JOE WILSEMS

Owen Bieber: "We view access and qualification in Japan as a means or bridge to a larger end. That end is greatly expanded purchases of parts produced by U.S.-based companies for vehicles assembled here by the transplant firms."

Atlanta strike ends; 24,000 Taurus/Sables lost

By Mary Connelly
DETROIT REPORTER

Production of Taurus and Sable models was scheduled to resume today, Aug. 18, at Ford Motor Co.'s Atlanta, Ga., assembly plant pending settlement ratification by striking workers Friday afternoon.

A spokesman for UAW Local 882, which represents 3,000 striking workers at the plant, said the union bargaining committee was optimistic the agreement would be ratified. Voting results were not available Friday afternoon.

Ford said the 27-day strike cost production of 24,000 units of the strong-selling models. The Atlanta plant is one of two producing Taurus and Sable models.

Before the strike began, Ford said it had back orders for 160,000 Taurus and Sable models and a four-month delivery lag.

Union members walked off the job July 19 to protest working conditions. Tentative settlement was reached after a 16-hour bargaining session last week.

Sid Hamby, president of UAW Local 882, said the working conditions which prompted the strike included "severe heat problems" in the plant, "poor ventilation," noise levels in excess of federal regulations and hazardous asbestos fibers in working areas.

"The bargaining committee feels we got a good settlement," said J.C. Phillips, a member of the Local 882 bargaining committee. "We feel the working conditions will be better in the plant."

Phillips said the agreement calls for additional fans to reduce heat and boost ventilation in the plant and requires repairs where needed to bring noise levels within federal regulations.

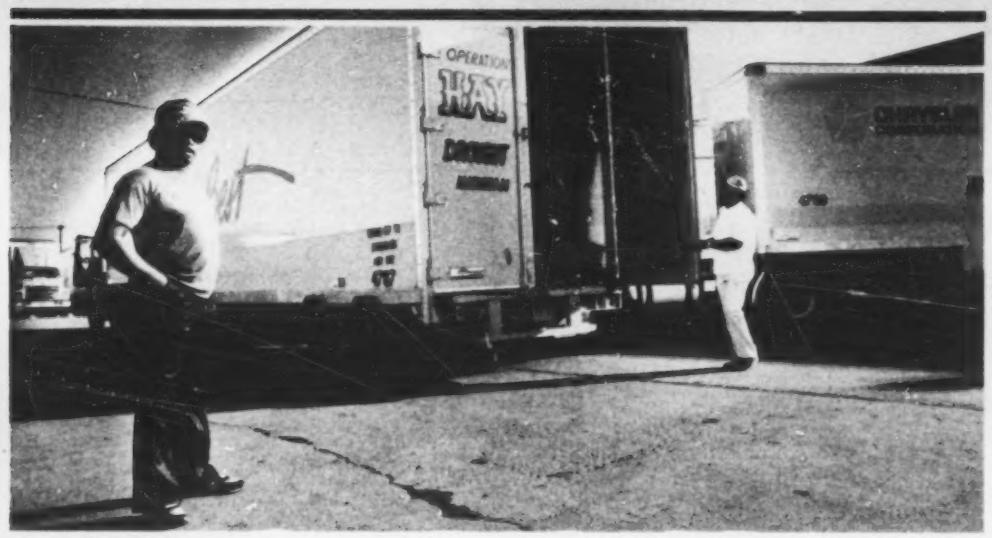
"We also got language that the company will keep asbestos repaired as necessary in the plant," Phillips said.

The strike at the Atlanta plant was allowed under the national agreement between Ford and the UAW, which permits employees to strike over health and safety issues and work standards.

However, the local union has also told Ford it is concerned about outsourcing of work at the Atlanta plant, although that is not a strikeable issue. The union cited the use of a Florida-based company to man a 100,000-square-foot warehouse which stocks more than 220 items to supply the assembly plant.

"Outsourcing was discussed across the table," said Phillips, who declined to reveal the outcome of the talks pending agreement ratification by the local membership.

Throughout the strike, production continued at Ford's Chicago assembly plant, which provides 50 percent of the Taurus and Sable sedans and wagons.



'Operation Hayride'

AUTOMOTIVE NEWS JOE WILSEMS

Five Chrysler trucks were used to deliver 2,500 bales of hay to drought-ridden southern states for livestock fodder. Twelve UAW members from Chrysler Transport in Detroit volunteered to drive the trucks, which were provided by Chrysler Motors. The hay — 125,000 pounds of it — was collected from Michigan farmers and was delivered last week to Forest Park, Ga.

Detroit dealers win partial FTC victory

Federal Trade Commission lawyers have agreed to drop charges that Detroit-area auto dealers used threats of violence and coercion for several years in an effort to limit business hours.

The allegations are part of an FTC antitrust action which accuses nearly 100 Detroit-area dealerships of conspiring to close on Saturdays and most weeknights. Trial before Administrative Law Judge James Timony began last month in Washington and is currently in recess until Sept. 8.

Daniel Hayes, executive vice president of the Detroit Auto Dealers Association, conceded that the "bulk of the case" must still be tried, but he said that dismissal of the threats and coercion charges is an important victory for dealers.

"The case isn't over, but obviously this was central to their case," he said. "With the charges of intimidation and violence out, the underpinning of the case is gone."

Several weeks ago, the dealers asked Timony to throw out the section of the complaint alleging threats and coercion. Acting on the motion, Timony had given FTC lawyers until Aug. 29 to produce 10 exhibits of such behavior by dealers.

Government attorneys last week filed notice with Timony that they would not present a list and would not oppose the motion for dismissal.

An order dropping the charges is being drafted by dealer counsel. The document must be approved by Timony before being forwarded to the full commission for ratification.

"The government was unable to connect any act of intimidation or threat of violence with any new-car dealer in this area," Hayes said.

In announcing the agreement, he called for an apology from FTC lawyers, claiming that the charges have been "a terrible burden for our dealers to bear." But he said the dealer group has not decided whether to file counter-charges.

"The temptation is there, but that is another tricky legal process and we're tired of dealing with these people," he said.

An FTC spokeswoman said last week that the agency does not oppose dropping the paragraph in the complaint citing threats and coercion.

"That has only limited significance and does not affect the main thrust of the case," she said.

During the trial, FTC lawyers have contended that limiting hours adversely affects the ability of car buyers to compare prices and obtain the best deal. They also have sought to show that dealers had no economic justification for reducing hours.

Dealer attorneys have argued that sales personnel pressured dealers to set uniform hours; that dealers did not use threats or coercion; and that dealers are exempt from antitrust laws because they were acting to prevent sales staffs from organizing a union.

The FTC brought restraint of trade charges in December 1984 against 105 individuals, 115 dealerships and 19 dealer associations. However, dealer spokesmen say some respondents have been dropped. DADA attorney Lawrence Raniszeski said last week that 83 individuals, 98 dealerships and 18 associations remain as defendants.

The FTC has declined to confirm the removal of any respondents from the case. But sources say commission approval is virtually certain. Some names have been stricken because the individuals are deceased or long out of business. Many charges included in the case date back to the mid-1960s.

Earlier this summer, Detroit-area dealers and the FTC reached a tentative consent settlement of charges that dealers conspired to restrict price advertising.

The FTC had charged that dealers sought to stop price advertising of current models in local newspapers, resulting in higher costs for consumers. The consent agreement dismissing those allegations is likely but has yet to be acted upon by the commission.

Makers seek to cope with Mexico's troubles

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Mexico's economic crisis is forcing the country's six carmakers to rethink their marketing strategies.

Some, like Volkswagen de Mexico and Chrysler de Mexico, plan to increase promotional advertising spending in 1987 and slash budgets for image building.

"A person who doesn't have the money to buy a car in Mexico is not going to have it if we do more advertising," said Marcus Huchrak, VW de Mexico's advertising and sales promotions chief. ". . . To motivate the market at the moment is very difficult."

Instead, VW de Mexico will try to motivate salespeople by dazzling them with prizes.

"If a salesman sells a Beetle, he'll get one point," Huchrak said. "If he sells a Corsar, he'll get 10. One hundred and twenty points will win him a trip to Europe, and 200 points a trip to Europe with all expenses paid. He'll be able to choose what he wants. There'll even be a house among the prizes."

The gloomy predictions of at least a 30 percent drop in car sales this year did not change following preliminary reports on sales in June, traditionally a bad month.

Huchrak said that in May, VW de Mexico lowered its 1986 car sales estimate from 90,000 to 61,000. Nevertheless, he said, VW expects to outsell Nissan this year.

But Mike Meckel, Ford's advertising manager, said Ford believed that Nissan would finish in first place this year, for the first time since it began selling cars in Mexico 25 years ago and started making them in the country 20 years ago.

Nissan, VW and Renault this summer have been offering a six-month interest-free financing plan to buyers who put 50 percent down.

"By having such strong incentives, Nissan is penetrating the market," Meckel said. "I'm sure this strategy comes from Japan. They did the same in the United States some years ago."

Luis Adame, Nissan Mexicana's marketing manager, said, however, that the Japanese carmaker would not cut back on image-building advertising next year.

"The others have been building their image in Mexico over more years than we have," he said. "We can't afford to stop building ours."

Meckel said, "My strategy next year will be to find a balance between image advertising and hard sell advertising, which includes all the incentive plans."

Ford had been the image leader in the Mexican market; Meckel said he planned to spend 70 percent on image next year and 30 percent on promotions. Ford will continue to advertise on television, despite the 120 percent price increase in the last year by Televisa, Mexico's and Latin America's major television consortium. Meckel said that most automotive companies in Mexico were spending about $1,384,615 a year with Televisa.

Nevertheless, Meckel said Ford might reduce the number of television events that it sponsors — now about 18 a year.

Inaki Landaburu, Chrysler de Mexico's advertising and promotions manager, said Chrysler would spend about 40 percent of its advertising and promotions budget on promotions next year, about the same as this year but double what it spent last year. The rest would be spent on image advertising.

Huchrak, describing VW de Mexico's philosophy in greater detail, said, "We are forgetting for the moment the aspect of communicating what the brand is. We want to get a mixture of promotional and advertising activities."

He said that throughout May and June, VW and about 180 of its 230 distributors had organized a raffle with 15 cars as prizes. About 35,000 people entered after completing a questionnaire. Huchrak said 10,000 of them were serious prospective buyers. "The raffle was a success, because we got people into the showrooms," he said.

The cost to VW de Mexico, including the cars, was just under $1 million, he said.

Huchrak said that this year for the first time VW de Mexico had to contribute toward advertising costs normally paid entirely by the distributors, who added 1.35 percent to the basic price of a vehicle for the purpose.

By the end of July, the company had contributed the equivalent of about $2 million toward advertising. Huchrak said he thought that next year it would be possible to reach an agreement whereby the distributors and company each paid half.

Mazda legal requirements on recall under fire

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Requiring some 500,000 Mazda owners to give up their legal rights to obtain a refund for head-gasket repairs is unfair and unprecedented, according to the Center for Auto Safety.

Replacing head gaskets costs about $400. Replacing the entire cylinder head can cost $1,300, and repair costs can exceed $2,000 if the engine is damaged.

In disclosing Mazda's informal warranty extension on its 1979-82 626 cars and 1979-84 B-2000 trucks, the safety center also criticized the company for failing to give the public notice of the problem and for not allowing consumers enough time to discover the problem or to have it fixed.

On Feb. 28, 1986, Mazda advised owners that it would reimburse them for head-gasket repairs if they responded within 90 days and if they signed a legal release.

The center charged that many owners may not be able to recover their expenses under Mazda's restrictions. The center described the legal release as "so broad that should the replacement head gasket fail later and cause personal injury, the consumer would be barred from any recovery."

The center said that the 90-day period specified by Mazda was not enough time, since the vehicles can be up to seven years old and may have been sold to second owners. Owners who have moved, sold their cars or recently bought a used Mazda may not have been able to meet the May 31, 1986, deadline, the center said.

The center maintained that Mazda's reimbursement program can also be unfair to those who bought one of the vehicles before Feb. 28, 1986, but who had the repair made later.

The center cited the case of a Virginia man who complained of the problem in late 1985 and in early 1986, but the dealer failed to replace the head gasket until March 1986 — after the five-year warranty had expired.

When the dealer and Mazda of America (East) refused to pay the $827 repair bill, the car owner complained to Mazda's president in Japan and was offered a $733 "goodwill" settlement. But, said the center, a less-persistent Mazda owner would get nothing.

The center is asking Mazda to extend the reimbursement period to Dec. 31. 1986, and to extend the warranty from 5 years/60,000 miles to 6/60.

It also wants Mazda to reimburse consumers and provide free repairs to those who first complained during the extended warranty period but had the repair made later. The center wants Mazda to advertise the program nationally in order to reach all affected consumers.

But most important, the center wants elimination of the release from legal liability that consumers must sign to get any repairs.

Mazda East declined to comment.

REGISTRATIONS

June's figure best for '86

By Jenny L. King
AUTOMOTIVE NEWS STAFF REPORTER

New-car registrations in June were highest for any month so far this year and were fourth best for that month. The import total was a record for the month, according to figures supplied by R.L. Polk & Co.

The first-half total was up some 160,000 cars from the 1985 period. Domestics were off 3.23 percent, imports were up 21.93 percent.

June registrations totaled 1,011,837, up 9.64 percent from 922,910 a year earlier.

Low-interest-rate loans accounted for the domestic-registration increase of 7.10 percent June to June. Domestic registrations numbered 714,196 this year, up from 666,863 in June, 1985.

The addition of new imports plus the usual buyer enthusiasm for cars built outside the United States resulted in record June import registrations of 297,641, up 16.24 percent from 256,047 last year.

Chrysler Motors and the combined imports, which include U.S.-assembled Honda, Volkswagen and Nissan cars, gained in shares of the market June to June.

Chrysler was up 1.14 percentage points, to 10.77 percent from 9.63 percent. Imports claimed 29.42 percent of the month's market, up 1.69 percentage points from 27.74 percent the preceding year.

Excluding imports, the June market was divided in this manner: General Motors had 58.77 percent, down from 59.39 percent a year ago; Ford Motor Co. was down to 25.23 percent from 25.81 percent; Chrysler Motors climbed to 15.25 percent from 13.33 percent, and American Motors plunged to 0.75 percent from 1.47 percent.

Toyota puts a freeze on employment

TOYOTA CITY, Japan — In an effort to reduce production costs, Toyota Motor Corp. reportedly has decided to freeze the number of its plant employes at the current 64,000 level.

Meanwhile, the company announced that it has decided to reduce next spring's hiring of college and technical high school graduates by about 24 percent from this year's level.

Toyota plans to hire 580 new graduates next year, compared with 781 this year. The reason for the cut is the business downturn resulting from the yen's appreciation. Toyota reportedly suffered a 30 percent decline in its annual recurring profit for the year ended June 30.

This marks the first time in three years that Toyota has placed restrictions on new hirings of college graduates.

According to the Nihon Keizai, a local business publication, the number of Toyota plant workers at the end of June was up 8 percent, or 4,500, from a year earlier and 15 percent, or 8,200, from three years earlier, mainly due to increased manufacturing processes resulting from a larger number of vehicles produced.

The company reportedly also will reduce the number of auto components used in its various models — which is currently about 700,000 — by more the 100,000 by using the same parts in different models.

Output, sales rise in Japan

TOKYO — Due to increased domestic demand and exports, Japanese automakers produced 1.07 million vehicles in June to top last year's total by 2.6 percent.

The Japan Automobile Manufacturers Association said six-month output rose 2.0 percent to 6.24 million, a record for any first half. The previous high of 6.11 million units was set in 1985.

According to JAMA, production in the first six months included 3.96 million cars, up 4.9 percent over last year; 2.25 million trucks, down 1.6 percent; and 23,000 buses, down 55.1 percent.

Domestic demand for automobiles in the first half climbed 4.1 percent to 2.92 million units, a first-half record, while exports increased to 3.43 million units, up 5.2 percent, JAMA said.

Motorcycle production in the first half, JAMA said, dipped 11.7 percent to 1.96 million units, including 316,000 units in June, down 22.9 percent from a year ago. It was the fifth consecutive month that production declined from the year-ago total.

Chrysler Motors names three plant managers

DETROIT — New plant managers have been appointed at three Chrysler Motors plants.

They are: Philip T. Bray at the Kokomo, Ind., transmission plant; Lawrence C. Mitchell at the Indianapolis foundry; and Richard F. Buehler at the Mound Road engine plant in Detroit.

100 vintage race cars slated to go on block Aug. 22 in California

MONTEREY, Calif. — The first vintage race-car auction in the Western United States will be held here Aug. 22, the same weekend as the Pebble Beach Concours and the Laguna Seca historic races.

The auction's 100 select vintage sports and race cars and antiques include such makes as Maserati, Jaguar, Alfa Romeo, Cobra, Lotus and Mercedes-Benz.

Rick Cole Auctions will conduct the auction. All proceeds from admissions will benefit Children's Service Center of Monterey County, a non-profit agency that finds homes for children through adoption and foster care.

Import sales in Japan crack record for July with 6,035

TOKYO — Imported-car sales in Japan in July climbed 28.5 percent over a year ago to 6,035 units, the highest ever for the month. It was the 31st consecutive month that sales have topped the year-earlier level.

However, July sales fell 14.8 percent below the 7,085 vehicles sold in June.

According to the Japan Automobile Importers Association, July sales surpassed the previous record of 5,486 for the month set in 1979, the year import sales reached a record 60,161 units.

Cumulative sales from January through July this year increased 32.2 percent to a record 38,279, JAIA said.

The dealer association attributed brisk sales to lower interest rates on automobile loans involving some imported cars and lower prices resulting from the yen's appreciation against other currencies.

JAIA said the top-selling imports in Japan in July were Volkswagen, 1,475, up 36.2 percent over last year; BMW, 1,325, up 6.8 percent; and Mercedes-Benz, 1,061, up 28.9 percent.

In sales by countries of origin, West Germany was first with 4,587 units, up 22.2 percent over last year. The United Kingdom was a distant second with 383, up 49.6 percent, followed by Sweden, 314, up 57.8 percent; Italy, 312, up 54.5 percent; United States, 250, up 53.4 percent; and France, 175, up 59.1 percent. Other nations accounted for 14 units, JAIA said.

China gets diesel help

TOKYO — Nissan Diesel Motor Co. said it has agreed to sell its management and production expertise to a new state-operated automotive company in China to facilitate the production of heavy-duty vehicles.

A spokesman for the Japanese firm said the request for assistance was made by Second Automobile Works, located in Shiyan, Hubei Province, in Central China.

Nissan Diesel signed an agreement in August 1985 to supply technological data on heavy-duty trucks and to provide consulting services for the construction of a truck plant.

According to the spokesman, the agreement calls for Nissan Diesel, the truck manufacturing affiliate of Nissan Motor Co., to send its experts to instruct Chinese executives and workers on production management and planning, information management, quality control, operational rationalization and labor management, starting in 1987.

The Japanese firm will also send a team of experts to China in September to determine what is necessary for the plant's effective operation and to facilitate the transfer of technology.

The spokesman said the value of the contract will be determined during the team's visit to the Chinese plant.

APAA's export service recognized
Julian C. Morris, president of the Automotive Parts & Accessories Association, accepts the "E" award from President Reagan. The honor is awarded for export service. APAA works closely with Ambassador Clayton Yeutter, left, U.S. Trade Representative; and Secretary of Commerce Malcolm Baldrige, right, to expand auto parts exports.

Auto sales down 4.5% for 10 days

By Jenny L. King
AUTOMOTIVE NEWS STAFF REPORTER

U.S. new-car sales for Aug. 1-10 dipped slightly from the year-ago total, which itself was depressed by a car haulers' strike and a quiet market.

Adding to this year's doldrums was the fact that there was one less selling day — eight, compared with nine in 1985. Actual sales were down 4.50 percent; they were up 7.44 percent on a daily-rate basis.

The Aug. 1-10 total this year was 152,079 compared with 159,241 in 1985. This year's daily rate was 19,010, up from 17,693.

Year-to-date sales of 4,940,725 were down 3.26 percent from 5,107,122.

General Motors dropped 15.11 percent, to 78,355 from 92,298. (It was down 4.50 percent on a daily-rate basis.) Ford Motor Co. reported sales of 41,435 new passenger cars, up 11.58 percent from 37,135 (up 25.52 percent daily rate).

Chrysler Motors' sales of 25,274 were up 2.57 percent from 24,640 (up 15.38 percent daily rate). American Motors plunged 48.15 percent, to 1,400 from 2,700 (down 41.67 percent daily rate).

The AMC total means that its dealers averaged about one car sale apiece during the Aug. 1-10 period.

Honda reported sales of 4,447 this year compared with 771 in 1985, when cars built were stranded by the haulers' strike.

†—Estimate

Volkswagen listed 1,118, down from 1,152. Nissan sales were estimated at 50 compared with 545 a year ago.

GM's share of the market dropped to 51.52 percent from 57.96 percent. Ford moved up to 27.25 percent from 23.32 percent. Chrysler was up to 16.62 percent from 15.48 percent.

AMC slipped to 0.92 percent from 1.70 percent. VW earned 0.74 percent, up from 0.72 percent. Honda had 2.92 percent compared with 0.48 percent in 1985, and Nissan's 0.03 percent was down from 0.34 percent.

On a numbers-only comparison, Plymouth was up 11.81 percent, Dodge was up 4.56 percent and Chrysler was off 7.63 percent. Ford sales were up 19.66 percent, Lincoln was up 17.90 percent and Mercury was down 8.01 percent.

IMPORTS

FROM PAGE 1

The latest 40-day-supply figure compares with the 29-day supply a year-earlier.

The import truck inventory on Aug. 1 was 200,649, also the highest total since Automotive News began reporting import stock figures.

A month earlier, the count was 193,608 and a year earlier it was 74,720.

The 49-day supply of trucks on Aug. 1 compares with 64 days a month earlier and 20 a year earlier.

The combined car-and-truck inventory totaled 643,893 on Aug. 1. A month earlier, the figure was 593,714 and on Aug. 1, 1985, it was 366,591.

Days' supply of cars and trucks on Aug. 1 was 43, down from 46 on July 1, but up from the 26-day supply a year earlier.

Car inventories for the month were shared as follows: Japan, 73.00 percent; Germany, 16.67 percent; and other countries, 10.33 percent.

On July 1, the split was: Japan, 69.44 percent; Germany, 19.46 percent; and other countries, 11.10 percent.

Days' supplies of imported cars by country of origin on Aug. 1 were: Japan — Honda, 11; Toyota, 13; Acura, 32; Mazda, 34; Subaru, 46; Nissan, 47; Mitsubishi, 87; Chrysler, 99; Chevrolet imports, 120 (including 94 for the Suzuki-built Sprint and 138 for the Isuzu-built Spectrum); and Isuzu, 145.

Germany — BMW, 27; Mercedes Benz, 31; Porsche, 40; Volkswagen, 62; Merkur, 73; and Audi, 104.

Other countries — Jaguar, 20; Alfa Romeo, 33; Saab, 42; Yugo, 52; Volvo, 53; Peugeot, 86; and Renault, 198.

Trucks and their days' supplies were: Suzuki, 16; Toyota, 23; Mazda, 48; Nissan, 84; Mitsubishi, 97; Isuzu, 103; and Chrysler, 116.

All import truck figures include Nissan's domestic models.

VOLVO

FROM PAGE 1

will have three.

GM of Canada and Volvo are forming Volvo GM Canada Heavy Truck Corp. to distribute heavy-duty trucks built by the U.S. firm.

The equity investments by the two Canadian firms will be the same as in the United States, but board representation will be split 50-50 between Volvo and GM of Canada officials.

Officials expect the new joint venture to begin operations later this year after formal government approval in Sweden and the United States. It is expected to be be fully operational by mid-1988.

The new firm will sell current GMC and Volvo heavy-duty trucks and also the medium-duty FL 4 and FL 6 models imported by Volvo from Sweden.

Thomas McDaniel: He expects uncertainty among dealers and customers.

Eventually, officials expect to combine products into a single lineup. All future products will carry both the GMC and Volvo badges.

GMC and Volvo dealers will retain their separate franchises through the transition period, McDaniel said, but eventually will combined into a single dealer network. He said Volvo dealers will have access to GMAC financing.

He said he anticipated a reduction in the overall number of dealers now handling GMC and Volvo heavy-duty lines.

The two companies expect, though, to retain their separate factory branch stores, some of which are close to one another.

GMC currently has about 300 heavy-duty dealers, Volvo about 220.

On the basis of last year's sales, the newly formed company will be the fourth largest in the domestic heavy-truck market behind Navistar, PACCAR and Mack.

Volvo White and GM had a combined 17.3 percent of Class 8 retail sales last year.

Navistar had 21.4 percent of the Class 8 market, followed by PACCAR, whose combined Peterbilt/Kenworth sales accounted for 17.8 percent. Mack was next with 17.7 percent.

Freightliner had 13.5 percent of the market; Ford had 11.4 percent; and miscellaneous companies accounted for the remaining 0.9 percent.

McDaniel said, however, that a "wait-and-see" attitude by dealers and customers during the transitional period would affect sales and market shares.

GM plans to phase out heavy truck production at its Pontiac Central plant within about two years, assigning all heavy-duty production to Volvo's U.S. facilities.

Affected by the shutdown will be about 1,600 employes directly involved in heavy-duty operations plus an undetermined number of people in support operations.

The end of heavy-truck production at Pontiac Central will eliminate about 21,000 units of annual capacity from the domestic industry's Class 8 market. The plant has been producing at less than half capacity.

The domestic industry has capacity to build 200,000 Class 8 trucks a year. However, this year's sales are expected to be less than 120,000.

GM is essentially turning over all future product design and planning — as well as manufacturing, sales and service — to Volvo.

GM wants to concentrate its money and resources to shoring up its position in the medium and light-duty truck markets.

GM is No. 1 in medium-duty trucks, with 33 percent of the market, McDaniel said. There is a lot of overlap between medium and heavy trucks, with fleets often inclined to buy both from the same manufacturers.

GM, which is planning all-new medium-duty Class 3 to 7 models by 1990 (Automotive News, May 12) wants to "preserve its position" in that segment, particularly against the host of new foreign competitors, McDaniel said.

During the two-year transitional period, GMC will continue to introduce new products already on the boards. They include a new setback-axle General model that is scheduled to go on sale next January and the 60 series Detroit Diesel Allison engines that will be phased in during the 1987 model year.

But ultimately Volvo, which does just about all its design work in Sweden, will be calling the product shots and making the major new-product investments.

Truck operations have remained profitable

Volvo Truck Corp. of Gothenburg, Sweden, has remained profitable through the truck recession of the 1980s.

Last year, Volvo Truck's sales of $2.4 billion accounted for about 19 percent of the parent company's total. It reported an operating profit of $133 million, 12 percent of AB Volvo's total.

Volvo Truck has invested $355 million in capital expenditures during the past five years. Trucks also accounted for a substantial portion of the $1.9 billion invested by the Volvo group in research and development in the same period.

Last year, Volvo produced 41,200 trucks, including 11,200 in Sweden, 11,200 in Belgium and 10,800 in the United States.

Many of its driveline factories are working on two or three shifts. President Sten Langenius estimated that his company could produce 50,000 units a year with no major investment.

PRODUCTION

5-millionth car built

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

United States automakers assembled their five-millionth car of the year last Thursday (Aug. 14), two weeks behind 1985.

So far this year, 5,019,066 cars have been built, 5.59 percent below the 5,316,424 completed last year at this time.

Last week's scheduled production of 90,814 cars was 18.35 percent more than the previous week's 76,733 but was 20.47 percent below the year-ago week's 114,186.

The makers split last week's targeted output as follows: General Motors, 36.39 percent; Ford Motor Co., 35.46 percent; Chrysler Motors, 15.97 percent; Honda of America Manufacturing Inc., 6.00 percent; New United Motor Manufacturing Inc., 4.11 percent; American Motors, 1.65 percent; and Nissan Motor Manufacturing Co., 0.42 percent.

Volkswagen of America's Westmoreland, Pa., plant remained idle last week for model changeover. The plant is to resume output of the Golf/GTI today (Aug. 18).

Nissan's car line in Smyrna, Tenn., resumed output on Aug. 12. The line had been idle since March 28, preparing for production of the 1987 Sentra four-door.

GM's Van Nuys, Calif., plant is to resume output today after being down for changeover. The Janesville, Wis., plant will resume production tomorrow.

GM's Lordstown, Ohio, plant resumed output Aug. 13 after being idle for changeover.

Ford's Atlanta plant is expected to resume production today. The plant has been closed since June 19 because of a strike over working conditions.

Ford's Dearborn, Mich., plant returned to work today after a two-week vacation.

All Ford plants except Wixom, Mich., are slated for daily overtime this week (Aug. 18).

Chrysler's Belvidere, Ill., and St. Louis (No. 2) plants were scheduled for overtime Saturday (Aug. 16). They are slated for daily overtime this week.

Truck output tops 60,000

Last week's domestic truck production of 60,405 units was 3.25 percent more than the previous week's 58,504 but was 6.96 percent below the year-ago week's 64,921.

Year-to-date, 2,256,993 trucks have been assembled, 3.67 percent more than the 2,177,050 completed last year at this point.

American Motors' Toledo, Ohio, plant resumed production today (Aug. 18) after being idle for vacation since July 21.

All Ford plants except Lorain, Ohio, and Twin Cities are slated for daily overtime this week.

Production rises in Canada

Canadian automakers scheduled production of 10,204 units last week, 14.42 percent more than the previous week's 8,918 but 49.18 percent below the year-ago week's 20,080.

So far this year, 664,181 cars have been built, 1.58 percent more than the 653,819 completed last year at this point.

Truckmakers targeted 13,237 units last week, 30.14 percent more than 10,171 the week before and 10.65 percent more than 11,963 a year ago.

Year-to-date, 545,813 trucks have been assembled, 1.80 percent more than the 536,173 built last year at this time.

Volvo's Halifax, Nova Scotia, plant is idle for vacation. The plant will resume production Aug. 25.

General Motors' Ste. Therese, Quebec, plant resumed output today (Aug. 18). The plant had been down since July 7 for vacation.

Big savings in tires seen for Detroit

By Dave Zeia
AUTOMOTIVE NEWS STAFF REPORTER

Industrywide cuts in wholesale tire prices enacted since last March could save the auto industry more than $100 million.

The 6 percent reduction in tire prices charged to original-equipment manufacturers is equivalent to about $1.30 to $2 per tire, sources said.

If OEM tire demand reaches 52 million units for cars and trucks in the coming model year as expected, the price cuts could translate into $78 million to $104 million in savings since the beginning of the 1986 model year, according to a New York-based auto analyst.

Tire makers trimmed wholesale prices twice during the past year. The first cut came last March, when Goodyear scaled back prices 3 percent, and other original-equipment tire makers followed. A second reduction of nearly 3 percent is being passed on to automakers for the 1987 model year by all the OEM tire suppliers.

Tire makers were able to offer automakers the break mainly due to sagging oil prices

"The major impetus for the lower prices is the drop in oil costs," said Harry W. Millis, a tire industry analyst with McDonald & Co. of Cleveland. "Raw materials are 55 percent of tire production costs and oil-based chemicals are 75 percent of all raw materials."

But the real inspiration for the cuts may have come from the automakers, particularly General Motors, which reportedly put the pricing squeeze on Goodyear last March in exchange for a promise to maintain Goodyear's share of GM business.

"I'd be surprised if there is any change during the model year," Millis said. "In my 25 years as an analyst, I've seen prices change only twice in the middle of the year. That was last March and back in 1980 when Uniroyal was in financial trouble and GM went along with increased prices in order to help bail it out.

"But the question of further cuts really boils down to whether Detroit gets into a jam or raw material costs put tire producers in the position to make further price reductions," he said.

Honda ponders Indonesian deal

TOKYO — Honda Motor Co. said it is considering a joint venture with Indonesia's P.T. Prospect Motor and other Indonesian investors to produce engines in Indonesia beginning next year.

Honda has been shipping knockdown kits of 1.3-, 1.5- and 2.0-liter engines to Prospect Motor for assembly. Last year, Honda shipped 8,000 such kits from Japan.

Honda already has an Indonesian joint venture with P.T. Imora Honda Inc., making seats, exhaust pipes, fuel tanks and other auto parts.

The Indonesian government treats commercial vehicles more favorably than cars. It imposes a stiff tariff on imported cars.

A venture with Prospect Motor would be Honda's second overseas engine program. This fall, Honda expects to begin producing 1.5-liter engines at an annual rate of 60,000 units at its Marysville, Ohio, plant.

Tax reform plan expected to boost year-end car sales

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Auto analysts expect a flurry of car buying late this year because of tax reform. The bad news is that the year-end buying will steal sales from 1987, they say.

Analysts forecast that sales by year-end could be 100,000 to 200,000 units higher than predicted before tax reform. They also say 1987 will see a decrease of the same magnitude from earlier forecasts.

Tax reform eliminates the sales tax deduction and begins phasing out interest deductions Jan. 1, 1987.

Howard Leonard, auto analyst with FNC Financial Corp., compared the situation to the personal computer market late last year.

Computer makers announced late in 1985 that prices of personal computers would increase Jan. 1, 1986. The announcements triggered a frenzy of computer buying last Christmas.

Maryann Keller, of Furman Selz Mager Dietz & Birney, has upgraded her 1986 sales forecast to 11 million cars or more from her earlier prediction of 10.8 million to 10.9 million units because of a year-end buying surge.

"There will be a flurry of car buying, especially in the expensive category," she said. "If I were thinking of buying a Mercedes, you can bet I'd be putting my order in right now."

She noted that on a $20,000 car

How tax bill would affect auto industry

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The tax bill agreed to by House and Senate conferees would treat the U.S. auto industry better in the short term than many of its heavy manufacturing brethren.

That's because the industry is profitable, interest rates are down, sales are relatively strong, and the major companies are wrapping up hefty new-vehicle and plant expenditure programs. The auto companies also have made major acquisitions that have diversified

Mexican-produced LeBaron expected in U.S. in March

Jerry Mathis

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Jerry L. Mathis, managing director of Chrysler de Mexico, expects his company will have to export J-cars from Mexico by March to meet U.S. demand.

The J-car is the mid-sized Chrysler LeBaron specialty coupe that will join the U.S. lineup early in January. A convertible, which will be built only in the United States, will be introduced next spring.

He said that Chrysler de Mexico's overall export target for 1987 is $1.5 billion, and he called for greater flexibility in the Mexican government's dealing with the local automotive industry.

He also said the company plans to continue adding to its workforce.

Mathis, a vice president of Chrysler Motors, has been chief of the Mexican operation since March 1985.

He said confusion about

Court issues injunction in Hyundai sales scam

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Hyundai Motor America last week obtained a judgment against two men who attempted to sell bogus franchises for the Korean car.

The stipulated judgment by Judge Warren H. Deering of Superior Court for the State of California awards $250,000 plus $10,000 legal fees to Hyundai if Jack LaFollette and Edward Yim violate an injunction that bars them from soliciting dealers for 25 dealerships LaFollette represented as having been issued to him by Hyundai Motor Co., Hyundai Motor America's Korean parent.

In a copyright story last week, Automotive News reported that at least 20 U.S. dealers have been offered phony franchises by apparently unrelated operators in the Southwest; Atlanta; New York; Washington D.C.; Minnesota; and Chicago. Hyundai Motor America attorneys earlier obtained cease and desist orders against several of the operators.

They accused LaFollette of soliciting contracts from dealers in California, Texas, Florida and Arizona. Judge Deering's judgement does not directly block LaFollette and Yim from operating in another state, but in such an instance Hyundai Motor America attorneys could move to collect the $260,000 award and request contempt of court action here while proceeding against the duo elsewhere, a HMA spokesman said.

LaFollette's attorney, Ramon Grolock, told Automotive News that his clients "thought they had something going in Korea" and that they paid more than $10,000 to an unnamed contact in Seoul who allegedly arranged the deal for the 25 franchises. Grolock said LaFollette and Yim are pursuing a case against that person in Korea to recover their money.

The attorney said LaFollette's contact, whom he declined to identify, was previously in the electronics business and now reportedly has landed a job at one of Korea's other automakers.

High inventories may delay GM '87 intro

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors is considering delaying the introduction of some 1987 cars because of bulging inventories of 1986 models.

GM said the fall public introduction of 1987 models still is officially scheduled for the last week of September. However, sources said that because of pressure from dealers whose lots are filled with certain 1986 cars, GM is contemplating delaying some model introductions.

GM has confirmed it has extended the model changeover period for some of its assembly plants because of high inventories of certain models.

Buick and Oldsmobile dealers have told their divisions that they refuse to take as many new models as they normally would in September because of hefty inventories of 1986 models on their lots.

The dealers have been pressuring the divisions to do something to alleviate the inventory problem, including pushing back the introduction dates for some 1987 models until the inventory of 1986 models can be cleared.

Oldsmobile dealers want the division to hold off introduction of the 1987 Toronado and Delta 88 because they are overloaded with the 1986 versions of those cars. Buick dealers want the same thing for the

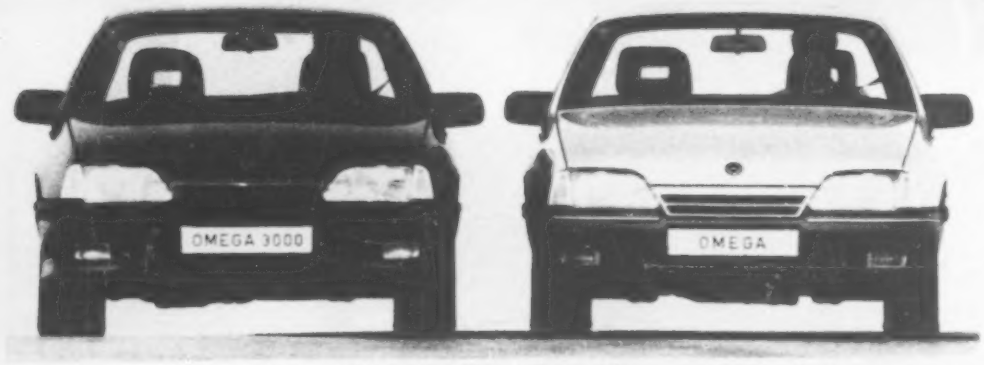
Renault abandons Mexican car market Page 52



The suspension on the Omega 3000 is set slightly lower than on other models.

Opel reveals details of new V-car

RUESSELSHEIM, West Germany — Adam Opel has released the first technical details of its new-generation V-car, which will replace the Opel Rekord and Vauxhall Carlton in the next few months.

The new line has a low-drag body, an automatically adjusting all-independent suspension, new four-cylinder engines and a 140-mph sporting version.

Opel has chosen a new name — Omega — while its General Motors sister organization in the United Kingdom, Vauxhall Motors, has retained the Carlton label.

In about six months, GM's European subsidiaries will introduce their V-Specials, which will replace the more-upscale Senator sedan and Monza coupe. They will be derivatives of the V-car, which is offered as a four-door sedan and five-door station wagon.

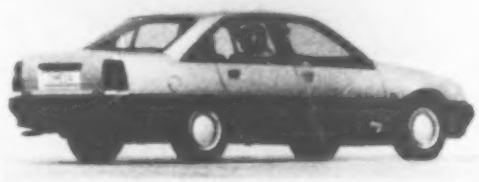
Omega is GM's European answer to part of the Ford Scorpio series. The forthcoming V-Specials will be more competitive with the top-line Scorpios, which will get revised V-6 engines with increased low-speed torque toward the end of this year.

Among Omega's other European rivals are the Renault 25, Volkswagen Passat, Audi 100 and Fiat Croma.

At the same time, GM is aiming for the seemingly recession-proof customers of Daimler-Benz, BMW, Volvo and Saab. Full-range makers like GM, Ford and Renault seem to suffer more from recessions than the specialist makers.

GM estimates that those market segments account for nearly 17 percent of total European sales, or about 1.8 million units annually.

Opel will manufacture Omega and Carlton in Russelsheim, where $490 million has been invested in production facilities. Among the automation systems are six huge transfer presses and separate modular assemblies for doors and interiors.



The lift-over height of the trunk sill is lower than normal on the Omega, making loading easier.

Omega has a front engine and rear-wheel drive. Four-cylinder engines, derivatives of GM's Family 2 design, have capacities of 1.8 and 2 liters and power outputs ranging from 82 to 122 horsepower, depending on state of tune. There are two diesels, including a turbo version.

The company is emphasizing its 3000 version, powered by a 177-hp 3-liter six. Having a high-speed, sporty version is regarded as important in West Germany — and doubly so, given Opel's stodgy image there.

The five-speed manual transmission is a new design. The automatic — a four-speed with lockup — has previously been used in Senator and Monza models.

Opel claims a class-beating drag coefficient of 0.28 for the new sedan. It uses flush-fitting side windows.

Omega is 184.5 inches long and has a 107.5-inch wheelbase. Weights range from 2,570 to 3,000 pounds.

Poling: 18 pct. share isn't enough for Ford

By Jenny L. King
AUTOMOTIVE NEWS STAFF REPORTER

Harold Poling: "We have the capability (to build) 20 percent of the car market and 30 percent of the truck market."

TORONTO — Ford Motor Co.'s long-term goal is to capture 20 percent of the total U.S. new-car market, but the No. 2 domestic automaker predicts a slightly lower share for this year.

"We'll do better than 18 percent, short of 20 percent" of an 11 million-car market, Ford President Harold Poling said here last week.

In a news conference preceding the opening show of Ford Division's 1987-model dealer preview, Poling said the corporation is climbing toward its goal of a 20 percent market share from 16.6 percent five years ago.

"We have the capability (to build) 20 percent of the car market and 30 percent of the truck market," he said. He said there are no plans to close any of Ford's North American plants and that Ford could not meet its market share goal if it reduced production capacity.

At the end of July, Ford's year-to-date share of the market was 17.82 percent, down from 19.10 on July 31, 1985.

The recent strike at the Taurus/Sable plant in Atlanta cost the company 24,000 units, production which he said might never be made up. To the question about a third Taurus/Sable facility, he responded, "Not yet."

Poling stuck with his prediction of 4.7 million truck sales for 1986 and suggested 1987 will be "a good year for cars, but they could drop 500,000" from the 11 million projected for 1986.

He refused to comment on the status of Rouge Steel sale talks. "Our objective is to find a way to run Rouge Steel profitably, to keep our employees," he said. "The problem isn't steel — there's plenty of steel."

Poling was highly critical of the Canadian government's attempts to work with foreign-car manufacturers on Canadian soil. He predicted that cars built in Canada by foreign-based companies would quickly find their way across the border into the U.S. market.

Poling also took a poke at General Motors, objecting to the No. 1 automaker's continued use of consumer incentives programs to increase its sales.

"They haven't increased their share of the market," he noted. "We (Ford) shouldn't be offering incentives. We do because GM does."

Marketing, product changes in works for Ford's '87 line

By Jenny L. King
AUTOMOTIVE NEWS STAFF REPORTER

TORONTO — Ford Division's 1987 new-vehicle line debuted here before the biggest announcement show crowd ever.

Ford marketing and advertising executives Ross Roberts and John Vanderzee told each of six dealer shows, with a total audience of 10,000, that four Thunderbird models will be available in a total of 16 versions, down from more than 160 (including option packages) two model years ago.

The Mustang LX convertible will get a $700 equipment package at no price increase, and the F-series trucks have been restyled and will feature anti-lock rear brakes.

The division's 1987 advertising theme reflects the corporate drive toward quality: "Best-Built American Cars, 6 Years Running. Have You Driven a Ford Lately?"

"It's easy to pick out the Mustang GT in a crowd — not that it's likely to be there long," says one Mustang television commercial. The F-series trucks are the "new shape of tough."

Thunderbird, "a driver's car," features anti-skid brakes and functional air scoops on the higher-horsepower, intercooled 1987 Turbo Coupe. The no-grille T-bird will have a 2.3-liter fuel-injected engine and five-speed manual; four-speed automatic with overdrive is optional.

Ford will bring in its Ford-designed, Mazda-engineered, Korean-built subcompact next spring, the only car in the lineup lacking Ford's aero styling.

At a news conference following the two-hour stage show, Ford Division General Manager Robert Rewey said Ranger pickups will be marketed as attractive alternatives to cars for younger buyers.

The 1987 F-series trucks will be introduced during the last quarter of the calendar year, he said. So far, it's a toss-up whether Ford truck sales will surpass car sales for the year.

Specialized marketing efforts have paid off in California for Escort and Tempo, Rewey said. A Ranger GT model also has done well there, he said.

U.S., Japan plan a series of talks in an effort to solve trade issues

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — U.S. and Japanese negotiators have slated bi-monthly committee meetings until the end of this year in an effort to solve some of the trade problems surrounding auto parts.

The principal difficulty facing U.S. companies seeking to supply Japanese automakers and the Japanese aftermarket is not the few governmental barriers, but the tight traditional relationship between Japanese manufacturers and their Japanese suppliers, U.S. delegates told their counterparts last week.

Undersecretary of Commerce Bruce Smart headed the U.S. delegation at the subcabinet-level meeting in the so-called Market-Oriented, Sector-Selective (MOSS) auto parts negotiations. Makoto Kuroda, vice minister for international affairs in the Ministry of International Trade and Industry, represented Japan.

At the initial auto parts subcabinet meeting last week, the negotiators set up the bi-monthly meeting schedule for a working-level committee that will outline questions concerning the auto parts issue. The committee met first on Aug. 22.

Those committee meetings will lay the groundwork for the United States and Japan to resume subcabinet-level meetings early next year.

Smart said the U.S. representatives last week outlined to the Japanese delegates their objectives for the auto-parts talks:

- To eliminate impediments arising from too-tight relationships between Japanese vehicle manufacturers and their traditional suppliers that preclude consideration of U.S. suppliers.
- To ensure that U.S. parts manufacturers have full access to the parts aftermarket for Japanese vehicles.
- To eliminate any Japanese government regulations and procedures that might limit market access.
- To facilitate U.S. companies' sales efforts through trade promotional and development activities conducted jointly by the U.S. government and MITI.
- To establish a monitoring system by which the United States can identify the types and quantities of parts being purchased.

"We made it specific that we

Isuzu/Fuji U.S. site hunt narrowed

Isuzu Motors and Fuji Heavy Industries have narrowed their search for a U.S. assembly site to just two states, Indiana and Illinois, an Indiana government source said last week.

Up to five other states also had been in the running for the plant just one month ago, including Missouri, Ohio, Kentucky, Tennessee and Arkansas.

Last week, the two Japanese automakers received a commitment letter from Indiana detailing financial incentives available to them.

Illinois has not submitted a final proposal yet, a state official said.

Isuzu and Fuji are looking at sites in three Indiana cities: Lafayette, Terre Haute and Shelbyville. More than one location is under consideration in Illinois.

Last May, Isuzu and Fuji announced plans to set up a joint assembly operation in the United States. The plant initially will be able to produce a combined total of 120,000 Isuzu small trucks and Subaru cars annually.

Already under construction in Illinois is the Diamond-Star car assembly plant in Bloomington-Normal. Diamond-Star is a joint venture of Chrysler Corp. and Mitsubishi Motors.

Several Japanese-based automotive suppliers have operations in Indiana. Another Japanese components maker is expected to announce this week that it plans to build a plant in Illinois, a state official said.

— Dave Zola

TRUCK INDUSTRY

Industry reacts favorably to Volvo/GMC truck tieup

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The heavy-truck industry reacted favorably to the Volvo-General Motors plan to establish Volvo GM Heavy Truck Corp. and predicted that similar agreements and realignments will follow.

Meanwhile, other industry sources said that:

- The new company, when officially formed in a few months, will phase out GMC's Astro. It is expected to continue producing the Brigadier and General long- and short-nosed conventionals.
- GM may end up with considerably less than a 35 percent interest in the new venture firm. It has only the option to acquire up to that percentage.
- The new company, which will refranchise all GM and Volvo heavy-truck dealers, will likely end up with about 350 dealers out of the current combined 520.
- The new company also will offer a variety of new services, such as more-complete finance and leasing packages and money to upgrade dealerships. The dealerships will be attractive, well designed and functional on the order of Volvo's European stores. Substantially more sales/service training will be provided.

Bernard Uhl, chairman of the American Truck Dealers division of the National Automobile Dealers Association, said that in view of worldwide overcapacity, the venture made good business sense to the manufacturers.

"We expect to see more of this kind of activity over the next few years because the market for heavy trucks will remain stagnant for some time to come," he added.

ATD intends to be involved in the issue of how this manufacturing consolidation will affect the dealer body, Uhl added.

Other industry observers expect heavy-truck joint ventures and mergers to "fall like dominos" during the next six to 10 years.

Navistar doesn't have a Class 8 partner, but it has a budding relationship with Nissan in the medium segment.

Mack has Renault, but it's a very weak partnership, since Renault is financially distressed.

PACCAR is starting a relationship with Volkswagen do Brasil.

Ford has no Class 8 partner, although it is trying to lower its heavy-truck manufacturing costs by importing more assembly components from Brazil for its assembly plant in Louisville, Ky.

The merging of Volvo White and GMC's heavy-truck operations may inadvertantly benefit competitors.

Peter Rupp, president and chief executive officer of Freightliner Corp., considers it "just another event in the American truck industry. We haven't attached a great deal of importance to it because these are two participants with the smallest market shares. It's not a jumbo marriage in any way."

Rupp added that the arrangement may have helped "all of us (competitors) by cutting down on excess manufacturing capacity," though he pointed out that there was plenty of excess left.

Individually, dealers like Eric Jackson, owner of Great Basin Truck Center of Salt Lake City and national dealer council chairman for Volvo White, hailed the venture.

"I'm finding a lot of optimism all over the country as dealers call me to discuss this merger," he said. "They're very complimentary of Volvo White's truck management and its ability to pull off this coup" in linking itself to a company the size of GM.

Another dealer, who asked for anonymity, said the GM-Volvo merger would help other dealers by reducing some of the cutthroat pricing competition.

Dealer profits have been eroded by intense price competition among manufacturers; by poor used-truck demand; and by poor new-truck sales profitability.

Robert Young, manager of the ATD 20 Group program at NADA, pointed out that dealers' net profit on sales fell to 1.1 percent at the end of June from 1.8 percent last September.

That represents net profit on sales of 135 to 150 participating heavy-truck dealers.

Young calculated that fully one-third of heavy truck dealers were losing money.

John Rock, manager of GMC Truck & Coach Operations, GM Truck & Bus Group, said GMC's market share had declined during the past several years, partly because it didn't want to buy market share by getting into the pricing foray.

Rock said that fewer than 30 of GMC's and Volvo's combined 520 heavy-duty dealers handle both makes.

Volvo White has no Canadian dealer organization, while GMC's Canadian dealers are exclusives.

Rock said that lack of overlap was one of the strong points in merging the two distribution systems.

Rock said that, as a "wild guess," he thought the new Volvo GM Heavy Truck Corp. probably wouldn't need more than 400 dealers.

GM expects to retain some of its eight truck centers where they don't compete directly with a strong, well-established GM/Volvo dealer nearby.

Some fleet buyers, like UPS, have their own complete service/maintenance facilities and buy only from the factory. And factory outlets will continue to handle such buyers, Rock added.

GMC expects to sell about 8,200 heavy trucks in the United States during the 1986 model year.

Rock said the venture wouldn't affect GMC's more than 600 medium-duty dealers, nor its franchise agreements and arrangements to import Isuzu trucks.

New Class 8 line expected from Peterbilt in autumn

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Peterbilt is expected to announce in late September an entirely new line of Class 8 conventional trucks.

Reportedly, the company will introduce a number of new vehicle identifications, two of them all-new and the balance replacing existing IDs.

The two new designations reportedly are the 375 and 377. They are long-nosed conventionals that will be offered in both set-back and set-forward axle configurations.

One of the lines is expected to be fully aerodynamic in design, similar to Kenworth's aero-styled T600.

The other is expected to offer compromise aero styling, featuring a conventional hood, for buyers who don't want a complete change in appearance.

Other new trucks expected to be announced include a 379 replacing the current 359 highway conventional series; a 357 replacing the current 353 line of on/off highway trucks; a 357A replacing the current 349A series, mainly used in construction; and a 357B replacing the current 349B series of construction vehicles.

Reportedly, the new models aim primarily at increasing cab space.

PACCAR, parent of Peterbilt and Kenworth, generally has a good reputation; but its cabs, some of them very dated, are small.

When Kenworth introduced the T600, it added an aerodynamic hood in front of an older-style cab.

The new Peterbilt lines will feature all-new, larger aluminum cabs among their considerable changes, according to industry sources.

The company is running prototypes in New York and Montana and is expected to officially introduce its new line Sept. 26.

The JMX Ford Taurus

Modified Taurus aims at enthusiast prospect

HOUSTON — JMX Aero Styling & Performance has introduced its new JMX Ford Taurus, a radical modification.

JMX said Ford's strategy was to hit the middle of the projected market.

"We are aiming a bit left, focusing on a narrower market segment — the enthusiast," JMX said.

Body additions designed to enhance the car's aerodynamics are available in fiberglass and ABS and soon will be available in injected nylathane.

JMX is a division of Plus One of Houston. The car's suspension has been modified in a joint effort by Plus One of Houston and Suspension Techniques of Southern California.

Spring rates have been increased slightly to lower the car 1¼ inches in the front and 1½ inches in the rear. Anti-roll bars and bushings as well as performance struts are in the works, the company said.

Both 15-inch and 16-inch Fulda HR and VR speed-rated tires are available, along with Centra and Bottger wheels made in Germany. The 15-inch application can use either a 205/68HR15 tire or a 225/50VR15 size. The 16-inch wheels can be fitted with a 205/55VR16 or a 225/55VR16 tire.

Imports soar to record and hike market share

By Jenny L. King
AUTOMOTIVE NEWS STAFF REPORTER

Registrations of imported cars set a record in June, and the imports increased their market penetration compared with both a year earlier and a month earlier.

Total import registrations were up 16.24 percent in June, to a record 297,641 from 256,047 in 1985. Figures from R.L. Polk & Co. showed imports claiming 29.42 percent of the market, up from 27.74 percent the same month a year earlier and up from 28.32 percent in May.

The top-10 lineup remained much as it was in June 1985. Hyundai, on sale in the U.S. only since February, pushed Volvo from seventh to eighth, followed by BMW and Mercedes-Benz.

Ten makes held 81.95 percent of the import market this June compared with 88.82 percent in 1985. Polk analyses include domestic-built units in VW, Honda and Nissan totals.

First-half new import registrations gained 4½ percentage points, advancing to 29.47 percent from 24.91 percent of the total market. In numbers, they were up 21.93 percent from the same 1985 period.

Mazda, up 0.62 percentage points, and Subaru, up 0.14 percentage points, were the only import makes to increase their shares of the market from year-ago levels. Hyundai moved into the top 10, pushing Audi out of that group.

Ten imports had 81.36 percent of the first-half total, compared with 88.37 percent in 1985.

Japanese makes accounted for 67.64 percent of the June import total, down from 70.70 percent in 1985. The German share dipped to 12.71 percent from 13.89 percent. Korea was the fifth highest seller in June by country of origin. The breakdown was as follows:

	June 1986	June 1985
Japan	201,337	181,019
West Germany	37,843	35,563
United States	23,837	22,446
Sweden	16,039	12,863
Korea	12,573	—
Britain	2,374	1,777
Yugoslavia	1,595	—
France	1,220	1,750
Italy	823	629
TOTAL	297,641	256,047

Year to year, the Japanese share of the market slipped to 68.21 percent from 69.88 percent. West Germany was down to 13.20 percent from 14.17 percent, while the U.S. (including U.S.-assembled Accords, Golfs and Sentras) was up to 9.17 percent from 8.73 percent. The totals:

	6 Mos. 1986	6 Mos. 1985
Japan	1,089,388	915,304
West Germany	210,844	185,650
United States	146,453	114,354
Sweden	78,859	68,983
Korea	37,477	—
Britain	11,600	9,545
Yugoslavia	10,760	—
France	7,664	12,431
Italy	3,961	3,544
TOTAL	1,597,006	1,309,811

Registrations of imported trucks were up 18.42 percent in June, to 89,553 from 75,625 last year. Of the four top makers, Nissan was the only one to fall below last year's total. Toyota was up 11.52 percent, Mazda was up 43.88 percent and Isuzu was up 2.88 percent. Totals for each were as follows:

	June 1986	June 1985
Toyota	33,738	30,252
Nissan	18,986	19,035
Mazda	13,752	9,558
Isuzu	6,175	6,002
Others	16,902	10,778
TOTAL	89,553	75,625

First-half imported truck registrations were up 9.14 percent, to 493,639 from 452,289.

	6 Mos. 1986	6 Mos. 1985
Toyota	187,343	170,492
Nissan	106,449	128,281
Mazda	69,236	51,258
Isuzu	42,331	23,394
Others	88,280	67,763
TOTAL	493,639	452,289

Cadillac's Allante gets its own tire design

DETROIT — Allante, the special car from Cadillac Motor Car Division, will have special tires.

Called the Eagle VL, they are from Goodyear Tire & Rubber Co. and will be the only size produced for Allante by Goodyear.

The main development challenge was to create a V-speed-rated tire with low rolling resistance and a smooth, quiet ride. The V rating means the tires are designed for speeds of excess of 130 mph.

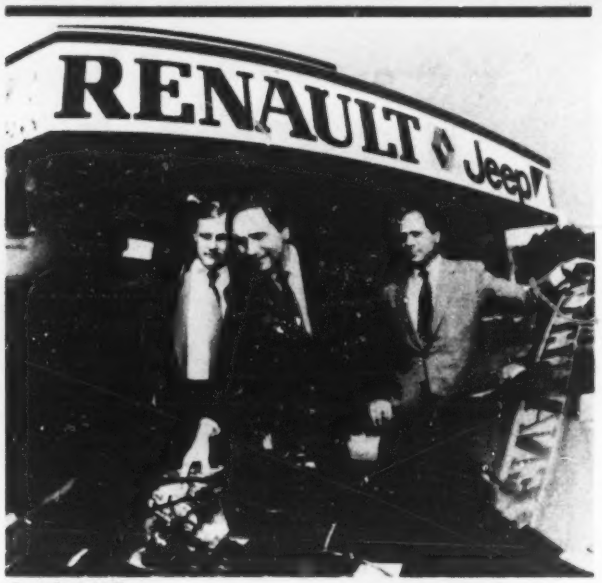
Each 26.2-pound tire is built of two polyester plies, two belts of steel cord and two overlays of nylon.

Goodyear said the Eagle VL is a result of its engineers working closely with tire specialists at Cadillac and General Motors during three years of development.

One of the top priorities was a quiet ride because Allante is a convertible/hardtop.

"The convertible was aimed at providing a ride with the top down that is as quiet at that of many sedans. That was a real challenge for tire designers," said Beale A. Robinson, Goodyear's chief of passenger-tire engineering.

The tire is a P225/60VR15. It is available only as a blackwall and has distinctive sidewall lettering and tread pattern.



Service talk
Jean Pierre Gerhart, center, director of manufacturing at Renault's assembly plant in Maubeuge, France, looks at a Renault engine. Gerhart talked to dealers in California recently about servicing for the 1988 Medallion, which is expected to arrive in showrooms in early 1987. Gerhart is flanked by Dean Greb, AMC's director of field operations, and Bob Williams, AMC's western regional manager.

Gem Motors acquires site for public auto auction

DENVER — Gem Motors Inc. has acquired a former truck terminal here as the site of Denver's first consumer auto auction.

Gem holds a franchise from Public Auto Auctions of America.

Progress reported in battle against odometer tampering

ST. LOUIS — The auto industry has made much progress in its efforts to end odometer fraud, according to Bernart Hart, executive secretary of the National Auto Auction Association.

Hart told the sixth annual National Odometer Enforcement Association that progress is being made in Congress, with the Senate approving a bill and the House considering another version.

Also, he said, the Odometer Tampering Elimination Committee (OTEC) has approved a resolution to stifle the practice.

However, Hart conceded that "no one segment" could solve the problem for all people. He said that only an all-industry approach could halt the increase in odometer fraud.

Hart said that the American Auto Leasing Association has resigned from OTEC and that the National Automobile Dealers Association has been "inactive," attending only one of four major meetings in Washington.

Richard C. Morse, chief of the Odometer Fraud Staff of NHTSA's Office of Enforcement, said later that he blamed new- and used-car dealers for some tampering.

"A lot of them know what's going on and turn their heads," he said. "Odometer fraud is a silent conspiracy." Morse represents the federal government on OTEC.

Morse said rollbacks "skew the used-car market and put dealers at a competitive disadvantage."

A report issued during the conference estimated that half of the 4½ million leased cars in one state had false odometer readings. Because of the extent of the fraud, the federal government and many states are upgrading the offense from misdemeanor to felony and are imposing stiffer penalties, including long prison terms.

Wayne Morton, representing the National Independent Automobile Dealers Association, said his organization has been "in the forefront of this struggle," but "we cannot and will not support any movement that attempts to use the used-car industry as scapegoats or use methods that only label all as being bad."

"The more we dig, there is some involvement by organized crime," Missouri Attorney General William L. Webster said after his keynote address.

Webster told the meeting "that new-car dealers are our greatest ally in our fight to protect the public against rollback fraud."

In the legislative effort to tighten the laws and put teeth into enforcement, "we have received marvelous support" from the franchised dealers, Webster said. After all, "when a new-car dealer has a floorplan, has erected a building and has assumed a franchise for millions, he cannot afford to have rollbacks."

Webster estimated that rollbacks cost Missourians $100 million a year; federal officials put the national loss at $4 billion annually.

John R. Fleder, director of the U.S. Department of Justice's Office of Consumer Litigation, said that "the federal government will prosecute the most culpable tamperers and no one will be immune."

Webster said his office is working with the Missouri Legislature to stiffen penalties because "this is no longer a petty white-collar crime."

OTEC passed a resolution calling on all states to engage in a vigorous law-enforcement program to apprehend and prosecute odometer tamperers, and to enact legislation and administrative practices to prevent title washing and provide felony penalties for tampering.

Several new ways to detect tampering were demonstrated at the meeting.

Carfax Inc. of Columbia, Mo., is compiling a database of title histories in several Midwest states. It has two million on file now in Missouri, Kansas and Iowa and is expanding into Texas.

Another national title
A hydroplane powered by a Pontiac Fiero engine won the 2.5-liter modified class race at the American Power Boat Association nationals, held Aug. 16-17 in Lowell, Ore. The boat's team, based in New Baltimore, Mich., clocked a 99.7 mph average speed. It was the second consecutive year the boat had won the race.

Dealer service grosses soar; looks like trend

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Several shop managers indicated dealerships are placing a greater emphasis on increasing business and improving productivity in the backshop.

Service and parts business at new-car dealerships soared in June to cap an increase for the first six months of 1986.

The Automotive News Service Index found that shop business at dealerships in June amounted to 114.3 percent of the volume recorded in June 1985.

The June increase was the fourth straight month in which service volume topped that of the year-ago month, and it was the largest gain of the year.

An industry source attributed increased service business to the growing population of automobiles after three strong years of industry sales. He also said the emphasis by manufacturers to offer service contracts, as well as the increased complexity of today's automobiles, has brought customers back to the dealers for service.

Several shop managers indicated dealerships are placing a greater emphasis on increasing business and improving productivity in the backshop.

A service manager at a southern Chevrolet dealer, for example, said the shop was "revamped" and 10 mechanics were recently added. The increase in service business, he believes, comes as a result of the emphasis placed by the manufacturers on improved customer satisfaction.

In May, the index showed an advance of only 2.4 percent over May 1985. Prior to June, the year's largest increase in service volume occurred in January, when the indicators registered a 7.4 percent gain over January 1985.

In the first six months of 1986, service and parts volume showed a gain of 5.1 percent over the 1985 period.

In June, total labor sales (customer paid and warranty) recorded the biggest gain, up 17.8 percent.

Shop parts sales (customer paid and warranty) were up 15.7 percent; sales of all parts and accessories climbed 14.8 percent; gross profit on all labor, parts and accessories sales was up 13.7 percent; and repair orders written were up 9.5 percent.

In addition, parts and accessories sales to off-premises customers were up 14.1 percent in June.

Total labor sales also registered the biggest gain for the first six months of 1986, climbing 9.8 percent over the year-earlier period.

Other indicators showing gains for the first half were gross profit on all labor, parts and accessories sales, up 7.7 percent; shop parts sales, up 5.4 percent; and sales of all parts and accessories, up 2.4 percent.

SERVICE INDEX 114.3*

	June '86 vs June '85	6 mos. '86 vs 6 mos. '85
Gross Profit on All Labor and P&A Sales	+13.7%	+7.7%
Repair Orders Written	+9.5%	0.0%
Total Labor Sales (Customer & Warranty)	+17.8%	+9.8%
Shop Parts Sales (Customer & Warranty)	+15.7%	+5.4%
Sales of All P&A	+14.8%	+2.4%

*—Survey by Automotive News shows that dealers' service and parts business in June 1986 was 114.3 percent of business in June 1985. Service business in the first 6 months of 1986 was 105.1 percent of business in the corresponding period in 1985.

Repair orders written registered no change.

Parts and accessories sales to off-premises customers were down 0.4 percent in the first half of 1986.

Taiwan OKs U.S. exports with names of Japanese

TOKYO — The government of Taiwan has decided in principle to allow imports of Japanese brand-name sedans produced in the United States.

Taiwan does not allow imports of cars built in Japan.

The Ministry of Economic Affairs said the importation of the Japanese-based sedans is in line with the government's trade-liberalization policy and will help offset Taiwan's large trade surplus with the United States.

Meanwhile, reports from Taiwan indicate that the government will rescind the export requirement for automotive joint ventures between Taiwanese and foreign companies.

According to the Free China Newsletter, distributed here by an agency of the Taiwanese government, the Ministry of Economic Affairs will allow imports of Japanese sedans on condition that the cars are given a U.S. certificate of origin.

According to Hsu Kuo-an, director of the Industrial Development Bureau, Taiwanese auto manufacturers will not be affected much by those imports because of their relatively high price, the problem of obtaining parts and accessories and the current high tariff.

The export requirement for automotive joint ventures between local and foreign firms was included in a law enacted in March 1985 to protect the domestic auto industry.

Currently, a joint venture between Toyota Motor Corp. and Taiwan's Kuo Zui Motors Ltd., for example, has to export 12.1 percent of its automotive production in the third year of operation and 12.5 percent in the fifth year.

Kuo Zui Motors, 22 percent owned by Toyota, is scheduled to start producing 25,000 of Toyota's Corolla-class cars and 15,000 commercial vehicles annually starting in 1988.

The U.S. has strongly criticized the Taiwanese export requirement. President Reagan recently appointed a commission to study the requirement to determine if it will result in some of the cars being exported to the United States.

New from BMW
BMW has released the first official photographs of its new 7-series, which is to debut at the Paris Auto and Truck Show in October. The first model in the series to be sold in Europe will be the 735i, which has a 3.5-liter engine. BMW says the aerodynamic 735i has a top speed of 145 mph. The 730i, to be available in early 1987, will be powered by a new 3.0-liter engine and will have a top speed of 140 mph. Introduction of the flagship 750i, with a new 5.0-liter V-12 engine, will follow at the end of 1987 or in early 1988. The BMW 7-series will not be available in the United States until 1988.

China resumes output of Jeep Cherokee

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Beijing Jeep Corp., a joint venture company formed by American Motors and the People's Republic of China, resumed production Aug. 8 on its Chinese-built Jeep Cherokees following a seven-week delay brought about by Chinese currency restrictions.

Jeff Trimmer, general manager of AMC's Far East operations, said AMC began sending hundreds of Jeep Cherokee kits to China in mid-June after an agreement was reached between Chinese government officials and AMC. The Chinese firm received the kits in early August, Trimmer said.

The Beijing joint venture between the Chinese and AMC began three years ago. It now assembles the Jeep Cherokee and produces the BJ212 model, a decades-old utility vehicle.

AMC began sending Cherokee kits to China last fall. But it stopped delivering the kits in May because the Chinese government could not make dollar-based payments to AMC due to a shortage of foreign currency. As agreed upon in 1983, AMC stopped delivering U.S.-made Jeep kits when the Chinese could not guarantee payment.

An agreement signed in May by AMC and the Chinese National Automotive Industry Council calls for an increase in Chinese-made parts in the locally assembled Jeep from 9 percent to 25 percent during the next year, according to Trimmer. He added that the projected increase is a goal and not a mandate since the Chinese do not have a sufficient local base of suppliers.

The Chinese have also promised to buy a minimum of 2,000 Cherokee kits for the 1987 model year. More will be ordered if the demand for the vehicle grows. Trimmer added that he anticipates the joint venture will produce approximately 2,500 Cherokees during the 1987 model year.

The total retail price of the Chinese-built Cherokee is $19,000; however, Beijing Jeep Corp. will receive only the equivalent of $12,500 in foreign currency. The balance — the equivalent of $6,500 — will be paid in local currency.

So far, AMC has been reinvesting its share of the profit from BJC in the joint venture. Trimmer said AMC hopes to bring some of its profits back to the United States after Beijing Jeep is sufficiently capitalized and market penetration grows.

Trimmer said BJC would like to build 20,000 Jeeps a year by 1990. An AMC spokesman said the Chinese would like to reach 80 to 90 percent domestic (Chinese) content by 1991; however, AMC executives have warned that to achieve that goal, the project will need substantial help from the Chinese government. No estimates are available on how much money would be needed to set up the suppliers necessary to achieve the 80 to 90 percent domestic content.

The suspension of Cherokee production also delayed an increase in the number of Jeep models assembled in China, Trimmer said. AMC officials are hoping to add the Comanche pickup truck to Chinese production soon.

Trimmer added that a business plan is being drawn up by Beijing Jeep executives covering such issues as when Comanche production will begin in China; increasing AMC's 31.3 percent (or $16 million) share in the joint venture; and investment in the present plant.

The business plan will be reviewed by both the Chinese government and Beijing Jeep directors this fall.

Croatian group calls Yugo boycott

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Yugo dealers and the car's U.S. importer say they anticipate little disruption from a boycott of the subcompact by a dissident Yugoslav political group.

The Croatian National Congress, which says it has a worldwide membership of 4,000 to 5,000, said it will launch a boycott of the Yugo Sept. 6 at the Yugoslav ethnic festival in Detroit.

The group also plans to picket some Yugo dealers, according to Nikola Jurisic, a spokesman for the Croatian group.

"Our objective is to inform the public of the low quality of the car and to expose the U.S. State Department support of Yugoslavian trade," Jurisic said. "We feel the State Department support of Yugo only serves to perpetuate another police state and it denies the Croatian nation the basic right of self-determination without increasing convincingly national security."

William E. Prior, president of Yugo America, the car's U.S. importer and distributor, said he is not concerned.

"It's a long-standing tradition that American companies are involved in industrial cooperation with business ventures in Yugoslavia," Prior said, "for instance, General Motors, General Electric and Dow Chemical.

"The Yugo project is really within this tradition. We are not going to get into a political debate because that is not what we are marketing."

The Croatian National Congress has been critical of the quality of the $3,990 Yugo GV since it went on sale in the United States in August 1985. Jurisic called the vehicle "a technologically outdated car."

Prior said 550 improvements were made to the Yugoslav car with the aid of the Yugoslav manufacturer, Zavodi Crvena Zastava, before the subcompact was marketed in the United States.

"Since the inception of production last year, an additional 176 product improvements have been made on a running-change basis without the price of the car going up a penny," Prior said. "That's the best indication I can give of the commitment Zastava has and we have to ensuring the car provides the basic functional transportation that our marketing concept talks about."

Jurisic said the Croatian National Congress informed 150 Yugo dealers of the planned boycott in letters dated Aug. 11 and Aug. 17.

Yugo has 220 dealers. Those contacted by Automotive News anticipated few problems due to the announced boycott.

"It's a shame," said Jeannette Crisconi of Crisconi Oldsmobile-Yugo, Philadelphia.

Car production climbs to 116,343

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Scheduled domestic auto production jumped last week as several plants resumed output after being down for model changeover.

The makers estimated a build of 116,343 units last week, 31.28 percent more than the previous week's 88,621 but 13.69 percent below the year-ago week's 134,798.

So far this year, 5,133,216 cars have been assembled, 5.74 percent below the 5,445,883 built last year at this point.

Companies shared last week's targeted production as follows: General Motors, 36.81 percent; Ford Motor Co., 34.74 percent; Chrysler Motors, 16.67 percent; Honda of America Manufacturing Inc., 4.94 percent; New United Motor Manufacturing Inc., 3.21 percent; Volkswagen of America, 1.55 percent; American Motors, 1.29 percent; and Nissan Motor Manufacturing Co., U.S.A., 0.79 percent.

Chrysler will no longer produce its Laser model but will continue to assemble the similar Dodge Daytona at the St. Louis (No. 2) plant.

GM plants in Van Nuys, Calif.; Janesville, Wis.; and Lordstown, Ohio, resumed production last week after being down for changeover.

GM's Wentzville, Mo., plant was to resume production today (Aug. 25) after being down for model changeover. However, model changeover has been extended until Sept. 2.

GM's Detroit-Hamtramck plant, originally scheduled to resume production Sept. 11, will be down until Oct. 3.

Volkswagen's Westmoreland, Pa., plant resumed production last week. It had been down since July 14 for model changeover.

Ford's Chicago plant was scheduled for Saturday (Aug. 23) overtime.

All Ford plants except Wixom, Mich., are scheduled for daily overtime this week (Aug. 25).

GM scheduled no Saturday (Aug. 23) overtime.

Chrysler scheduled Saturday (Aug. 23) overtime at its Belvidere, Ill., and St. Louis (No. 2) plants.

The same plants are slated for two nine-hour daily shifts this week.

Canadian total trails '85

Extended model-changeover downtime at General Motors plants last week caused Canadian auto output to fall behind 1985's for the first time this year.

The company said its Oshawa, Ontario, plants remain closed due to a parts shortage.

Oshawa No. 1 will be down until Aug. 29, and No. 2 will be down until Sept. 4.

So far this year, 677,175 cars have been assembled, 0.07 percent below the 677,680 completed last year at this time.

Last week's scheduled output of 13,114 cars was 30.05 percent more than the previous week's 10,084 but 45.86 percent below the year-ago week's 24,224.

Truck production last week was estimated at 13,229, 3.93 percent more than the previous week's 12,729 but 18.32 percent below the year-ago week's 16,197.

GM's Ste. Therese, Quebec, plant resumed production Aug. 18 after being down for model changeover.

Volvo's plant in Halifax, Nova Scotia, is scheduled to resume production today (Aug. 25). The plant had been idle since Aug. 4.

American Motors' plant in Brampton, Ontario, began production of the 1987 Eagle model on Aug. 18.

Truck output drops 23 pct.

Production of domestic trucks dipped last week.

The makers scheduled 45,311 units, 23.34 percent below the previous week's 59,109 and 23.77 percent below the year-ago week's 59,442.

General Motors' Detroit plant is slated to return today (Aug. 25). The plant has been down since Aug. 8 for model changeover.

GM's Flint, Mich., plant resumes production today after being down for model changeover. It had originally been slated to resume Sept. 8.

All Ford Motor Co. plants except Lorain, Ohio, are scheduled for daily overtime this week.

The Lorain plant begins production of the 1987 Econoline model today.

Chrysler Motors' Warren, Mich., plant operated two overtime shifts Saturday. It is slated for two nine-hour daily shifts this week.

Chevy builds first Corsica

LINDEN, N.J. — The first production Chevrolet Corsica was assembled here last week. The Corsica, which Chevrolet calls a compact sedan, will go on sale in early 1987.

Each Chevrolet dealer, however, has the option of leasing one Corsica or its sister car, the Beretta coupe, before they go on public sale. They will be used for such purposes as service rentals.

The remainder of the 14,000 cars produced by the end of this year will go to daily rental companies.

The 12-month modernization of the Linden plant represents a $300 million investment by General Motors.

During a 28-week pilot process, some 290 Corsica and Beretta pilot models were produced and evaluated by employees prior to the start of regular production.

About 100 employees returned to work last week, bringing current employment to more than 1,000 on one shift. After one-shift production reaches planned capacity, a second shift will be added.

The Corsica and Beretta will be exclusive models for Chevrolet.

Ford Atlanta resumes output of Taurus/Sable

Production of Taurus and Sable models resumed last week at Ford Motor Co.'s Atlanta, Ga., assembly plant following settlement of a 27-day strike.

Members of UAW Local 882 at the plant approved a new contract Aug. 15. The pact was ratified by 83 percent of those voting.

The Atlanta plant is one of two producing Taurus and Sable. Ford said the strike cost production of 24,000 of the strong-selling models. The other Taurus-Sable assembly plant is in Chicago.

Union members at Atlanta walked off the job July 19 to protest working conditions.

Sid Hamby, president of UAW Local 882, said the settlement resolved heat, ventilation, noise and asbestos problems in the plant.

He said the UAW also won the right to represent 26 employees at two warehouses supplying the assembly plant. The warehouses had been operated by a Florida-based company using non-union labor.

Ford bets millions on new car in Brazil

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Ford Brasil will invest more than $100 million during the next two years to tool up and expand an assembly plant near here to build a new subcompact sedan based on the Escort platform.

The car is currently without a name but is known within the company as the Nevada, according to market sources, who described it as "a modified Orion." The Orion is a sedan version of the Escort sold in Europe.

Wayne Booker, Ford Brasil president, and Agostinho Gaspar, director of governmental relations, were in Brasilia, the nation's capital, Aug. 28 to present the company's plans to government officials. The next day, Ford announced that the government had approved the program.

The new model will use the 1.6-liter engine available in the Escort hatchback currently sold in Brazil, sources said. The car will be produced alongside the Escort in the Sao Bernardo plant near Sao Paulo. Annual production is projected at 50,000.

The Nevada is expected to debut in Brazil as a 1989 model. Like the Orion in Europe, the car will be offered in two-door and four-door versions. The former is fundamental in Brazil, where there is an overwhelming market preference for two-door cars.

In part, the Nevada will fill the gap left in Ford's product line by

GM, Chrysler move to 2.9 and 2.4% in loan-rate battle

By Edward Lapham and Jenny King
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors answered the question "How low can you go?" by slapping a 2.9 annual-percentage-rate incentive on more than one million cars and trucks Aug. 28. Not to be outdone, Chrysler Motors responded the next morning with a lower-than-low 2.4 percent rate on certain models.

The GM program, called "the Big One," replaces and expands on the plan launched July 1. The new one runs until Oct. 8, offering 2.9 APR 36-month or 4.8 APR 48-month GMAC loans to approved customers on all 1986-model cars, and most light trucks, still in inventory.

Cash rebate options range from $300 to $1,500, depending on model. The $300 cash allowances cover GM's subcompact cars; the $1,500 awards are on the restyled high-inventory E-bodies.

GM also delayed its entire 1987 model introduction until Oct. 9. The new models had been scheduled for introduction on Sept. 25.

The Chrysler plan, with the lowest financing rate in the history of the industry — at least as of Friday — runs Aug. 29 through Oct. 12 and covers all 1986 North American-built cars and trucks, except Dodge Caravan/Plymouth Voyager, Dodge Mini Ram Van, Dodge Dakota, Dodge Shadow/Plymouth Sundance and the 1987 America models. It also covers 1987-model Charger/Turismo, Diplomat, New Yorker and Fifth Avenue models and all 1986 Colts.

Chrysler Credit Corp. loans are available to approved customers at 2.4 percent financing for 24 months, 3.6 percent for 36 months, 4.8 percent for 48 months and 9.9 percent for 60 months. Customers can instead take rebates ranging from $400 to $1,500.

The GM program made waves far and wide. Ford Motor Co. President Harold Poling, in Hollywood last week for the 1987 Lincoln-Mercury dealer introduction, said that as much as the No. 2 domestic

Top designers on the move across Europe

By Giancarlo Perini
STAFF CORRESPONDENT

COLOGNE, West Germany — For about two years, top designers have been deserting the studios of Ford of Europe and Adam Opel AG.

At least 18 designers have left Ford for Chrysler Corp., American Motors, Volkswagen AG, BMW, ItalDesign, Porsche AG and Audi AG.

The two chief designers working with Uwe Bahnsen, Ford of Europe's vice president of design, moved to Chrysler (Trevor Creed) and Volkswagen (Patrick le Quement).

They had been Bahnsen's right-hand men. Following their move, two of Bahnsen's executive designers, Alan Jackson and Tom Scott, departed.

Jackson joined le Quement at VW, and Scott became the head of design for AMC.

Adding to the turnover are several other Ford executive designers who left the Cologne, West Germany, design and modeling studio for a stint in Dearborn, Mich. A few of Ford's most talented modelers have left, too.

The list of designers who have left Ford of Europe recently is so long that the photo of the Cologne design team — which appeared on a 1985 Ford calendar — seems decades old.

The other American-inspired design center in Germany — Opel — has lost a number of its designers. Chris Bangle, a young American who has been credited with the interior design of the Opel Junior, moved to Fiat Auto S.p.A. in Turin, Italy.

Also leaving Opel were Gert Hildebrand, who joined VW, and Toni Hatter, who moved to Porsche. Nyoji Nagashima left for Renault. Kunisha Itoh went back to Japan some years ago to work with ODS, a research organization.

The Cologne design team, as shown on a 1985 Ford calendar. Many of the people are already gone.

Franchises for imports rise 4% to top 20,000

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The number of imported-car franchises rose again in the first six months of this year, according to the latest Automotive News Imported Car Dealership Survey.

On July 1, there were 20,691 import franchises, an increase of 2.25 percent from 20,235 on Jan. 1, 1986, and an increase of nearly 4 percent from the July 1, 1985, total of 19,897.

Most of the additional franchises were the result of new dealer groups for Acura and Hyundai,

GM expanding white-collar 'incentive separations'

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

In upcoming weeks, some salaried employees at General Motors will be asked to accept a financial incentive to resign.

GM said last week that in its quest to cut its salaried workforce by 25 percent by 1989, it is expanding an "incentive separation program" throughout its groups, divisions and staffs in the United States and Canada.

Electronic Data Systems Corp. and GM Hughes Electronic Corp., both acquired subsidiaries, are not affected.

A GM spokesman also said that "some activities such as Saturn, Trilby, etc., will increase, while others will be discontinued."

GM would not specify which activities would be discontinued. Saturn and Trilby are the company's new small-car manufacturing subsidiary in Spring Hill, Tenn., and its manufacturing and design think-tank.

Although GM would not say what the financial incentives would include, workers were reporting offers of up to 20 months' salary and six months' of health care benefits if they quit.

Salaried employees who are asked to accept an incentive to resign may decline the offer, a GM spokesman said.

GM employs 133,000 salaried workers in the United States and 9,000 in Canada.

GM said the move was made as part of its annual model-year budget review and is "consistent with its long-range business planning." The company's executive committee met Aug. 21 to establish guidelines for salaried staffing and job reductions.

"While much of the reduction can be accomplished by normal attrition, the expanded separation program will provide more flexibility in achieving reductions as new business systems are implemented," the company said.

The No. 1 automaker has faced criticism in recent weeks for its high cost structure.

Maryann Keller, an auto industry analyst for Furman Selz Mager Dietz & Birney, speaking in Detroit recently, attacked what she called GM's "undisciplined reorganization." Keller charged that it has resulted in a collection of "empires" — the Chevrolet-Pontiac-Canada Group, the Buick-Oldsmobile-Cadillac Group, the Truck and Bus Group, component products and central office.

"GM has not trimmed down as promised in the reorganization and has added to the bureaucracy," Keller said. "Productivity at Ford and Chrysler has continued to rise, while GM's corporate reorganization, vast expenditures on new plants and acquisitions have added staff and strangled efficiency."

GM, however, is not the only domestic automaker seeking to trim its salaried payroll.

Ford Motor Co. has indicated it will cut its white-collar workforce by at least 25 percent by the end of the decade.

Chrysler Corp., which made sizable cuts in salaried ranks during its brush with bankruptcy several years ago, has also indicated that its business plan calls for some reduction in salaried manpower through attrition.

Six keep hands-on approach
Tamaroff Acura, in East Detroit, Mich., co-sponsored a marathon contest to benefit the Muscular Dystrophy Association. Contestants donated $100 to enter. After 48 hours, six contestants out of 21 were still in the running. The last person to maintain bodily contact with the Acura wins the car.

Sterling name nearly settled; Jan. debut set

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Raymond Ketchledge: "We believe we've got all the elements in place."

Raymond A. Ketchledge, president of Austin Rover Cars of North America, said his company is prepared to introduce the Sterling luxury sedan in the United States in January with 96 percent of its dealer network in place and a legal skirmish over the car's name nearly settled.

"We believe we've got all the elements in place — an extremely receptive market climate, a good product and an organization to distribute and sell the product," said Ketchledge, who heads the Miami company which will import and distribute the Sterling, the U.S. version of the Rover 800.

ARCONA will import two versions of the British-built Sterling and distribute them to 145 dealers in 32 states. The Sterling is the U.S. version of the Rover 800 and is a product of the joint venture between Britain's Austin Rover Group and Japan's Honda Motor Co.

The Sterling will feature a Honda 24-valve, V-6 engine and a body designed by the Austin Rover Group. Approximately 35 percent of the content will be Japanese. One of the Sterling models will be a high-end car priced between $20,000 and $25,000. The other will be the basic model with a $19,000-to-$20,000 price tag.

Ketchledge said that the recent challenge by London Coach, of Mount Clemens, Mich., over the rights to the Sterling name is being negotiated. ARCONA claims London Coach, an assembler of taxi kits, did not have a trademark for the name. The U.S. Patent Office has not yet given ARCONA the trademark, but Ketchledge said he is confident that his company will receive the rights to the name.

The Austin Rover-Honda venture also will produce and distribute Honda's Acura Legend in Europe. The Legend is being built alongside the Sterling in ARG's plant in Cowley, England; the Rover 800 will be built alongside the Legend in Japan. Honda already distributes the Acura Legend in the United States.

Ketchledge said ARCONA will not follow the marketing strategies of other makers of European luxury cars. Sterling's luxury features and styling will be emphasized over performance, he said.

"We figure everyone is trying to be BMW," he said.

Austin Rover is stepping carefully into the American marketplace after a seven-year absence from the United States and a disappointing U.S. sales record. There is also the issue of quality problems that affected many Austin Rover models in the past.

As a quality measure, every Sterling will be test driven at least 25

Ford invited to buy up Beneficial; analysts predict more acquisitions

By Dave Zola
AUTOMOTIVE NEWS STAFF WRITER

Ford Motor Co.'s interest in Beneficial Corp., a consumer finance company specializing in home mortgages, may go far beyond its quest for diversification.

The purchase of Beneficial could enable Ford to offer future buyers alternative forms of car financing.

Ford last week confirmed it was approached by First Boston Corp., a New York investment firm, about the possible purchase of Beneficial.

Beneficial, which is expected to lose money this year due to its troubled reinsurance business, said in an Aug. 21 letter to stockholders that it was seeking a buyer.

The Delaware-based firm, specializing in consumer financing, has assets of $9 billion. It has 1,100 offices in the United States, the United Kingdom, Canada and West Germany.

In 1985, Beneficial reported net profits of $101.2 million and outstanding loans of $6.1 billion. Analysts said Beneficial is worth about $1.5 billion.

Ford has made it known it wants to continue expanding its financial service operations under Ford Credit. Last year, Ford spent an estimated $593 million in acquiring First Nationwide Financial Corp., then the nation's ninth largest savings and loan association.

"Financial services are starting to be important to the bottom line for Ford," said Doug Laughlin, auto analyst with Dean-Whitter-Reynolds. "I'd have to believe they are going to take a look at other acquisitions."

Ford Credit posted record profits of $441 million in 1985, and had assets of $24 billion at year's end.

"Ford has $7 billion in cash it would like to deploy in order to diversify," said Gary Glaser, an analyst with First Boston. "They certainly have the ability to make acquisitions."

Analysts said Beneficial's expertise in home mortgages could be valuable to Ford in light of proposed changes to federal tax laws that would limit allowable deductions on most interest payments. Home mortgage interest would remain fully deductible under the tax reform plan, making a home loan a potentially attractive way to fund a new-car purchase.

"Beneficial has a substantial presence in the second mortgage field," Glaser said. "That could prove helpful to auto lending institutions in the future.

"With changes in the tax laws, (consumers) in the position to might opt for a second mortgage as a way to finance big ticket items, like new car purchases."

Also, a company with an expansive service network like Beneficial's could be an asset if Ford issues its own credit card, as has been discussed.

"Beneficial has a wider base of operations geographically than First Nationwide," said Glaser. "It seems logical that Ford would want to make use of that network."

2 new imports for L-M to boost sporty image

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Two imports coming next March will add most of the new flavor for 1987 as Lincoln-Mercury Division seeks a young, sporty image more distinct from Ford Division.

L-M is becoming increasingly dependent on imports. It will have three models from two continents in 1987, and a Japanese-designed, Michigan-assembled "transplant" is due the following year.

Scorpio, a $20,000-$25,000 "executive-class sports sedan" designed and built by Ford of Germany, will become the second Merkur branded line. The Mercury Tracer, expected to go on sale in March, 1987, as a 1988 model, will be imported from Ford's assembly plant in Hermosillo, Mexico.

Tracer is designed by Ford's Japanese partner, Mazda Motors. The four-door hatchback shares its mechanical platform with the Mazda 323, but has different sheet metal. It will be marketed as the "most complete car in its class" with a high level of standard features, said L-M General Marketing Manager Edsel Ford II at a dealer preview here.

SALES

Car sales 'average' in mid-August but climb 11 percent to 201,521

By Jenny L. King
AUTOMOTIVE NEWS STAFF REPORTER

Mid-August domestic new-car sales were average for the period, compared with earlier years.

The 22,391-unit daily selling rate was up from 19,010 the first 10 days, but off from last year's Aug. 11-20 rate of 22,556 just before big domestic incentive programs took over the market. There were nine selling days in the period this year, compared with eight in 1985.

In a straight numbers comparison, Aug. 11-20 sales were up 11.68 percent, to 201,521 from 180,446 a year earlier. American Motors was the only domestic manufacturer to slip behind a year ago. AMC fell 48.15 percent, to 1,400 from 2,700 (down 53.85 percent on a daily-rate basis).

Chrysler Motors, which has earned more than 13 percent of the domestic car market since June 1, was up 23.83 percent, to 31,388 from 25,348 (Chrysler was up 10.07 percent on a daily-rate basis).

Ford Motor Co. was up 35.29 percent, to 53,935 from 39,865 (up 20.27 percent, daily rate). General Motors reported sales of 107,163 new cars, up 0.78 percent from 106,333 (down 10.42 percent, daily rate).

Volkswagen was up 25.04 percent, to 2,242 from 1,793 (up 11.16 percent, daily rate). Honda reported sales of 4,154 Accords and Civics built in Marysville, Ohio, up 13.40 percent from 3,663 Accords a year ago (up 0.87 percent, daily rate). Nissan was up 66.53 percent, to 1,239 from 744 (up 48.39 percent, daily rate).

Ford and Chrysler made impressive gains in market shares during the mid-August period. Ford climbed to 26.76 percent from 22.09 percent. Chrysler earned 15.58 percent, up from 14.05 percent. GM dropped to 53.18 percent from 58.93 percent.

AMC was down to 0.69 percent from 1.50 percent. VW claimed 1.11 percent, up from 0.99 percent. Honda had 2.06 percent, up from 2.03 percent, and Nissan climbed to 0.62 percent from 0.41 percent.

Sales by make included a 66.53 percent year-to-year increase for Nissan. Ford was up 45.93 percent; Plymouth, 32.33 percent; Dodge, 28.28 percent; Volkswagen, 25.04 percent; Mercury, 24.93 percent; Honda, 13.40 percent; Chrysler, 11.14 percent; Oldsmobile, 5.32 percent; and Lincoln, 3.35 percent.

Renault was off 50 percent; AMC Eagle, 33.33 percent; Cadillac, 5.46 percent; Buick, 2.18 percent; Chevrolet, 1.57 percent; and Pontiac, 1.46 percent.

Calendar-year sales remained below the 1985 level, down 2.75 percent to 5,142,246 from 5,287,568.

Ford Escort/EXP, at 11,176 units, was the top-selling nameplate in mid-August. Following were Chevrolet Celebrity, 9,435; Oldsmobile Cutlass Ciera, 8,351; Oldsmobile 88, 7,895; and Chevrolet Nova, 7,462.

Deal Me In.
— A seminar on valuing a dealership. —

Arthur B. Bent
Nationally recognized automotive consultant and former dealer specializing in valuing dealerships.

Allan R. Curhan
Attorney for dealers and state associations and specialist on automotive business problems.

Automotive Business Associates is pleased to introduce a new team concept and approach in seminars. Featuring a consultant, accountant, attorney and a factory business manager, ABA is making this seminar (featured at NADA 1986) available in select cities for the next three months. One-day seminar cost: $495. $395 additional person(s). Includes all materials, refreshments and complete luncheon.

Thailand works to boost automotive exports

By Andrew Tank

Thailand's government is making a concerted bid to boost exports of automotive components and production machinery.

TRW — the first major U.S. company to use Thailand as a manufacturing center for auto components — clearly illustrates the potential.

Last December, TRW took a majority shareholding in Fuji-Serina Valve Co., based just outside of Bangkok. The company had been set up three years earlier to make engine valves for the Thai auto market.

At the same time, TRW authorized an investment program of nearly $3 million to build a new forging facility and increase capacity from 1 million to 2.5 million valves annually.

TRW will use that capacity to fill small-lot orders, mostly of around 1,000 pieces. But it will also supply the spare parts and replacement aftermarket in Europe. Business will progressively be transferred from European factories, which then will concentrate on high-volume production runs requiring automated machinery.

Says David N. LaForest, Fuji-Serina's managing director: "Customers in Europe were given a 10- to 15-percent price reduction because of moving the business to Thailand."

TRW's decision is especially interesting, because Fuji-Serina has been consistently unprofitable. That's because Thailand's automakers have not increased the local content of their vehicles as fast as they had once planned to. Fuji-Serina supplies the aftermarket in Thailand, but has failed to win any business from original equipment manufacturers who all continue to receive engine valves as part of a completely knocked down engine from overseas.

LaForest describes the key benefits of being located in Thailand: "The labor rates are very low, but first and foremost the quality of the work force is very high."

He says his employees, whose average age is 22, are diligent, eager to learn and very productive. The absentee rate is only 1 percent, and only 0.5 percent of production has to be scrapped because of poor quality. In the first three years of operation, no product has been returned by a customer.

Pay rates for workers average 60 cents an hour including all fringe benefits. Fuji-Serina enjoys an array of promotional incentives from the Thai Board of Investment, including a five-year tax holiday, duty-free importing of machinery, and assistance in expediting local planning procedures.

Fuji-Serina will increase its work force from 60 to 160 when it starts full-scale production in the third quarter of 1987. LaForest says it will then become a healthy profit center. The company will still pitch for local business, but will be predominantly export-oriented, selling first to Europe, then to neighboring countries and possibly the U.S.

TRW is very much a pioneer, but the Thai government is anxious to attract similar ventures. At present, exports of auto parts from Thailand are small — worth only $12 million in 1985 with a target of $16 million in 1986.

Such figures are dwarfed by the import of $365 million worth of auto products in 1985, mostly from Japan. That imbalance — part of a total trade deficit between Thailand and Japan of $1.6 billion in 1985 — adds urgency to the export drive.

The intent is to highlight the low cost of skilled labor in Thailand and win foreign investment that previously might have gone to other Asian manufacturing centers such as Taiwan, South Korea or Singapore, all of which face rising labor costs with increased affluence.

Explains Chackchai Panichapat, assistant secretary general of the promotional Board of Investment: "We have enough skilled labor, but lack technology, investment and a market. Labor is 20 times cheaper here than in the U.S., so we are trying to promote industries that are labor-intensive and export-oriented."

> "Labor is 20 times cheaper here than in the U.S., so we are trying to promote industries that are labor-intensive and export-oriented."

Chackchai says unskilled workers in Thailand can be hired for 50 cents an hour, skilled machine operators cost less than $2 an hour, and government financial incentives being offered are "comparable if not better than others in the region."

Notes William R. Fothergill, a consultant with Arthur D. Little Inc., who is advising the Board of Investment: "More and more Americans are becoming interested. In the electronics field, Thailand has already attracted firms like AT&T, National Semiconductor, Data General, Signetics and AMD. I sense a lot of momentum building up."

American foreign investment in Thailand totals just over $4 billion, although 75 percent of it is by major oil companies. Japanese investment is still the highest at about $8 billion.

As for exports, many Thai companies sense greater opportunities in the relatively free U.S. market compared to the tightly restricted Japanese ones. This is reflected in the fact that last year the U.S. was Thailand's biggest export market, and Thailand ran up a record trade surplus of $700 million, most of it attributed to exports of agricultural produce.

Despite that imbalance, the Reagan administration is actively encouraging Thailand to promote foreign investment and diversify its exports. Last June, Chackchai led a third promotional tour to the U.S. to outline the advantages of manufacturing in Thailand. The trips were funded by the U.S. Agency for International Development (USAID), which assists friendly, developing countries to promote private sector investment.

Last November, Chackchai led a Board of Investment delegation which visited Big Three automakers in Detroit (*Automotive News*, Dec. 30, 1985). The Board outlined the benefits of subcontracting items with a labor content greater than 20 percent, such as automotive wiring harnesses and seat covers, or which are made in small batches, such as stamping dies or jigs.

Subsequently, Chrysler Corp. purchasing has asked for more information about the engineering industry in Thailand and has supplied a list of items it might like to buy.

Chackchai acknowledges that most such procurement contracts have a long lead-time and major orders are unlikely soon. But he hopes to have Thailand on the agenda when the time comes for major U.S. automakers to review their procurement policies.

Thailand also hopes to win export contracts for assembly machinery that is either no longer made elsewhere or is expensive to make in small volumes.

Three Thai auto parts manufacturers — Chao Auto Parts, Sammitr Motor and Thai-Hino — recently won an order from Toyota to supply $800,000 worth of dies and jigs to Toyota's associate company in Indonesia.

Another Thai firm — Able Autoparts Industries — has sold jigs to Mercedes-Benz, Mazda, Honda and Ford in countries as far afield as Venezuela, Malaysia and Indonesia.

Nissan is studying a proposal to export stamping dies to its affiliates in the Middle East, India, South Korea and Taiwan which will be manufactured in Thailand by Siam Motors Co.

"We face an unemployment problem and have a trade imbalance," Chackchai says. "For the last 20 years, we have emphasized import substitution. In the next development plan we want to develop industry and promote exports of machinery and electronics." ■

WORLD NEWS BRIEFS

CdM boosts exports

Chrysler de Mexico states in its annual report that 1985 sales totaled 84,344 vehicles: 52,336 cars and 32,008 trucks. That's a 54.1-percent increase over 1984. Chrysler exported 13,540 units — 100 percent more than in '84 — producing $511 million. This year's export program will be bolstered by investments of more than $210 million, to be distributed between car, truck and engine plants. About $106.8 million is destined for development and launch of new models. Sales goals for this year are about $1.28 billion, with $766 million representing export income.

Dina's in the black

Mexico's Diesel Nacional (Dina) has released a report revealing in-the-black operations for the first third of this year. Dina's consolidated financial statement through April showed positive operations totaling 3.717 billion pesos (about $5.9 million) — despite a 27-day strike at the beginning of the year. Dina plans to build up exports of parts and engines and to begin exporting assembled trucks.

Chihuahua hits 500,000

Ford de Mexico's four-cylinder-engine plant in Chihuahua hit the half-million mark in mid-June. About 90 percent of the output, according to Ford, was exported to the U.S. and Canada. The Chihuahua plant, built in November 1983, represents an investment of nearly $400 million. Output is 1,350 four-bangers daily.

The Beetle's safe

Wolfgang Sauer, president of Volkswagen do Brasil, said his company will not abandon manufacture of the venerable Brazilian Beetle. He also stated that when the time comes for VW to build new manufacturing facilities, they might well be located outside of Sao Paulo, which is where VWdB is headquartered. Insiders whisper that Sauer is partial to the State of Minas Gerais, which is where Fiat's facilities are located.

New plant for GMdB?

General Motors do Brasil is also thinking of establishing manufacturing facilities in another Brazilian state. Chief on the list are the cities of Porto Alegre, Curitiba, Salvador and Recife.

The tax man cometh

To quash the great consumer demand for new cars, the Brazilian government reportedly is considering a new direct tax on the sale of new vehicles. This undoubtedly would make Brazil the world champion of such a tax, which already stands at 39 percent (compared to 33.3 percent in France, 24.6 percent in Spain, 14 percent in West Germany, 5 percent in Japan, and 4 percent in the U.S.) The government is also thinking about an extra tax on gasoline, because gas consumption has risen 10 percent since the Government's Stabilization Program was instituted.

Peugeot to redo Sochaux

Automobiles Peugeot is going ahead with a five-year $1-billion plan to renovate its 74-year-old plant in Sochaux, France. Plans include rerouting the Allane river, which now bisects the 650-acre site and takes up a lot of valuable space. Peugeot's target is to boost capacity from 1,500 to 1,800 cars per day. It will replace the existing paint shop with a 650,000-square-foot building. The final assembly area will be increased in size from 900,000 to 2,260,000 square feet.

No. 1 in Norway?

Sales of new cars in Norway this year are at an all-time high. After six months, 101,646 passenger cars and 21,671 trucks were sold — 35 percent more than in the same period last year. Ford is still No. 1 with a market share of 13.2 percent, but Toyota is a close second. After six months, Toyota was only 500 cars behind Ford, and for the month of June, Toyota outsold Ford. It's said Toyota is trying to be the first Japanese automaker to hit No. 1 in Norway. Toyota already is the top seller in Denmark and Finland.

South Africa maintains sales momentum

By Jeremy Sinek

The recent improvement in new vehicle sales in South Africa maintained its momentum in July. Sales of 25,155 cars, trucks and buses were 6.4 percent above June (24,635), which had been 12.5 percent better than May.

July car sales (16,778) jumped 6.4 percent over June (15,769) and were well above the average monthly volume of about 14,000 in the first five months of 1986.

July sales of light commercials rose 8.3 percent over June — to 7,499 from 6,881 — and compared with a monthly average of 6,000 earlier in the year.

However, July sales of medium and heavy trucks slipped 1.3 and 8.7 percent respectively from June. Although medium-truck sales in July remained well above the January-to-June average, the heavy truck figure (527) was less than the year-to-date average, causing continuing concern in the South African industry.

The January-July total for sales of all vehicle types was 153,292, 11.3 percent below the first seven months in 1985.

July was the first full sales month since the government's package of fiscal relief and stimulation measures were announced June 17; among other things, they eased the perks-tax burden on private use of company-owned vehicles.

Also contributing to better-than-expected July sales were pent-up replacement demand, new-model introductions, aggressive marketing and a high number of selling days during the month.

Most automakers expect the momentum to continue the rest of the year, with monthly car sales ranging between 15,500 and 17,500 units.

Not all auto companies are celebrating July's sales, however. Nissan car sales slumped 12.6 percent from June and its light commercials sales remained stagnant.

Samcor (Ford/Mazda/Mitsubishi) car sales slipped 10.1 percent, but that was expected since its June performance was inflated by new-model launches. However, the company's July figures of 3,604 cars and 1,401 light commercials were marked improvements over sales earlier this year.

July generally was a good-news month for U.S. interests. General Motors, after a steady but gradual recovery from a disastrous start this year, posted a 50-percent improvement from June to July with 1,934 car sales. GM also sold 1,501 light trucks in July, a 7.6-percent improvement over June.

Almost as sparkling were Volkswagen-Audi improvements to 3,604 car sales in July (up 34.4 percent over June) and 613 light commercials (up 26.9 percent).

Mercedes/Honda car sales in July climbed 10.4 percent to 1,460, but only minor gains were posted by BMW (1,234 cars, up 1.9 percent) and Toyota (4,000 cars, up 3.4 percent). Although Toyota remained the car-sales leader, its market share fell to 23.8 percent in July.

Second in July was Samcor with 21.5 percent of the car market. Close behind was VW, with 20.6 percent, the company's best performance in years.

VW's Golf/Jetta (2,994 units) even ousted Toyota Corolla (2,752) from the latter's hitherto unassailable No. 1 spot in model competition.

On a year-to-date basis, VW/Audi is the star of the 1986 car market with a share increase from 14.1 to 17.8 percent; despite a depressed market market, VW/Audi volume is 11 percent above last year.

BMW and Nissan also recorded slight volume gains, increasing their respective market shares from 6.4 to 7.6 percent and from 6.8 to 7.8 percent.

Toyota's year-to-date volume is slightly down, although its market share went up to 26.3 percent from 23.7. Samcor's share remained at 20.6 percent on a year-to-date basis.

The big volume and market share losers were Mercedes/Honda (down from 10.5 to 9.5 percent) and GM (down from 8.8 to 7.9 percent). ■

WORLD NEWS BRIEFS

BHP buys BIEC

BHP Steel International Group, Coated Products — part of Australia's largest conglomerate — acquires Bethlehem International Engineering Corp. (BIEC) from Bethlehem Steel Corp. The new company, renamed BIEC International Inc., will be headquartered in Bethlehem, Pa. The sale includes patents for Galvalume, an aluminum/zinc-coated sheet used in automotive and other applications.

Japan buys laser crystals

Allied-Signal Inc. will start selling synthetic laser crystals in Japan through an agreement with Mitsui Petrochemical Industries Ltd. Allied subsidiary Synthetic Crystal Products, Charlotte, N.C., will export the crystals — which have application in lasers, acoustic wave filters, electro-optic devices and bubble memories — to Mitsui for distribution in the Asian market. Allied and Mitsui also are partners in a joint venture formed to manufacture and sell amorphous metal alloys in Japan.

Automated tire production

Goodyear Tire & Rubber Co. believes its purchase of British firm Engineering Consultancy Service puts it on the path to a tire-building system that could revolutionize the industry. ECS, a former Dunlop subsidiary, now known as Howdins Ltd., has been working on a fully automated tire-building system for nearly 10 years. Goodyear says the ingredients of a rubber compounding system developed by Howdins has to be processed only once compared to multiple processing in conventional equipment.

Nottingham gets test beds

The University of Nottingham has received three engine test beds from educational equipment manufacturer G. Cussons Ltd., Manchester, England. Installed in the engineering school, the beds are equipped with diesel engines and complement three other Cusson test sets used in studying gasoline engines.

Hagglunds buys hydraulics

A.B. Hagglunds & Soner, an Asea Group company in Ornskoldsvik, Sweden, will acquire Abex Denison Group, one of the world's largest hydraulics companies with production and marketing units in the U.S., Great Britain, France and West Germany, and sales companies in Italy, the Netherlands, Switzerland, Austria, Denmark and Sweden. Hagglunds makes hydrostatic drives; electro-hydraulic cranes, winches and cargo-handling systems for civilian and military vehicles; and marine and offshore markets.

Foreign parts for Toyota

Toyota Motor Corp., Japan, plans to import materials and equipment worth 70 billion yen from overseas markets in 1986. That's 7 billion yen more than last year's tab. The company recently started importing six more auto parts and accessories: floor mats from Viam (U.S.) and polishing liquid from McKesson (U.S.), to be marketed through dealers and parts distributors throughout Japan as accessories; door trim material from Lignotock (West Germany) for the door-trim core of small cars; propeller-shaft joints from Lohr & Bromkamp (West Germany) to be used in small cars; windshield glass from Voest Alpine (Austria) for Corolla cars sold in Europe; and tires from Bridgestone (Australia) for the Town-Ace minivan marketed in Australia.

Land Rover sales up

Chalk one up for Land Rover Ltd. Last July, the British off-road vehicle maker posted its best month for sales on the European continent. The company beat its previous record — set the month before — by nearly 30 percent. There were 911 Range Rovers and 397 Land Rovers sold on the continent in July, versus June's sales total of 1,007 vehicles. Year-to-date sales are up 34 percent on the continent, at 4,407 vehicles.

Jaguar breaks records, too

Land Rover isn't the only British vehicle maker to post sales gains. Jaguar Cars Ltd., of Coventry, produced a record 22,049 sedans and sports cars in the first six months of 1986, and retail sales in the U.S. reached record levels in the month of June. During that month, 2,504 Jags were sold in the U.S., compared with 1,713 cars for June of 1985. Jaguar reports it is "on target" to produce a record 42,000 cars this year.

British show times set

The British International Motor Show is set for Oct. 18-26 at the National Exhibition Center, near Birmingham, England. Hours are: Oct. 15-17, 9 a.m. to 7 p.m.; Oct. 18-25, 9:30 a.m. to 7 p.m.; Oct. 26, 9:30 a.m. to 5:30 p.m.

Will Big Four miss show?

Unless a last-minute agreement is reached between the organizers of Brazil's 14th Automobile Salon, scheduled to open Oct. 13, it will take place without the participation of Brazil's Big Four automakers: VW, GM, Ford and Fiat. Of the 38 Brazilian manufacturers of specialty and off-road vehicles who participated in the last Salon, six went out of business, 22 have confirmed their participation this year and the remaining ones are still negotiating.

From new to old

Because of big demand for new and used cars in Brazil, a shift in employment has developed. Many new-car dealers have dismissed their salesmen because they simply have no cars to sell. The more experienced salesmen have opened up used-car dealerships, and those with shop experience are buying and reconditioning wrecked vehicles — an activity that has become quite lucrative in Brazil.

Enasa automates

Spanish truck builder Empresa Nacional de Autocamiones (Enasa) has built a new 41,000-square-foot truck cab plant in Barajas, Spain. The plant connects with truck assembly lines using a fully automated trainsport system. Enasa officials say the new plant will simplify the production process, while laying the foundation for greater robotization and for a high-tech manufacturing process that Enasa is preparing with Dutch truck builder Daf.

Rockwell appointments

The Brake and Trailer Axle Division of Rockwell International Corp.'s Automotive Operations announces two appointments at its European manufacturing facilities. Willie Bevc has been appointed plant manager, Rockwell Bremsen, Alzenau, West Germany. He succeeds Ritchie A. Costley, who becomes managing director, Llay plant, Wales, U.K., for Rubery Owen-Rockwell Ltd. Rockwell Bremsen produces wedge- and cam-actuated brakes for heavy-duty truck markets worldwide. Rubery Owen-Rockwell's Llay plant provides truck trailer axles, suspensions and accessories for the European truck market. ■

58 auctioneers graduate

HIGH POINT, N.C. — Fifty-eight students graduated from the Mendenhall School of Auctioneering Aug. 15. Students hailed from 13 states and Nigeria. The next class will be Nov. 3-14.

Change in arbitration helps Mass. lemon law

BOSTON — Massachusetts' auto lemon law is working, thanks to a change from voluntary to compulsory arbitration that was made last April.

Since then, 80 percent of the cases which have gone to arbitration have been won by new-car buyers, according to Paula Gold, state secretary of consumer affairs.

Twenty-one motorists received refunds and one received a new car. Owners have won 33 cases in compulsory arbitration and the manufacturers have won eight.

Of the 33 cases won by consumers, 11 involved General Motors cars; seven, Chrysler; seven, Ford; and four, American Motors. One case each involved Mitsubishi, Isuzu, Yugo and Saab cars. Two cases being appealed involve Ford cars.

Volunteer members of the American Arbitration Association are trained by the state to preside at hearings. There have been 244 requests for arbitration, but a shortage of personnel has lengthened the processing time.

As defined by Massachusetts law, a "lemon" must contain a serious defect which impairs the vehicle's use, market value or safety. Under the strengthened law, dealers must put stickers on all new cars, spelling out consumers' rights. Gold said that about one-third of those checked by her office have complied.

The current lemon law for new cars gives buyers the right to a refund or a new car if they can show that their car has serious defects which the manufacturer cannot repair in a reasonable time. The law is effective for the first year of ownership or 15,000 miles.

Two situations must exist for the car owner to qualify for refund or replacement: The defect must still be present after three or more attempts to repair it, and repair attempts for a single defect or group of defects must take 15 or more business days.

The car owner must then give the manufacturer a last chance to fix the defect within seven days. If the defect is not corrected or if it recurs, the car owner is entitled to a refund or a new car.

Lease-rental revenues top $52.4 billion

NEW YORK — Record revenues for the lease-rental auto industry in 1985 reached $52.368 billion, up 16.9 percent over 1984's $44.784 billion.

Hertz Corp., in its annual estimate, said total units in service also set a record, advancing 7.5 percent to 6,719,000 from the previous year's 6,249,000.

New cars and trucks entering lease-rental service rose 3.7 percent to 2,013,000 in 1985 from 1,941,000 in 1984. But new units last year fell below the 1978 record of 2,284,000, Hertz said.

The Hertz survey showed the average lease-rental vehicle age in 1985 edged up to 3.33 years from 3.22 years in 1984. Both were far above the 2.45-year average in 1972, the last year before the first Arab oil embargo. Average age of the nation's total 170.6 million vehicles on the road was 7.7 years in 1985, according to industry data.

Average annual mileage run by lease-rental units climbed 8.1 percent from an estimated 26,228 in 1984 to a record 28,367 in 1985. The previous record was 26,730 in 1978. That is far above the average mileage for the entire U.S. fleet, which was 9,675 in 1985 and 9,284 in 1984.

The report estimated total cars in non-personal service — business fleets and lease-rental fleets — were up 1.45 percent to 12,656,000 units in 1985 from 12,484,000 in 1994. Sales of new non-personal cars rose 3.2 percent to a record 5,145,000 in 1985, compared with 4,985,000 in 1984. Hertz figures for non-personal units include deliveries to organizations buying 10 or more units a year, plus sales to individuals driving more than 50 percent for business and to smaller business and government groups purchasing four to 10 vehicles.

The share of new lease-rental vehicles to total new-car and truck sales has grown from under one percent in 1950 to 14 percent last year.

Hertz said the number of firms in car or truck leasing or renting may be as high as 20,000.

FRANCHISES

FROM PAGE 1

which were not selling cars at the beginning of this year.

Those two makes also reflect the growing trend toward single-line import dealerships. They joined Mitsubishi in requiring a separate facility for their franchises, thereby promoting total exclusivity.

Many of the established makes, including the captive imports, added franchises in the first half of the year, which also helped to push the total higher.

The largest number of import franchises remained concentrated among the captives, with Chevrolet and its Spectrum/Sprint duo leading the pack, followed by Plymouth and Dodge with their Mitsubishi-built Vista, Conquest and Colt models.

Nissan reported the most franchises among the non-captive import makes, nosing out archrival Toyota 1,107 to 1,081 on July 1, although neither total included the separate distributorships in Hawaii.

The number of outlets selling imported vehicles in the U.S. also increased during the January-June period, again reflecting the addition of Hyundai and Acura points.

On July 1, the total number of retail outlets selling imported makes — alone or dualed with either other imports or domestic makes — was 16,810, up 2.6 percent from the revised total of 16,392 on Jan. 1, and up 7.92 percent from the 15,576 retail outlets selling imported makes on July 1, 1985.

The number of outlets handling a single imported make increased to 3,290 from 2,974 on Jan. 1 and 2,908 on July 1, 1985.

The leader in the exclusive category was Honda, with 655 solo outlets. The second highest total, 650, belonged to Toyota. Nissan was third with 593 exclusives, Subaru was fourth with 311 and Mazda reported 163 exclusive points.

Japanese-make franchises far outnumbered franchises of makes from other nations, although Japanese-make franchises accounted for 77.9 percent of the total on July 1 compared with 78.9 percent on Jan. 1.

West Germany's share of import franchises increased slightly to 11.8 percent from 11.7 percent at the beginning of the year.

Sweden's share remained unchanged at 3.7 percent. Italian-make franchises accounted for 1.9 percent of all import franchises, compared with 1.8 percent at the beginning of the year.

The French share dropped slightly to 1.3 percent from 1.4 percent. The United Kingdom's share rose to 1.7 percent from 1.6 percent.

STERLING

FROM PAGE 3

miles in Europe before it is shipped to the United States.

"Austin Rover did not do well in the United States, so there is no arrogance," Ketchledge said. "The ARG people have been very responsive on this product."

Even the Japanese-built air conditioning system in the Sterling was redesigned by ARG, according to Ketchledge.

Ketchledge said he is confident that Sterling will reach its sales goal of 25,000 cars in 1987. Part of that confidence stems from the high level of interest among dealers requesting Sterling franchises.

Ketchledge said ARCONA received about 1,100 applications for 145 franchises. To date, 130 dealers have been selected. Ketchledge said the remaining 15 will be named before November.

About 35 percent of the Sterling dealers are Cadillac dealers and about 20 percent are Audi dealers, Ketchledge said. The large percentage of Cadillac dealers is not surprising since ARCONA's majority owner, mega-dealer Norman Braman, holds several Cadillac franchises.

Dale Pollak, vice president and general manager of Pollak Cadillac, in Elmhurst, Ill., said Braman's credibility influenced his decision to apply for a Sterling franchise.

"We were not interested in another franchise until we heard about the opportunity through Ed Leibowitz (Braman's brother-in-law and partner)," said Pollak. "I figure if Leibowitz and Braman are behind it, it's got to be successful."

Some Cadillac dealers in the Sterling dealer group say the British car will offer a European alternative to Cadillac without hurting Cadillac sales.

"I think people have decided beforehand whether they are going to buy an American luxury car or an import," said C.M. Brooks, owner of Brooks Cadillac, in Scottsdale, Ariz. "The handling and driving are different. The Sterling is a sports-type car compared to the Cadillac. It's non-threatening to the Cadillac line."

DESIGN

FROM PAGE 1

Opel design management is in place, despite the losses. Its studios in Russelsheim, West Germany, are far from deserted.

There is more than one reason for the large-scale migration from the Ford and Opel design centers.

The basic reason is that the talent was there to begin with. A few decades ago, American automotive design centers were the first to be professionally organized in Europe. For many years, they have had the reputation of being the best organized — although not necessarily the most efficient or successful in selling their designs to top management.

For years, Ford sponsored young designers at schools in Great Britain and Germany and later employed many of them.

But though those young designers were provided with training, they were perhaps given few chances to make personal contributions to the company's product design. Understandably, they were frustrated.

When other European automakers recently decided to establish design studios, they went head-hunting. The time was right for designers to move.

VW is setting up a major design center in Germany's fashion-capital city, Dusseldorf, with le Quement in charge. He has 20 years' experience in design and management and speaks French, German and English fluently.

BMW has a new design center in Munich — a new company called BMW Technik Gmbh. Harm Lagay, former Ford design studio chief, is in charge.

Audi quietly had British designer Martin Smith open a small, independent studio in Munich, totally dedicated to Audi projects. It has set a new trend in design management by European carmakers.

Fiat and ItalDesign now also employ at least one designer previously employed by Opel (Bangle) or Ford (Luciano D'Ambrosio).

The aggressive head-hunting by those automakers found easy entry at Ford, which had announced a five-year plan to cut its workforce in all departments by 20 percent.

Ford reportedly first asked le Quement to move to the United States to get the American experience necessary to take Bahnsen's place when Bahnsen retires in a few years. But things didn't go well in the United States, and le Quement resigned.

His colleagues at Ford watched with disappointment and perhaps saw the prospect of receiving the same treatment.

Rebuilding the Ford team will take years.

But a Ford of Europe spokesman said that the migration of designers is "not unusual, except perhaps for its degree.

"In two raids upon us," he said, "BMW hired six of our people and Volkswagen hired five. We found that a rather flattering recognition of the fact that we had done a fair bit of trail blazing in Europe with Sierra and Scorpio as examples of airflow management."

The spokesman added, "It doesn't mean that any work has been held up. We can rotate people from Australia, the states, Germany and England."

Ford also helped set up a car-design course at the Royal College of Art in London. "We have a permanent pool of people coming through that course. The pot is being replenished," he said.

Commenting on the departure of his designers, Bahnsen said, "It is a tremendous compliment to our company and to myself that so many major industries seek the people who have been growing at Ford under my leadership."

Bahnsen added that he is not worried about the future. "On the one hand, we can trust our former designers as far as confidentiality is concerned, and we have the resources to replace them.

"In fact, this is an opportunity to let younger designers assume more responsibility and achieve higher rewards," Bahnsen said.

An Opel spokesman said, "We may have lost some good young designers, but we certainly haven't lost key people." He added that in design circles "some flux and attrition is healthy and necessary."

"Good designers are in short supply," the Opel spokesman said, and Opel studios were a natural recruiting ground for other companies.

There was a time, however, when GM or Opel designers felt they were in such a privileged position they would think 10 times before considering going elsewhere.

BRAZIL

FROM PAGE 1

the discontinuation of the Corcel, a medium-sized sedan pulled out of production in July.

The car is seen as an ideal candidate for the 1.8-liter Santana engine built by Volkswagen in Brazil, should ongoing talks between VW and Ford bear fruit. The two automakers announced in June they were holding discussions concerning possible collaboration in both the Brazil and Argentina. A decision on such a venture is expected by year's end.

Mazda parts also could find their way into the Nevada, sources said. Mazda is said to be interested in becoming a direct supplier to Brazilian carmakers. Mazda officials have met with Ford executives in Brazil several times in recent months, sources said.

Nevada could be a candidate for export to other markets. Brazil currently exports the Escort to European countries that are not members of the Common Market.

However, the 1.6-liter Escort engine has been modified for 1987 and as yet hasn't been authorized for sale in those markets. Ford Brasil said it is awaiting finalization of proposed changes to emissions laws in those countries before submitting the engine for validation.

PRODUCTION

Scheduled output seen up 2%, a 9-week high

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

As model changeovers and vacations tapered off at U.S. car assembly plants, last week's scheduled auto production was the highest in nine weeks.

Makers estimated output of 140,622 cars last week, the highest since the 175,718 assembled the week ended June 28.

Last week's total was 2.20 percent above the previous week's 137,592 and 3.76 percent more than the year-ago week's 135,522.

So far this year, 5,295,087 cars have been assembled, 5.27 percent below the 5,589,622 completed in the corresponding period last year.

Companies split last week's targeted output as follows: General Motors, 47.75 percent; Ford Motor Co., 28.03 percent; Chrysler Motors, 14.08 percent; Honda of America Manufacturing Inc., 4.10 percent; New United Motor Manufacturing Inc., 2.65 percent; Volkswagen of America, 1.42 percent; American Motors, 1.07 percent; and Nissan Motor Manufacturing Co. U.S.A., 0.90 percent.

GM's Wentzville, Mo., plant is expected to resume production tomorrow (Sept. 2).

GM did not schedule Saturday overtime at any of its car plants last week.

All Ford plants except Wixom, Mich., are slated for daily overtime this week.

On Saturday, overtime is scheduled for the following Ford plants: Edison, N.J.; Atlanta; and Chicago.

Chrysler's Belvidere, Ill., and St. Louis (No. 2) plants are slated for daily overtime this week.

Truck production advances

U.S. truckmakers scheduled production of 66,465 units last week, 11.42 percent more than the previous week's 59,650 but 4.60 percent below the year-ago week's 69,670.

Year-to-date, 2,381,812 trucks have been assembled, 3.29 percent more than the 2,305,910 completed last year at this time.

General Motors' Detroit plant is expected to resume production tomorrow (Sept. 2). The plant has been idle for model changeover.

All Ford Motor Co. plants except Twin Cities, Minn., and Lorain, Ohio, are slated for daily overtime this week (Sept. 1).

Ford's St. Louis plant is scheduled for overtime Saturday (Sept. 6).

Chrysler Motors' Warren, Mich., plant is slated for daily overtime this week.

More autos built in Canada

Canadian manufacturers scheduled production of 14,872 cars last week, 13.60 percent more than the previous week's 13,092 but 39.58 percent less than the year-ago week's 24,613.

So far this year, 691,373 cars have been assembled, 1.63 percent below the 702,863 completed last year at this point.

Last week's targeted production of 12,562 trucks was 3.41 percent below the previous week's 13,006 and 28.46 percent below the year-ago week's 17,560.

Year-to-date, 570,385 trucks have been built. The total is 98 less than the 570,483 assembled last year at this time.

General Motors' Oshawa, Ontario, plant No. 1 remains idle due to a parts shortage. Oshawa No. 2 resumed output last week.

GM's Scarborough, Ontario, plant and Volvo's Halifax, Nova Scotia, plant resumed output Aug. 25 after vacations.

Yugo grosses $122 million in first year

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Yugo America reported sales of $122 million during its first full year of operation, which ended July 31.

William Prior, president of the company, said last week that wholesale vehicle sales totaled 27,000 units. That amounted to $109 million, including port-installed accessories. Parts and accessories sold to dealers accounted for the remaining $13 million.

Prior said he would not give out a profit figure but termed it a "few million." Yugo is a privately held company.

The company created a stir last year when it introduced its $3,990 Yugoslav-built subcompact.

After initial favorable publicity, the company received some negative comments but they apparently did not affect sales.

Prior also said the company has launched its national television advertising campaign, using the theme, "Everybody Needs A Yugo Sometime." Each commercial has a toll-free telephone number, and Prior said responses have averaged 1,600 calls a day.

The advertising is strictly network and stresses the "broad appeal" of the car, Prior said.

The company has completed its 220-member nationwide dealer network. Yugo also made some additions to its headquarters operations, creating a corporate planning department.

Prior said the company is studying the feasibility of forming a financial subsidiary and finding alternative sources — such as Japan and Taiwan — for some Yugo components that are made in the United States.

He said a company study revealed that nearly a third of Yugo retail paper is being carried by the financial arms of the Big Three domestic auto manufacturers.

Vehicle output sets monthly record in Japan

TOKYO — Motor-vehicle production in Japan during July increased 3.7 percent over the year-ago total to a new monthly record of 1,147,428 units. The total surpassed the previous high of 1,143,548, set in October 1985.

According to the Japanese Automobile Manufacturers Association, the month's production consisted of 744,994 cars, an increase of 9.5 percent over the year-ago total; 398,598 trucks, down 4.7 percent; and 3,836 buses, down 52.1 percent.

Knockdown units totaled 112,249 during July, an increase of 27.6 percent.

JAMA said July's production record was the result of the automakers boosting inventories to compensate for August's summer vacations and brisk car sales.

JAMA said it is doubtful whether output would continue to increase because of worsening export conditions, including the yen's appreciation against foreign currencies and voluntary restrictions of car exports to the European Economic Community.

Domestic sales in July increased 3.2 percent, while export demand declined an estimated 5 percent.

GM money brings life, stability to Lotus

By Richard Feast
AUTOMOTIVE NEWS STAFF REPORTER

HETHEL, England — General Motors is going to do for Group Lotus what Fiat did for Ferrari in the 1960s: Underwrite a talented but financially strapped company to enable it to become one of the most prestigious names in the industry.

On the one hand, Lotus Cars will be designing and manufacturing high-ticket sports cars that some judge to be among the best in the world. Annual volumes will be between 3,000 and 5,000, or about at the Ferrari level.

On the other hand, Lotus Engineering is gathering a reputation as an engineering and technology [illegible] beginning to rival the famous services of Porsche System in West Germany.

If the outline plan seems promising, it should be remembered that GM bought Lotus for a bargain price. For GM, a concern that will have annual revenues of more than $100 billion this year, spending $33.1 million to acquire total control of Lotus almost comes out of petty cash.

The GM investment in Lotus will not, of course, stop there. Just how much the product program and research and development expansion will cost will be under discussion when the first post-takeover board meeting takes place here Sept. 29.

But whatever the budget for Lotus' five-year plan, it will be tiny in comparison with what GM would have to spend in-house to gain similar facilities and talents.

"Small is beautiful," said Michael J. Kimberley, Lotus managing director and chief executive officer. "We can do in a third of the time what large companies can do. And at half the cost."

GM already has one of the best test-track facilities in Europe, Millbrook, about 100 miles west of Hethel. It was built for Vauxhall and Bedford use, but is seriously underutilized these days.

Some observers feel that the initial GM investment will repay itself from the royalties that will come from the Active Suspension patented by Lotus. Kimberley predicts that seven companies worldwide will be using Active Suspension by the early 1990s — most of the components produced by the joint production venture just established by Moog and GM.

The microprocessor-controlled Active Suspension system eliminates conventional springs and dampers. It can "read" road surfaces and react accordingly. Differing ride and handling character-

GM learning from past as it plans for LeMans

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

SEOUL, South Korea — General Motors hopes to avoid some of the supply problems that plagued its other imported and joint-venture cars when it brings the Korean-built LeMans to the United States next spring.

GM Chairman Roger Smith said 80,000 to 100,000 of the front-wheel-drive subcompacts will be imported the first year. The car will be sold by Pontiac dealers, and Smith said it will be pitted against the "high-class import cars down in the lower end" of the subcompact group.

Smith was here for the dedication of the expanded production facilities of Daewoo Motor Co., GM's 50-50 joint venture that will produce the car. He said shipments will begin early next year.

On the 80,000-to-100,000 supply issue, Smith said, "You can't really do much less than that and cover all the Pontiac dealers. We found that out with the problems encountered introducing the Nova, the Sprint and Spectrum. We just didn't have enough of them.

"If you start talking one, two or three cars to a dealership, that is simply not enough," he said. "You

Late-August sales skyrocket, point to bigger September

As August ended, the new-car market could be described as the gold rush of '86.

The gold appeared to belong to the dealers, while eager would-be customers were providing the rush — jamming showrooms from coast to coast.

The shopping hysteria was triggered by the Big Three announcements of attractive financial rates during the month's final 10-day period. That was enough to make sales explode in the last few days of the month.

Additional entries in the annual-percentage-rate derby as September began could turn the first 10 days of this month into a barn-burner.

With 321,040 sales reported by the makers, the Aug. 21-31 period compared with 281,478 for the final period a month earlier and 207,335 a year earlier. The first 10 days of September could reach 400,000.

Said James G. Vorhes, General Motors vice president in charge of the Customer Sales and Service Staff, "The American auto market exploded in the final three days.

"Our first indications of the electrifying effect of the program were overflow crowds in the GM showrooms and a record level of credit applications received from dealers by GMAC."

Vorhes said GM sales for the 10 days were fifth highest in GM history.

Tom Pappert, group vice president of sales for Chrysler Motors, said, "The industry sales numbers are going to go through the roof.

"Our early returns from the last three selling days of the period show our rate of car sales up 111 percent over the early six non-program selling days.

"September should be one of the best months in Chrysler's history and historic for the industry."

At Cadillac, Peter Gerosa, general sales manager, said Aug. 21-31 daily-rate sales were the best in

Incentives stir buyers to frenzy

By Arthur Pius
AUTOMOTIVE NEWS STAFF REPORTER

New-car dealers offering factory financing incentives are claiming tremendous increases in showroom traffic and sales.

However, most dealers contacted by Automotive News say the financing incentives have created an exceptionally soft market for late-model used cars.

General Motors started the ball rolling Aug. 28 when it began offering a 2.9 annual-percentage-rate incentive on more than one million cars and trucks. Chrysler Motors and Ford Motor Co. followed quickly and last week, American Motors and Peugeot joined the fray.

GM is offering 2.9 APR financing on three-year loans from General Motors Acceptance Corp. and 4.9 APR financing on four-year GMAC loans. The loans apply to all 1986-model cars and most light trucks in inventory. There also are optional rebates of $300 to $1,500.

GM dealers reported remarkable sales as a result of the program.

Nick Vitale, sales manager at Joe Panian Chevrolet, Southfield, Mich., said, "In 13 years of selling automobiles, I have never seen anything like it. We sold 168 cars in a four-day period" over the Labor Day weekend.

In a normal four-day span, he said, the dealership might have sold 60 cars.

Another suburban Detroit dealer reported 150 deliveries in a three-day period with most cars purchased on 2.9-APR, three-year loans.

Richard Thompson, finance manager at Jim Burke Buick-Nissan, Birmingham, Ala., said his dealership sold approximately 75 cars in four days. Before the incentives, he said, the dealership sold eight to 10 cars per day.

Philippine industry withering, seeks aid

By Andrew Tanh
STAFF CORRESPONDENT

MANILA, Philippines — Outside the factory gates of Pilipinas Nissan is a stall called the "Foorman's Canteen." It's an apt symbol of the plight of the auto industry in the Philippines.

Political turmoil and economic distress have crippled a once-thriving auto industry. Production has slumped, the Big Three have pulled out after incurring heavy losses and there is little prospect of early recovery.

Yet that hoped-for recovery will be among the key economic issues on the agenda during President Corazon Aquino's state visit to Washington next week (Sept. 17-19) to discuss her country's situation with President Reagan and other governmental officials.

A jeepney in Manila. They are now the principal form of public transportation in the Philippines.

Trade and Industry Minister Jose A. Concepcion will accompany her — and one of his jobs is to portray an improved investment climate for his country.

But one auto industry spokesman here says, "We

NEWSPAPER

AMC's 1987 strategy: Market high and low

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

American Motors President Joseph Cappy unveiled a 1987 product line that is aimed at the performance and sports-car market as well as the low-priced segment of the pickup market.

The first set of 1987 offerings, which feature a sporty version of the Alliance, a short-bed Comanche pickup and a more powerful Jeep engine, will set the stage for what Cappy called "the biggest product launch in the company's history."

Cappy

AMC will add three new car models to its lineup late in the 1987 calendar year when it introduces the French-built Renault Medallion and Alpine and the Canadian-built Premier.

During AMC's new-model preview, Cappy said Jeep sales should reach 200,000 by the end of the calendar year. Last year, 181,000 were sold. He predicted that for 1987, Jeep sales again will reach 200,000 or will increase.

On the other hand, he predicted that calendar-1986 retail car sales will fall to 80,000 units — a 43,000-unit decrease from 1985. He refused to predict 1987 car sales, although he said the subcompact segment will stay about even but with more players jockeying for a share of the segment.

Cappy said AMC's $187 million preferred-stock sale is complete.

He said he expects the agreement to build Chrysler Motors cars in AMC's Kenosha, Wis., plant to be finalized by the end of the month. Meanwhile Chrysler is already spending a modest sum at Kenosha, he said.

The fate of the Toledo plant, where AMC produces nearly all of its Jeeps, has been put on hold, according to Cappy. AMC has said it will close the plant unless the union agrees to profit sharing instead of a per-vehicle repayment of 1982 concessions. The union nevertheless voted for the per-vehicle payment or "wheel tax."

Asked when he would move Jeep production out of Toledo, Cappy said he had no comment.

"They've (the Jeep unit of UAW Local 12) sent me a message that it is not a very good place to do business," said Cappy. The Toledo plant's operating costs are $35 million more than they should be because of the wheel tax and its labor contract, he said. He said the wheel tax alone costs $9 million.

The Jeep unit of UAW Local 12 has not returned to the bargaining table, although the International UAW offered to resume negotiations, he said.

AMC targets the performance market in some of its 1978 commercials, using actor George C. Scott, who touts the GTA to buyers tired of the family sedan. Other commercials stress the power of the new inline six, 4.0-liter Jeep engine.

AMC also will target the price-conscious buyer with commercials in which Scott introduces the Alliance hatchback, formerly the Encore. "Since the Alliance hatchback hasn't been established yet, it's willing to work cheap," Scott says in one closing line.

Jeep commercials and print ads also tout a $8,495 base Comanche. "The Jeep truck anyone can afford.

Hal Holbrook to star in Buick ads as division targets 850,000 sales

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Buick Motor Division has selected actor Hal Holbrook as its spokesman for the 1987 model year.

Holbrook, a three-time Emmy nominee, will appear in Buick ads that stress the Buick name, not specific products.

Buick would not say how much the actor is being paid. However, his compensation is less than the $1 million American Motors is paying actor George C. Scott to advertise its cars.

Edward Mertz, who became Buick general manager a month ago, said the division is looking for sales of 850,000 units in the 1987 model year. He made the prediction in Detroit last week at the national press preview of the division's new models.

Sales for the 1986 model year are expected to be 750,000 to 760,000 units. Buick's best-ever year was 1984, when sales hit 940,611. Sales in the 1985 model year were 915,270.

"The 850,000 may be a stretch, but that's what we're shooting for," said William Atkinson, Buick general sales manager.

Buick expects to sell more of every line except the Regal, which will be discontinued after the 1987 model year.

Buick hopes to sell 230,000 Centurys, 170,000 LeSabres, 135,000 to 140,000 Somersets/Skylarks, 100,000 Skyhawks, 100,000 Electras, 65,000 Regals, 35,000 Rivieras and 15,000 station wagons.

Buick has scrapped its old advertising tagline of "Wouldn't you really rather have a Buick?" in favor of "Buick. Where better really matters."

Atkinson said the shift in advertising was the result of consumer research, which showed that the division should focus on the brand and on "the people who want what Buick has."

"It's going to be Buick, Buick, Buick until you get sick of seeing the word Buick," Atkinson said. "Hopefully, if you get sick enough, you'll go down to a Buick dealer and he'll sell you the car."

Atkinson said Buick has tried to be credible in its advertising and to tell people that the division is constantly improving its product and service.

Holbrook was chosen to convey that message because of his credibility and stability, Atkinson said.

Other candidates for the job of Buick spokesman were actors Robert Wagner and Robert Stack. Buick did not pursue Stack; Wagner wanted to inject humor into the ads, which Buick did not want.

Edward Mertz, Buick's new general manager, predicts sales will jump to 850,000 for the model year.

AUTOMOTIVE NEWS/JOE WILLIAMS

Since the division has no all-new product for 1987, Buick executives said they will refocus their efforts this year.

Buick's sales and market share have been sliding since their 1984 peak. Sales for the 1986 model year are down nearly 20 percent from 1985.

Buick executives blame the poor performance in the 1986 model year on the lack of availability of V-6 engines, particularly for the Century and the LeSabre, which was a new front-wheel-drive entry for the 1986 model year.

LeSabre production was slow because of plant start-up problems at the Buick City complex in Flint. However, in August, the supply of LeSabre models was 87 days, with 60 days being the desirable inventory level. Buick's total inventory, before General Motors' 2.9 percent financing program was announced, was a 90-day supply.

For the long term, Mertz said, Buick is working on ways to become distinctive from Oldsmobile. In recent years, the two divisions have suffered by competing for the same market.

Nissan may use AMC plant

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Nissan is negotiating with American Motors to build Nissan cars in AMC's Brampton, Ontario plant, according to a high-ranking AMC source.

"Negotiations have been under way for several weeks, the source said. The main obstacle to an agreement is whether AMC will invest in a new paint shop.

Nissan has indicated that it wants to use Brampton for a relatively short time, and AMC officials feel that building a new paint shop would not be worth the investment, the source said.

AMC President Joseph Cappy told reporters last week that AMC had been negotiating for 10 days with a "major Japanese automaker" about building cars at Brampton. AMC presently uses only half of the plant's 60,000-unit annual capacity to build Jeep Wranglers and AMC Eagles.

Cappy indicated that if the Japanese company wanted to produce more than 30,000 units there, Wranglers could be built in AMC's Kenosha, Wis., plant.

AMC has been looking for assembly contract agreements with other automakers since it signed a memorandum of understanding in June with Chrysler Corp. to build Chrysler's standard-sized rear-wheel-drive cars in Kenosha.

J.R. trades his Mercedes for an Allante

Larry Hagman as J.R. Ewing, and an Allante

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — J.R. Ewing, "Dallas" character and America's favorite villain, is trading in his Mercedes-Benz for a Cadillac.

Actor Larry Hagman will show up in Cadillac's new $50,000 Allante two-seater in the Sept. 26 season debut of "Dallas." He may even refer to the car's American origins in dialog.

Allante is actually an Italian-American hybrid.

The bodies are made in Italy by Pininfarina and are air-freighted to General Motors' Detroit-Hamtramck plant for final assembly with GM chassis and powertrains.

Placing automobiles and other products in TV shows and movies is a long-standing mini-industry in Hollywood. Several companies specialize in that work.

However, Allante's appearance on "Dallas" was arranged by Melissa Effler, Cadillac's Western region public relations manager, who convinced producers that J.R. should be driving an American car.

Although J.R. Ewing is trading in last year's Mercedes 560-SEL for a Caddie on the show, it doesn't mean actor Hagman is promoting the Allante. Cadillac is talking to the actor's agent about permission to use a photo of Hagman in the car. The agent handles Hagman's ad pitches for products — like his TV spots for BVD underwear.

Hagman hasn't yet posed with the Allante, so the world may have to wait until Sept. 26 to see if J.R. Ewing looks as good in a Cadillac as he does in his BVDs.

Street-legal three-wheeler for two passengers

Minikin gives new meaning to the term commuter car

ST. CLOUD, Minn. — A three-wheeled, two-passenger, street-legal, commuter vehicle called the Minikin is being marketed by D&A Vehicles Inc.

The little convertible, priced at $4,990, has a fiberglass body, automotive-style steering and front suspension and a chain-driven rear wheel. D&A says the Minikin cruises at highway speeds and gets up to 70 mpg.

Standard equipment includes automotive lighting and instrumentation, vinyl top with removable side curtains, padded roll bar, seat belts, dual outside mirrors, defroster, sports steering wheel, padded and adjustable bench seat, three-wheel hydraulic drum brakes, locking storage compartment, carpeting and radial tires.

Standard body colors are red, yellow and orange.

A factory-installed towing package will allow the Minikin to be a motor home "tag-along" vehicle. An optional cargo carrier, heater, spare-parts kit, spare-tire kit and other body colors also are available.

The car is powered by a 16-horsepower engine driving through a continuously variable transmission.

The Minikin is 119 inches long and has an 80-inch wheelbase. It weighs 950 pounds.

GM cites Allen Industries

TROY, Mich. — The manufacturing facility of Allen Industries in Compton, Calif., has been awarded the General Motors SPEAR 1 quality award, the highest rating available to suppliers.

Only 48 of GM's 3,500 suppliers have qualified for the award.

SALES

FROM PAGE 1

history for that period.

William W. Lane, Oldsmobile general manager, said the division sold more than 17,000 cars in one day at month's end. "That's more than we sold in the first 10 days of the month," Lane said.

Overall industry sales in August rose to 952,262, compared with 953,876 a month earlier and 1,075,171 a year earlier. Obviously, without the month-end spurt the full August figure would have been drab.

Sales excitement apparently has washed over onto makes that were not participating in APR incentives.

Hyundai sales for the month numbered a record 20,689 — topping 20,000 for the first time.

Honda reported an alltime record high in combined Honda/Acura sales. Honda said sales totaled 58,291 in August, compared with 43,607 a year earlier. The total included U.S.-built Civics for the first time.

An August record was broken by Jaguar, which racked up 1,676 deliveries. Year-to-date sales also were at the highest level ever.

Import sales in August totaled 278,951, compared with their record-breaking 305,209 a month earlier and 267,581 a year earlier.The month-to-month decline amounted to 8.6 percent.

August domestic sales, at 673,311, compared with 648,667 a month ago and 807,590 a year ago. A spectacular improvement is expected in September. Nonetheless, the month-to-month gain was 3.8 percent.

GM's share of the domestic market was 56.1 percent, a modest recovery from 54.3 percent a month earlier. Ford slipped to 24.1 percent from 26.20 percent. Chrysler's share was sliced to 14.9 percent from 15.2 percent. AMC held even at 0.8 percent.

Honda advanced again, to 3.1 percent from 2.44 percent and Nissan held even at 0.01 percent.

Sales leaders by makes in August were: Ford Escort, 34,731; Chevrolet Celebrity, 31,379; Oldsmobile 88, 30,504; Oldsmobile Ciera, 29,120; Chevrolet Cavalier, 25,004 percent; Chevrolet Nova, 24,702; Ford Tempo, 21,756; Pontiac 6000, 21,535; Honda, 21,201; and Buick Century, 21,111.

Year to date, overall sales totals were 7,508,492, compared with 7,515,428 last year, a decline of 0.09 percent.

3-day tent sale sells 1,300 cars

HARRISBURG, Pa. — Seventeen Harrisburg-area new-car dealers sold 1,300 cars, mostly new vehicles, during a three-day, $15 million tent sale sponsored by the Harrisburg Automotive Trade Association.

The event cost each participating dealer $2,447.57, according to promoter Robert D. Lilley, president of Liberty Productions Inc.

Harrisburg newspapers carried two tabloid supplements on the show. Promotion also included 13 billboards and television and radio ads.

More than 1,500 vehicles were on display, and sales hours were from 10 a.m. to 10 p.m. each day.

Court backs FTC on used-car rule

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A three-judge panel of the U.S. Court of Appeals for the District of Columbia has decided that the Federal Trade Commission's decision to drop the "known defects" provision from its used-car rule was procedurally correct.

Thus, the suit brought by Consumers Union to reinstate that provision has failed.

The provision would have required dealers to list on a window sticker any mechanical defect of which they had knowledge.

The decision is also a victory for the National Automobile Dealers Association and the National Independent Automobile Dealers Association because their suit in the Second Circuit opposing the "known defects" provisions became entangled in the District of Columbia circuit case.

The litigation has lingered on even though the used-car rule, which FTC staff started working on in 1975, has been effective since May 1984.

Of interest is the fact that the opinion in the District of Columbia case was written by Judge Antonin Scalia, now a Supreme Court nominee. Scalia, writing for himself and Judge Kenneth Starr, gave a ringing endorsement of the FTC rationale for dropping the original "known defects" provision.

But Chief Judge Patricia Wald, although generally concurring, disagreed strongly with FTC's arguments and gave her own critique. After acknowledging the right of an agency to change its course so long as it justifies its actions by a "reasoned analysis," she added, "This one makes it, but just under the wire."

Consumers Union's counsel Michelle Meier expressed disappointment that the court accepted FTC's "flimsy rationale for gutting its own regulations." She added that consumers need a strong rule just as much now as when FTC issued its original rule with the "known defects" provision in 1981.

Late last week, Consumers Union had not decided whether it would appeal to the full circuit court.

Car production climbs for August, but remains below year-ago levels

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto production in August totaled 526,692, an increase of 2.85 percent over July's 512,118, as several plants resumed output after downtime for model changeover.

But the August build was 4.32 percent below the year-ago month's 550,469.

With all assembly plants closed last Monday for Labor Day, last week's targeted production dipped from that of the prior week.

The makers scheduled 127,547 cars last week, 8.41 percent below the previous week's 139,253, but 5.43 percent more than the year-ago week's 120,973.

So far this year, 5,421,265 cars have been assembled, 4.97 percent fewer than the 5,704,882 completed last year at this point.

Companies split last week's scheduled production as follows: General Motors, 56.13 percent; Ford Motor Co., 23.19 percent; Chrysler Motors, 12.39 percent; Honda of America Manufacturing Inc., 3.45 percent; New United Motor Manufacturing Inc., 2.63 percent; Volkswagen of America, 1.25 percent; and Nissan Motor Manufacturing, 0.96 percent.

Ford has added 36,000 cars to its production schedule for the rest of this year.

American Motors' Kenosha, Wis., plant was idle last week (Sept. 1-5) for inventory adjustment. The plant is expected to resume output Sept. 15.

GM's Pontiac, Mich., (No. 8) plant is down this week (Sept. 8) for inventory adjustment. The plant produces the Oldsmobile Cutlass Supreme and the Buick Regal.

Ford's Lorain, Ohio, plant was down last week for changeover. It is scheduled to return Sept. 22.

Ford slated Saturday (Sept. 6) overtime at three plants: Edison, N.J., Atlanta and Chicago.

Chrysler's Belvidere, Ill., and St. Louis (No. 2) plants were scheduled for Saturday overtime. They also are slated for daily overtime this week.

Canadian output falters

Canadian auto production in August was the lowest for any month in nearly four years.

The month's build of 48,131 was the lowest since July 1982, when 46,413 cars were assembled.

August's output was 16.13 percent below July's 57,390 and 45.96 percent below the year-ago month's 89,072.

Last week's targeted auto production of 17,049 was 19.78 percent more than the previous week's 14,234 but was 15.16 percent below the year-ago week's 20,096.

So far this year, 708,436 cars have been assembled, 1.98 percent fewer than the 722,773 built last year at this point.

Truckmakers assembled 49,895 units during August, 7.40 percent more than July's 46,456 but 12.28 percent fewer than the year-ago months 56,880.

Scheduled output of 11,852 trucks last week was 1.03 percent below the previous week's 11,975 and 19.83 percent below the year-ago week's 14,784.

Year-to-date, 582,138 trucks have been built, 0.81 percent fewer than the 586,873 completed last year at this time.

General Motors' Oshawa, Ontario, truck plant is down until Dec. 8 for model changeover.

U.S. truck production rises

Truckmakers in the United States assembled 270,164 units during August, 2.96 percent more than July's 262,390 but 8.45 percent fewer than the 295,114 produced in August 1985.

Scheduled production of 59,434 trucks last week, a holiday week, was 11.58 percent below the previous week's 67,219 and 3.05 percent below the year-ago week's 61,305.

Year-to-date, 2,442,000 trucks have been assembled, 3.14 percent more than the 2,367,732 completed last year at this point.

Saturday overtime was slated at General Motors' Janesville, Wis., and Baltimore plants. Ford Motor Co.'s St. Louis plant was scheduled for Saturday overtime, and Chrysler Motors slated Saturday overtime in Warren, Mich.

Ford to close Canton plant

Ford Motor Co. announced last week it will close its Canton, Ohio, forge plant by 1990, eliminating the jobs of some 984 hourly and salaried workers.

The Canton plant is Ford's only forge facility.

The automaker blamed the phase-out on high operating costs, vehicle downsizing and the switch to front-wheel-drive cars.

Ford said it spent 18 months studying the world market for forgings before determining that Canton could not be made competitive.

Plans call for Canton to end production of certain "unprofitable or low-return" components within the next six months, eliminating 250 jobs. Within 12 months, 30 percent to 40 percent of the plant's present business will be sourced to outside suppliers. All operations will end by late 1989 or 1990.

The Canton plant produces nearly 200 different components, including driveshafts, axle shafts, pinion gears, steering and suspension parts and truck I-beams.

Ford will switch to offshore sources for about 20 percent of its forging requirements.

The company said it would offer retirement benefits to those who qualify and try to place as many remaining eligible workers as possible at other facilities.

NUMMI builds first Toyota

FREMONT, Calif. — The first U.S.-built Toyota was assembled last Thursday (Sept. 4) at the New United Motor Manufacturing Inc. plant here, a product of the Toyota-General Motors joint venture.

Output of the 1987 Corolla FX-16 model is scheduled to start at about 15 units per day.

NUMMI anticipates production of 230 Corollas per day by mid-October, along with the 620 Chevrolet Novas per day now built at the Fremont plant.

The front-wheel-drive Corolla hatchback is equipped with the same 1.6-liter engine as the Toyota MR2 and will be priced to compete with Volkswagen Golf/GTI and Mitsubishi Mirage.

The NUMMI Toyota is scheduled to arrive at dealer showrooms in early October.

Some wait to decide on passive restraints

By Dave Zeltz
AUTOMOTIVE NEWS STAFF REPORTER

Most car manufacturers will install automatic seat belts and a few will offer air bags to meet federal passive-restraint requirements that go into effect for the 1987 model year.

But several firms still haven't decided how they'll comply with the NHTSA mandate.

Because the law requires passive restraints on just 10 percent of the cars sold in the United States in the 1987 model year, many of the low-volume carmakers are putting off a decision on what system to use, which models to offer it on and how to market it.

Even some high-volume companies, such as Honda and Hyundai, say they still haven't finalized their passive-restraint planning.

Several of those that have a firm program won't begin producing cars equipped with passive restraints until late in the model year.

Subaru will put passive belts on the XT Coupe next March, and Isuzu will wait until June and the introduction of its 1988 model Impulse before it installs its first automatic belts. Peugeot will offer a belt system at midyear.

Some makes won't offer passive systems at all on 1987 models.

Because compliance will be measured on a corporate basis, it isn't necessary for every marketing division to offer cars equipped with passive restraints. Buyers of Chevrolet, Cadillac, Audi, Lincoln and Merkur vehicles will not be offered passive restraints in 1987.

General Motors has chosen to meet the federal requirement by making stationary passive belts standard on its N- and H-body cars for 1987.

Neither Chevrolet nor Cadillac have models in the N- or H-body lines. However, the two divisions will participate in another GM first, three-point rear-seat harness systems. The rear three-point belts will be standard on Chevrolet Corsica/Beretta, Oldsmobile Toronado, Buick Riviera and Cadillac Eldorado and Seville for 1987.

Volkswagen of America will offer passive belt systems on most Golf and Jetta models, but will not make the devices available on any Audi vehicles.

Volkswagen is the only company so far that will permit buyers to refuse the passive belts if they don't want them.

American Motors will have passive belts in certain Alliance models, but will not have such systems available on its imported

GM PLOTS ITS MARKETS

AUTOMOTIVE NEWS CHARLOTTE BUREAU

4 GM car divisions are repositioned in effort to help sales

By Jesus Sayter
AUTOMOTIVE NEWS STAFF REPORTER

General Motors is repositioning four car divisions to shore up eroding sales. It is GM's largest marketing shift since its 1984 reorganization.

In the repositioning:

- Buick and Oldsmobile will switch assigned marketing images — the fate each presents to the public — during the next four years, starting this fall. That will make Oldsmobile the more contemporary nameplate while Buick downplays its sporty T-types and returns to traditional luxury.
- Pontiac and Saturn Corp. also have swapped positions on GM's future marketing charts. When the Saturn car is introduced in 1989, it will be positioned as sportier and less expensive than Pontiac. In the original 1985 concept, Pontiac was to be sportier and less expensive than Saturn.
- GM's strategic planners are still trying to fill a void in the luxury-performance segments with imports from GM's Adam Opel subsidiary in West Germany or another European maker.

The options, which still have not been narrowed down to a proposal for senior management, include importing Opels as "captive" Buicks, Oldsmobiles or Cadillacs; setting up a new division with separate distribution network; or marketing Opel as a separate brand sold by Buick or Oldsmobile dealers a la Ford Motor Co.'s Merkur.

Another option — considered unlikely after GM efforts to buy BMW, Jaguar and others failed last year — is to acquire an established European automaker and make it a seventh car division in the United States.

GM is basing its marketing plans on maximizing its profitability with a smaller market share, although GM denies that losing share is inevitable despite a more fragmented market and more competitors.

GM's share of the total U.S. car market was 39.8 percent in August.

Plymouth to try simple approach

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors is using Plymouth to test a simplified manufacturing and marketing philosophy.

Plymouth in the 1987 model year will offer only one version of the Sundance, a new, upscale compact. Dodge will have two versions of the sister vehicle, the Shadow.

Two-door models went into production last week at Chrysler's Sterling Heights assembly plant. More than 20,000 four-door models have been shipped since production began in May.

Sundance is viewed as an extension of Chrysler's streamlined manufacturing and marketing philosophy first applied last spring on the 1987 Plymouth Horizon and Dodge Omni America models.

"We're taking the lead," said Joseph N. Caddell, Plymouth general marketing manager. "Our future vehicles will have that same kind of philosophy."

Sundance is priced slightly higher than Shadow and contains "slightly more content," Caddell said. Two-door models start at $7,499 for Shadow and $7,599 for Sundance.

"There is not a base car with options," Caddell said. "There is only one Sundance."

Chrysler's philosophy of simplification for both Sundance and Shadow includes offering only "convenience items" such as air conditioning, power windows and upgraded sound systems, as options.

Features such as gauge instrumentation, tachometer, split folding rear seat and velour trim become standard in Sundance, Caddell said.

Chrysler is pushing to simplify products to gain manufacturing efficiencies and a marketing edge.

see PLYMOUTH, page 50

Lido

The car, not the man

The proud parents, Lido A. "Lee" Iacocca and Alejandro DeTomaso, have reportedly agreed on a name for their joint-venture, luxury-sports-coupe offspring.

Detroit radio station WJR-AM personality J.P. McCarthy said in a broadcast last week that the Chrysler-Maserati coupe will be called the Lido. It will be introduced as a 1989 model.

Iacocca

Iacocca said in January that he and Maserati chief DeTomaso had been unable to christen the car because the Italian executive wanted an Italian name and the American executive wanted an American-sounding name.

The joint-venture car was known only as the Q-coupe, its project name, until getting the first name of an executive — a rarity for domestic makers that had happened with the Essex.

An executive says the name is "probably the most closely guarded secret" at Chrysler.

Study offers cure for U.S. cost penalty

By Dave Zeltz
AUTOMOTIVE NEWS STAFF REPORTER

A newly published study maintains that reductions in hourly job classifications could nearly eliminate the differential in automobile manufacturing costs between the United States and Japan.

The analysis of small-car transaxle operations indicates that a model labor contract could pull the United States nearly even with Japan and ahead of South Korea in component production costs.

The analysis was presented in an article by Daniel D. Luria in the September-October edition of the Harvard Business Review.

Luria, a senior researcher at the Industrial Technology Institute, based in Ann Arbor, Mich., produced the cost analysis for the Auto-in-Michigan Project, a program to determine the role of the auto industry in Michigan's future.

Luria is director of the project, established by the Michigan Department of Commerce and the University of Michigan.

According to Luria's model, it costs $311.43 to produce a small-car manual transaxle in the United States today, compared with

Protesters at Yugoslav ethnic festival in Detroit call for Yugo boycott.

Yugo drops lawsuit, apologizes to Toyota

By John A. Russell and Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTERS

Yugo America Inc. last week dropped its lawsuit against Toyota Motor Sales U.S.A. The suit alleged that Toyota threatened and coerced two Yugo-Toyota dealerships into terminating their relationships with Yugo.

In addition, Yugo paid Toyota $35,000 to defray Toyota's legal fees and expenses.

Yugo said that its suit "was based on information which, after the case was filed, turned out to be unfounded."

Yugo President William E. Prior, sent a letter of apology to Toyota and its senior vice president, Robert McCurry, also a defendant.

McCurry said Yugo's withdrawal of the action vindicates Toyota and added that the apology by Yugo means the entire matter was a publicity stunt in the first place.

"This is an absolute victory for Toyota," McCurry said. "Yugo was forced to drop its suit when the witnesses they called said under oath that the charges against TMS and at me were false."

He added, "We consider (Prior's) written apology . . . to be an admission that Yugo's suit was an obvious publicity grab."

"We aren't," McCurry said.

Informed of McCurry's comments, Prior said this was a settlement, not a victory for Toyota.

He said the real reason the suit was dropped was that Yugo was being forced by the court to reveal the identity of "XYZ Toyota," a New York-area dealership which refused to drop Yugo, but was unnamed in the suit because of fear of retribution by Toyota. Prior said Yugo decided to honor its commitment to the dealer and not reveal the name.

That weakened the case, Prior said. He said another reason for dropping the suit was that Toyota's legal tactics were "costing tons of money." He vigorously denied the publicity aspect.

Yugo filed the suit March 18 in Federal District Court in Los Angeles. It also charged Toyota, Toyota Motor Distributors and McCurry with violations under the federal Racketeering Influenced and Corrupt Organization Act and with violations of California law.

Yugo letter rebuts dissidents

Yugo dealers in the United States are receiving letters from the car's U.S. importer and distributor labeling information circulated by a dissident Yugoslav political group as "untruths."

William E. Prior, president of Yugo America, has written the Yugo dealers to rebut charges in letters sent to dealers in August by the Croatian National Congress.

The group, which says it has a worldwide membership of 4,000 to 5,000, opposes the Yugoslav government and export of the Yugoslav-made subcompact Yugo GV to the United States.

In the letter to dealers, Prior called members of the group political extremists, and he rebutted the claim in the group's August letter that export production was halted indefinitely because of the inability of suppliers to deliver parts.

Prior reiterated statements that no work stoppage occurred at the Yugoslav plant or at plants of its vendors. The letter said 80 percent of the factory was closed for a traditional collective July-August vacation and that full production resumed as planned Aug. 20.

In a related action, the Croatian National Congress was among those supporting a boycott of the Yugo that was urged during a protest of the Yugoslav ethnic festival in Detroit on Sept. 7. The group told Yugo dealers of the boycott in its August letter.

The demonstration was planned by some people of Croatian and Albanian descent. During the event, an attempt reportedly was made to set fire to a Yugo on display.

The $3,990 Yugo GV went on sale in the United States in August 1985.

Import stockpile at 3½-year high

By Kathleen Hamilton
AUTOMOTIVE NEWS STAFF REPORTER

Inventories of imported cars inched upward once again last month to open September with a 41-day supply — the fattest days' supply in 3½ years. Meanwhile, the stockpile of imported light trucks climbed to the highest unit count on record.

The month opened with 437,297 imported cars in stock — at U.S. docks, in transit to dealerships and in dealerships. The figure is slightly below the Aug. 1 inventory of 443,244.

Inventories have been hovering above 400,000 for three months, but before this, the 400,000 mark hasn't been seen since 1981. For example, the latest stockpile is nearly half again as large as that of a year ago (293,268) and more than double that of two years ago (184,513).

Nevertheless, before quotas, the ideal import days-supply level was considered to be 65 days — a figure some Europeans still strive for. So this month's 41-day supply is still pretty lean. It compares to an Aug. 1 supply good for 40 selling days and a year-ago supply good for 29 selling days.

The combination of higher quotas, higher prices caused by exchange-rate changes and incentive programs by the domestics continued to take a toll on the imports last month as the average daily selling rate declined, thereby pushing up inventories.

The fairly steady-looking supply of Japanese cars (40 days this month versus 37) is a bit deceiving. The sales rate — on which the days-supply figures are based — declined significantly, but fewer cars landed on the docks. Similarly, the selling rate for German cars declined for the month, and that hiked their days-supply levels.

By country of origin, the stockpile was split this way on Sept. 1: Japan, 70.00 percent; Germany, 17.93 percent; and other countries, 12.07 percent.

The Japanese makes averaged a 40-day supply on Sept. 1. Breakdown by make and days: Chevrolet Spectrum, 104; Chrysler captives: 99; Isuzu, 85; Mitsubishi, 60; Chevrolet Sprint, 54; Subaru, 52; Nissan, 48; Mazda, 47; Acura, 29; Toyota, 17; Honda, 7.

The average for German makes was 57 days: Audi, 120; Merkur, 96; VW imports, 55; BMW, 50; Porsche, 37; Mercedes-Benz, 32.

Average for cars from other countries was 32 days: Renault, 121; Peugeot, 90; Volvo, 39; Yugo, 37; Saab, 31; Jaguar, 29; Alfa Romeo, 28; Hyundai, 23.

TRUCKS: The Sept. 1 light-truck stockpile of 209,059 units was the highest since Automotive News began tracking import-truck inventories in 1982. The latest stockpile is equivalent to a 75-day supply, up from 49 days a month earlier when there were 200,849 trucks in stock, and the heaviest days-supply figure since May 1, 1983, when there were 78 days' worth of import trucks in inventory. On Sept. 1 a year ago, there was a 20-day supply of trucks, or 99,748 units.

Combining imported cars and trucks, there were 646,356 imports in the United States on Sept. 1, a 48-day supply. The stockpile was slightly higher than the Aug. 1 count of 643,893 units (43 days) and well above the year-ago count of 393,016 vehicles (33 days).

In fact, the combined car-truck unit count is the highest in Automotive News' records, and the days-supply figure is the largest since Feb. 1, 1983, when there was a combined 52-day stockpile.

Drug-drink tests due at Toyota's Kentucky plant

FRANKFORT, Ky. — Prospective employees of Toyota Motor Corp.'s auto-assembly plant in Scott County must pass drug and alcohol tests as a prerequisite for employment, state officials said.

Drug tests "have been a part of the discussions since right after the announcement" in December that Kentucky had landed the $800 million factory, said James P. Daniels, commissioner of employment services. His agency has set up a state-subsidized procedure by which Toyota will select and train workers for the plant.

He said Toyota officials made it "perfectly clear" that testing for drug and alcohol abuse was one of their requirements. Daniels said the state Department of Employment Services, which will help screen applicants for Toyota, will be "up-front about it. If you have those problems, there's no sense in wasting everybody's time. It will be mandatory."

A Toyota official said the company feels the testing "is necessary to ensure the safety of all workers at the plant." — Associated Press

Kentucky approves training funds for Toyota

By Mark R. Chellgren
THE ASSOCIATED PRESS

FRANKFORT, Ky. — A legislative committee has given final approval to the $55 million training package offered to Toyota Motor Corp. as part of the incentives to attract the Japanese automaker to build its assembly plant in Kentucky.

Funding for the training and other items in the incentive package was included in the budget approved by the 1986 General Assembly, but the approval of the Personal Service Contract Review Subcommittee also was required because the state has a pact with the company to carry out the training.

The training package includes the first six months' salary of the 3,000 people hired at the Scott County plant, payments to thousands of prospective workers and trips to Japan for selected employees.

About $33 million in state General Fund money will pay for part of the training with another $22 million coming from federal Job Training Partnership Act funds, according to James Daniels, commissioner of the Department for Employment Services.

Also included is $10 million to be paid for construction and operation of a facility on the 1,600-acre plant site. That part of the project is expected to be funded with economic development bonds.

The subcommittee approved the contract with one dissenting vote by Rep. Woody Allen, R-Morgantown. Allen was critical of the training program because there are no guarantees about the number of Kentuckians to be employed or their wages.

About 9,000 job applicants will be selected to go through a 30-hour assessment session during which they will be paid $5 per hour. About 6,000 of those will be selected for further orientation during which they will be paid $5 per hour for a 120-hour program.

When hiring is completed, 600 employees will be sent to Japan with the state paying all travel costs. Half of those employees will make two trips to Japan.

The state will also pay the travel costs for 100 instructors from Japan to come to the United States.

The state will pay salaries of most employees during a six-month probationary period. A salary of $10.20 per hour, plus fringe benefits of $2 per hour, will push the cost of that on-the-job training to $38.06 million.

Daniels said every employee — from administrative staff to assembly line workers — will be covered by the training appropriation.

About $22 million of the commitment will come from federal Job Training Partnership Act funds, Daniels said. The rest will be state General Fund dollars.

1987 MODEL YEAR PASSIVE RESTRAINT PLANS

Company	Models	Type of Passive Restraint System	Availability	Minimum Units To Meet Standard*
Alfa Romeo	Spyder Quadrifoglio	Motorized Belts	Not Determined	500-700
American Motors	Alliance, L & DL Sedan & Hatchback	Belts	Standard	7,000-9,000

Yugo	Not Determined	Belts		2,000

NHTSA still has work to do on 1987 'passive' standard

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The passive-restraint safety standard, now in effect for 1987 models, has not yet been completed by NHTSA, but the industry is not unduly concerned because the answers are not actually needed immediately.

One area not yet addressed is whether to exclude convertibles and the other is whether forces affecting the head should be measured differently from the method now used for setting the Head Injury Criteria.

During the early phase-in of passive restraints (10 percent of 1987 models, 25 percent of 1988 models, 40 percent of 1989 models), manufacturers can easily meet their quotas without counting convertibles. And until the way to measure HICs is changed, the old familiar way is in effect.

There are, however, other uncertainties which NHTSA is just now getting around to clearing up.

Last week, the agency responded to eight petitions for reconsideration, many involving placement of the instrumented dummy during testing. NHTSA made some minor adjustments but, in general, held fast to its previous position.

However, in responding principally to Ford Motor Co. and to import companies, the agency provided flexibility by allowing an extra year for the companies to use either the old or the new procedure. That makes Sept. 1, 1987, the effective date for the new test.

NHTSA denied Nissan's request for a two-year postponement (from Sept. 1, 1989, to Sept. 1, 1991) of the effective date for dynamic testing for front-seat manual lap/shoulder belts. That provision goes into effect only if enough states pass acceptable mandatory belt-use laws to automatically rescind the passive-restraint provision.

The agency said it had told American Motors earlier that most of the vehicle components needed for passive protection are the same for dynamically tested manual belts. Besides, said NHTSA, about 40 percent of current models can meet the injury criteria at 35 mph — or at a level 36 percent more stringent than standard 208.

Because of the imminence of the 1987 model year and the start of the 10 percent requirement, NHTSA decided to retain the due-care defense for the first year until it can make up its mind.

In that regard, the Center for Auto Safety argued that allowing a manufacturer to defend itself by claiming it has taken "due care" contravenes the defect notification and remedy provisions of the law. Moreover, the center said, it is not a "performance standard" as required by law and it is overly broad for its intended purpose.

On the other hand, Ford said that adopting the due-care defense does not sufficiently answer its concerns about the objectivity and practicability of the standard's requirement. As in past years, Ford urged NHTSA to adopt a "design to conform" standard as a defense.

NHTSA's intention is to allow the due-care defense for an isolated apparent failure if the automaker can show it made a good-faith effort in designing the vehicle and exercised reasonable quality control.

RESTRAINTS

FROM PAGE 1

Renault Medallion line that will debut midway in the model year.

Lincoln and Merkur also will not be available with passive restraints. Ford Motor Co. will begin installing passive belts in Ford Escort and Mercury Lynx subcompacts beginning Dec. 1 to go along with its Tempo/Topaz air-bag option.

The Ford belts, which will be produced by Toyota, are the only motorized belts for U.S.-built cars. Motorized systems move the shoulder harness out of the way for easy entrance and exit.

Chrysler Motors will offer such a belt on its Japanese-built Conquest model. Other importers — including Toyota, Nissan, Saab, Mazda, Mitsubishi, Subaru, Ferrari, Alfa Romeo and Isuzu — will have similar devices on certain cars.

Car buyers eager for air bags will find such systems available from only five makers — most in the luxury price segment.

Only Ford Motor Co., Mercedes-Benz, Volvo, BMW and Porsche have firm plans to offer air-bag systems as a way to meet 1987 federal passive-restraint requirements.

Mercedes, which made driver-side-only systems standard in all its models in 1986, is the only firm installing air bags in 100 percent of its U.S.-bound production for 1987.

Porsche is the only company that will offer passenger-side air bags, as well as driver-side systems. The dual air bags will be standard in the 944 Turbo and will be a $2,730 option in the 944 and 944S.

Ford will continue to make a driver-side air bag available to Tempo/Topaz buyers in 1987 for about $815. Ford first offered the device in 1986 models.

Some 1987 Volvo and BMW cars also will feature driver-side air bags.

Under federal standards, the passive-restraint requirement will increase from 10 percent of sales in 1987 models to 25 percent in 1988, 40 percent in 1989 and 100 percent in 1990.

The rule will be rescinded if states covering two-thirds of the U.S. population adopt laws making seat-belt use mandatory by April 1989.

Automakers will be able to carry forward credits from one model year to any future year, if the mandate is exceeded. For example, if a firm is required to build at least 50,000 cars with passive restraints in 1987 and it produces 100,000, it can bank the 50,000 extra units for use in any future model year it falls short of the standard.

That means that air-bagged cars built by Ford and Mercedes in the 1986 model year — when there was no passive-restraint law — potentially could be applied to future requirements.

Automakers receive one vehicle credit for every car that has either passive belts for both driver and front-seat passenger or a driver-side air bag. Cars with a driver-side air bag and a passive belt or air bag for the front-seat passenger receive 1.5 credits.

Under current planning, only Porsche, which will have a dual air-bag system, will receive 1.5 credits per car.

Automakers face fines of $1,000 per violation up to $800,000 for failure to meet the passive-restraint rule.

RECREATION ON WHEELS

Regional operation gives Kentron an advantage in a tough business

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

ELKHART, Ind. — The customized van business is extremely competitive; but some competitors, like Kentron, are successfully using regional manufacturing/sales centers, focused brand selling and even telemarketing to increase their penetration.

Kentron Inc. found that the best way to get on with Texans, Tennesseeans and Southwesterners was to set up shop in their own territory.

During the past year, it has opened a plant in Marshall, Texas, complete with its own general manager and sales staff — a sort of "mini Elkhart" — and has found it has improved sales substantially.

"When you get down to Texas, Elkhart is almost an objection. You can overcome it, but they would rather buy locally," said Frank Bauer, Kentron sales vice president.

"We did a fairly good job in Texas, Arkansas and Memphis markets, but our growth was slow and difficult. So we opened a factory, and it's made a difference."

Kentron carved the Texas customizing operation out of its U.S. Conversions company, establishing a separate entity. It now is considering a similar operation in the Southeast for markets like Georgia, Florida and Alabama.

Again, buyers there prefer locally produced products, and local competition is intense.

Kentron has a sales manager working the market to determine if it can support a new plant. Depending upon what he finds out, "I'd like to do it, probably within a year," Bauer said.

He noted that, based on "considerable research" and his extensive travels, the domestic market for van conversions really breaks into three regions.

Along with the Southwest and Southeast, there is the Midwest which, in Bauer's opinion, includes the East Coast because buyers there "are used to, and accept, Elkhart products."

Kentron also has been upgrading its operations in other ways. The past year has been busy.

Aside from the Southwest operation, it established a separate Ram Coach Corp. to handle only customized Dodge products.

The company has its own general manager, John Witucki; its own factory; and its own sales force to work exclusively with Dodge dealers and Dodge zone people.

Previously, Kentron ranked eighth in volume among Dodge converters, but now is third and shooting for first place, Bauer said.

The company also created separate sales forces, complete with their own managers, to concentrate exclusively on Ford and GM products.

Its Premier Edition vans take in only Ford products, while U.S. Conversions focuses exclusively on Chevrolet/GMC.

Both Ford and GM products are built in U.S. Conversions' 50,000-square-foot facility.

The Ram operation has a separate plant because "there are certain panels, lighting systems, paints etc., that fit a Dodge that won't work quite as well on a Ford," Bauer noted.

Within the past year, Kentron also has acquired Lands Design Inc., a premier luxury van firm, whose conversions average more than $10,000 at dealer cost.

Kentron also operates Royal Motor Coach, which produces $300,000 to $400,000 luxury motor bus conversions from MCI, Prevost and Eagle.

It has a year's backlog of orders, with an annual production rate of 12-15 units.

And Kentron operates Solid Oak Corp., which produces a line of wood products for the company's use and for other van converters.

Kentron's biggest product change for the 1987 model year is a switch to Flexsteel seating for all its vans.

For the past 11 years, it has manufactured its own seats, but it is switching to Flexsteel because of the latter's strong retail image and the added flexibility it gives Kentron in choosing fabrics and styles, Bauer said.

Generally, Kentron's goal for the 1987 model year is to "sell the better packages," he added.

That means shifting emphasis to higher-priced content conversions in the $5,000-and-up dealer price range.

"Our dealers are generally tired of all the conversion companies trying to sell them a price, like the $2,995 conversion," Bauer said.

"They and their customers want some of the extras, like better furniture, built-in consoles, lighting packages. Anybody can produce a cheap conversion. It's hard to do a Lands Design or some of our better models," he added.

Overall, Kentron's unit sales may be up only 5 percent in the 1987 model year, but its dollar volume could increase 15 percent, Bauer added.

Kentron conversions start at $3,495, and that entry-level price is being kept, primarily to provide dealers a complete price range of models so they won't have to go elsewhere.

Kentron offers models in seven price ranges up to its top-line Lands Design units.

Prior to its acquisition by Kentron, Lands Design handled only Ford. Kentron, through its bailment pool agreements, added Chevrolet and GMC chassis.

The fact that so many GMC dealers are dualed with Pontiac, Oldsmobile, Buick and, particularly, Cadillac opened up "excellent prospects" for the luxury customizing firm, Bauer said.

Recently, the firm began using telemarketing in its dealer/sales recruiting effort. It has more than 400 dealers and covers more than 60 percent of the U.S. market.

It has three people — one for U.S. Conversions, one for Premier Editions and one for Lands Design — who each make 100-plus calls weekly to dealers, strictly for prospecting.

They introduce themselves, pitch the company, follow by sending company literature and ultimately follow that by setting up appointments for area salespeople.

New luxury motor van from Lands Design
Lands Design, Elkhart, Ind., introduces this Brougham II luxury motor van, featuring deep tinted Vista Bay slider windows and a full tritone paint scheme. It also has extra-wide high-back seats, striking wood accents and other niceties like a leather-wrapped steering wheel, overhead console sound system and rear-mounted television.

June RV shipments up

RV manufacturers wholesaled 33,900 units in June, up 7 percent over the total for the year-ago month. Calendar-year-to-date shipments of 207,800 were up 3 percent over last year's.

Seasonally adjusted, the year-to-date total represents an annual rate of 385,000, according to the Recreation Vehicle Manufacturers Association.

The Index of Consumer Sentiment, as measured by the University of Michigan Survey Research Center, registered a reading of 99.3 in June, up from the previous month's 94.6.

The rise was due mostly to favorable consumer evaluations of current rather than future expectations.

Favorable attitudes toward buying conditions for vehicles were held by 77 percent of those surveyed in June, an all-time record.

Retail sales of RVs also improved in June, the RVIA pointed out. Indications are that retail sales of both travel trailers and conventional type A motor homes are outperforming wholesale shipments in much the same pattern as last year.

RV DELIVERIES
as reported by the Recreation Vehicle Industry Association — Numbers in Thousands

	June '86	June '85	% change	Cum. '86	Cum. '85	% change
All travel trailers	7.2	7.5	−4.0	47.8	48.0	−0.4
Folding camper trailers	2.8	2.7	−3.7	19.2	20.6	−6.8
Truck campers	0.8	0.7	+14.3	4.0	4.1	−2.4
ALL TOWABLE RVs	10.8	10.9	−2.8	71.0	72.7	−2.3
Conventional (Type A)	2.5	2.3	+8.7	16.8	19.0	−11.6
Van campers (Type B)	0.6	0.8	−25.0	3.3	3.9	−15.4
Chopped vans (all)	2.7	2.2	+22.7	14.9	17.0	−12.4
ALL MOTOR HOMES	5.8	5.3	+9.4	35.0	39.9	−12.3
VAN CONVERSIONS	17.5	15.3	+14.4	101.8	86.9	+15.0
TOTAL	33.8	31.5	+7.8	207.8	201.1	+3.3

Detroit manufacturers' shipments of van chassis with the seat delete option were up sharply in June, portending future van conversion sales.

Detroit shipped 17,200 of those units in June, up 25.6 percent from last year.

RVIA expects exhibitor record for Atlanta show

RESTON, Va. — The Recreation Vehicle Industry Association expects its 1986 national RV trade show in Atlanta to be the largest in the show's 23-year history.

The show will be hld Dec. 2-5.

Steve Krivian, chairman of the show committee, said 529,044 net square feet of exhibit space was assigned to RV manufacturers and suppliers at the national show space drawing.

Krivian is director of marketing for Airstream Inc., Jackson Center, Ohio.

A total of 470,444 net square feet of exhibit space has been assigned to 96 manufacturers, with 14,000 square feet of manufacturer exhibit space still available.

All supplier exhibit space has been sold and assigned. A total of 239 suppliers will exhibit at 586 booths, each measuring 10x10 net square feet.

The show is expected to draw more than 12,000 industry officials.

A special feature of this year's show will be a seminar, co-sponsored by RVIA and the Recreation Vehicle Dealers Association, which will instruct dealers on new ways to attract the often-elusive first-time RV buyer.

The seminar will be conducted by Burson-Marsteller, RVIA's public relations agency, and will be presented once daily Dec. 1-3.

Registrants will receive the first report of a consumer survey by Burson-Marsteller, aimed at understanding the first-time RV buyer.

Aviator seeking increase in business with GM

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

WAKARUSA, Ind. — After increasing its office facilities and sales staff, Aviator Van Conversions expects a substantial gain in its sales of customized vehicles in the 1987 model year.

Brian R. Brady, Aviator vice president and general manager, said the company is eager to increase its sales of customized off-road vehicles and its General Motors business.

Aviator, along with Utilimaster, is a division of Holiday Rambler Corp. of Wakarusa. Holiday Rambler has been Ford Motor Co.'s largest consignment pool company the past six years.

Brady said Aviator has developed an "extremely close working relationship" with Ford. Now, he said, the company is seeking to build up the Chevrolet/GMC side of its business.

Aviator got a late, limited start last year in branching out into customizing Bronco IIs, compact Blazers, Jimmys, Suburbans, crew-cab pickups and dualies. It plans a more aggressive effort in that market in 1987.

The customized off-road vehicle business is seasonal, Brady added, with a peak in fall and winter.

Aviator hopes to sell 400 to 500 customized off-roaders in the 1987 model year, while expanding sales of its customized vans. It sells about 2,000 customized vans yearly.

It is signing 10 to 12 new dealers monthly, and expects to have 450 to 500 dealers a year from now, Brady said.

The company offers customized vans in low, medium and high-priced series. It does 40 percent of its volume in entry-level models, 40 percent in mid-priced models and the balance in high-priced models, which Brady considers a very healthy balance.

This year, the company sharpened negotiations with suppliers.

More important, Brady said, it worked closely with them to examine how things might be produced differently or how product value might be improved without reducing quality.

As a result, the company was able to improve the quality of its trim. It added a 40-channel CB and complete oak dash, along with custom-designed seating and custom fabrics to its high-line Crown Royale series while reducing the base price to dealers by about $300.

Brady said that for 1987, the company has reduced what it calls the "effective selling price" — a combination of added value and price reductions — by at least 15 percent.

The company promotes through direct-response ads, mailings, dealer testimonials and various other kinds of dealer communications. It plans to increase its range of dealer communication.

Because of the investments they're making to upgrade the value of their products, Brady believes that larger, quality customizers will succeed over the long haul in beating back competition from small, low-overhead operators.

Aviator, for example, has invested money in tooling for raised roofs and door panels that give it proprietary design rights, Brady said.

"Nobody can reproduce those designs unless they're willing to make the investments we have. And that begins to separate an Aviator or a Starcraft or a Bivouac — people that have the financial wherewithal — from the small shops," Brady said.

Rising yen may be boon for Japan, study warns European automakers

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — A new report on surging Japanese competition in Europe carries warnings for Europe's high-volume auto producers.

A 228-page analysis by the Motor Industry Research Unit (MIRU) at the University of East Anglia in Norwich, England, projects that rapid appreciation of the yen will pay long-term dividends for the Japanese industry by stimulating an increase in efficiency.

The researchers speculated that the Japanese eventually may be able to reduce the average cost per vehicle by as much as $3,000 through increased automation, upscale marketing and new emphasis on foreign assembly sites.

The study comes at a time when the Japanese have been strengthening their position in Europe, much to the displeasure of the European Common Market. Indeed, a growing discontent with Japanese penetration on several product fronts was reflected recently in the Common Market's imposition of anti-dumping penalties on Japanese photocopier producers. And Japan is placing curbs on auto exports to the Common Market.

In the first half of 1986, Japanese makers increased their car sales in European by 23 percent, from 592,000 to 727,000. According to the report, titled "Quality and the Japanese Motor Industry," the Japanese are challenging European makers not only in Europe, but in such traditional export markets as Latin America, Africa, the Middle East and Australia.

The report, compiled by a team under Professor Krish Bhaskar, contends that although such European makers as Daimler-Benz and BMW are relatively safe, the prognosis for volume producers is bleak.

"It has already become quite apparent from their performance in the more open markets in Europe that Japanese car manufacturers can easily sell their cars to European consumers," the report said. "Europe's volume producers — despite financial difficulties — have to respond immediately."

The authors said European manufacturers must compete with Japanese quality and reliability.

"If they do not manage to at least match the Japanese in this area, they will increasingly lose sales," according to the report.

With the yen rising approximately 40 percent against the dollar in the last year, Common Market officials have accused Japanese manufacturers of shifting emphasis toward European markets, where currencies have not declined as much against the yen.

In June, Japan's Ministry for International Trade and Industry said it would ask Japan's car companies to reduce the rate of increase of car exports to Common Market countries. Japanese automakers had registered year-to-year European export increases of about 55 percent in May and 70 percent in April.

In August, MITI and the automakers reportedly agreed on a voluntary limit of 1.1 million car exports to Common Market nations for 1986, a 10 percent increase over 1985.

Japanese shipments have slowed this summer, but MIRU warned of a long-term threat that must be met by European makers in markets outside France, Spain and Italy, which all but bar Japanese imports.

According to MIRU, the yen situation eventually will result in a more competitive industry in Japan. MIRU projects a broad long-range strategy by the Japanese. The research group looks for an increase in overseas sourcing and production capacity and further cost reductions bred by automation.

According to MIRU, the various strategies designed to weather the yen situation could result in domination of the world motor industry by Japan.

"The success of the Japanese in emerging with renewed strength from the 1974 oil crisis leads us to believe that the innovations and advances they make as a result of the present currency crisis will enhance their competitive position worldwide," the report said.

The research group laid out a formula by which the Japanese could achieve an average savings of $2,984 per car from new efficiencies.

According to MIRU's breakdown, the $2,984 would be achieved by recovering $1,000 through the sale of higher-priced vehicles with more options, $750 by locating new manufacturing plants overseas, $234 through automation, $100 by reducing office cost, $200 in other non-assembly reductions and $700 through supplier reductions in man-hours and costs.

According to MIRU, European producers must absorb the fundamental Japanese lesson that better efficiency is compatible with quality improvements. The researchers considered product reliability data among a wide range of Western European manufacturers. However, the group focused on high-volume producers in the United Kingdom — Nissan, Vauxhall, Ford and Austin Rover.

The dealer-oriented survey included an examination of numerous reports on reliability published in the United Kingdom, more than 1,000 questionnaires sent to dealers, interviews at dealerships and telephone interviews with dealers.

"We basically came to the conclusion that the Japanese are significantly better in quality terms," said Bhaskar. "Whichever way you look at it, however you define it — in warranty costs, in customer satisfaction, whatever — the Japanese retain a very much higher level of quality than the European manufacturers."

The research group attributed Japanese superiority to such factors as product development and design, employee attitudes and motivation, supplier involvement, automation, plant engineering and manufacturing systems and quality control systems.

Among Europe's high-volume manufacturers, "only certain Volkswagen models come close to the Japanese in quality and reliability," according to the study.

Among the primary U.K. competitors, MIRU placed Nissan first in its quality index. Next were Ford and Vauxhall, both of which were deemed to be ahead of the European average for quality, followed by Austin Rover.

Mitsubishi, Daimler-Benz plan joint van production in Spain

TOKYO — Joint production of the Mitsubishi Motors Corp. minivan with Daimler-Benz AG in Spain is expected to start at 9,000 and gradually be doubled. Mitsubishi said that initial output at the Mercedes-Benz Espanol facilities, in Vitoria, Spain, will be increased so that some vehicles can be exported to West Germany.

Mexican car exports show 5-month growth

MEXICO CITY — In contrast to the depressed domestic market, exports of Mexican-made cars increased 33.1 percent in the January-May period.

Shipments totaled 26,765 units, with the United States the main destination, according to the monthly report of the Mexican Automotive Industry Association.

The association said Chrysler de Mexico accounted for 61.7 percent of the exports for the five-month period, followed by General Motors, with 25.6 percent; and Nissan, with 11.3 percent.

Meanwhile, domestic sales of cars and trucks continued to slide, with a decrease of 34.2 percent for the five-month period.

The report said that domestic sales totaled 108,947 units in the five months, down 56,509 from the 165,456 sold in the same period last year.Cars were hardest hit, with 63,701 units, a loss of 37.2 percent.

TRUCK INDUSTRY

Sales set record in August

By JOSEPH BOHN
AUTOMOTIVE NEWS STAFF REPORTER

Domestic truck sales soared to another record in August, continuing their record-setting pace for the first eight months of calendar 1986 as well.

August sales were 391,200, up from 345,009 a year earlier.

The total included 370,679 light-duty sales, up from 323,210 a year earlier; 4,881 medium-duty Class 4-5-6 sales, down from 4,995; and 15,640 heavy-duty Class 7-8 sales, down from 16,804.

Within the medium segment, Class 5 sales of 797 were up from 519 a year ago, while Class 6 sales of 4,084 were down from 4,476, according to preliminary reports from the Motor Vehicle Manufacturers Association.

Within the heavy segment, Class 7 sales of 7,816 were up from 7,310, and Class 8 sales of 7,824 were down from 9,494 a year earlier.

Eight-month industry sales of 3,209,470 were up from last year's previous record of 3,162,397.

Light-duty sales of 3,034,539 were up from 2,973,930 in 1985, according to manufacturers' reports.

Medium-duty sales of 33,311 were down from 34,293, according to the association.

Within that segment, Class 4 sales of 3,459 were up from 3,366. Class 6 sales of 29,852 were down from 30,927 a year earlier.

Heavy truck sales of 141,620 were down from 154,174 in 1985.

Within that segment, Class 7 sales of 67,488 were up from 63,394. Class 8 sales of 74,132 were down from 90,780 a year earlier.

Aftermarket groups slap incentives in Canada's auto-trade program

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Two aftermarket associations have told U.S. trade officials that the United States should not enter a free-trade agreement with Canada unless the agreement prohibits Canadian investment incentives that hurt U.S. parts makers.

The industry groups are the Motor and Equipment Manufacturers Association and the Automotive Parts and Accessories Association.

In an attempt to gauge industry concerns about establishing a free-trade arrangement with Canada the U.S. International Trade Commission and the U.S. Trade Representative's office held public hearings here last week. MEMA and APAA testified at those conducted by the U.S. Trade Representative's Office.

MEMA President William A. Raftery said his association "will under no circumstances support a duty-free arrangement while anti-competitive, pro-Canadian policies remain in effect."

Lee Kadrich, APAA managing director of government affairs, said, "Unless Canada agrees to discuss all aspects of our automotive trade relationship and all trade-distorting practices, the free-trade proposal remains the immediate threat to our aftermarket which must be stopped."

The two associations dealt at length with what they view as unfair Canadian trade practices that have developed during the past few years.

The Reagan administration and the government of Canadian Prime Minister Brian Mulroney have proposed that tariffs and other trade impediments between the two countries be abolished. Although most tariffs on automotive products were eliminated under the Automotive Products Trade Act of 1965, tariffs still exist for aftermarket products in both countries.

Kadrich and Raftery were especially critical of a Canadian program allowing duty remission on imported auto parts. The U.S. Trade Representatives Office has called the program a violation of the General Agreement on Tariffs and Trade and of the U.S.-Canadian Automotive Products Trade Act.

Raftery explained the program after submitting to the U.S. Trade Representatives Office a copy of a Canadian government "Order-In-Council" regarding a duty-remission arrangement with Honda Canada.

Raftery said, "The order grants Honda Canada a drawback on payable duties regarding the importation into Canada of any vehicles or parts to the extent that Honda incorporates Canadian Value-Added (Canadian production) into the vehicles.

"In other words," Raftery said, "for every dollar of Canadian Value-Added contained in the import parts or vehicles, Honda receives a dollar remission on the payable duty."

Kadrich joined MEMA's condemnation of the duty remission and local content requirements. He also criticized Canadian government efforts to attract Japanese suppliers to invest in Canada.

He said, "It was with Canadian government blessings that the newly founded Pacific Automotive Cooperation Inc. (PAC) embarked in 1984 on a zealous mission to stimulate both the Canadian and Japanese parts industries.

"Staffed by Japanese auto executives and directed by officials of the Japanese Automobile Manufacturers Association and the Japan Auto Parts Industries Association, PAC is waging an ambitious campaign to entice Japanese suppliers to take some of the sting out of U.S. political frustration with the mounting parts trade deficit, by entering the United States through the back door."

Kadrich said, "What makes all of this even more threatening is PAC's push for Japanese suppliers to use Canada as a springboard to launch duty-free original-equipment exports into both domestic and Japanese car assembly plants in the United States." The duty-free treatment is granted under the U.S.-Canadian Automotive Products Trade Act.

"Add to this the lure of government grants and lower operating costs in the key areas of wages, utilities and materials, and it is easy to see that our parts trade deficit with Canada could mount swiftly as Japanese suppliers move to exploit the Auto Pact to sidestep U.S. political pressures," he said.

PRODUCTION COSTS OF SMALL-CAR MANUAL TRANSAXLE

	U.S.	Japan	Korea	Spain
BEFORE THE DEAL				
Direct and indirect labor	$60.28	$34.67	$60.28	$51.68
Materials	$736.89	$645.71	$736.89	$736.89
Expense packaging	$71.42	$68.71	$68.71	$68.71
Transportation and duty	3	$68.71	$68.71	$68.71
Total cost	$871.42	$868.19	$934.59	$925.99
% of U.S. cost	100%	99%	107%	106%
AFTER THE DEAL				
Direct and indirect labor	$60.28	$51.67	$60.28	$51.68
Materials	$736.89	$645.71	$736.89	$736.89
Expense packaging	$68.71	$68.71	$68.71	$68.71
Transportation and duty	3	$68.71	$68.71	$68.71
Total cost	$871.42	$834.79	$934.59	$925.99
% of U.S. cost	100%	96%	107%	106%

The above is based on a model developed by Harbour Simons of Troy, Michigan.

"Before the deal" shows product cost differential between small-car manual transaxle manufacturers in the United States and abroad. It is assumed that each U.S.-made transaxle requires two hours of direct labor, four hours of indirect labor and $100 in purchased material. Also assumed are a 1,000-hour work year, equipment costs of $50 per unit, a 5% scrap rate and 70% machine utilization.

"After the deal" illustrates what doesn't happen if labor and management agreed to a trade in which labor modifies work practices in exchange for management's commitment to invest in existing transaxle facilities at home. The data assigned a 15% increase in productivity of direct labor, 90% machine utilization, a 2% scrap rate and a ratio of indirect to direct labor of 3.7-to-1.

Harbour Inc., Troy, also compared Korea and Japan. Dr. David E. Cole, Harbour Professor, Industrial Technology Institute, University of Michigan, and Dr. Yuzo Yamashina, professor, Science Institute, University of Tokyo, also assisted.

STUDY

FROM PAGE 1

$268.19 in Japan and $334.96 in Korea. European production costs, at $306.31, already exceed those in the United States, due primarily to materials and transportation fees.

According to the article, a more competitive contract, in which "labor modified work practices in exchange for management's commitment to invest in existing transaxle facilities at home", would greatly narrow the gap between the United States and Japan.

Assuming the new pact would lead to a 15 percent increase in productivity of direct labor, 80 percent machine utilization, a 2 percent scrap rate and a ratio of indirect to direct labor of 3.7 to 1, manufacturing costs at the hypothetical U.S. transaxle plant would drop to $278.21, according to Luria. All but 236 of the plant's 850 jobs would be saved under such a contract, he said.

Luria said the remaining $11.02 in cost difference between the United States and Japan could be eliminated through a government subsidy.

"If one assumes that the advantage of proximity to U.S. assembly plants isn't enough to offset this $11.02 cost differential, then management would still have an incentive to move more auto production offshore," Luria wrote.

"If the cost to the U.S. Treasury of losing domestic production is greater than the remaining cost gap, then selective subsidies or tariffs might be an effective way to bolster the new productivity conditions and keep production in the United States."

It would cost the federal government $6.3 million to subsidize the $11.02 difference at the one transaxle facility, according to Luria. But he called the cost a bargain since it would help save the 614 plant jobs plus another 1,000 in related industries.

"Moreover, phasing out such a subsidy or tariff over, say, five years would both support the productivity coalition and make demands on its continuance easier," Luria said in the article.

Luria provided examples of how changes in job classifications have had a direct effect on production costs.

About $15 per vehicle was saved at the U.S. assembly plant because employees were allowed to clean their own work areas, Luria said. At an engine plant, $10 per unit was saved due to new work rules and the addition of automated manufacturing, he wrote.

"From a company-wide engineering study conducted by one of the Big Three, one can infer that as much as 37 percent of plant downtime results from restrictive work practices, which works out to approximately $700 in added costs per vehicle," Luria said.

Future agreements will have to include more-flexible work practices and lower pay in some labor-intensive component plants, he said. In exchange, he said, corporations will have to accept somewhat lower returns on investment.

He predicted that more agreements will be modeled after General Motors' Saturn contract, which tak part of wages to profitability and possibly productivity. Starting pay scales in the future likely will be at a lower percentage of maximum pay, he added.

Jaguar expects CAFE fine

WASHINGTON — Jaguar is expecting to pay upwards of $4.5 million in civil penalties because its 1985 models did not meet the Corporate Average Fuel Economy standard of 27.5 mpg for that year.

The exact figure is not yet known because EPA has not finished collecting data and NHTSA has not done the math.

The fine is $5 for each tenth of a mile mpg by which a company misses the CAFE standard.

Last December, Jaguar paid $6,015,000 in fines because it missed both the 1982 CAFE of 26 mpg and the 1984 CAFE of 27 mpg.

The 27.5-mpg standard has caused problems for many companies — about $900 million in fines for General Motors and about $50 million for Ford Motor Co. But those full-line manufacturers can take advantage of carry-forward and carry-back provisions.

Auto production best in 10 weeks

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

With lines speeding up after model changeover, U.S. automakers targeted their best week's production in 10 weeks.

Last week's scheduled build of 149,908 cars marked the highest production since 175,718 during the week ended July 5.

Last week's output was 14.85 persent more than the prior week's 130,529 — a holiday week.

But last week's build was 4.18 percent below the year-ago week's 156,445.

Companies split last week's scheduled production as follows: General Motors, 57.79 percent; Ford Motor Co., 19.71 percent; Chrysler Motors, 13.81 percent; Honda of America Manufacturing Inc., 3.64 percent; New United Motor Manufacturing Inc., 2.49 percent; Volkswagen of America, 1.33 percent; and Nissan Motor Manufacturing Corp. U.S.A., 1.23 percent.

American Motors' Kenosha, Wis., plant was down last week for inventory adjustment. The plant is scheduled to resume production today (Sept. 15).

GM said its Oklahoma City and Framingham, Mass., plants are down this week because of a material shortage.

GM's Oldsmobile No. 1 and 2 plants in Lansing, Mich., were slated for two overtime shifts Saturday (Sept. 13).

Ford's Edison, N.J., plant was also scheduled for Saturday overtime.

All Ford plants except Lorain, Ohio, are scheduled for daily overtime this week. Lorain is down for model changeover until Sept. 22.

No Saturday (Sept. 20) overtime is scheduled at Ford plants.

Chrysler's Belvidere, Ill., and St. Louis No. 2 plants were slated for Saturday (Sept. 13) overtime.

The same plants are scheduled to work two nine-hour daily shifts this week.

Truck output off slightly

Last week's domestic production of 68,083 trucks slipped 1.50 percent from the previous week's 69,121.

The drop from the prior week — which included Labor Day — was due primarily to model-changeover downtime at Ford Motor Co.'s Wayne, Mich., plant. Wayne is slated to resume production Sept. 29.

Last week's targeted build was 5.24 percent below the 71,846 trucks assembled in the year-ago week.

General Motors scheduled two overtime shifts Saturday (Sept. 13) at its plants in Janesville, Wis.; Moraine, Ohio; Flint, Mich. (No. 1); and St. Louis.

Ford's St. Louis and Norfolk, Va., plants were slated for overtime Saturday.

All Ford plants except Lorain, Ohio, are scheduled for daily overtime this week (Sept. 15).

Ford's Kansas City and Twin Cities plants are slated for Saturday (Sept. 20) overtime.

Two overtime shifts were scheduled at Chrysler Motors' Warren, Mich., plant Saturday (Sept. 13).

The Warren plant is slated to operate two nine-hour daily shifts this week.

Production rises in Canada

Output of both cars and trucks in Canada last week was slated to top any week's build since late June.

Automakers targeted 25,538 units last week, the highest output since the week ended June 21, when 25,753 cars were assembled.

Truckmakers scheduled 14,686 units last week, more than any week since 16,564 the week ended June 28.

General Motors' car production of 13,550 last week was more than double the previous week's 6,512 — a four-day week.

The jump was due in part to increased output at both of GM's Oshawa, Ontario, car plants, after downtime for a parts shortage.

Last week's scheduled car production total was 88.89 percent higher than the previous week's 13,520 and 2.83 percent better than the year-ago week's 24,835.

Last week's truck output was 33.78 percent better than the prior week's 10,978 but was 19.43 percent below the year-ago week's 18,228.

Contributing to last week's gain was production at GM's Scarborough, Ontario, plant, which shot up to 1,594 from 365.

VW, BMW boost prices

By John K Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

The auto price spiral continued last week as Volkswagen United States and BMW of North America priced their 1987 models.

VW's hike amounted to $530 on the average-equipped car. It consisted of $438, or 4.2 percent, on the base car on a sales-weighted basis after adjusting for equipment changes and $92, or 5.8 percent, on optional equipment.

The BMW boost averaged $1,148, or 5.3 percent.

VW's increases ranged from $390 on the base Jetta sedans to $760 on the Vanagon GL Camper. For BMW, whose cars start above $20,000, the hikes ranged from $1,120 on the 325 two-door sedan to $3,200 on the 735i four-door sedan.

In the VW Golf line, the two-door and four-door hatchbacks (gasoline engines) rose $410 each, about 5 percent. The two-door now is $8,190; the four-door, $8,400.

VW said the Golf has been upgraded with a velour interior, aerodynamic headlights and aero steel wheels with finned trim rings. It is called the Golf GL for 1987.

The GTI went up $430 and is now $10,325.

Jetta models start at $9,290 for the base two-door and $9,520 for the base four-door, up $390 each. The fancier Jettas have steeper hikes — $505 for the GL four-door and $550 for the GLI four-door.

Golf and GTI are built at VW's plant in Westmoreland, Pa. Pilot production of the Jetta has begun at Westmoreland, and regular output will start in October.

On VW's imported cars, prices went up $555 on the Cabriolet (now $13,250); $420 on the Scirocco coupe (now $10,680) and $600 on the Quantum GL four-door sedan (now $14,985).

BMW's lowest-priced 1987 model is the 325e two-door sedan at $21,475, an increase of $1,120. Other 3-series units rose $1,150 to $1,430.

At the top of the BMW line, the 735i four-door sedan climbed $3,200; the L7 four-door rose $2,645; and the 635CSi coupe went up $2,660. The 1987 prices are 735i, $42,475; L7, $46,675; 635CSi, $46,965.

Record August sales reported by Yugo

Yugo sales numbered a record 4,135 in August to bring the year-to-date count to 18,994.

One of the two sales figures listed for Yugo in the Sept. 8 issue of Automotive News was incorrect.

Forecasts vary, show a lack of certainty

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

The 1987 model year looms as a time of uncertainty in the U.S. car and truck market.

Forecasts by 17 auto market analysts surveyed by Automotive News are more varied than ever before.

Their predictions for total vehicle sales in 1987 range from a low of 14.4 million units to a high of 16.2 million.

Car sales forecasts range from 10.2 million to 11.4 million, with sales of imported cars in the 2.8-million to 3.5-million area.

Truck sales estimates for 1987 stretch from 3.7 to 4.8 million, with truck imports figured to settle anywhere from 700,000 to 900,000 units.

As noted in this week's Automotive News Marketing '87 Extra, the wide variations in forecasts by the nation's leading auto industry analysts result from a number of key factors that could directly affect the 1987 market — for better or worse. They include the general economy, tax reform, actions on the federal deficit, vehicle pricing and financing strategies and consumer reaction to 1987 domestic and imported vehicles.

The Automotive News composite estimate for 1987, based on the analysts' forecasts, puts total vehicle sales at 15.0 million units — 10.7 million cars and 4.3 million trucks. The figures include import sales of 3.2 million cars and just over 800,000 trucks.

According to the analysts, the nation's economy in 1987 will be similar to that of 1986. However, they believe tax-reform legislation will have a dramatic impact on new-vehicle sales — adding to them in the fourth quarter of 1986 but stealing from them in the coming calendar year.

The analysts unanimously agree that low-rate financing and other incentives will continue to be a way of life in the 1987 market.

However, their views on import-vehicle sales differ greatly. A major factor, they believe, will be pricing and product strategies by importers of Japanese vehicles.

The situation is this: A weakening U.S. dollar has ignited price competition in the small-car market. Chased by low-priced South Korean-built imports and cut-rate U.S. domestic products, the Japanese are moving into upscale segments traditionally held by U.S. and European makes.

The Japanese have few changes in their 1987 import lineups. Nonetheless, as competition intensifies, Japanese-import advertising bud-

U.S. industry is called less than world-class

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Executives of U.S. auto manufacturers and automotive supplier companies confess they are a long way from world class in engineering performance, according to a study by Arthur Andersen & Co.

"The challenge for U.S. companies to become world class is huge," said Peter Van Hull of Arthur Andersen.

He said the survey showed that basic fundamental differences exist between U.S. management style and foreign management styles. Until recently, manufacturing and engineering were not considered a high priority in the United States, Van Hull said.

That attitude, however, must change, and manufacturing and engineering must be used as a competitive weapon against foreign companies, he said.

"As the Japanese establish assembly plants and supplier plants here," Van Hull said, "manufacturers can no longer use exchange rates and labor rates as an excuse."

The survey came about because Arthur Andersen consultants, who advise automakers and automotive suppliers, kept hearing the term "world class." They wanted to know what it meant and where U.S. companies currently stand.

The firm, which does a full-scale Delphi study of the automotive business every other year, did a mini-study on the world-class issue. It surveyed 125 executives of automotive and automotive supplier companies, mostly domestic, who also participate in the full-scale study. A Delphi study is based upon the opinions of those interviewed, not on hard data.

The major finding was that those surveyed perceive a significant gap between their current engineering performance and world-class engineering performance in almost every category.

The executives were asked to list what items constituted world-class engineering performance. They listed what they thought would be world-class performance for each category and where they thought

Ford, Fiat contend for hand of Alfa in 12th-hour skirmish

By Richard Johnson and Giancarlo Perini
AUTOMOTIVE NEWS STAFF REPORTERS

The courtship of Alfa Romeo was shaping up late last week as a full-scale battle of wits between two of the world's automotive giants.

Just as Ford Motor Co. was putting the finishing touches on months of negotiations aimed at acquiring an equity interest in Alfa, Fiat reemerged as a contender for the prestigious, but financially strapped Italian specialty producer.

While Ford Chairman Donald Petersen was reportedly making plans to fly to London to announce the deal, Fiat S.p.A. Chairman Giovanni Agnelli was paying a visit to Italian Prime Minister Bettino Craxi, presumably to gain support for a Fiat takeover of government-controlled Alfa.

Though a letter of intent could be signed virtually any day by Ford and Alfa, the deal must still be ratified by Italian authorities. A parliamentary commission would likely invite a response from Fiat, setting the stage for political maneuvering and campaigns for public support.

There was suggestion last week that if the proposals are similar, the Italian Parliament, stirred by political and patriotic feelings, would back Fiat over Ford.

But another point of view which surfaced in Italy favored the notion of foreign investment pouring into the country and opposed further monopolizing by Fiat of the Italian market, which already boasts some of the highest car prices on the continent.

Meanwhile, emerging from the Ford-Alfa talks was a glimpse of what the U.S. automaker has in mind for its Alpha clean-sheet subcompact/compact-car development program. Under terms of the equity agreement, Alfa Romeo would play a key European role in a global strategy that would be for

Tax overhaul could bring Toyota loss

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Chrysler Corp., General Motors and Mazda appeared to be the big winners in the tax-overhaul derby, while it appeared Toyota would lose a $33 million break on its first U.S. assembly plant.

Under transition rules published during the weekend, Chrysler won approximately $50 million worth of tax credits for renovation work on two assembly plants in St. Louis, according to an aide to Sen. John Danforth, D-Mo.

In addition, the Chrysler-Mitsubishi joint venture plant in Illinois was granted a $30 million tax break, according to Rep. Dan Rostenkowski, D-Ill., who was co-chairman of the Senate-House conference committee drafting rules on how the new tax law would be phased in.

However, Toyota Motor Corp., embroiled in a dispute with organized labor over the construction of its Kentucky plant, will lose an estimated $33 million in tax breaks under the transition rules, according to Rostenkowski. The tax

Court dismisses suit on air bags

by Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A federal appeals court panel has dismissed the challenge to the passive-restraint standard raised by the state of New York, State Farm and other insurers.

The three-judge panel of the U.S. Circuit Court for the District of Columbia ruled that main arguments raised by New York and State Farm centered around the so-called "trap-door" provision of the passive-restraint standard.

That provision would automatically rescind the federal passive-restraint standard if, by April 1, 1989,

see AIR BAGS, page 66

As a federal appeals court panel considered a challenge to the passive-restraint standard, Ford tested an air bag at its new-car preview in Detroit.

Sprint ER wins fuel-economy race once more

GM boosting car stickers $368 for '87

By John E. Tomlinson Jr.
AUTOMOTIVE NEWS STAFF REPORTER

With its 1987 price increase, General Motors is once again daring the public to buy its automobiles.

If consumers don't take the dare, they could benefit financially from a new round of incentives — this time on the 1987 models. But where do you go from 2.9 percent, the current finance rate on GM cars?

GM's 1987 price increase averages $368, or 2.6 percent, on models that will go sale Oct. 9. The 2.6 percent figure was supplied by the corporation. The $368 was computed by Automotive News. GM does not divulge the average dollar amount of its price increases.

News Analysis

Ford Motor Co. last week acknowledged that it had sent price-protection letters to dealers so they can pre-sell 1987 models. Some of Ford's tentative increases are huge, but they are mitigated somewhat by major equipment additions.

Chrysler Motors had nothing to add to its earlier price statement. In August, Chrysler said its 1987 stickers were tentatively slated to rise 2 percent.

The GM hikes covered a wide range. A Chevette was reduced $780, but that was an exception to the rule. A partial list provided by GM showed boosts as high as $1,004 on a Cadillac Brougham.

The 2.6 percent hike is on comparably equipped 1987 and 1986 models. On a straight sticker-to-sticker basis, the increase appears to be at least twice that high. GM said the figure for the base-model increase was not available.

The $368 lump on the 1987 cars follows a year of substantial price hikes by GM. Automotive News estimates that GM raised its prices an average of $750 on its 1986 models. There were $400 boosts in September and in April. The other $150 came from sales-weighting the higher stickers on certain full-sized and luxury cars that weren't included in the 1986 introductory figures.

GM has said there will be no incentives — finance or otherwise — at the beginning of the 1987 model year. With higher prices and the end of the tremendously successful 2.9 percent loans, another question arises. How long will that decision hold?

As noted, GM's $368 increase is on comparably equipped models. In that exercise, the manufacturer adds to the old model the price of any equipment that has been made standard on the new one.

There's no problem in that procedure as long as the added equipment is something that most buyers would order anyway — like automatic transmission on a Chevrolet Celebrity, which is one of this year's add-ons.

But it's an out-and-out price hike if the added equipment is something that the normal buyer never would choose — like wire wheels on a base Chevette.

(No, GM has not made wire wheels standard on the Chevette.)

GM mentioned only three add-ons for 1987. Aside from automatic transmission on the Celebrity, they are a 3.8-liter port-fuel-injected V-6 on the Buick LeSabre and the Oldsmobile Delta 88 and a wide body side molding on the Pontiac Grand Am. Obviously, there were others: GM supplied price comparisons for 17 models, and every one of the "adjusted" 1986 prices is different from the actual 1986 sticker.

Automatic transmission on the Celebrity has been batted around like a ping pong ball. It was standard equipment when the car was introduced as a 1982 model. It was stripped from the standard list for 1984 and was $425 to $490 extra for three seasons. Now it's back as standard equipment for 1987.

GM cut the prices of its lame-duck Chevettes, which will be dropped after the 1987 model year. The two-door hatchback is $4,995, down $750 from 1986, and the four-door hatchback is $5,495, down $464. Automotive News pinned the $4,995 tag on the Chevette in the Aug. 11 issue.

Contributing to the Chevette price reduction was a cut in the

Chrysler adds models to '87 incentives list

By Laura Clark
AUTOMOTIVE NEWS CHRYSLER BEAT

Chrysler Motors Corp. has added more 1987 models to its low-rate financing program. But the new phase will be partially subsidized by participating dealers.

The rates range from 2.4 percent to 9.9 percent, depending upon the length of the contract.

Chrysler dealers who participate in the new program will have to pay the company $39 for every new 1986 or 1987 car they sell at retail from Sept. 12 to Oct. 12. No rebates are being offered on the 1987 models in the new program.

Chrysler's original program was to run from Aug. 29 to Oct. 12. It included most North American-built 1986 cars and trucks and a few 1987 models.

The 1987s were Dodge Charger/Plymouth Turismo, Dodge Diplomat, and Chrysler New Yorker and Fifth Avenue.

The 1987 models added to the program are: Dodge Aries, Plymouth Reliant, Chrysler LeBaron four-door, LeBaron Town and Country wagon, Dodge 600, Plymouth Caravelle, Chrysler LeBaron GTS, Dodge Lancer, standard-size Ram Van and standard-size Ram Wagon.

Despite the addition of the participation fee, several Chrysler dealers said last week that limited incentives on the 1987 models may sustain the sales momentum created by the cut-rate loans.

"Lee Iacocca says if you want to party, you gotta pay," said Edmund Kehoe, owner of Kehoe Chrysler, Wellesley, Mass.

Others welcomed the incentive program for 1987 models but said the the $39 was unnecessary.

"I love the extention and hate the $39," said Jack Kennedy, general manager of Lochmoor Chrysler-Plymouth, Detroit. "After all, isn't this benefiting the corporation?"

Some dealers interviewed last week said the new program will help keep Chrysler dealers competitive during a period when their inventories of 1986 models are low.

Jack Caruso, owner of Caruso Chrysler-Plymouth and Regency Dodge, Jacksonville, Fla., said the supply for 1986 models is so slim that Southeast dealers have been traveling as far as Texas and Colorado to buy 1986 cars and trucks.

"Chrysler was not in the position that General Motors was; we didn't need incentives to clear our inventories," said Caruso. "I'm tickled to death about the extension. I figure what's $39, when my sales are up 60 percent at both my stores!"

No incentives for GM on '87s — McDonald

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

President F. James McDonald said General Motors will not use marketing incentives at the beginning of the 1987 model year.

McDonald said that sales incentives will not be needed because of the appeal of the 1987 models and GM's decision to raise 1987 prices by only a "nominal" 2.6 percent over comparably equipped 1986 models.

The success of GM's current 2.9 annual-percentage-rate incentive on more than one million 1986 cars and trucks "surprised everybody," McDonald said, noting that in the 10 days after the program began Aug. 28, GM car sales soared 58 percent over the year-earlier period, when a 7.7 percent financing rate was bolstering sales.

"Although there had been some indication that retail rate support programs were losing a little enthusiasm in the marketplace, this one just went way beyond our expectations," McDonald said.

McDonald acknowledged that the current low-interest-rate battle is drawing sales from the 1987 model year.

"You'd have your head in the sand if you didn't say there is some buying ahead," he said. "There's no question about that. On the other hand, it's not going to be a disaster from then on. We've all got 1987 models that are great. We had a 2.6 percent price increase, which is a very nominal increase. I think we'll do great."

McDonald noted that the industry was successful in working its way out of rebates offered in 1982 and 1983.

"I'm not sure what we'll need in the future," he said. "But in any business, particularly ours, dealers order the cars. We don't build unless we have a dealer order.

"It is our obligation to do the things we have to do when the market is flat to fit people up to get into the showroom.

"A dealer can sell if he's got traffic and the 2.9 did that. We'll just have to wait and see, but we're certainly going to start the 1987 model year without incentives."

Chrysler Motors is the only domestic automaker offering low interest financing on some of its 1987 models. Other makers have restricted the low rates to 1986 models.

McDonald also said that he expects demand for convertibles to remain limited and does not foresee GM sales of ragtops reaching the late 1960s peak of 75,000 to 100,000 annually.

McDonald said the GM reorganization is "99 percent in place and it's really already becoming effective."

He acknowledged that during the industry's dark days earlier in this decade, GM had considered reorganizing with only three divisions.

"When you go through a 1980, 1981 and 1982, you say maybe we could get along with only three divisions, maybe it would cost us less looking and so forth," McDonald said.

"Pontiac is really a strong franchise right now. But back then, if we had taken Pontiac out of the circuit; if we had closed all the Pontiac dealerships at that time, we would not have been able to open an Oldsmobile or Buick franchise right alongside. You just can't add another franchise. We would have lost at least half the volume at Pontiac.

"We determined quite some time ago that we want to stay with our five marketing arms in the United States," McDonald said.

GM extends '87 warranties

General Motors is improving the warranty coverage on electronic components on all its 1987 models and on major systems on some 1987 Cadillacs.

GM extended its warranty covering selected electronic components on all 1987 models to five years or 50,000 miles, whichever comes first. The longer warranty applies to electronic instrument panels, driver information centers and heater and air conditioning controls.

In 1986, warranty coverage on electronic components ranged from one year/12,000 miles (under the standard comprehensive coverage) to four years/50,000 miles.

Also, 1987 Cadillac DeVille, Fleetwood and Brougham models will carry a five-year/50,000-mile warranty on major component systems. Included in the improved coverage are powertrain, braking, fuel, air conditioning, electrical and brake systems.

In 1986, the Cadillac Brougham carried a three-year/36,000-mile warranty on the engine, transmission and drivetrain components. The 1986 DeVille and Fleetwood carried a four-year/50,000-mile warranty on all the major vehicle systems covered under the 1987 warranty.

GM has not yet announced its 1987 warranty coverage for other Cadillac models.

GM said it is offering improved warranty coverage in recognition of improved reliability and quality.

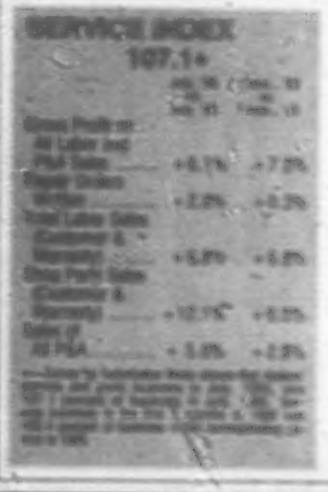
Service volume increases in July; 7-month results also show advance



By Arthur Pias
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships in July trailed the June increase, but it was still considerably above the volume of a year earlier.

Service volume for the first seven months of 1988 also outpaced the figure for the corresponding year-earlier period.

The Automotive News Service Index found that shop business at dealerships in July amounted to 107.1 percent of the volume recorded in July 1987.

July was the fifth straight month in which service volume topped that of the year-ago month. However, July's increase over the year-ago month was considerably less than that in June, when service volume amounted to 114.3 percent of the volume recorded in June 1987.

A service manager at a Western Buick dealership said both June and July were strong months. The dealership showed an increase in gross profits and a decrease in repair orders during July. The service manager attributed that to specials on winter car preparation.

A service director at a Midwest Cadillac dealership said service volume fell slightly during July but was still above year-earlier figures. He could not pinpoint the reason for the trend. He said the weather was mild during the summer months, which usually results in less service business. "Warranty business was up.

An industry source predicted that service volume will continue at high levels into the fourth quarter of 1988 and probably to the end of the year.

He said sales incentives that began in late August will fill service bays with warranty jobs in three months.

"When cars are being sold as rapidly as they [illegible] don't do as thorough a job of pre-delivery preparation," the source said. "Also, a number of those cars have been on the lot for seven months or so. Any time a car sits for a long period, it increases the chances something will go wrong."

In July, shop parts sales (customer paid and warranty) showed the biggest gain, up 12.1 percent.

Total labor sales, (customer paid and warranty) were up 9.8 percent, gross profit on all labor, [illegible] and accessories sales was up 6.1 percent, sales of all parts and accessories climbed 5.5 percent, and repair orders written were up 3.9 percent.

In addition, parts and accessories sales to off-premises customers were up 0.6 percent in July.

Total labor sales registered the biggest gain for the first seven months of 1988, climbing 9.8 percent over the period in the previous year.

Other indicators showing gains through July were gross profit on all labor, parts and accessories sales, up 7.3 percent; shop parts sales, up 6.5 percent; sales of all parts and accessories, up 2.9 percent; and repair orders written, up 2.3 percent.

Parts and accessories sales to off-premises customers were down 1.1 percent through July 1988.

OBITUARIES

Frederick Sloane Ford Sr.

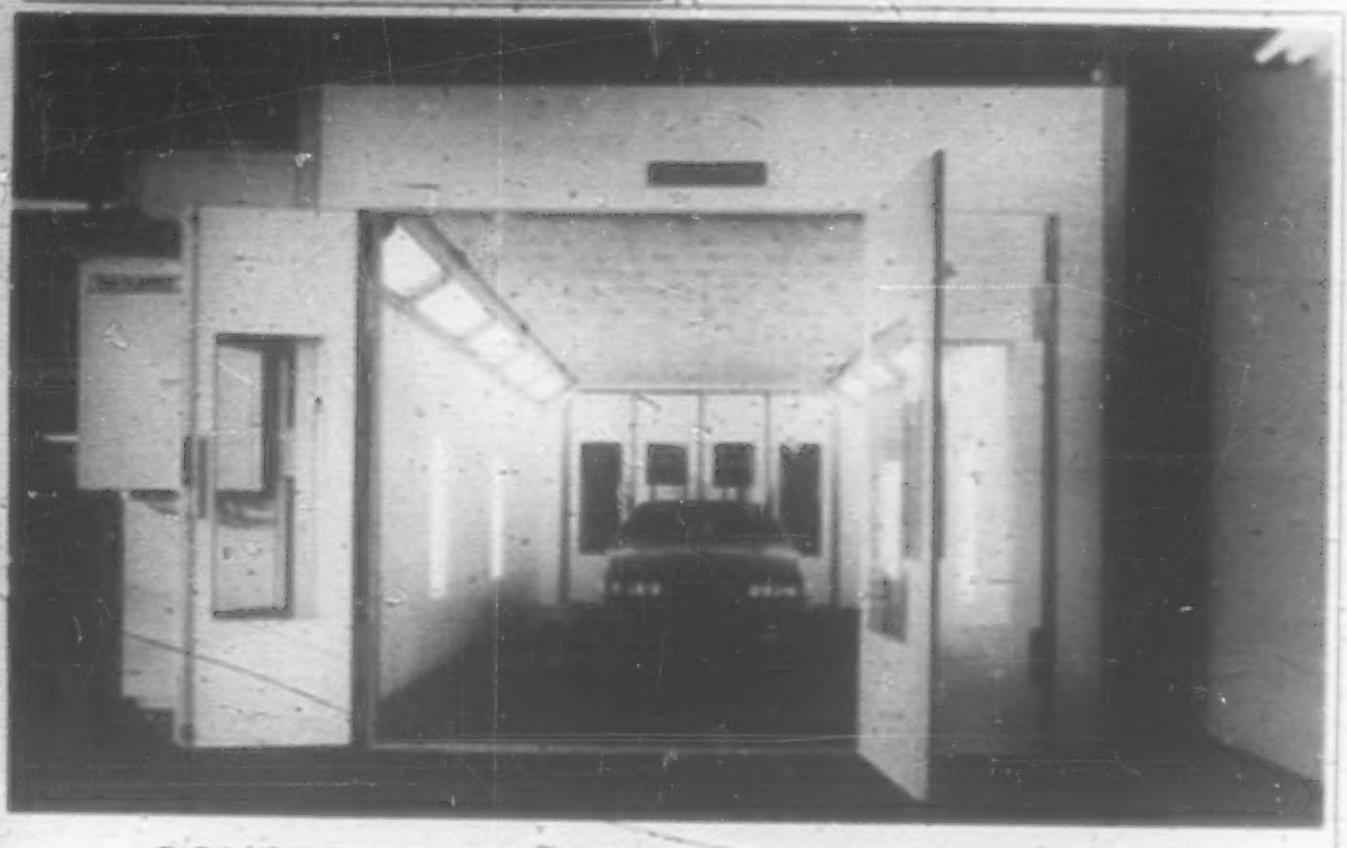
DETROIT — Frederick Sloane Ford Sr. died Sept. 15. Mr. Ford was an officer and director of Libbey-Owens-Ford Glass Co.

David W. Davenport

ROCKY MOUNT, N.C. — David W. Davenport, a Pontiac dealer here, died at the age of 78. Mr. Davenport held the oldest continuous Pontiac selling agreement in the Charlotte, N.C., zone. When he began as a dealer in 1926, his father had to sign dealership documents because he was not of legal age.

C. Carroll Grindal

ST. PETERSBURG, Fla. — C. Carroll Grindal, 86, retired American Motors warehouse manager in the Boston zone, died Sept. 4. Mr. Grindal worked for AMC for 20 years.



CONCEPT/CURE: YOUR COMPETITIVE EDGE

The downdraft spray booth/drying oven system engineered for North American shops

Many users of "combination" booths are finding that what's a hot idea in Europe can be a lukewarm performer over here. But DeVilbiss Concept/Cure delivers—it's designed to meet the special needs of North American users!

DeVilbiss the leader in spray booth technology! For years we've given you the performance and service back-up that we know you need—and you can count on us tomorrow!

Downdraft air flow means cleaner paint jobs! Concept/Cure moves more air over the vehicle to ensure top quality finishes!

A choice of 1,000,000 or 1,200,000 BTU heating capacity! Direct firing for efficiency—keeps production up inside when the temperature drops outside!

Full range of models to fit your needs! In-floor or raised-floor versions; drive-through or solid back!

Complete family of booths! Concept/Cure is the latest addition to our unequaled range of DeVilbiss automotive refinish spray booths!

See us at RACE booth No. 1710

Automatic temperature control panel for consistent results! Paint and curing cycles are controlled from an easy-to-use panel!

Concept/Cure will work hard for you—every day of the year! For a literature package and our unique Blackfield Planning Guide contact your nearest DeVilbiss distributor or call The DeVilbiss Co.

TRUCK INDUSTRY NEWS

Chrysler strives to recapture lost ground in truck market

By Joseph Szabo
Automotive News staff reporter

CHELSEA, Mich. — Despite the success of its vans, Chrysler Motors is still playing catch-up in a lot of truck areas.

But officials appear determined to make up lost ground as quickly as time and money permit.

For example, Chrysler is planning a U.S.-built sport utility truck, based on its new Dakota pickup, "for the latter part of this decade," according to John Wilfrow, Chrysler Motors executive vice president, product development.

"It's not going to be like anything you've seen," Wilfrow said, differentiating it from the two Mitsubishi Raider (Montero) that Dodge dealers will offer in the 1987 model year.

"You'll see some pretty innovative things" on the new off-roader, he added.

Chrysler also has some catching up to do to fuel-inject its light trucks.

Ford Motor Co. and General Motors will expand electronic fuel injection to the majority of their light-duty vehicles this fall.

Chrysler, on the other hand, will introduce EFI for the first time on its extended-wheelbase Caravan/Voyager minivans, which go on sale next spring.

Wilfrow said, though, that "it (EFI) is coming rapidly. We'll be the first manufacturer to have 100 percent fuel injection on cars, so you can rest assured we're not going to be very far behind on trucks."

He added, "It's really a question of getting the engineering done to make sure it's right. Getting the testing completed and the testing finished. And as soon as that's done, we'll put them on."

The pattern of offering throttle-body zone or two injectors on smaller engines and multi-port injection on larger ones — which is says with the stretched minivans — will be followed with other truck products.

On the extended-wheelbase Caravan/Voyager models, Chrysler will offer a base 2.5-liter EFI throttle-body injection engine and an optional 3.0-liter V-6 with sequential multi-point EFI and tuned intake port design.

"There are certain engines, like the V-engines (V-8s and V-6s), on which you have to use multi-point to get the right kind of (fuel) distribution," Wilfrow said.

"In general, you have to use multi-point on V-engines. You can get distribution on your inline engines with a throttle-body injection system."

Throttle-body systems are, of course, less expensive, too.

Wilfrow added, though, that the price spread between throttle-body and multi-point injection systems has been narrowing steadily as the cost of injectors worldwide is coming down."

Meanwhile, industry sources say that Chrysler appears to be taking a second hard look at the need for a smaller van, like its proposed Z-van.

Wilfrow confirmed that, noting, "It's a big investment. We have to make sure there's a big enough market for it (Z-van), that's all."

Chrysler, he added, is still bullish about the overall future growth of the van market.

Chrysler plans to build about 180,000 of its stretched Caravan/Voyager T-115 minivans at its St. Louis plant, boosting total minivan capacity to more than 400,000 annually.

Although V-8 power and larger capacity will make the stretched minivans more attractive to commercial users, Dale Dawkins, program management director, Truck Programs, Chrysler Motors, expects that their primary appeal will continue to be as people movers.

"We have a whole line of larger vans to serve the commercial market," Dawkins said. "We would expect them (stretched minivans) to continue primarily as passenger vehicles."

Chrysler is dropping its D-100 series pickups this fall to make room for the new Dakota which would have competed too closely with the D-100 models in price and size.

The D-100 was originally designed to give Chrysler a competitive entry against Ford's Ranger and Chevrolet's S-10, said Glen Hoque, chief, N-truck program management.

Dakota has now effectively filled that gap, he concluded.

Cat, Rockwell cutting

By Joseph Szabo
Automotive News staff reporter

Caterpillar Tractor and Rockwell International, both major suppliers to the heavy-truck industry, are adjusting their production — but for different reasons.

Caterpillar is partially shutting down its Mossville, Ill., engine plant from Sept. 15 to 29 to bring inventory and production in line with "current and anticipated sales levels," a spokesman said.

The company is curtailing production because it overbuilt earlier in the summer to safeguard against a possible strike.

Cat's labor contract had been due to expire June 1. The company had guaranteed its original-equipment customers a two-month supply of engines, regardless of the outcome of negotiations.

The contract was subsequently extended to July 6, during which time Cat continued to overbuild.

After successfully reaching a new agreement without a strike, the company had excess inventory which it is now reducing.

Industry sources said the outlook for demand for Cat's 3208 and other heavy-truck engines is actually stronger than anticipated.

It expects to do well with Ford Motor Co., a key customer, even after Ford introduces its Brazilian engine in 1987 trucks built at its Louisville, Ky., plant.

Meanwhile, Rockwell International advised employees at its brake manufacturing plant in Ashtabula, Ohio, that it intends to close the plant and consolidate production at its other automotive facilities.

The company cited trends in the heavy-duty truck industry that indicate a reduced level of production. That would affect demand for the plant's principal products, brakes and brake components for medium and heavy trucks.

The plant has been in operation since 1948. It employs 225 persons and will remain open for about eight months while the consolidation is being completed.

Early retirement is popular

ALLENTOWN, Pa. — Mack Truck Inc.'s offer of early retirement to some workers as a way to trim payrolls is proving more popular than anticipated.

The program — a financial incentive package to entice non-unionized employees to take early retirement — was expected to be accepted by about 10 percent of the 3,500 eligible Mack workers.

Instead, some 600-700 have agreed to accept early retirement effective Dec. 31, a Mack spokesman said last week.

"We don't have a final count yet," he said. "But we believe it will be in the 600-700 range.

"Of course, that includes a good number of people who would have been retiring anyway, even without this program."

Mack announced the retirement incentive in June as a way to reduce its payroll.

Depressed sales in the heavy-duty truck market are forcing some other producers to follow Mack's lead.

Earlier this month, Navistar offered workers in its administrative and marketing staffs the option of early retirement. The program, Navistar said, will help reduce its workforce 25 percent and save $40 million during the next three years.

Ball of Confusion

Ask a lot of market analysts about sales for '87, and you'll probably get a lot of different answers

By Michelle Krebs

Auto analysts predict another year of incentives and out-of-whack supply and demand for 1987.

Sales forecasts from analysts surveyed by *Automotive News* are more diverse than ever for 1987.

The reason: Vast differences of opinion on a multitude of factors and issues that could directly affect 1987 new-vehicle sales, for better or worse, including the general economy, tax reform, the federal deficit, vehicle pricing, financing strategies, the import market and consumer reaction to 1987 model products.

As a result, forecasts for total vehicle sales in 1987 range from a low of 14.4 million units to a high of 16.2 million units. Forecasts for car sales range from 10.2 million to 11.4 million.

The *Automotive News* composite, based on an average of the analysts' forecasts, puts total vehicle sales at 15.0 to 15.1 million units, with about 10.7 million car sales and 4.3 million truck sales. Import car sales will be about 3.2 million units; import truck sales will be about 808,000 units.

Despite the wide range in sales forecasts, analysts agree incentives will be around again for 1987 and probably will be even more aggressive than in 1986. Supply will far outweigh demand, forcing more aggressive incentives and production cuts. For the first time in recent years, the analysts disagree on how much of the market imports will take.

In 1986, the analysts surveyed unanimously agreed that imports would take a bigger bite of U.S. car sales.

Not so in 1987. The analysts say Japanese pricing puts the import share in question. Forecasts for import car sales range from a low of 2.8 million units for 1987 to a high of nearly 3.5 million.

Some analysts believe the imports — particularly the Japanese — will continue to steal market share from the domestics. Others think the shift in the Japanese yen versus the U.S. dollar will force Japanese automakers to price themselves out of the market to some degree.

General Economy

Analysts envision a 1987 economy and vehicle market similar to that of 1986.

Tax reform will be the biggest chapter of the economic story for 1987, and it will have a dramatic impact on vehicle sales.

Analysts say the proposed tax reform will add sales to the 1986 calendar year but steal them from 1987. Analysts say the added sales for 1986 could amount to 100,000 to 200,000 units.

Under the proposed tax reform, consumers would no longer be able to deduct interest on car loans and sales tax. In order to take advantage of the sales tax deduction, which would disappear on Jan. 1, consumers will buy cars in 1986 rather than 1987, the analysts theorize. The interest deduction would phase out over the next four years.

"Tax reform should get the model year off to a strong start," says Wendy Beale of Smith Barney, Harris Upham & Co. But, she adds, that means a weak first quarter of 1987 calendar year.

Howard Leonard of PNC Financial Corp. says the year-end car surge will be like the surge in personal computer buying that took place last Christmas.

Jack Kiman, manager of automotive research for Merill Lynch Economics Inc., had predicted car sales would be 10.9 million units for the 1987 model year. But he has since revised his forecast because he believes tax reform will cost the auto industry 200,000 sales in 1987.

At the same time, Kiman predicts the fourth quarter of 1986 will be somewhat stronger than he had originally forecasted because consumers will buy in advance of the tax reform. As many as 100,000 added vehicle sales will be made by year-end 1986 as consumers take advantage of the sales tax write-off, Kiman says.

William Pochiluk of Autofacts Inc. is the most pessimistic on the 1987 economy. Of all the analysts' forecasts, his is the lowest for car sales and total motor vehicle sales.

"We're very concerned about 1987," Pochiluk says. His firm has been cautioning its clients about a possible recession by the 1988 model year.

He sees the domestic automakers wrestling with the same problems that arose in 1986. In 1986, the domestics focused their efforts on market share at all costs, ignoring the traditional relationship of production, sales and inventory, he notes. They turned to ultra-low interest rate incentives, leaving them nowhere to go as 1987 opens. At the same time, the domestic auto companies must struggle to boost profits.

A less pessimistic Kiman forecasts a slight decline in vehicle sales because of sluggishness in the economy, which is headed into the fifth year of its expansion.

Thomas O'Grady of Integrated Automotive Resources also predicts a dip in the economy — and consequently in vehicle sales — for 1987.

"There are too many things, including the federal deficit and a lethargic economy, on the horizon not to plan for one," he says. However, the economy is not headed for dire straits, he adds.

Ted Sullivan of Chase Econometrics predicts continued good demand. He bases his forecast on the affordability and the consumer's willingness to buy a car.

"We seem to have a willing and able consumer, though the ability and willingness are weaker than last year," he says.

Sullivan notes that the down-payment condition has worsened because of soft used-car prices. Buyers who use their trade-in for the downpayment are being forced to finance more of the car.

Sullivan also points out that while the record consumer debt burden hasn't dragged car sales so far, it could be a moderating factor in 1987.

Sullivan also places a caution flag on the consumer's income flow. Gains in disposable income in recent years have been the result of low inflation, not real income increases. If inflation rises, it could adversely impact personal income, Sullivan says.

Incentives

The auto analysts unanimously agree incentives will continue to be a way of life in 1987. To what degree is where they disagree.

Maryann Keller of Furman Selz Mager Dietz & Birney insists low-rate loans won't be enough to move cars in the competitive environment of 1987 compounded by the aftermath of tax reform. She sees more cash rebates and more promotions such as "the $2,000 worth of options for $500" campaigns.

Jean-Claude Gruet of Salomon Brothers Inc. also expects low-rate loans to be replaced with a new gimmick. He adds, however, that low-rate loans are more appealing to the automakers because car buyers are forced to do business with the auto companies' finance subsidiaries, which helps make the incentives more palatable.

Ronald Glantz of Montgomery Securities says GM's low-rate loan strategy has been, in part, to boost General Motors Acceptance Corp.'s market share of car loans against the banks. Otherwise, he argues, GM would have offered rebates, not low-rate loans.

Philip Fricke of Goldman Sachs & Co. said, in an interview before GM announced its 2.9-percent financing program, that by early 1987 GM would have too much excess inventory — a million units or more.

"As they open the doors on Jan. 2, 1987, they will have that kind of inventory and will have to offer incentives and destroy pricing structure for 1987," Fricke had said. "GM will have to lead off again with attractive pricing. Ford and Chrysler will have to go along even though Ford's inventories may be short."

Sullivan says automakers will be confronted with incentives and/or production cuts. He looks for strong incentives through the second quarter of 1987 and production cuts midway through the model year.

Scott Merlis of Morgan Stanley sees irony in the fact that in 1987 — considered to be a relatively good year for the economy and the auto industry — cash rebates of $750 to $1,000 are being offered.

"That's in good economic times," he says. "What happens during poor economic times when there are even more imports?"

Import Share

For the first time in a long time, there is disagreement as to how the imports, particularly the Japanese, will fare.

A major development for 1987, analysts agree, will be Japanese pricing. However, there is little agreement as to what the Japanese will do.

One school of thought has the Japanese automakers, their dealers and distributors continuing to sacrifice profit margins to maintain volume and market share.

The second school says the Japanese can't afford to eat into their margins any longer, and they will be forced to increase prices significantly. Some believe those price increases will be enough to slow down the Japanese inroads into the U.S. car market.

Glantz, for example, predicts imports won't do as well as other analysts are forecasting. "Strategically, the Japanese don't like giving up market share and will lose money for long periods of time to keep it," Glantz says.

However, Glantz notes that the last price increases were made when the yen was at 165. Now it's at 155 or better. "That means they need to raise prices 3.5 percent," he says.

"The yen is up 55 percent from a year ago," Glantz says. "The first 30 percent didn't do much, since dealers were making a huge profit on cars and the companies' profit margins were embarrassing even to the Japanese."

Nevertheless, now the impact on Japanese auto company earnings will force the Japanese to raise prices more rapidly, providing room for domestics to sell even more.

Kiman also believes price hikes by the Japanese as well as Europeans will restrain import sales.

He predicts the Japanese will raise prices 2 to 3 percent every few months rather than seek one large increase to recoup profits.

Arthur Davis of Prescott, Ball & Turben expects the Japanese to raise prices 5 to 7 percent on cars and 7 to 10 percent on trucks by year-end 1986. That, he says, will give domestics a chance to do better, particularly in truck sales.

So far, Gruet notes, price increases have not affected sales of Japanese vehicles. However, he thinks the consumer will become more price-sensitive, and demand for Japanese cars will decline in 1987.

Others disagree.

Sullivan believes the Japanese have a way to go before meeting price resistance. "Even if the Japanese companies raise prices, the selling price still has a big cushion because of the premium dealers and distributors receive," he says.

Sullivan points out that Japan's quota issue arises again in 1987. He expects the new quota to add 300,000 units.

"The South Koreans are nipping at the heels of the low end and the Japanese feel they have to defend that end of the market," he says. "On the other side, they want to ship more upscale cars to the U.S. and they can't carry out their U.S. plans with quota of 2.3 million."

Sullivan says without government intervention the picture is dismal for U.S. manufacturers.

Notes: *—Forecast is for the calendar year.
†—Includes total trucks; all other forecasts include light trucks only.
‡—Does not include captive imports.

Arvid Jouppi of Arvid Jouppi Associates puts import sales at 2.8 million units for the 1987 model year, the lowest estimate of all of the analysts surveyed. Jouppi points out that "hybridization" — the manufacture of cars by the Japanese on American soil — has taken hold. Therefore, though he predicts import share will drop in 1987, the 300,000-unit rise in domestic share will be made up of Japanese cars built in the U.S.

What's Hot

"What hot will be what's new," according to John Hammond of Data Resources Inc.

He expects new pickups from Ford, GM and Chrysler to be hot as well as the new versions of minivans and sport/utility vehicles.

Pochiluk says the 1987 launch will get off to a slow start, not only because of a slow economy, but because of the lack of excitement and new models in the product lineups.

"Chrysler is the only one with anything new," he says, pointing to the Sundance/Shadow, LeBaron J car and Dakota truck.

A number of analysts say the two major sales stories of 1987 will be the continuation of 1986's major sales stories: the success of the Ford Taurus/Sable models and the "disaster" of GM's E cars (Olds Toronado, Buick Riviera and Cadillac Eldorado); and the new Cadillac Seville.

Davis says the big story for 1987 again could be Taurus/Sable as production is boosted to 450,000 units annually from 300,000 units. The question will be whether the models can maintain their popularity in a market segment which will be relatively flat.

"Any faltering would hurt Ford's earnings and image," says Michael Luckey of Shearson Lehman Brothers. He notes that Ford took a major risk with the Taurus/Sable and it paid off by spreading a halo over the rest of Ford's line.

"GM is suffering from the opposite effect with the E and K cars," he says. GM's challenge will be to reposition the E and K cars and adjust the pricing, Luckey adds.

Small Cars

The 1986 model year set the stage for what's to come for the second half of the decade — that is, supply far outweighing demand and more companies vying for a piece of the pie.

Nowhere is that more evident than in the small-car market, and that trend will continue with even more intensity in 1987.

David Healy of Drexel Burnham Lambert says with gas prices remaining low, demand for "econocars" will drop off as consumers trade up for more upscale cars. Even so, Healy expects the U.S. market to be deluged by new economy entries from overseas.

Other analysts disagree. They say pricing in the economy segment and the availability of product, which will be even better in 1987, has been so attractive that it has created demand.

"For 1987," says Fricke, "the economy segment will continue to see favorable pricing and strength in sales."

Hammond sees the segment being redefined in the next 24 months with more low-priced South Korean cars coming to the U.S. and projects like that of Chrysler's America models. Chrysler offers its Omni/Horizon America with a low price and few option choices.

Luxury Cars

It's the same old story in the luxury market as the small car market: The imports dominate. However, the luxury end is dominated by Europeans, primarily the West Germans, and will continue to be dominated by the Europeans, the analysts say.

"Most of the growth of the luxury segment that we'll see in 1987 will be exclusively from the import side," Kirnan predicts. "The import luxury companies will be aggressive in 1987 and beyond."

Though the Europeans dominate the luxury market, Hammond says a major development in the segment will be the Japanese effort to move upscale. Honda's separately created Acura line is the one to watch, he adds. "That's a bellwether for what the other Japanese companies want to do."

Gruet expects the luxury segment to continue to grow because oil prices will remain low and because baby boomers are moving upscale and their earnings are reaching a peak. The number of households, for example, where incomes exceed $50,000 will double by 1990.

"They tend to own a larger, more luxurious car and a second car that is functional," he says.

Fricke disagrees. He believes the luxury segment has peaked. He notes that sales of high-priced cars in the first half of calendar 1986 were down 7 percent to 363,000 units. GM had the poorest performance in the segment with sales off 17 percent because of problems with its E and K cars, he says.

"The slack of the E and K failures has not been taken up by competitors, which shows the maturity of the economic cycle," Fricke adds.

In Between

The spotlight in the in-between market segments will be on the Big Three, all of which have major new entries in the middle market segments.

At Ford, the question is whether Taurus/Sable will sustain its success in its first full year of production.

The analysts unanimously agree that Chevrolet's L-body Corsica and Beretta models, which debut after Jan. 1, will have the greatest impact on the middle market segment of any entry. The cars fill a void left by the X-car.

"GM coming on with 400,000 L-bodies will put pressure on an already weak segment," contends Hammond.

Fricke wonders how well the Corsica and Beretta will do relative to Ford's Tempo/Topaz and Chrysler's K-car Aries and Reliant. The Chrysler models could pose an interesting challenge if, as speculated, they are offered in America packages like Omni/Horizon.

Chrysler's Sundance/Shadow models also will be part of the in-between picture for 1987.

At the same time, the Japanese have moved into the middle segment in full force and will be expanding their foray with new models.

Sullivan expects the longer term outlook for the intermediate and compact segment is intensified competition with the squeeze being on the domestics.

"Manufacturers will pick niches in the market where there are high margins and less competition," he says. The competition story in the small-car market began to unfold in 1986 and that competition will push out to other segments in the future.

"Incentives have postponed the day of reckoning," he says. "But how long will incentives be effective in delaying the inevitable?"

Trucks

Trucks will play a major role in 1987, mainly because of new entries.

Many analysts predict great success for the new Chrysler Dakota.

"They don't cost much more than smaller pickups, yet they can carry three people in the front and they have more cargo-carrying space," Glantz says. "I see it eating into import truck sales."

At the same time, he wonders about the success of GM's new full-size pickups. "I question the acceptance of the electronic dashboard," he says. "The popularity of those has declined in cars because it's hard to see in the daylight and trucks tend to be used commercially in the middle of the day."

Kirnan predicts the entire segment, because of new light trucks, minivans and sport/utility vehicles, will grow aggressively in the next five years.

At the same time, however, other analysts see capital spending by companies who buy trucks weakening. ■

Automakers' Ad Spending

General Motors (5) and Ford Motor Co. (7) were among the nation's leading ad spenders in 1985.

Advertising Age's survey of national advertisers showed other auto firms in the top 100 were: Chrysler Corp., 22; Toyota Motor Corp., 45; Nissan Motor Co., 49; Honda Motor Co., 55; American Motors Corp., 65; Volkswagen of America Inc., 67; Mazda Motors of America, 85.

Following are edited excerpts from *Ad Age*'s Sept. 4 issue.

Honda Motor Co.

($ in Millions)

Worldwide	1985	1984	% chng.
Sales	16,115	14,690	+9.7
Net income	811	712	+14.0
U.S. advertising	156	136	+15.0

American Honda Motor Co., the third largest auto importer in the U.S., increased its U.S. sales by 8.6 percent in '85 as it funneled its largest ad expenditures into a revamped Accord line and introduced its first luxury car.

The new Accord, launched in October, accounted for more than $26 million in media expenditures in 1985, most of it in network TV ($15.5 million) and magazines ($8.4 million). Honda showcased the Accords in TV spots themed "What will be," using the voice of veteran actor Burgess Meredith.

Print included a five-page insert using the same theme in major newsweeklies and an array of monthlies. National newspaper advertising was in *USA Today*.

Honda's new Civic accounted for $13.2 million and new Prelude for $9.1 million in media spending.

But the big news came in spring '86 when Honda entered the luxury segment with two Acura products — the Legend sedan and Integra hatchback. The Acura campaign, budgeted at $20 million for 1986 (40 percent Legend and 60 percent Integra, with a 50/50 split between TV and magazines), began in late March with an eight-page spread in national newsweeklies. Prime-time spots on network TV followed just before showroom intros in late March.

Honda still dominated the motorcycle, all-terrain vehicle and scooter markets in '85. Combined annual ad budget for the three is said to be more than $40 million.

American Motors Corp., posting a loss in '85 for the fifth time in six years, fell to No. 5 U.S. automaker, behind Honda of America Mfg. Co.

But AMC made no overall cuts in ad spending and held fast to its five-year, $2 billion product development program.

During the first quarter of 1986, AMC lost $18.9 million, compared with a loss of $29 million in the same quarter the previous year. An 18-percent sales gain by AMC's Jeep Corp. subsidiary, as well as cost-cutting programs, accounted for narrowing of the loss.

AMC's passenger car problems were related to its reliance on the small-car segment, which has shrunk from 22 percent of the total '83 market to 17 percent today.

In an attempt to gain ad efficiencies, AMC consolidated advertising to one agency, Saatchi & Saatchi Compton, which had been doing only Jeep ads.

Saatchi handled the campaign for the fall 1985 debut of Comanche, Jeep's first entry in the lucrative compact pickup market. It was pitched as a macho alternative to buying a small car. AMC spent more than $11.5 million during the last four months of 1985 to introduce Comanche, including about $6.4 million in network TV and $4.2 million in magazines.

AMC spent $6 million in a three-month introductory media blitz for its Wrangler (CJ replacement), featured the vehicle on at least 12 prime-time TV shows and ran sweepstakes tie-ins. AMC tried to bolster its sagging Renault car line by signing actor George C. Scott to a 14-month, $1 million contract.

In its 1985 ads, Chrysler Corp. tried to "be the best." In picking up market share, Chrysler was the best. It advanced a full percentage point to 11.4 percent — the industry's largest gain in U.S. car sales.

Chrysler continued the "All the Japanese you need to know" tag for '86 vehicles built for it by Mitsubishi Motors Corp. Chrysler's goal was to set its captive imports apart from its U.S.-built cars by positioning them as Japanese.

Chrysler's September-breaking ads for 1986 models were patriotic and comparative. Plymouth was "Born in America," and Dodge was still "An American Revolution." Chrysler-brand ads said, "Chrysler technology makes 'Made in America' mean something again." Plymouth was no longer the lost brand of Chrysler-Plymouth, getting a three-fifths share of C-P spending in the introductory quarter rather than the usual two-fifths.

In June 1986, Dodge unveiled its '87 midsize pickup, the Dakota. The vehicle is targeted to open a new market segment between compact and full-size pickups.

Chrysler spent $40-$50 million for a late-summer introduction of its Dodge Shadow and Plymouth Sundance. The kickoff of its 1987-'88 new product drive included: A new Dodge theme; Chrysler's first use of 15-second TV spots; U.S. Olympic team sponsorships; and heavier targeting of women. The campaign also was the first step in a sweeping restructuring of Chrysler's marketing divisions.

Chrysler, Plymouth and Dodge got more distinctive images and marketing tasks. Plymouth becomes a more upscale import-fighter pitted against Pontiac and the Japanese; Chrysler emphasizes luxury; and Dodge remains Chrysler's performance division. "Setting new standards of performance" replaced "An American revolution" as Dodge's theme.

Ford Motor Co. increased its '85 ad budget 17.4 percent to $461.5 million, inked a multiyear deal in April '85 with ABC for sponsorship of *Monday Night Football*, and broke a yearlong $100 million ad blitz — its biggest — for its new Ford Taurus and Mercury Sable in December '85.

Network TV rose 16.5 percent to $191.4 million, but spot TV fell 6 percent to $37.1 million. Magazine spending was up 18.1 percent at $114.7 million.

Ford targeted separate audiences for Taurus and Sable. Ford Division aimed at a more mass-market group. Mercury targeted affluent, trendy, well-educated buyers. Ford hoped to establish itself in the intermediate market before the Japanese could make the sort of inroads they made in the small-car segment.

Ford Division's '86 spending emphasizes magazines, both general circulation and women's books. Aside from Taurus, its creative sticks with old themes.

Lincoln-Mercury Division split '86 ads by brand and continued a thrust to have a more distinct identity from its sister division. It emphasizes more regional efforts, using dealer associations, and steps up efforts to reach women, blacks and young people.

Part of the strategy was to use popular recording artists in commercials to push the youthful image. As part of a sweeping approach to reaching women buyers, L-M made yearlong contractual buys in April 1986 issues of *Ms.*, *Savvy* and *Working Woman*.

Brightest spots among General Motors' car marketers in 1985 and early 1986 were Pontiac and Chevrolet Motor Divisions.

At least two major programs unfolded for Chevy in the 1986 model year. One was a huge effort to target women buyers. The other was a regional marketing effort — budgeted to receive up to $50 million in calendar 1986.

Pontiac, with its "We build excitement" theme, concentrated nearly all its advertising on "image" cars: Fiero, 6000, Grand Am, Firebird. In January '86, it launched a $4.5-million California regional campaign, was heavy on outdoor boards, spot TV, radio and 100,000 direct mailings. A separate $4 million campaign aimed at 18- to 24-year-olds broke in March 1986. It was concentrated on 300 college campuses.

Buick Motor Division experimented with a variety of unconventional marketing tools. Telemarketing, product information computer displays in airports and malls, and electronic hookups between headquarters and dealers are in place.

Oldsmobile Division continued its consistent mainstream ads that have created one of the strongest marketing images in GM's stable.

Cadillac Motor Car Division launched a campaign aimed at Hispanics in Florida in November '85 with its all-new Eldorado and Seville. A separate but related effort tied polo to the U.S. visit paid by Britain's polo-playing Prince Charles. Cadillac's other major effort involves paving the way for the Allante two-seat sports car.

Mazda Motors of America's ad spending was up 29.4 percent in '85, with network TV spending up 20 percent to $38.7 million, magazine spending up 24.3 percent to $22.2 million, and spot TV posting a 22-percent gain to $5.4 million. The B2000 compact pickup got the largest ad outlay ($19.2 million), followed by the 626 model ($18.5 million) and the RX-7 sports car ($16.2 million).

Ads followed the successful pattern of recent years, with the budget weighted toward national campaigns and away from regional buys on spot TV. The ads for the model year, however, did have a new look. Mazda marketers say the company's new ads, featuring actor James Garner, are making 1986 Mazda's best sales year yet.

As the '86 campaign unfolded, the creative approach disclosed a definite move to market upscale products, while sticking with a traditional price/value story.

Mazda began targeting wealthy, urban consumers for its new line of compact pickups. About half the 1985 budget was spent on trucks.

Fall promotions included the use of network TV, with the message aimed at men making over $35,000. Sponsorship included sports programs, top-rated weekend shows and Friday series.

The *Mazda Sportslook* series of

Nissan Motor Corp. in USA dropped its '85 ad spending to match a virtual absence of new products, but that didn't seem to hurt the company's momentum. It maintained its market share and posted record sales of both cars and trucks in the U.S.

The year 1986 was a continuation of the conversion from Datsun to Nissan. Ads, under the "Name is Nissan" theme, focused on building brand awareness. The slogan replaced the 18-month-old "Major Motion" theme, which many had labeled ineffective.

Compact trucks accounted for more than $38 million in media spending — the most of any Nissan product. Most went into spot and network TV.

Nissan's biggest media cut was in network TV, where it chopped spending by 31 percent from 1984. It continued its high profile on network sporting events, including *Monday Night Football*.

Media spending trends for '85 showed 35.2 percent of the total measured dollar going to spot TV; network TV, 27.3 percent; magazines, 13.4 percent; newspapers, 12.9 percent; spot radio, 9.1 percent; and lesser amounts in the remaining media.

Nissan's van and sport/utility vehicles, introduced in fall '85, got about $10 million in ad support. Balance of the '86 model year found Nissan cars getting about half the company's ad budget.

TV spots debuted in late March on the CBS telecast of the NCAA basketball championship and ABC's *Hardcastle and McCormick*.

Operating in an environment that restricts the importation of cars, Toyota Motor Sales U.S.A. — leading car and truck importer in the U.S. — threw its '85 media weight behind trucks, which do not fall under the terms of Japan's voluntary restraint agreement. Truck advertising, led by spot and network TV, topped $40 million.

Passenger cars accounted for only $6.2 million in '85 media expenditures. But some cars got special attention (like the MR2, which was supported by a seven-media outlay of $15.3 million).

Use of cable TV dropped to $4.3 million, down from $4.8 million a year earlier when Toyota was ranked eighth among the top 10 users of cable.

Toyota retired the "Oh, what a feeling" theme and replaced it with a slogan borrowed from George Gershwin ("Who could ask for anything more") for the new creative umbrella — the "more" emphasizing the company as a full-line marketer out to shake its image as a small-car marketer.

Toyota continued to use celebrity spokesmen, for the second year making use of pro golfer Lee Trevino to pitch the full line of trucks and vans. Supporting the TV effort was a major print campaign in magazines, a series of full-page, full-color ads, spreads and three-page gatefolds that singled out specific products.

Early this year, Toyota joined a sponsorship and marketing program with Opryland USA Inc. of Nashville, Tenn.

Volkswagen of America Inc.'s '85 ad spending rose 18 percent, reflecting sales increases and a more competitive U.S. market, which it will invade in December with its Brazil-built entry-level VW Fox. The Fox, which borrows a retired Audi name, is expected to sell in the $5,000 range.

The Fox is being counted on to help VW capture 3 percent of the total U.S. car market by 1990.

VWoA separated the marketing functions of Volkswagen and Audi operations. It stopped treating Audi as a "tradeup" brand for those who outgrow VW. Studies showed the strategy degraded Audi and didn't help VW. Doyle Dane Bernbach, Troy, Mich., continues to handle ads for both.

VW's '86 campaign focuses on value, quality and durability while keeping the "It's not a car, it's a Volkswagen" theme. One spread showing all VW models and titled "The smartest way to spend $50,000 on German engineering is to buy them all" plays up German heritage. There also is a TV ad effort to shed a "one-car company" image, which lingers among Beetle fans, before Fox comes.

Even before the '86 campaign, network and spot TV jumped from 55 percent of the national budget in '84 to slightly more than 60 percent in '85.

Audi's growth was stunted a bit in '85. "Audi, the art of engineering" theme was retained for '86. TV, equally split between network and spot, got less than two-thirds of Audi's $28.5 million media spending, with magazine buys at $10.9 million capturing nearly all the rest.

Reznor beat the Japanese by a comfortable margin in cost, performance, and fuel economy.

The Japanese, and other off-shore people, aren't significant competitors with Reznor, because they can't match our quality, service, and price. For ninety-eight years, Reznor has set the pace in heating systems and equipment for commercial and industrial buildings... and now we're widening the gap, with all foreign *and* domestic producers.

Cut fuel costs 50%.

Our new line of Venturion space heaters can reduce fuel costs up to 50%, and achieve a payback in less than two years. Many companies have replaced functioning, but wasteful, existing heating systems when they saw all the specifics and the dollar and cents figures that you can examine for your building.

Call us today for a free heating audit.

If you would like to have a free audit of your heating system, or case histories of how other companies have benefitted from Reznor's new, high efficiency heating systems, write to Reznor, McKinley Avenue, Mercer, Pa., 16137, or call our toll-free number:

LEADING AUTOMOTIVE MANUFACTURERS ON TELEVISION

Auto spending on TV rises 18% for 1st half

By Edward Lanham
ADWEEK/NEW YORK BUREAU

The biggest increase was in spending by the dealer associations. The total in that category went up 35 percent to $223.6 million.

Automotive television advertising expenditures in the first half of 1986 totaled nearly $1 billion, according to the Television Bureau of Advertising.

Combined expenditures by manufacturers, importers, dealer associations and individual dealers in the January-June period were $969.1 million, up 18 percent from $824.7 million in the first half of 1985.

The 18 percent increase in spending is a real increase, according to estimates by the trade paper Advertising Age.

Fred Danzig, editor of Advertising Age, said the cost of commercial time in the type of programming generally bought by the auto companies "was just about flat." The first-half year-to-year increase was "almost nil," he said.

"If they bought more (commercial time) this year, it was because they were getting more for their money," Danzig said.

The biggest increase was in spending by the dealer associations. The total in that category went up 35 percent to $223.6 million, according to TVB.

Part of the rise resulted from an increase in regional marketing programs and more tie-ins for 'annual-percentage-rate finance incentive' advertising. It also reflected improved measurement of factory-generated creative advertising, which is used by dealer associations.

That was most apparent in the Toyota dealer association total, which increased 256 percent, much of that due to the improved monitoring and reporting methods.

Nissan dealer associations, however, continued to lead the category, although their expenditures increased only slightly, according to the TVB figures.

First-half automotive corporate television ad spending increased 15 percent to $377.8 million, according to TVB. Ford Motor Co., which boosted its TV ad spending 18 percent, led that category.

In the individual dealer category, which TVB said increased 9 percent, three Cal Worthington dealerships led the pack with increases ranging from 23 to 87 percent. The Worthington dealerships are in Los Angeles; Sacramento, Calif.; and Seattle.

TVB analyzes data provided by Broadcast Advertisers Reports, which monitors the top 75 U.S. markets. This year, BAR has increased its full-time monitoring to additional markets.

Atlanta, Dallas/Forth Worth and Philadelphia have joined New York, Chicago and Los Angeles as markets that are monitored full-time, rather than just one week per month. By the end of the year, BAR intends to monitor 17 markets full time.

DOMESTIC-CAR SUPPLIES

New-car supply drops to 60 days as lower finance rates ignite sales

Blistering sales, coupled with curtailed production, clipped Sept. 1 new-car inventories to the lowest point recorded in nearly a year.

Heavy showroom activity touched off by the finance-rate wars resulted in a 60-day supply of unsold units on Sept. 1. That compares with 69 a month earlier and 51 a year earlier. It was the lowest supply figure computed by Automotive News since the 38 days on Oct. 1, 1985. Most days-supply figures for 1986 have been in the 70s.

Actual count Sept. 1 was 1,557,291, a nine-month low. That was down from 1,725,524 a month earlier, but was higher than the year-earlier 1,413,483. It was the lowest since 1,433,567 on Nov. 1, 1985.

Among domestic makers with lower figures on Sept. 1, Volkswagen of America appeared to be in the best shape with a 59-day supply, compared with 71 days on Aug. 1. Chrysler Motors had a 62-day supply, down from 66 a month earlier. General Motors was close behind with a 63-day inventory, down from 79. American Motors was down to 142 from 148.

Ford's stock was good for 57 days of selling, compared with 53 the previous month. Honda showed an eight-day supply, up from six days.

In a statistical anomaly, Nissan showed a days-supply figure of 1,494, compared with 21 a month earlier. That's because there were virtually no Nissans to sell in the period on which daily rates are calculated.

Companies shared the Sept. 1 inventory as follows: General Motors, 58.34 percent; Ford Motor Co., 22.86 percent; Chrysler Motors, 15.30 percent; American Motors, 1.95 percent; Volkswagen of America, 0.95 percent; Honda, 0.42 percent; and Nissan, 0.18 percent.

A month earlier, shares had been: GM, 62.40 percent; Ford, 20.09 percent; Chrysler, 14.58 percent; AMC, 1.72 percent; Volkswagen, 1.01 percent; Honda, 0.19 percent; and Nissan, 0.01 percent.

Shares by market class on Sept. 1 were: Intermediate, 34.78 percent; compact, 20.38 percent; subcompact, 18.80 percent; standard, 14.29 percent; and luxury, 11.75 percent.

Shares on Aug. 1 had been: Intermediate, 37.74 percent; compact, 19.83 percent; subcompact, 17.64 percent; standard, 13.93 percent; and luxury, 10.86 percent.

Subcompacts on hand Sept. 1 were good for 51 days of selling, compared with 61 a month earlier. By makes, supply figures were: Honda, 8; Horizon, 27; Omni, 30; Escort, 47; Nova, 47; Shadow, 56; Golf/GTI, 59; Lynx, 61; Sundance, 66; Charger, 67; Turismo, 68; Fiero, 76; Daytona, 77; Chevette, 95; Encore, 106; Pontiac 1000, 106; Laser, 122; and Alliance, 159. Only makes to have a higher supply figure than a month earlier were Alliance, Chevette, Omni, Horizon and Honda (insignificant).

There was a 64-day supply of compacts as the month opened, compared with 62 days on Aug. 1. The Sept. 1 tally by makes showed: Mustang, 39 days' supply; LeBaron, 55; Topaz, 61; Firebird, 62; Tempo, 63; Cavalier, 64; Cimarron, 64; Reliant, 66; Aries, 68; Camaro, 69; Sunbird, 79; Capri, 83; Firenza, 84; Skyhawk, 90; and Eagle, 149.

In the intermediate class, the days' supply of 59 was down from 73. Individual totals were: Grand Am, 33; Calais, 41; Celebrity, 42; Cutlass Ciera, 47; LTD, 49; Marquis, 50; Pontiac 6000, 50; Cougar, 52; Cutlass Supreme, 59; Sable, 64; New Yorker, 64; Century, 67; Thunderbird, 70; Taurus, 75; Somerset/Skylark, 77; LeBaron GTS, 79; Dodge 600, 81; Monte Carlo, 85; Caravelle, 88; Lancer, 92; Regal, 101; and Grand Prix, 136.

Among standards, the days' supply was 65 on Sept. 1, down from 74 on Aug. 1. By makes: Grand Marquis, 44; Parisienne, 57; Crown Victoria, 59; Plymouth, 63; Diplomat, 63; Oldsmobile 88, 64; Chevrolet, 76; and LeSabre, 77.

There was a 71-day supply of luxury cars, down from 80 days a month earlier. By makes: Fifth Avenue, 61 days; Lincoln, 62; Cadillac, 66; Electra, 67; Continental, 72; Oldsmobile 98, 73; Riviera, 78; Mark VII, 80; Eldorado, 83; Corvette, 93; Seville, 119; and Toronado, 129.

WHAT HAPPENS WHEN YOUR CUSTOMERS FIND OUT THEY'RE LEAVING WITH LESS SUBARU THAN THEY CAME IN WITH?

We'd rather not find out.

There's a good reason why we at Subaru have been rated one of the highest in overall customer satisfaction.

It's because our customers trust Subaru and their Subaru dealers.

But a customer's trust can easily be shaken. All it might take is discovering he got something he wasn't expecting. A non-genuine Subaru part.

To insure customers receive genuine Subaru parts when they need them, we've set up a state of the art, fully automated parts distribution center in Southern California. This, coupled with 13 regional distributor warehouses and the Subaru Star Dealer Computer System, lets you locate genuine Subaru parts anywhere in the country.

After all, customers come to a Subaru dealer for Subaru quality. Don't you agree they shouldn't leave without it.

SALES

Incentives push early September to highest-ever 368,674 deliveries

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Sales incentives work.

Early September new-car sales by the seven domestic auto makers totaled 368,674, a record for the Sept. 1-10 period.

It was also the highest total for the first 10 days of any month, and the ninth largest tally for any 10-day period in history.

The record 10-day period was the final period of September 1972 when sales reached 485,631.

This year, Sept. 1-10 had eight selling days and full coverage from the ultra-low finance rates. Sales broke the old Sept. 1-10 record of 235,679 set last year by a whopping 56.4 percent. On a daily-rate basis, the sales total was up 36.9 percent.

On a straight volume basis, year-to-year increases ranged from 17 percent for Volkswagen to 75 percent for General Motors and Honda. Nissan, which is still building inventory after several months of model-changeover downtime, was down 46 percent from last year.

General Motors, with its "Big One" 2.9 annual-percentage-rate program, led the parade with a 53.4 percent daily-rate increase over the first 10 days of September 1985. It averaged 29,032 per day this year versus 18,931 per day last year. Each of the GM car and truck divisions reported records.

Honda, operating without an APR finance incentive, also posted a 53.4 percent daily-rate gain to 839 from 547 per day in early September last year.

Chrysler Motors reported a 39.1 percent gain in sales of domestic cars, as the daily rate increased to 5,887 from 4,232, also a period record as well as a record for the early period in any month.

American Motors' daily-rate sales of Alliance, Renault and Eagle totaled 498, up 5.7 percent from 471 in the same period last year.

Ford Motor Co.'s car sales were up 5.1 percent, to a daily rate of 9,562 from 9,096 last year. That increase was strictly on the basis of Ford Division results; Lincoln-Mercury sales for the period declined on a daily-rate basis.

Daily-rate sales of U.S.-built Volkswagens rose 2 percent in the period to 154 from 151 last year.

Nissan, which only recently resumed U.S. car production after model changeover, was short of cars and saw its sales of U.S.-produced cars tumble 52.9 percent to 113 per day from 240 per day in early September last year.

Holidays reduce sales in Japan

TOKYO — Domestic sales of Japanese automotive vehicles dipped slightly in August for the first time in four months, according to the Japan Automobile Dealers Assn.

JADA reported total vehicle sales at 214,872 units, down 1.3 percent from a year ago. It attributed the drop to fewer business days during the month because of summer holidays.

Of the total sales, cars accounted for 154,107 units, a decline of 1.9 percent from the year before. Small-car sales dropped 2.8 percent to 149,164 units, while medium-size cars were up up 35.7 percent at 4,943 units.

Domestic sales of trucks in August were up 0.4 percent from last year at 59,424 units. Small trucks accounted for 52,256 units up 1 percent, while large trucks dropped 3.9 percent from the year before to 7,168 units. Bus sales during the month were up 1.5 percent to 4,943 units.

INCREASE USED CAR PROFITS

IMPROVE SALES • ORGANIZATION • GROSSES • CUSTOMER SATISFACTION

THE USED CAR MANAGEMENT MANUAL

5 yrs. research, testing—nation's most comprehensive guide. Already helped over 500 new and used car dealers. All sizes and levels of experience will benefit. Featured in N.A.D.A. Guide, Automotive News, N.I.A.D.A. and others.

HERE'S HOW YOU CAN PROFIT FROM THE MANUAL

Improve Sales and Grosses
- Customer Tracking & Follow-Up System
- Advertising Techniques to Control Costs & Increase Traffic

Improve Organization
- Dozen Management Forms to Improve Reconditioning, Control Lot Functions, Improve Daily Operations

Increase Employee Productivity
- Training Programs for Managers & Staff
- Job Descriptions & Motivational Techniques

Improve Financial & Inventory Controls
- Financial Planning, Statements, Cash Flow, Inventory Planning and Ratios

Do you want the best results for your advertising dollar? Advertise in the Classified Section of Automotive News.

Put this computer system to work and your dealership will handle like a dream.

With software customized for your specific needs by a Value-Added Reseller, and Texas Instruments hardware designed to handle your growth, you'll wonder how you ever got along without it.

What the auto dealership needs today is one solution for Sales, Service, Parts, and the Business Office. One system that computerizes each department while giving you what you need most. Control.

And that's exactly what this dealership system is all about. It's a total system solution from a computer company that's been in the automotive business for over a decade. And it puts you in the driver's seat.

TI Value-Added Resellers will help steer you in the right direction.

Your system's software can be designed for each department's needs and the dealership as a whole, and comes from an automotive market expert who knows about TI's full range of technologically advanced products. No matter what size your operation, small, medium or multifranchise, TI can provide you with the right hardware. TI has a system that can handle your needs today, and expand for tomorrow as your needs grow. Our service and support people are easy to work with too. Our network stretches from coast to coast and features four-hour response time in many locations, among other options.

But the real story is its superb handling. Get behind the wheel of a Texas Instruments system, and you'll find your dealership will drive a lot smoother. In fact, it'll handle like a dream.

Call 1-800-527-3500, for the TI-authorized reseller specializing in automotive dealership systems nearest you.

Excalibur rescue plan is temporarily halted

By Scott Miller
AUTOMOTIVE NEWS STAFF REPORTER

A plan to rescue financially troubled Excalibur Motor Corp. from bankruptcy was temporarily halted when a federal judge in Milwaukee denied the motion for a buyout.

An Illinois company had proposed to buy the maker of neoclassic cars and is appealing the court's decision.

Bankruptcy Court Judge Charles Clevert sided with two objectors who claimed that the proposed sale price of $1.78 million was artificially low.

R.V. Robinson, an Atlanta Cadillac dealer, and M.L. Coleman, an Excalibur litigant from Dallas, objected to the proposal.

They said a company in Chapter 11 reorganization cannot circumvent the normal procedures that are guaranteed creditors. They claimed the proposed price would not be enough to cover the debts.

Last spring, Robinson invested $95,000 in Excalibur. Excalibur Executive Vice President William Stevens said it was part of a contract that would have given Robinson control of the carmaker.

Robinson was to inject some $1.8 million in equity and assume 51 percent ownership. The agreement also called for Co-owners Stevens and his brother, David, to be minority stockholders and to remain managers.

Robinson backed out last spring after a court decision released him from the pact.

The two objectors were not part of the creditors' committee. The committee did not object to the offer.

Henry Warner, president of Acquisition Co., a Bannockburn, Ill., firm that proposed the sale, said he was disappointed with the judge's decision.

"We are investigating other methods that would allow us to buy the company," he said.

Acquisition's newly formed subsidiary, EMC, was to have acquired Excalibur. Warner said Acquisition, comprised of a group of investors, buys failing businesses and attempts to turn them around.

The case has been appealed to the U.S. District Court of Appeals in Milwaukee, but Excalibur's attorney said that action may be moot.

Joseph Niebler, attorney for Excalibur, said it could be two years before a decision is reached. The financial condition of the company can change during that time. "The assets deteriorate, employees leave," he said.

Niebler added that the buyer probably wouldn't wait two years for a judgment.

William Stevens said Excalibur has recently been approached by still another interested buyer — from Columbus, Ga. — who offered $2 million for the company. Excalibur's attorneys are reviewing the offer.

Excalibur, based in Milwaukee, filed for bankruptcy protection in October 1985 and stopped car protection early in June 1986. At the time of filing, Excalibur officials estimated the company owed $4.53 million to at least 500 creditors. Excalibur estimated its own value at $5.62 million.

Marshall and Illsley Bank, of Milwaukee, is the largest creditor. When bankruptcy papers were filed, Excalibur owed M&I about $1.79 million. Money Pension Insurance Corp. of New York was the next largest creditor at $1 million.

Recently, M&I Bank was granted the right to liquidate Excalibur's assets to recover its collateral. However, no plans have been made for liquidation, according to Anthony Di Castri, vice president of M&I. He said Excalibur has been gradually paying off the debt since the October 1985 filing.

Stevens said all of the original debt to M&I has been repaid, but M&I loaned Excalibur another $500,000 to continue operations. About $350,000 of that loan is still outstanding.

Niebler said that if Excalibur is forced into liquidation the company will be lucky to get $1.78 million for its assets.

William Stevens said a decision on the company's future should be made this week.

Excise tax proposal is scuttled

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — The chief tax reformer in the House, Illinois Democrat Dan Rostenkowski, told members of the American Automotive Leasing Association last week, "you can expect an excise tax in your future," probably on gasoline.

As it turned out, however, the congressman spoke too soon.

Questioned later in the day, Rostenkowski — who chairs the House Ways and Means Committee — said he had learned in phone conversations following his speech that the Democratic leadership "seems to be backing off the tax plan," which in fact was scuttled the following day, Sept. 16.

Rostenkowski, who is often mentioned as a possible successor to retiring House Speaker Thomas P. "Tip" O'Neill, has made several statements in recent weeks supporting a tax increase to help reduce the federal budget deficit. He said at last Monday's AALA meeting that he would not support a value-added tax, because "it is a hidden tax."

"It hurts the poor," he said.

A value-added tax, which has been touted by Chrysler Vice Chairman Robert S. Miller Jr., is a tax levied on products before they reach consumers. Value-added taxes are collected on imported products along with domestic products.

Rostenkowski said he expected AALA members to grill him over the loss of the investment tax credit and changes in vehicle depreciation schedules. He told them, After all the arguments and unfairness you are going to suggest to me, just remember the rates." The top corporate rate in the tax bill is 34 percent and the top personal rate is 28 percent.

"Now, you've got to pay for that, and that's how you pay for it," he said.

Rostenkowski said disclosure of transition rules in the tax-reform package, which specify who will receive special tax favors under the bill, have been delayed because, "I want staff to give us a good narrowness and interpretation of what we are doing. I don't want to come back next year with 1,000 pages of technical corrections."

Rostenkowski said he hoped President Reagan would be able to sign the tax bill by Sept. 30 and added, with respect to tax reform, "I'd like to hang a 'Gone fishing' sign on the door of the Ways and Means Committee next year."

Tax threat looms for closely held lessors

by Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — Leasing authorities feel that portions of the House-Senate tax bill designed to wipe out abusive tax shelters will hurt vehicle leasing companies that are owned or controlled by only a few shareholders.

A tax panel at last week's midyear meeting of the American Automotive Leasing Association said that the proposed law "has the result of including as passive activities all rental activities, of which the leasing of vehicles is one type."

The new tax bill ends the writeoff of losses incurred in passive investments by closely held companies, individuals and partnerships, they said.

The panel said that under that provision, a closely held company is one in which not more than five persons owned more than 50 percent of the stock at any time during the last half of the taxable year.

The panel said, "This provision means that if after taking into account all other changes in the tax law, such as the reduced depreciation and the alternative minimum tax provisions, the company still shows a taxable loss, this loss cannot be used to offset the income of any interest, dividends, or royalties not derived in the ordinary course of the trade or business. This includes any gain or loss on the sale of such property."

The AALA panel said that if the passive-losses provision is not changed, the leasing industry will seek a technical correction to the bill during the next Congress.

Members of the panel were John Winburn, a Washington lobbyist for Jones & Winburn; Earl Holtzman, a certified public account with Michael Silver & Co.; and attorney Ed Groobert, of Volpe, Boskey & Lyons.

STUDY

FROM PAGE 1

their company stood in its current performance.

In the order of importance, the list included: the percent of products that are made properly the first time; the amount of lead time from the concept to start of production of new products; the percent of products that meet cost objectives after the first year of production; the amount of up time on new equipment during the first year of production; the total production lead time from the start of production through shipment of the product; and the number of days needed to make engineering changes.

In almost every category, the gap between world-class and current performance showed that the companies are only one-half or one-third of the way toward world-class performance.

For example, the executives said that world-class performance meant that 90 percent of the products would be made properly the first time. Current performance, however, was only 50 percent.

They said that total lead-time from the concept of a new product to the start of production should be 36 months to be world class. It currently takes 60 months.

The percentage of products that meet cost objectives should be 80 percent to be world class but currently only 50 percent meet cost objectives, they said.

New equipment up time should be 90 percent, but current new equipment up time is only 60 percent.

Total production lead time from the first operation to shipment takes three days when it should be two days to be world class. The number of days needed to process an engineering change should be 30 days but is now 100 days.

The survey also asked when executives thought their companies would be world class in various categories. Those categories included inventory turns, rejects per million, processes that are controlled by something like statistical process control, projects that are on schedule, cost versus the Japanese, setup time and utilized capacity.

In six of the categories, roughly a third said they would be world-class in those areas by 1990. That means two-thirds don't expect to be world-class until some time after 1990.

A third said they would never be world class in inventory turns.

Are demos cutting-into your profits?

Ever consider how expensive salesmen's demos are to your Dealership? Well, if you haven't there is no better time than the present.

- Insurance Rates
- Allocations
- Declining Profits

All subtracting from your bottom line.

Now, there is a solution. With dedication and a firm understanding of your needs, Wheelways has designed innovative supplemental Dealership Financing guaranteed to stop the demo dilemma. In addition, you are insured with $5,000,000 of liability coverage on each vehicle you finance with us.

For more information, complete & mail the attached coupon. Or call Wheelways today, (215) 642-8400.

ALFA

FROM PAGE 1

centerpiece Ford's plans for the 1990s.

Ford has laid the groundwork of a package that has the backing of Alfa Romeo management. But some Ford sources fear Fiat will capitalize on Ford's months-long effort to put an accurate price tag on Alfa and — on the strength of Ford's respected financial judgment — swoop in with a marginally better 11th-hour offer.

On the other hand, there have been some complaints in Fiat circles that the Ford package is cleverly structured to disguise the fact that it is a nominal-price takeover of a beloved Italian brand name by a foreign entity.

Despite its poor financial condition, Alfa offers Ford a desirable European marketing and product development tie that could pay dividends in both North America and Europe.

Historically, Fiat has shown little interest in Alfa, which commands only 1.5 percent of the European market. But Fiat is apparently worried about Ford expanding, via Alfa, in the Fiat-dominated Italian market, and is also interested in enlisting the Alfa marque to become a bigger force in larger and sportier car lines.

There was speculation last week that Ford and Alfa floated word of an impending agreement to draw a response from Fiat, which has enormous political clout in Italy and the ability to martial public opinion.

Ford is said to be attempting to avoid the sort of last-minute public and political outcry which doomed its efforts to purchase the Austin Rover Group from the British Government earlier this year.

Apparently, the public relations concern has led to structuring a deal requiring Ford to put up cash proportionate to its share of Alfa's debt. The alternative would be a takeover similar to Fiat's one-lira acquisition of Lancia a few years back — a package not apt to be well-received by the Italian people.

Ford would reportedly pay about $95 million for a 20 percent share of Alfa Romeo that would be increased to 51 percent ownership over a three-year period. It is not known how much would be paid for the additional 31 percent.

Some sources said the final package was put together Sept. 12 in London. Yet there was word in London and Milan early the following week that though industrial issues were settled, not all financial details had been resolved between Ford and IRI/Finmeccanica, the government holding companies which own Alfa Romeo.

There was said to be lingering debate over the range of veto power the Alfa holding company would retain as a minority shareholder, the amount of Alfa debt Ford would assume and whether Ford would get a "divorce clause" enabling it to withdraw prior to taking majority control.

The deal reportedly calls for Alfa Romeo to maintain its independent identity, product range and sales network. Ford would help Alfa distribute cars and parts and provide service in some areas.

In the United States and other selected markets, Ford dealers would be appointed to handle Alfa Romeo dealers, but would have to have separate facilities.

Alfa produced 157,625 cars and 2,938 commercial vehicles last year, far less than the 450,000-unit capacity of its two assembly plants.

At Pomigliano, Alfa would eventually produce a version of a new Ford global car under the auspices of Ford's clean-sheet Alpha project, with interchangeable parts sourced throughout the world.

Pomigliano would join a network of existing Ford affiliates, including Mazda in Japan, Ford Lio Ho in Taiwan and Kia in Korea, turning out flexibly designed replacements for its Escort range — on which Ford is reportedly losing money in Europe — and its North American Tempo and European Sierra lines.

The global strategy marks a fundamental difference between General Motors' Saturn small-car program and Ford's Alpha. GM executives have largely dismissed the world-car concept, while it is the centerpiece of Ford's long-term program for offsetting overseas cost advantages in smaller segments.

Ford officials in Dearborn have embraced a global-car framework that would allow regional marketing capability and individual tailoring of of vehicle packages for specific world markets.

In Europe, Ford and Alfa apparently have settled on an arrangement by which Alfa Romeo would assemble an early 1990s Sierra replacement with 80 percent "global" content and 20 percent Alfa componentry and styling geared for the European market.

One potential snag seems to be the level of Alfa debt Ford is willing to underwrite. Alfa, which is believed to have stacked up short- and long-term obligations of more than $1 billion while losing money for 13 consecutive years, has said it expects to break even by 1989. However, many industry many observers are not forecasting profitability before the early 1990s. Alfa is expected to run about $156 million into in the red in 1986, down from more than $300 million in losses last year.

Some reports have Ford balking at assumption of a large share of debt, which could conceivably be written off in part by the Italian government. But there have been reports that Ford will invest up to $2.25 billion during the next several years to modernize Alfa facilities.

Another possible stumbling block is the issue of veto power. There was some suggestion that the Italian government might insist on authority to prevent plant closures or relocation of facilities outside the country, even without a majority position.

After the two companies acknowledged they were close to a final agreement last week, Italian industry minister Valerio Zanone expressed "satisfaction" with the Ford package, but nevertheless invited Italy's domestic industry, namely Fiat, to respond.

Cesare Romiti, managing director of Fiat, almost immediately said the company would be willing to reopen talks with Alfa. In a statement, he said Fiat had developed new proposals which it had not voiced in order to avoid disrupting ongoing Ford/Alfa talks.

The Italian firm has declined to spell out the content of its proposal. "We have ideas which we are more than happy to tell the world if and when the Alfa/Ford talks are over," said the spokesman.

After Ford and Alfa revealed their negotiations in May, it came to light that Alfa had previously entertained proposals from Fiat. The Fiat plan was described at the, time as a joint venture at the Pomigliano plant and cooperation with a third party, possibly Saab or BMW, at Arese.

Fiat backed away when Ford entered the picture, and a company spokesman said last week that Fiat has stayed clear of the current negotiations.

PRODUCTION

Auto production slips

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Last week's domestic production of 149,411 cars was down a bit (1.06 percent) from the previous week's 151,008, which was the highest total in 10 weeks.

Last week's output was 5.50 percent below the year-ago week's 158,101.

Companies shared last week's scheduled production as follows: General Motors, 54.12 percent; Ford Motor Co., 21.88 percent; Chrysler Motors, 14.52 percent; Honda of America Manufacturing Inc., 2.95 percent; New United Motor Manufacturing Inc., 2.50 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.49 percent; Volkswagen of America, 1.34 percent; and American Motors, 1.20 percent.

GM's Tarrytown, N.Y., plant is down this week because of a material shortage; 4,388 workers have been idled.

Ford plants in Lorain, Ohio; Edison, N.J.; and Chicago begin producing 1987 models this week.

GM scheduled no Saturday (Sept. 20) overtime.

All Ford car plants except Lorain, Ohio, are scheduled for daily overtime this week.

Ford's Wixom, Mich., plant is slated for Saturday (Sept. 27) overtime. Chrysler's Belvidere, Ill., and St. Louis No. 2 plants are slated for two nine-hour daily shifts.

Trucks hold above 75,000

Domestic truck production totaled 76,281 last week, down 3.01 percent from the previous week's 78,625, which was the highest count since the week ended Dec. 14, 1985. The industry built 83,892 trucks in the December week.

Truck output has topped 75,000 in each of the last two weeks, the first times since June that that figure has been reached.

Last week's production was 8.20 percent better than the year-ago week's 70,481.

Year-to-date, 2,606,573 trucks have been built, 3.76 percent more than the 2,512,114 completed last year at this point.

General Motors' heavy-duty truck plant in Pontiac, Mich., is down for one week for inventory adjustment, idling 1,400 workers.

Ford Motor Co. said its Wayne, Mich., plant is down this week for "engineering modifications on parts." The plant may also be down next week.

GM's Baltimore plant was slated for two overtime shifts Saturday (Sept. 20).

All Ford plants except Lorain, Ohio, are scheduled for daily overtime this week.

Chrysler Motors' Warren, Mich., plant is slated for two nine-hour daily shifts this week.

Canada trucks top 600,000

Truck production in Canada passed the 600,000 mark last week, a week behind 1985.

So far this year, 610,322 trucks have been assembled, 2.05 percent fewer than the 623,115 built last year at this time.

Last week's target of 14,850 trucks was the highest since the 16,564 built the week ended June 28.

Last week's build was 4.52 percent better than the year-ago week's 14,208.

In each of the past two weeks, car production has topped 20,000 units, a total that had not been achieved since the end of June.

Scheduled production of 24,722 cars last week was the best since the 24,560 for the week ended June 28.

Last week's estimated production was 14.59 percent more than the previous week's 21,574, which fell some 3,900 cars short of target.

Year-to-date, 751,203 cars have been assembled, 2.46 percent fewer than the 770,174 completed last year at this time.

GM minivan won't go to Framingham

By Michelle Krebs and Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors' plastic-bodied minivan will not be built in Framingham, Mass., as originally planned.

David Campbell, GM vice president in charge of manufacturing for the Chevrolet-Pontiac-Canada Group, said Framingham has been ruled out as the source for the minivan. He did not say where it would be produced.

Campbell also said that the plan to locate a facility adjacent to the assembly plant to produce the plastic body panels has been scrapped. There is no time to do that now, he said.

CPC had planned to have a contiguous facility. However, the town of Framingham refused to rezone property for the plastics plant, which made the Framingham location less desirable as a source for the minivan.

In addition, union members in Framingham have refused to reopen local contract talks. CPC wanted a local contract that included teams, much like it has in other plants.

Pontiac and Chevrolet will market the minivan, known within GM as the all-purpose vehicle (APV) or the GM200 program. It is slated for 1989 introduction and will have plastic body panels, as does the Pontiac Fiero. Pininfarina Industrie SpA, the Italian design house and manufacturer, will do the engineering and prototypes.

The Framingham plant will continue to produce GM's A-cars. It now assembles the Chevrolet Celebrity and Oldsmobile Cutlass Ciera.

"We're building A-cars there, and we need A-car plants," Campbell said.

The GM10 program was to have replaced the A-cars. However, GM has stretched out the GM10 program, a massive mid-sized car program, over a longer time period and has extended the life of the A-cars, perhaps into the 1990s.

CPC said it is looking at each of its plants as a possible location for the APV. However, plants which have no future product planned are more likely candidates. Those would include assembly plants in Pontiac, Mich.; North Tarrytown, N.Y.; Arlington, Texas; and Ste. Therese, Quebec.

GM also is considering building two entirely different models in its Van Nuys, Calif., plant. The plant now produces Pontiac Firebird and Chevrolet Camaro.

Campbell said it makes sense to build in California vehicles that are sold on the West Coast. GM is trying to improve its market share in California.

He noted that at one time, the plant produced Corvairs and trucks at the same time for sale in California.

Van Nuys workers have feared the plant would be closed. Workers at the plant recently agreed to an innovative labor contract that uses teams of workers. In addition, the life of the present Firebird and Camaro has been extended into the 1990s.

The GM80 program, which was the front-wheel-drive plastic-bodied replacement for the Firebird and Camaro, has been canceled, or at least put on hold until the 1990s.

South Asia hoping for surge in industry

By Andrew Tanh
STAFF CORRESPONDENT

SINGAPORE — South Asia is emerging as an important auto manufacturing region, a significant exporter of low-cost vehicles and components built by low-paid workers and eager governments.

South Asian governments are delighted by the soaring Japanese yen. It is giving added momentum to the region's development, which had been stalled by acute economic recession.

In the process, real effects could be felt in the United States, such as Chrysler Corp. possibly importing Malaysia's Proton Saga as an Omni-Horizon replacement.

For the longer term, South Asian planners are impressed at how other developing nations — as diverse as South Korea, Spain and Mexico — have used the auto industry to reduce rural poverty. They have encouraged an infusion of foreign technology and capital — mostly from Japan — and insisted that the proportion of locally made parts should increase at a fast clip.

AUTOMOTIVE NEWS CHARLOTTE WIRTZ

South Asia is one of the few remaining major unexploited auto markets, and it is poised to be the next to develop rapidly.

By the early 1990s, India, Indonesia, Malaysia and Thailand will each have an integrated auto manufacturing industry using some of the latest assembly techniques. Even two of the world's poorest nations — Bangladesh and Nepal — are in the early stages of setting up fledgling assembly plants.

The scope is vast. South Asia already has 1 billion people — one-fifth of the world's total. The region spans the same distance as from New York to Anchorage, Alaska, and contains massive un-

Market shifts seen as way to head off excess production

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Massive losses from overcapacity in the United States can be avoided — if Japanese automakers shift into the right market segment.

The latest Automotive News World Outlook, a service of Automotive News and the economic forecasting firm Data Resources Inc., shows that an enormous glut in capacity — and the price war and red ink that would result — can be avoided.

"There doesn't have to be lot of price slashing and it doesn't have to be a financial loser for everybody," said John Hammond, DRI's U.S.-based economist.

However, he said, U.S. and Japanese companies must act fast and make their moves by 1988 or 1989, the first years of major overcapacity problems.

More than a year ago, the World Outlook said the U.S. auto industry was headed toward an overcapacity problem, particularly in the subcompact segment. It looked as if there were no way out.

The forecast then showed that production capacity in the United States and in plants in foreign countries aiming their products at the United States would increase about 15 percent by the end of 1990. At the same time, annual vehicle demand was estimated to increase only 7 percent by the end of 1990.

The somber scenario for the United States resembled the recent situation in Europe. The World Outlook had predicted intense price competition and a financial bloodbath, particularly for domestic automakers.

But now, said Hammond, "the car companies are doing the simple arithmetic. The question is, how do they deal with it?"

The domestics, Hammond said, will deal with it by cutting back their domestic production plans.

Profits hold for used cars while APRs reduce sales

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The current round of annual-percentage-rate finance incentives has softened late-model used-car sales in some markets, but gross margins seem to be unaffected.

"There is no question that the APRs are depressing the late-model used-car market," said Lynn Weaver, editor of the National Automobile Dealers Association's Used Car Guide.

"The market is very soft right now," Weaver said. "With APR, you can get into a new car for the same or less than you can get into a late-model used car."

Nonetheless, independent used-car dealers and new-car dealers with used-car lots said last week that per-unit profits were holding, or even increasing.

"The strength of the used-car

Austin Rover execs ousted in shuffle

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

Rover Group Chairman Graham Day shook up top management at the sagging Austin Rover car division last Thursday. The chief executive and two other senior officers were replaced and a new head of marketing was appointed.

Austin Rover Chairman Harold Musgrove, a 40-year company veteran, will take early retirement effective Oct. 1. Mark Snowdon, chief product planner, and Peter Regnier, finance director, left the company.

The changes coincided with the announcement of a $300 million first-half loss for Rover Group. The deficit includes a $90 million loss for Austin Rover.

Under the new alignment, Day becomes chairman of the car unit, and Les Wharton, currently managing director of Leyland Trucks, becomes managing director. They will share Musgrove's previous duties.

In addition, Tony Rose, Land Rover-Leyland Trucks finance director, takes over as Austin Rover's chief financial officer, and Chris Woodwark, previously managing director of Land Rover-Leyland International, assumes the new position of commercial director of Austin Rover.

The Woodwark appointment supersedes the duties

Output in 4th quarter slated to top '85 total

By Kathy Barbaglio
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers plan to build nearly 6 percent more cars in the fourth quarter than they did last year, making calendar 1986 another 8-million-car year and nearly on par with 1985.

The makers' schedules call for 2,079,620 cars for the final quarter, 5.56 percent more than last year's output of 1,970,084.

Automakers estimate they will build 8,055,107 cars for all of 1986, down 1.60 percent from the 1985 total of 8,186,040.

The bulk of the projected fourth-quarter increase will come from two foreign-based firms and one that is a U.S.-foreign joint venture. The eight companies that manufacture cars in the United States plan to

Dodge aims to be No. 3 nameplate by 1990

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Dodge is shaping a plan for a 24 percent sales increase to 1.2 million cars and trucks by 1990 and a position as the No. 3 volume division in the United States.

Dodge currently vies for fourth place with Toyota and expects to sell nearly one million vehicles this year.

The Dodge plan is part of the long-term strategy Chrysler Motors is formulating to differentiate Chrysler, Plymouth and Dodge products in consumers' minds.

Chrysler is being positioned as the luxury division. Plymouth is linked with integrity, Dodge cars with performance and Dodge trucks with toughness.

Dodge's strategy to gain market penetration calls for use of high-end, high-performance image models supported by a broad range of affordable models.

"I am convinced you can marry those two approaches successfully if you have the products and define the consumer groups," said John B. Damoose, Dodge general marketing manager.

Pontiac Motor Division is not Dodge's prime domestic competition, Damoose said. Pontiac's market is more narrowly defined, he said. Dodge is working "to appeal to the broad range of Ford, Chevrolet and Pontiac buyers."

"We want to be a volume marketer of fun-to-drive, performance-oriented cars that appeal to the heart-of-the-market American buyer," he said.

Damoose said brand distinction among the three Chrysler Motors makes will be more apparent in 1988 and 1989 models.

Early product moves include offering the 1987 Daytona body exclusively as a Dodge and the LeBaron coupe body exclusively as a Chrysler. The performance version of Chrysler Motors' new small cars, Dodge Shadow and Plymouth Sundance, is available only to Dodge.

Dodge's plan for hefty sales gains comes when the market is becoming increasingly competitive. However, Chrysler Corp. Chairman Lee A. Iacocca said last week that the company's long-term goal is to capture 15 percent of the car market and 15 to 20 percent of the truck market.

Damoose said aggressive product plans are the basis of Dodge's strategy.

"We're expanding our car lines," he said. "We're getting into markets we haven't been in," he said. "We will be much more involved in the mid-sized and smaller pickup-truck market. We'll be broadening our coverage of the middle of the market, and we'll be coming out with some more expressive performance vehicles.

"We'll have a new Daytona. There is the new Dakota truck. There will be other trucks and special models between now and 1990.

New models to tip scales for Chevy

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

WARREN, Mich. — Chevrolet Motor Division expects to increase both its sales and market share in 1987 because of its new mid-size entries, the Corsica and Beretta.

Chevrolet General Manager Robert Burger, at the division's 1987 model preview, predicted 1987 model-year sales of 1.8 million cars and 1.3 million trucks. That compares with 1.7 million cars and 1.3 million trucks in 1986.

Market share will be up a percentage point in calendar 1987 at 17 percent, Burger predicted.

Chevrolet predicts sales drops in nine of its 11 car lines. Corsica and Beretta, which will be introduced in the spring, will boost Chevrolet's 1987 model-year sales above those in 1986.

Burger said that the division wants no low-interest financing incentives to launch the 1987 models.

"The plan now is on introduction day, that's it. We'll go naked for the foreseeable future," he said.

"I hope the industry stands pat on no incentives," he said. "But if anybody announces new incentives, it will be no more than 24 hours later that Chevrolet responds."

Burger said Chevrolet, like Pontiac Motor Division, will cut back on the number of free-standing options available on its models and instead offer option packages.

Option packages and a limited number of free-standing options are available on Camaro, Corsica and Beretta. Burger said by 1988 or 1989, all models will have only option packages.

Burger also said he expects it to be at least two years before the GM80 program is resurrected. GM80 is the replacement program for Camaro and Pontiac Firebird. The replacement vehicle would have been front-drive and plastic bodied. However, the program was scrapped, or at least postponed until the 1990s.

Burger said Chevrolet's challenge will be to keep Camaro fresh. He said Chevrolet will do more IROC-type packages, aimed at market niches, to keep volume up.

Chevrolet predicts 1987 car sales to breakdown as follows: Caprice, 204,000, down from 227,000 in the 1986 model year; Corvette, 30,000, down from 36,000; Monte Carlo, 93,000, down from 118,000; Celebrity, 360,000, down from 399,000; Camaro, 160,000, down from 173,000; all-new Corsica and Beretta, 233,000; Cavalier, 345,000, down from 387,000; Chevette, 60,000, down from 75,000; Sprint, 61,000, down from 67,000; Spectrum, 90,000, about the same as the 91,000 in 1986; and Nova, 180,000, up from 171,000. The other 3,000 sales for 1986 were from Citation, which was dropped.

The 1987 truck forecast: S-10 pickup, 215,000, down from 217,000; S-10 Blazer, 160,000, down from 189,000; El Camino, 20,000, down from 23,000; Astro, 150,000, up from 136,000; Chevy Van/Sportvan, 140,000, down from 155,000; Blazer, 40,000, down from 47,000; Suburban, 52,000, down from 63,000; full-size pickup, 506,000, up from 441,000; medium-duty trucks, 19,000, about the same as the 20,000 in 1986.

RICK LIEBER

Chevrolet General Manager Robert Burger with Camaro Z28 convertible

Camaro convertible to return

WARREN, Mich. — Chevrolet will offer a Camaro convertible in the 1987 model year to celebrate the car's 20th anniversary.

It will be the first Camaro soft-top since 1969. Chevrolet also offers convertibles in its Corvette and Cavalier lines. There will be ragtop versions of all Camaro models — IROC-Z, Z28, LT and Sport Coupe.

The convertibles will go on sale in January, and Chevrolet expects to sell 4,000 in the 1987 model year. The conversion will be done by American Specialty Co., a division of American Sunroof Co., of Southgate, Mich.

Mazda to delay Ford production

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

A new car that Ford Motor Co. expected to market as a 1988 model may become a 1989 model because all early production at Mazda's Flat Rock, Mich., plant will be Mazda 626s, not Fords.

Louis Lataif, Ford Sales Operations vice president, spoke of the Mazda-designed car at a recent press preview of Ford Motor's 1987 models. He said Ford would share output with Mazda at Flat Rock starting with job one in October 1987 and that the new Ford would debut as a 1988 model.

But a spokesman for the Mazda plant said the next day that all initial production would be Mazda models, with production for Ford starting sometime in 1988. Ford and Mazda eventually will split production at the plant, which will have an annual capacity of 240,000 vehicles.

But Mazda is looking for domestic production that would allow it to expand U.S. sales and introduce a U.S. version of the new-generation of the Luce (929 series).

"We're not expecting to receive any cars until late February or March of 1988," a Ford spokesman later acknowledged. That would push the debut into March or April.

"I'm pushing for it to be a 1989 designation," Louis A. Ross, Ford executive vice president for North American Automotive Operations, told the Detroit Auto Writers Group last week.

If Ford decides to go with a 1988 label, it would be because of new state laws limiting how early a next-year model designation can be used, or because Ford needs the new model to help meet the 1988 federal passive-restraint standard or the Corporate Average Fuel Economy requirements, Ross said.

Ford seemed surprised that it would not immediately split Flat Rock production with Mazda, which is 25 percent owned by Ford. But the delay may postpone a decision on what powertrain to use in the Ford version.

Ford is known to be considering its own 2.3-liter, four-cylinder engine and three-speed automatic transaxle for some Flat Rock Fords, with a Mazda-built transaxle for manual-shift versions.

Ford has not disclosed the name of the new car. But it is expected to market the front-wheel-drive Flat Rock car as a low-level Mustang.

Feaheny's suit against Ford bosses goes to trial

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

The judge hearing a $130 million suit brought by a former Ford Motor Co. vice president said a jury will be seated quickly but that the trial could last two months.

Wayne County Circuit Judge Michael J. Talbot in Detroit said he hopes lawyers for both sides will be able to agree on a jury today, the first day in court for the case of Thomas J. Feaheny against six current and retired Ford executives.

Feaheny alleges that his salary was frozen, he was denied perquisites given to others and was excluded from stock option eligibility.

Feaheny

He was vice president in charge of vehicle research when he was fired in September 1983, a few weeks after he filed the suit.

Defendants are Philip Caldwell, retired Ford chairman; Harold A. Poling, Ford president; Louis R. Ross, executive vice president for North American Automotive Operations; John McDougall, retired executive vice president for International Automotive Operations; Harold C. MacDonald, retired vice president for engineering and research; and Peter J. Sherry, retired vice president for personnel and organization. All have been subpoenaed to appear at the trial.

A list of possible witnesses for Feaheny includes two former Ford executives — Lee A. Iacocca, chairman of Chrysler Corp., and Marvin T. Runyon, president of Nissan Motor Manufacturing Corp. U.S.A.

Court documents filed by Feaheny charged that Runyon and others were victims of a "denigration program" in the company.

The first testimony expected to be heard by the six-person jury will be a videotaped deposition by Henry Ford II, former Ford chairman. He initially was a defendant but was dropped from the case.

Ford Motor Co. is not a defendant.

As part of the pretrial maneuvering, Feaheny offered to drop McDougall as a plaintiff in return for $500,000 and McDougall's cooperation in testifying in Feaheny's behalf. McDougall rejected the offer, court records show.

Caldwell is scheduled to testify Oct. 6-8. McDougall, MacDonald and Sherry are scheduled for Oct. 13-17, and Poling for Oct. 20-21. Ross is slated to testify Oct. 27.

Made in Taiwan

Will Taiwan be Asia's next automotive powerhouse?

By Andrew Tank

Japan became a major force in automotive manufacturing in the 1960s. South Korea is flexing its muscles in the 1980s.

Could Taiwan be the Far East's next automotive powerhouse in the 1990s?

That question is being asked by major vehicle manufacturers around the globe as they jockey for position in Taiwan's rapidly growing automotive industry.

A series of strategic alliances is being struck that could turn the island off the southeast coast of China into as busy an auto manufacturing base as South Korea by the end of the decade.

Nissan Motor Co. Ltd., Ford Motor Co. and Honda Motor Co. Ltd. have long-standing ties in Taiwan. Toyota Motor Co. Ltd. and Mitsubishi Motors Corp. took equity shares in Taiwanese firms in the past year. General Motors and San-Fu are in the final stages of negotiating a partnership. Chrysler Corp. and Mazda Motor Corp. are studying possible joint ventures.

Just this month, Taiwan's potential as an automotive center got a hefty boost when Fuji Heavy Industries Ltd., maker of Subaru vehicles, invested in a new joint-venture.

On Sept. 9, Taiwan's Economics Ministry announced approval of the new firm, Ta Ching Motor Co. Fuji is spending $11.4 million for a 35-percent stake, with local company Taiwan Vespa providing $19.5 million.

Production is scheduled to start in 1988 when Ta Ching hopes to make 6,000 vehicles. The plan is to build 36,000 vehicles in 1989, and 48,000 cars and 12,000 trucks by 1990. At least half the planned output will be exported.

It is the fourth joint-venture in Taiwan involving Japanese firms announced in the last year.

Last fall, Nissan took a 25-percent stake in Taiwan's biggest automaker, Yue Loong Motor Co. Ltd. Last February, Toyota bought 22 percent of a small truck-maker, Kuo Zui. Soon after, Mitsubishi purchased 25 percent of China Motor.

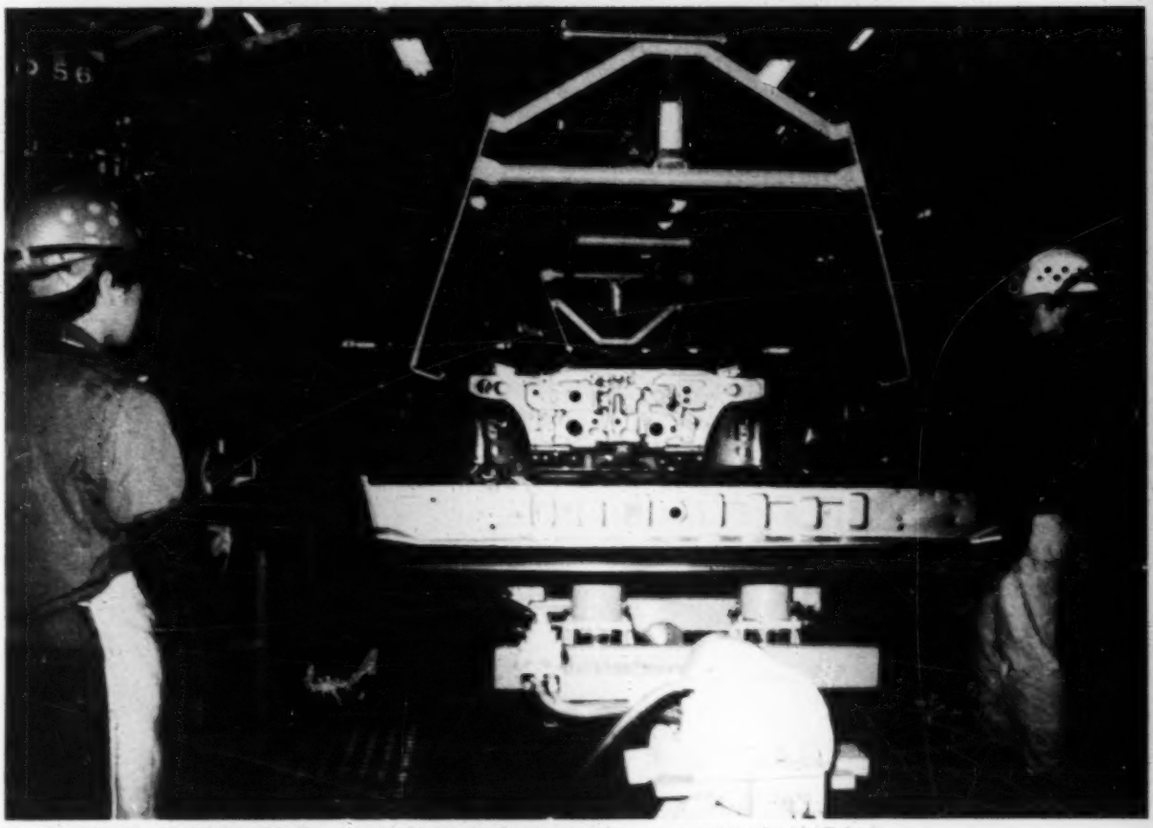
Other major automakers in Taiwan are Ford Lio Ho, 70 percent owned by Ford Motor, and Sanyang, 14 percent owned by Honda.

Add to this an automotive parts industry that has doubled export volume to $450 million in the last three years, and the 36,000-square-kilometer island starts to loom large on the world auto map.

"By 1990 $1 billion of auto exports would be a reasonable estimate," says Dick Mou, director of market development at the China External Trade Development Council. "In the next few years we hope to make major inroads into the original-equipment manufacturer component market."

The prospect of major vehicle exports from Taiwan in the near future seems less likely.

Ford's 70 percent-owned subsidiary Ford Lio Ho Motor Co. recently started shipping Taiwan-assembled Mercury Tracer cars to Canada at a rate of about 1,000 a month, and hopes to export up to 30,000 a year.



The Ford Lio Ho plant (above) is the most technologically advanced auto assembly plant in Taiwan.

Taiwan's biggest automaker, Yue Loong, 25 percent owned by Nissan, hopes to export small volumes of cars to Japan and is discussing other export options with Chrysler.

Other possibilities are Third World commercial-vehicle exports from China Motor, 25 percent owned by Mitsubishi, and the development of export capability by Toyota, which grabbed a 22-percent stake in Kuo Zui earlier this year.

But most of these are strategic ideas rather than immediate plans. Taiwan's automakers realize they must upgrade production efficiency before they can mount major export drives.

Says Haruyoshi Nakamura, appointed quality control director of Yue Loong last year: "Japanese quality must be our goal in order to export. We are not there yet."

It is more likely that, for now, the main task of Taiwan's diligent and highly skilled workers will be auto parts production.

Says Hsu Kuo-an, director of Taiwan's Industrial Development Board: "We have to make ourselves an indispensable part of multinational corporations' worldwide strategy."

The policy to achieve that is causing dispute. Taiwan's government is adopting a "free-market" approach to the auto industry. Last year it unveiled a policy that radically cuts protectionist barriers in a bid to force local auto companies to become internationally competitive.

Tariffs on imported completely built-up cars will be cut 5 percent a year from 60 percent now to 30 percent by early next decade. Tariffs on completely knocked-down kits used by local assemblers will be reduced only from 35 percent to 25 percent, thus giving importers an equal chance to compete against local firms.

In addition, the former policy of insisting that local vehicle manufacturers attempt to use 70 percent locally made parts has been relaxed. In three years the target will be 50 percent.

More recently — under pressure from U.S. trade negotiators — the Taiwanese government permitted future auto joint ventures without committing them to an export target, and is allowing Japanese-designed cars built in Europe or the U.S. to be imported. Direct car imports from Japan and Communist countries remain banned.

The liberalized approach is angering the two automakers that made the biggest investments in developing Taiwan's indigenous auto industry.

Says Ford Lio Ho President Jo G. Auton: "The domestic industry cannot survive under the new government auto policy. We argue that you need a strong domestic auto industry as a base to develop auto export industries."

Adds a manager at Yue Loong: "It's crazy. After all this effort to build the industry, they're now saying we should reduce our local content."

Taiwan's auto assembly industry employs around 10,000 people, its parts industry over 50,000, although the nation's low unemployment weakens any job-preservation argument.

IDB's Hsu argues that for 30 years the auto industry in Taiwan has enjoyed greater protection than other major local industries such as electronics, and that the impact of the new measures has been spread over six years. He hopes this will prompt local automakers to rationalize their production, encourage joint purchases from component suppliers (in the same way that Taiwanese TV makers use a common chassis) and, above all, force greater efficiency.

Hsu, who insists there is no possibility of changing the direction of the government's policy, concludes, "If they (auto manufacturers) want to survive, they'll have to do it this way. Six years is a good time to develop an industry."

But the future health of the auto industry is not the IDB's only concern. Taiwan's exporters of textiles and electronics are so successful that the country enjoys massive merchandise trade surpluses with every major country except Japan.

Taiwan's surplus with the U.S. was $10

Continued on page 30

TAIWAN

Continued from page 29

billion last year, and on official forecasts it could leap to $15 billion this year.

Some observers feel Taiwan's domestic auto industry is becoming a sacrificial cow to ward off possible protectionist measures in the U.S. Congress and elsewhere.

The liberalization policy is also fueled by consumer pressure groups and free-market economists. Taiwanese consumers have long complained about poor quality and high prices of domestically built cars.

Yale economics professor John Fei presented calculations at a recent National Development Seminar that locally made cars are $1,600 more expensive than their Japanese counterparts, resulting in a net loss to consumers of $250 million a year. He said the local economy would be better off if an earthquake destroyed the vehicle producers.

Government officials present a less apocalyptic view, stressing that competition will bolster Taiwan's bid to become a world auto center. Says CETDC's Mou: "In order to survive, firms will have to expand, import technology and look for foreign markets."

But in comparing the new approach to the previous protectionist policy, Mou says, "The goal is to be part of the international division of labor rather than developing a fully integrated industry. We take a global view."

So do strategic planners in multinational Japanese and American auto companies that are gambling on Taiwan's future.

The past year has seen unprecedented interest in Taiwan, partly because of the government's more relaxed approach and fewer restrictions on auto collaborations, and partly because of the adjustment of Japanese firms to the soaring yen.

Auto executives in Taiwan, noting the rapid progress of South Korea as an auto producer, believe the two Northeast Asian "dragons" — Taiwan and Korea — will gradually become integrated into overall purchasing and production programs of major Japanese companies.

The maneuverings have affected all of Taiwan's auto companies, although each case is different. Following are their strategies.

Yue Loong

Established in 1953, Taiwan's oldest vehicle producer now has the most integrated design and manufacturing capability in the country.

In 1981 Yue Loong opened a new manufacturing and assembly plant on an 865-acre site at San Yi, about 100 kilometers south of Taipei, Taiwan's capital. After further investment, it now has a forging facility, engine line, $27 million body-stamping plant and $25 million paint shop.

Present capacity is 70,000 vehicles a year, but a second phase could boost it to 200,000.

The San Yi plant has ample surrounding area for parts makers to supply Yue Loong on a just-in-time basis. The company also makes commercial vehicles at its old Hsin Tien factory.

Yue Loong spent $50 million to open an engineering center in 1981 at Tao Yuan which is equipped with computer-aided-design tools for product and process development.

The first Yue Loong-designed car is the X101. It will be named the Feeling, which means Flying Antelope in Chinese, and will be launched in October. It will be available as a sedan and hatchback with 1.6-, 1.8- and 2.0-liter engines.

There is discussion that Chrysler might distribute the car in North America, but Yue Loong will not confirm if and when that might happen. There are also rumors that Nissan might sell Yue Loong-built cars in Japan.

However, Nakamura suggests that before Yue Loong can embark on a major export drive it must improve production efficiency and product quality. Its showcase San Yi plant still lacks the automation typical of advanced factories in Japan, Europe and America. The machine shop has fewer than 10 numerically controlled machine tools, no automatic welding machines or robots and few computer-controlled materials-flow systems.

The plant's productivity is about 20 vehicles per employee per year, about the same as the newest South Asia assembly plants such as Proton in Malaysia and Maruti in India, but far below Japanese levels. In addition, the company incorporates 70 percent locally built parts in its vehicles, some of which lack the quality of parts used abroad.

Since Nissan invested $50 million for its 25-percent interest last September (consolidating a long-standing technical collaboration), Yue Loong has revised its strategy. Nissan plans to supply Yue Loong with engines, probably built by its affiliate in Australia, by the beginning of 1987, and local content is expected to be around 50 percent.

The hope is this will revive Yue Loong's sagging market share, which has fallen from 50 percent to 35 percent over the last decade, and will eventually allow exports of vehicles. Yue Loong at one time had exported small volumes of commercial vehicles to South America and the Middle East.

Yue Loong strategic advisor Clement C.C. Yen admits it will be hard to imitate South Korea's success. "We'd have problems exporting to the U.S., so we'll have to look elsewhere," he says.

Ford Lio Ho

Ford adopted a radically different approach than Yue Loong by making substantial investments in a world-class assembly plant with emphasis on quality manufacturing rather than high local content.

The company recently invested $24 million to re-equip its 80,000-square-meter plant at Chungli, 40 kilometers south of Taipei, with the latest production technology. President Auton explains: "It's only justified, as part of a long-term program, to establish we can do quality manufacturing here."

That's been proved. In June a quality-audit team from Ford world headquarters gave Ford Lio Ho's export car the best mark of any car built by Ford worldwide, according to Auton. He attributes that to an investment project geared to boosting quality and, more importantly, a highly educated and diligent work force.

The Ford Lio Ho plant is the most advanced assembly plant in Taiwan. Ninety-four percent of all critical welds are computer controlled and are done by eight robots or specially designed Bosch welders. The paint shop has automatic handling systems and spray guns, and automatic test equipment at the end of the assembly line. The whole process is controlled by a materials-management system, and 180 processes are monitored regularly by statistical process control techniques.

Denton A. Grenke, manufacturing manager, says quality improvement was the guiding principal behind the investments. He says that since 1982 the quality of vehicles produced has increased 400 percent, while productivity is up 70 percent.

However, Grenke, a Canadian who has worked in high-volume car plants, identifies a highly motivated and intelligent staff as the key reason for success. "If I could, I'd take this work force anywhere in the world," he says.

He describes their active participation in quality circles, a disciplined attitude to punctuality, attention to detail and, above all, a keen work ethic.

The workers are a key to what Auton identifies as Ford's reason for increasing its commitment to Taiwan. Labor costs are low — about $3.50 an hour — but more importantly the workers are far more productive than those in other countries. "I think they're among the best in the world," boasts Auton.

The bargain work force is matched by bargain investment expenses. "A major comparative advantage is relatively low capital cost," says Auton. A U.S. executive making automotive electronic components in Taiwan says the cost of capital to fund new projects is 6 percent.

Still, the increasingly competitive environment has hit Ford Lio Ho's domestic sales which have fallen from over 36,000 in 1983 to under 26,000 last year.

Since vehicles supplied to the local market share most of the new assembly technology set up for the export versions, Ford Lio Ho sales director David M. Morgan hopes to capitalize on an improved image for quality. But he admits, "It's very difficult. I expect all the expansion of market to be taken up by imports."

The tough situation in Taiwan is another reason Ford decided to make Lio Ho an export unit. It now has the capacity to make 30,000 export cars a year. Auton says Canadian dealers are enthusiastic about the cars delivered so far; factory managers are given instructions to ship orders as soon as possible.

But prospects for rapid expansion in export sales have been hit by the soaring Japanese yen. For its export cars, Ford Lio Ho is allowed to import all components duty-free. At present almost all parts come in a CKD kit from Japan to be assembled at the sophisticated Chungli plant. In contrast, cars built for the domestic market, which are subject to import tariffs, have 60 percent local content.

To address this problem, Ford Lio Ho is working with local suppliers to build a quality group of subcontractors.

Supply director K.L. Yeh hopes to start local buying of products such as wiring harnesses, seats, plastic molding, glass and trim, and to increase local content on export cars to 30 percent by early next year and 50 percent within two years.

The bottom line is Ford Lio Ho is now losing money after being moderately profitable in the past. Auton says, "The objective is to get out of the red and into the black as soon as possible."

The fact that Ford world headquarters is prepared to meet those losses shows that Taiwan is considered a strategic investment, but is not yet an easy place to make money.

Longer term, Ford might use its Taiwan plant to supply components to other Ford and or Mazda plants.

Ford Lio Ho's engine plant currently ships 13,000 Mazda B-series engines a year to Ford Australia for use in locally built Laser cars. Ford in the U.S. buys wiring harnesses from another Taiwanese firm, Yazaki.

Auton believes Ford might source high-cost labor-intensive items such as compressors and electrical items from Taiwan. There are also rumors that Mazda might use Ford Lio Ho's plant to assemble cars in Taiwan.

Whatever the outcome, the success or failure of Ford Lio Ho will be a critical indicator of Taiwan's potential as a major auto center.

Success would show that Taiwan's diligent workers can give their country a niche in the world automotive business. Failure would show that the government's zealous liberalization makes automaking in Taiwan an unprofitable exercise for the auto giants.

China Motor

Taiwan's third largest automaker, China Motor, accounts for 14 percent of total production.

It shares the same chairperson as Yue Loong, Mrs. Vivian Yen, and until recently was a wholly owned subsidiary of Yue Loong, but with independent management.

Earlier this year Mitsubishi, a technical collaborator, took a 25-percent equity stake.

China Motor and Mitsubishi have a plan that could involve annual exports of 20,000 commercial vehicles. But China Motor president K.K. Hsu, while welcoming the new technology that the tie-up will bring,

TAIWAN'S EXPORTS OF AUTO PRODUCTS

Table 1: Growth of auto exports 1983 - 1985

Year	Value ($ million)	% Annual Growth
1983	311	41
1984	406	31
1985	451	11

Table 2: Major export markets 1983 and 1985 (%)

Country	1983	1985
USA	52.1	57.0
Singapore	3.6	4.1
Nigeria	5.3	3.4
Canada	2.2	3.2
Hong Kong	1.7	3.0
Saudi Arabia	4.4	2.8
Australia	3.4	2.8
Indonesia	2.1	2.3
Japan	1.2	1.6
Malaysia	2.1	1.5
Others	21.9	18.3

Table 3: Major export products (% in 1985)

Product	Value ($ million)	%
Vehicle Accessories	133	29.5
Auto Parts	129	28.6
Motorcycle Parts	75	16.6
Wiring Harnesses	64	14.2
Other Auto Products	25	5.5
Motorcycles	21	4.7
Cars, Trucks & Buses	4	0.9

Source for all tables: Customs Statistics of the Republic of China.

cautions that exports are unlikely before 1989.

Hsu echoes the need to improve product quality and says possible markets for China Motor export vehicles are Turkey, other Middle-Eastern countries and South America.

Sanyang

Local automaker Sanyang has worried established competitors by increasing its market share from 5 percent in 1977 to 11 percent this year.

Owned 14 percent by Honda, Sanyang has mirrored its Japanese partner's world success. Building on a strong cash flow from selling motorcycles and scooters, it markets high-grade cars that are popular with consumers.

The company concentrates on making 1,500cc Civics, and has won market leadership in that class by boosting sales from less than 6,000 in 1977 to nearly 18,000 last year.

It is believed to be investigating the feasibility of supplying components to Honda's U.S. plants.

San-Fu Motors

The Zsa-Zsa Gabor of the Taiwanese industry, San-Fu has influential suitors.

Most significantly, GM reportedly has taken a 25-percent equity stake that is being considered by the Taiwan government for approval.

T.S. Liu, president of Summit Engineering, local distributor for GM trucks, locomotives and Detroit Diesel Allison engines, will only confirm the deal is in the discussion stage.

He says, noting that a GM-team came to Taiwan in January to talk to San-Fu, "GM wants a Taiwan beachhead. It doesn't want to vacate South and East Asia and probably aims to shift its resources from the Philippines (where GM has just closed its plant) to Taiwan."

It is GM's second bid. In the late 1970s GM collaborated with Taiwan Machinery Manufacturing Corp. in a joint-venture company, called Hwa Tung, to make heavy trucks. But its prices proved too high and three years ago Hwa Tung was sold to truckmaker Kuo Zui.

GM's potential new partner has had mixed fortunes the last few years with market share fluctuating from a peak of 11.6 percent in 1977 to a low of 4.1 percent in 1980 and 8.8 percent in the first six months of this year. It makes cars and light trucks.

Liu, speculating that GM's main interest might be sourcing components from Taiwan, says, "GM is already very interested in Taiwan-made parts."

Yeu Tyan

Yeu Tyan progressed from making motor scooters, in collaboration with Italian producer Piaggio, to making up-market sedans, in collaboration with Daihatsu Motor Co. Ltd. and Peugeot S.A.

The company made almost no cars in the 1970s but now has about 8 percent of the Taiwan market.

It recently completed a collaboration with Subaru. Isuzu Motors Ltd. had been interested in Yeu Tyan, but once its U.S. partner, GM, started overtures with San-Fu, plans were quietly dropped.

Kuo Zui

A bus and truck maker that produced only 2,600 vehicles last year, Kuo Zui has attracted the biggest Japanese suitor of all: Toyota.

Last February, Toyota bought 22 percent of Kuo Zui, which was already partly owned by Hino Motors Ltd., itself a Toyota affiliate.

Toyota made a major bid to set up an export-oriented auto plant in Taiwan in the early 1980s. It would have involved annual production of 300,000 cars, half slated for export.

Will cars like Ford Lio Ho's Laser help put Taiwan on the automaking map?

The deal failed to get because of disputes between Toyota and Taiwan's Economics Ministry over local-content requirements and the proportion of exports. (Once it was called off, the government encouraged a less ambitious Ford Lio Ho export project). Also, the proposed Toyota project was so large it threatened other local automakers and suppliers.

In Taiwan's new liberalized climate, Vice Economics Minister Wu Mei-tsun says he will welcome Toyota's latest proposal to make Coronas with 1,800cc and 2,000cc engines.

Toyota is taking its new acquisition seriously. According to a component maker, Toyota has already spent $20 million on carmaking machinery at Kuo Zui.

As a result of these deals and investment programs, Taiwan now has capacity to produce at least 300,000 vehicles for a market that last year absorbed 157,000. Yue Loong alone could supply the entire market, and then some.

No one doubts Taiwan's auto market is set to continue growing at a healthy rate. Throughout its history, Taiwan has enjoyed one of the highest rates of economic growth in the world, averaging almost 10 percent a year into the early '80s.

That growth was accompanied by a major road-building program that increased the length of paved roads from 1,046 kilometers in 1952 to over 16,000 today.

In the past decade, car registrations climbed from 150,000 to over 800,000, commercial vehicles from 120,000 to over 400,000 and motorized two-wheelers from 1.7 million to over 6 million.

Car ownership is only six per 1,000 people, about the same as Brazil but well below Japan and the U.S.

Industry forecasts show demand for cars rising to 150,000 by 1990 and 230,000 by 1995, with trucks reaching 68,000 in 1990 and 87,000 in 1995. Even with that healthy growth in prospect, there is enough capacity today to handle expected demand 10 years hence.

Moreover, foreign automakers are in a better position to start selling cars in Taiwan than Taiwan automakers are to start exporting. In the first five months of 1986 the value of imported sedans was $78 million, 65 percent above last year.

European imports Mercedes-Benz, BMW and Volvo have traditionally been the major foreign-made sellers, but the new auto policy is attracting manufacturers of less-expensive cars made by Lancia, Seat, Opel and others.

European truck and coach builders Volvo, Scania, Mercedes, and MAN are also increasing sales in Taiwan, partly because of the added advantage of the soaring yen against European currencies.

Even importers of U.S. vehicles anticipate rising sales. Chrysler importer Charles S. Yeh hopes to sell 200 to 300 luxury sedans this year compared to typical sales the last few years of 50-80 annually. Relaxed rules on Japanese-designed cars built outside Japan could open the Taiwan market to products such as the U.S.-built Chevrolet Nova and the British Rover Sterling.

Ford Lio Ho Sales Director Morgan predicts total industry imports in Taiwan will increase from 16,000 last year to 25,000 in 1986 — and that is with an import tariff of 60 percent. If the auto policy were pursued to remove most or all protection now enjoyed by domestic makers, Morgan predicts imports could easily capture half the domestic car market.

Local automakers complain that some importers are engaging in predatory pricing and dumping cars on the market to grab market share.

However, IDB Director Hsu says no formal petitions have been filed and legislation exists to ensure fair-trade practices. He argues that, after 30 years of protection, local automakers must adjust: "We cannot force them to rationalize, the only thing we can do is create some pressure."

Hsu hopes that will promote more efficient auto parts manufacture by encouraging mergers and forcing automakers to insist on lower costs and better quality.

The hotly debated issue is whether that may be expecting too much too soon. The removal of restrictions on market entry means there are now many more players.

Insiders say Yue Loong and China Motor, under the same chairperson, might be expected to share suppliers, but they doubt that local affiliates of aggressively competitive firms such as Toyota and Nissan or GM and Ford will agree to share supply sources.

Beyond that are more fundamental problems in the structure of Taiwan's industry.

Taiwan has achieved extraordinary success in boosting exports of auto products (see Table 1, opposite page). CETDC Director Mou attributes this to a balanced development of industrial processes such as forging, plating, plastics and electronics, which has enabled Taiwan's firms to meet market demands quickly.

But as Table 2 indicates, Taiwan is crucially dependent on the U.S. market which is threatened by retaliatory protectionist legislation. And as Table 3 shows most Taiwan auto exports are add-on accessories or spare parts sold in the after market.

Few of Taiwan's auto parts exporters have major OEM contracts. The biggest exception is Taiwan Yazaki which exported over $60 million worth of wiring harnesses last year. But anxieties about the future of local automakers are making other parts manufacturers look overseas.

Says David C. Chang, president of RDC-Spicer, which makes rear axles, propeller shafts and constant-velocity joints: "We have to think of exports because achieving economies of scale is a problem."

Chang's analysis of prospects for Taiwan's parts industry is ambivalent: "I feel design capability is weak here. But in terms of manufacturing technology, Taiwan is already there. It can produce quality parts to international standards with no problems."

The problem is most of Taiwan's estimated 2,000 auto parts firms are family businesses full of entrepreneurial zeal and able to respond quickly to the latest consumer gimmick, but less able to invest in research or expensive production machinery.

Of 373 members of the Taiwan Transportation Vehicle Manufacturers Association, only 17 employ over 500 people, and 259 employ less than 100.

A recent study by the National Science Council found that, on average, Taiwan firms devote just 0.44 percent of sales to r&d, a tiny fraction compared to most companies in the industrialized world.

Taiwan's bid to become an automaking center is based on different foundations than those built by Japan and South Korea, whose industries are characterized by large, integrated trading companies with resources to fund both long-term investment and product development.

However, while it may have liberalized the auto trade, Taiwan's government remains eager to nurture its infant industries with discreet state support. The China External Trade Development Council is pursuing promotion of new trade and investment opportunities. Several Taiwanese auto component firms are currently setting up joint ventures in Indonesia, Mexico and Turkey in an attempt to reduce trade imbalances.

At home, the government is forcing firms to spend more on r&d. Companies will soon be required to devote between 0.5 and 1.5 percent of sales income on r&d, depending on their industry. Those failing to spend their quota will forfeit the difference to the government, which will use the money to fund other r&d.

Will Taiwan become the next South Korea? "The jury is still out," says Ford Lio Ho's Auton. "We'll know in three to five years if it's been able to develop a healthy supply base."

But Hu notes that that all Japanese and U.S. firms show a surprising keenness to become involved in one of the world's most oversupplied markets.

One reason is Taiwan's political and social stability coupled with an extraordinarily strong financial position, with foreign exchange reserves of $35 billion.

Says GM distributor T.S. Liu: "Compared to Korea, which has lots of loans from foreign banks and a political situation that is not stable, the fundamentals are good here."

That is backed by a recent survey by the Geneva-based European Management Forum which found that Taiwan is the most competitive newly industrialized nation, just ahead of Singapore and Hong Kong, and double that of South Korea which is ranked fourth out of nine countries [illegible]

The growth of robots at Nissan

In the 1960s, Japan's Nissan Motor Co. Ltd. launched a program to modernize and expand its production facilities. At the center of this was the introduction of transfer machines and multi-spotwelding machines.

Since the late 1960s, Nissan has increased its use of robots on body assembly lines and steadily developed and improved its automation technology. Today the company has 2,000 robots operating at its domestic plants, including those for final assembly, painting and materials handling.

By introducing robots, Nissan believes it has achieved the following:

- A higher level of manufacturing accuracy and reliability.
- Higher productivity.
- A lighter work load and improved working environment for employees.
- Flexibility to changes in the manufacturing process.

In 1982 Nissan, for the first time, used final assembly robots on the March (Micra) production line in its Murayama plant.

In 1984 the company began automation of the Sunny (Sentra) final assembly line at its Zama plant, which involves 16 robots and 10 special-purpose automated machines.

Operations automated at the Zama plant by introducing the final assembly line for Sunny production include the following:

- Filling fuel tank, radiator, reservoir tank and window-washing fluid container.

Fitting fuel cap, rear doors and rear combination lamps.

- Installing and fitting windshield and rear-window glass.
- Installing battery, front and rear seats, and the spare tire into trunk compartment.
- Mounting tires.
- Adjusting aim of headlight beam.
- Measuring wheel alignment.

In 1985 Nissan began to use two new kinds of robots: free-moving robots and paint-inspection robots.

Equipped with an optical sensor, free-moving robots move along the rail as fast as the conveyor belt without stopping at each manufacturing stage.

Nissan says the laser-equipped paint-inspection robots have raised the consistency and quality of the paint finish on its cars.

During 1985 Nissan completed its introduction of sequential-control systems for automated production equipment at all of its plants.

The systems feature an integrated network of decentralized control units, which allows for easy adaptation to frequent changes of equipment, control-system wiring and programming.

The robots and automation systems helped Nissan introduce flexible manufacturing systems (FMS) that allow production of different car models on a single line and permit model changeovers with minimum retooling. ■

Perkins diesel for Mexico

John Rogers, commercial director of Perkins Motors, at the company's 13th National Convention in Mazatlan, Mexico, told distributors that Phase IV diesel engines will be launched in Mexico in 1987.

He said this will guarantee the firm's future for the next five years, during which plans for the future will be finalized.

While Phase IV engines will substitute for current Phase II units, Rogers said the latter will be produced one more year, in line with negotiations completed with Perkins Engines Ltd. Over the next term the switch will be to new F-4 and Q-20 units.

Perkins is part of the Dina (Diesel Nacional) complex. At the convention, Humberto Mosconi Castillo, group director, labeled the Perkins affiliate "the most efficient within the Dina complex." The reason: Despite operating at less than 30 percent of installed capacity, Perkins has not sought emergency financing. In 1986 Perkins will show an operating profit, Mosconi Castillo said.

Besides auto engines, Perkins turns out marine, industrial and agricultural units. The new engine is expected to spark sales.

C.P. Camacho, general director of Perkins Motors, revealed negotiations are under way with Perkins Engines Ltd., England, to invest $9.6 million in the Mexican subsidiary. Capitalization would be split 60 percent by Dina and 40 percent by the English home office.

The deal would give Perkins Motors access to developing technology and international markets. Under present capitalization, Dina has a 62 percent interest in the firm, Perkins Motors 19 percent and Nacional Financiera 19 percent.

If negotiations with the British parent firm are completed, Dina would buy out stock held by Nacional Financiera, the Mexican official financial and development institution. ■

WORLD NEWS BRIEFS

Jetting Jetta

One of the debutantes at this year's Birmingham Motor Show (Oct. 18-26) will be a hotted-up Volkswagen Jetta, which will go on sale in [illegible] spring. The Jetta GT 16V — powered by the same 1.8-liter 139-horsepower 16-valve engine of the popular VW Golf GTI 16V — is said to combine the spaciousness of a sedan with the performance of a supercar and the economy of a family car. Top speed is 130 mph, 0-60 is 8.1 seconds and average mileage is 29 mpg. Standard equipment includes alloy wheels, high-speed low-profile tires, power windows and locks, steel sliding sunroof, cloth sports seats, four-speaker AM/FM cassette stereo and tinted glass. Price will be announced in the spring.

Jetta GT 16V

Mexican sales down

Cesar Flores, president of the Mexican Automotive Industry Association, said 1986 car, truck and bus sales in Mexico will be down about 34 percent from last year — about equal to sales in 1972 and 1973. Flores said he expects car sales of about 190,000 and truck and bus sales of about 80,000 this year. Car sales figures for the first six months of the year were down 36 percent from the year-ago period. The association said 79,056 new cars were sold compared with 123,643 in the same period of 1985. The first-half total was 101,696 in 1984 and 104,408 in 1983.

Jaguar hikes prices

Jaguar Cars Inc., Leonia, N.J., has announced a 3.3-percent average price increase on its '87 models. Prices are as follows: Jaguar XJ-6, $36,300; Vanden Plas special edition sedan, $40,100; XJ-S, sport coupe, $39,700; XJ-S Cabriolet, $44,850.

What price Seven?

Brits who yearn for the new Caterham Super Seven HPC, a resurrected and rejuvenated version of the famed Lotus Seven, will have to pass a driving test before they can buy one. That's right, Caterham Car Sales and Coachworks Ltd., Surrey, England, will insist that customers prove their sports-car skills by taking a special class designed by High Performance Course Ltd. The car is powered by a 1,700-cc version of the Cosworth 16-valve twin-cam engine which pushes ultra-lightweight two-seater from 0-60 mph in about five seconds. The driving course takes two days and includes driving on ordinary roads as well as a race circuit and skid pad. The fee of more than 245 pounds sterling (about $355 in Britain) is refunded on delivery of the car, which will be priced in the 12,000-pound range ($17,400).

The deal is sealed

Sealed Power Corp., Muskegon, Mich., has formed a joint venture with Riken Corp. of Japan to manufacture and market a patented, digitally controlled electro-hydraulic valve. The venture will have exclusive rights to make and distribute the valve to automakers in Japan. Sealed Power developed the valve over the last two years. It's now in production for a major U.S. automaker and is in the advanced testing stage at several other auto manufacturers.

The valve is designed for new automobiles with on-board microprocessors that regulate the automatic transmission. It relays information from the microprocessor to the transmission. It will also be applicable to vehicles' other hydraulic systems, such as power steering and power brakes. The venture companies hope to broaden the valve's application through continued research in electrohydraulic technology. Sealed Power is a manufacturer and distributor of auto parts and components; specialized service tools and equipment; and industrial products for both domestic and international markets.

Audi unveils 80

Also debuting at the Birmingham Show will be Audi's new 80 model (4000 on these shores), due to go on sale in Europe this fall. The 80's features include fully galvanized steel body with 0.29 drag coefficient, Procon-Ten passive safety system which swings away the steering wheel in the event of a head-on collision, Torsen ("torque sensing") differential and a new interior.

Audi 80

U.K. road code

If you're planning a jaunt over to England, the DOT in Jolly Ol' has just the book for you. It's called *On the Road in Great Britain*, and it's a handy-sized, illustrated booklet designed to reduce driving risks for foreign visitors. For a free copy, write: The Department of Transport, Building 3, Victoria Rd., South Ruslip, Middlesex, England.

ASIA

FROM PAGE 1

tapped natural and human resources.

It is one of the few remaining major unexploited auto markets, and it is poised to be the next to develop rapidly.

In 1985, total car production in South Asia was just over 200,000.

The governments in the region have targeted the auto industry as the key to economic development.

Adding up the official development plans of India, Indonesia, Malaysia and Thailand shows some ambitious projections for production growth between now and 1990: cars up from 209,000 to 389,000, commercial vehicles up from 360,000 to 586,000 and motorized two-wheelers up from 1,678,000 to 3,135,000.

Those targets are unlikely to be met, since the once-vibrant economies of Southeast Asia are slowing down. In the decade between 1973 and 1983, average annual economic growth rates were India, 4 percent; Indonesia, 7 percent; Malaysia, 7.3 percent; and Thailand, 6.9 percent.

This year, there could be a contraction of output in Indonesia and Malaysia, both of which are crucially dependent on exporting commodities that have suffered sharp price declines. Thailand, which is the world's biggest rice exporter, is being hurt by U.S. agricultural policies and India is afflicted with a soaring trade deficit and civil disturbances.

Nonetheless, each country has developed an engineering infrastructure and training facilities, which have given them a pool of skilled labor and the expertise to utilize it.

Moreover, adversity is accelerating the pace of change. South Asian countries can no longer afford large auto import bills. They need to industrialize to generate new jobs and wealth-creating industries to supplement predominantly agricultural economies.

Each of the countries has strict policies to increase the proportion of locally produced components in vehicles. That percentage now varies from an average 20 percent in Malaysia to well over 50 percent in the other countries.

The form of the import substitution policies varies, but the principles are common to all. Industry and government officials prepare a list of components that are "mandatorily" deleted from imported complete-knockdown kits, to enable a protected local producer to make them.

However, the value of imports is still substantial, and it is dominated by Japanese manufacturers. Last year, South Asia was worth $1.3 billion to "Japan Inc."

Although the proportion of direct exports might decline, there can be no doubt that Japanese firms will be key beneficiaries of the growth of South Asia as an auto manufacturing region. The Japanese managed to outbid the European firms that traditionally had dominated South Asia's foreign collaborations.

The two latest audits confirm Japan's position. In the early 1980s, the governments of India and Malaysia were eager to enhance their local industries by promoting a state-owned "national car" project. Both chose Japanese firms — Suzuki for India and Mitsubishi for Malaysia — despite historical ties with the British, Italian and West German auto industries.

How have the Japanese done it?

"Pragmatism and a better appreciation of local markets and aspirations," said Ho Tet Kheong, general manager of Assembly Services, one of Malaysia's biggest auto assemblers. "Japan's trading houses have always understood the need to build up manufacturing; the Europeans have relied much more on just selling their products overseas."

Added Dr. Kosol Surakomiol, general manager of Bangchan General Assembly in Thailand: "The Japanese products are cheaper than the European or American products, their spare parts are more available, and their quality is better."

The major U.S. automakers have recognized that. Most of General Motors' South Asian involvement is through its tie-up with Isuzu. Similarly, Ford relies almost entirely relies in the region on cars designed and built through its Mazda link.

European automakers keep a small niche. Daimler-Benz makes luxury Mercedes-Benz cars throughout the region, and has a substantial truck operation in Indonesia. BMW, Citroen, Peugeot and Rover have South Asian assembly operations for luxury cars.

Equally absent is any substantial intertwining of the local industry in South Asia. In the mid-1970s, there was an attempt to build a "basic utility vehicle" inspired especially by auto firms in the Philippines. An organization called the ASEAN Automotive Federation was set up to persuade each country in Southeast Asia to specialize in producing key components.

Said one executive closely involved with that project: "We were trying to say 'to hell with all the multinationals; Southeast Asia can build its own motor industry.' But we found that national rivalries were too strong and, in the end, Japanese imports were cheaper."

An early prototype of the "ASEAN vehicle" was designed in Indonesia and has been quite successful. The "Kijang" — meaning Antelope — uses mostly Indonesian parts (although none drawn from other ASEAN nations) and a Toyota engine.

The other examples of trade between South Asian nations in the auto field are rare. The Indian truck builder, Telco, made an unsuccessful attempt to set up an associate manufacturing plant in Malaysia, and the Indian scooter manufacturer, Bajaj Auto, sold appreciable numbers of three-wheeled "autorickshaws" to Indonesia.

But, in general, each South Asian country has a very protectionist approach to its auto industry. Import duties are high; cross-border sales are discouraged; and considerable incentives are given to local manufacturers. The results, not surprisingly, are high production costs and high local selling prices for vehicles.

The most likely development, said Ridwan Gunawan, operations director of Federal Motor, Indonesia's assembler of Honda motorcycles, is that firms in different countries making the same product will start interchanging parts to promote scale economies.

That is already beginning in the field of production machinery. Three companies in Thailand — Chao Auto Parts, Sammitr Motor and Thai-Hino — recently won an order to supply $800,000 worth of dies and jigs for Toyota's associate in Indonesia.

AUTOMOTIVE NEWS/ANDREW TANK

A "Kijang," a basic utility vehicle, leads traffic in Jakarta, Indonesia. It uses mostly Indonesian parts and a Toyota engine.

Each S. Asian nation has a bag of problems

By Andrew Tank
STAFF CORRESPONDENT

SINGAPORE — The nations of South Asia face a variety of problems as they attempt to become a force in the worldwide auto industry. Here is a look at the situation in India, Indonesia, Malaysia and Thailand.

India

Until very recently, the Indian auto industry was of interest principally to students of industrial archaeology.

India is a nation with 700 million people and vast needs for road transportation. Yet in 1983, two of its carmakers produced just 45,000 models that were virtually unchanged from those of the 1950s.

Those auto firms used production techniques as antiquated as their products — typical rates of productivity were two cars per employee per year. Some other Indian firms, notably Telco and Bajaj Auto, did modernize and run world-class operations, but even those firms faced massive difficulties.

One major problem is the clout of the state-run railroads. The railroad industry is India's largest industry and largest employer. It has its own minister in the cabinet and its own budget.

Less obvious, but more pervasive, has been a reluctance to permit the growth of a strong automotive industry. India's peculiar blend of Fabian socialism and non-aligned self reliance has created a culture deeply suspicious of big business. It regards car ownership as a luxury to be taxed heavily.

Rahul Bajaj, the Harvard-educated chairman of Bajaj Auto, argues that at the end of the 1960s, the nation missed an opportunity that could have made India as successful an exporter as South Korea is today. He said that in the 1950s and 1960s, Indian engineering developed strongly, but that political crises in the early 1970s set development back by a decade.

The first attempt to bring about change was directed by Sanjay Gandhi, the younger son of the late Prime Minister Indira Gandhi. His private-sector car project, named after the Hindu god Maruti, crashed amid much controversy and debt. It ended in the fall of 1980, just after Sanjay's death.

Almost immediately, India executives were enlisted to start a state-run motor firm. It was established in early 1981 and was called Maruti Udyog. The addition of the Hindi word for industry symbolized a much more professional approach.

Maruti Udyog's success has traumatized India's less-efficient auto makers and has sent almost all of them scurrying overseas to seek technology. The process has been aided greatly by Rajiv Gandhi, the present Indian prime minister. In the two years since his mother's assassination, he has liberalized the Indian economy substantially.

The result is that Indian companies now have agreements with almost all the Japanese manufacturers (as well as a few from Europe) to make the complete range of the latest, foreign-designed cars, commercial vehicles, trucks and motorized two-wheelers.

It is still uncertain if this process will be allowed to continue. Last year, India had a record trade deficit of $6.5 billion. Critics blame the relaxed exchange rules for much of that deficit — with the automotive industry as the largest culprit.

The government has blocked further collaborations. Deals involving Honda, Nissan, Isuzu and Citroen have been held up.

The outcome is tied to internal political wrangles. If Gandhi can maintain his liberal policies, India could capitalize on its vast market and engineering prowess to become a major auto center.

If he cannot, India would slip back again to become a quaint but insignificant backwater.

Indonesia

South Asia's least industrialized country and the world's fifth most populous could be a surprise new entrant in the world auto industry.

It has a rapidly growing market of 162 million people, vast unexploited territory and a unified, stable political system.

At present, the economy is suffering acutely from the fall in oil prices, since oil accounts for 75 percent of foreign exchange earnings. But that crisis is also prompting industrialists and the government to step up the development of manufacturing industries, with the auto industry a high priority.

Such intentions are not pipe dreams. Ten years ago, the Indonesian government decided to start an aircraft industry, and many experts from the industrialized world scoffed.

Today, Indonesia makes helicopters and commuter aircraft in collaboration with major European and American firms and is embarking on a venture with two of the world's leading aircraft firms — Boeing and Messerschmitt-Bolklow-Blohm. Its aircraft industry employs 13,000 people and aircraft-engine firms are offering to produce parts in Indonesia.

Soebronto Laras, chairman of the Indonesian vehicle manufacturers' association, believes that his company could soon begin exporting Suzuki-designed vehicles and that annual production could rise from 140,000 now to 600,000 by 1995.

Ridwan Gunawan, vice chairman of the motorcycle manufacturers association, said that in the medium term, Indonesia is the most likely South Asian country to emerge as a major exporter of vehicles. He said its local market is much larger than Malaysia's and its industrial policy is more stable than India's.

SITUATION

FROM PAGE 33

One field in which Indonesia might make a breakthrough is motorbikes. It has the capacity to make one million per year and the local market takes only 250,000.

Aghmad Safiun, vice chairman of the auto parts manufacturers association, admitted that locally made parts can be 40 percent more expensive than they would be in the world market. But he said that prices will fall as local suppliers generate economies of scale. That will give parts makers a chance to begin substantial exports by the mid-1990s, he said.

The government is backing that up with an order that most vehicles must have 100 percent local content by 1990. Few expect that ambitious target to be met so soon, but once it is, Indonesia will be in a good position to supply rugged vehicles suited for the poor roads in the world's developing nations.

Malaysia

The boldest attempt to set up an export-oriented auto industry was launched last fall by Malaysian Prime Minister Dr. Mahathir Mohamad, when he unveiled the Saga sedan, built by Proton.

Proton — 70 percent owned by Heavy Industries Corp. of Malaysia and 30 percent owned by Mitsubishi Motors Corp. and Mitsubishi Corp. — has built a $200 million plant. It is said to be the biggest and most modern in South Asia.

The snag is a lack of demand. When Proton was conceived, government planners were forecasting a domestic car market of 220,000 a year by 1995. But falling commodity prices, coupled with a large existing car population, led to a 34 percent sales decline to just 71,300 vehicles in 1985.

Proton's capacity is 80,000 cars a year, and it could make a lot more. According to Dato Wan Nik Bin Ismail, Proton executive director, the break-even point is 67,000 cars a year. So Proton is accelerating its export plans.

Large-volume exports to the industrialized world are unlikely until the end of the decade. Wan Nik admitted that 29 to 32 months of engineering work are needed to make the Saga meet American and European specifications. But he hopes to start exporting to Bangladesh, Brunei, Hong Kong, Pakistan and Sri Lanka this year.

The hotly contested question in Malaysia is whether the government can continue to afford lavish subsidies to Proton during a period of economic diversity. Proton is exempt from import duties and receives other special benefits.

Malaysia has only 15 million people, and after two decades of rapid economic growth, it now faces its worst economic crisis since independence. The crisis is due to collapsing prices for all its major exports — oil, rubber, tin, palm oil and semi-conductors.

Said Ho Tet Kheong, general manager of Assembly Services, the largest private sector auto maker, "The Malaysian motor industry was set up by the British and had a trading mentality, not a manufacturing mentality. Proton was the first sign of a change in that mentality. It was a noble concept to force the pace of change."

However, in practice, Proton is antagonizing the rest of the Malaysian auto industry.

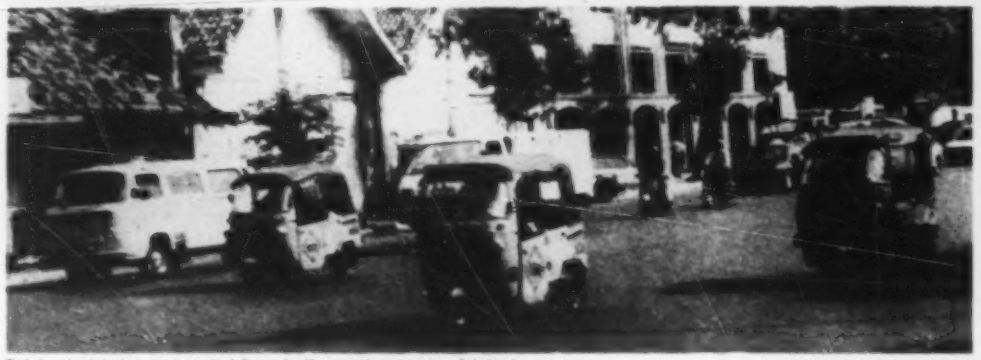
Says Paul Low Seng Kuan: "The rationale behind the Proton project was to make a viable car industry by eliminating models and concentrating resources. Now, Proton is more worried about making profits than ensuring a viable parts industry."

Low is president of the auto parts manufacturers association, which advised its members not to sign a restrictively worded supply agreement with Proton.

Zulkifli Isahak, honorary secretary of the Automotive Federation of Malaysia, questioned whether starting a full-fledged auto industry makes sense for a developing country such as Malaysia. He said it could leave the government with heavy bills for years to come.

There is one intriguing potential "white knight." Executives from Chrysler Corp. — which owns 24 percent of Mitsubishi Motors, Proton's Japanese partner — have made regular visits to Proton's plant.

Said Wan Nik: "We have been in contact with Chrysler. Their intention was to buy our car to replace their subcompact Omni. The two big problems are the technical problems and the pricing problems. But it's still open."



Bajaj autorickshaws exported from India, on the streets of Jakarta.

AUTOMOTIVE NEWS/ANDREW TANK

Thailand

The Thai government has the same basic ambitions as other governments in South Asia: to promote a small number of viable producers. But it is depending on gentle nudging and persuasion rather than grandiose directives or state-lead initiatives.

Its promotional Board of Investment has invited foreign producers to submit proposals to make engines for motorcycles and one-ton pickup trucks, which account for the bulk of demand. The goal is to increase the percentage of locally made parts and persuade marginal players to leave the market, allowing the remainder to grow.

Observers are skeptical. Said Kavee Vasuvat, vice president of Siam Motors Co., "Rationalization is still far away because the Thais like lots of choice."

So it seems unlikely that Thailand will become an exporter of vehicles in the near future.

However the local market is sizable, and European firms are doing relatively well. The local assemblers of BMW, Citroen, Peugeot and Volvo report that production is increasing as a result of the rising yen, which is putting pressure on the assemblers of Japanese vehicles.

But auto components is the area in which Thailand could become important.

The Board of Investment is eager to promote the benefits of Thailand's low-cost, highly skilled workforce. Board members have visited Detroit to talk with procurement executives from the Big Three U.S. auto makers.

Chackchai Panichapat, the board's assistant general saectreary, said Chrysler has shown interest in potential purchases of such labor-intensive items as wiring harnesses.

So far, few foreign auto firms have set up operations in Thailand. But the example of Fuji Serina Valve Co., which is 51 percent owned by TRW, of the United States, shows the potential.

The company, based near Bangkok, Thailand's capital, is incrasing production of engine valves to 2.5 million a year to supply the European aftermarket.

Said David N. LaForest, Fuji Serina managing director, "Customers in Europe were given a 10-15 percent price reduction because of moving the business to Thailand."

The chief reason is labor cost of 60 cents an hour, including fringe benefits.

Chackchai said, "We have enough skilled labor, but we lack investment, technology and a market. Labor is 20 times cheaper here than in the United States. . . We need to create jobs, so we are trying to promote industries that are labor-intensive and export-oriented."

That refrain is heard throughout South Asia, as governments embark on an increasingly tough battle for a shrinking pool of foreign investment. The message is simple: "Large family to support. Will work long hours for low wages. Foreigners' help welcome. Profits guaranteed. Please invest generously."

All South Asian nations face acute short-term economic distress coupled with long-term population pressures. The combination of global recession, the debt crisis and more profitable investment opportunities in the richer countries make competition intense.

All the nations offer low wages and other concessions, but those benefits must be weighhed against special hardships and difficulties.

As a senior diplomat put it: "You must always remember that out here, you're doing business in the jungle. Lots of things you'd take for granted back home just don't work here."

He referred not just to the unreliable phone system, the expensive raw materials and the inadequate utilities, but — more imporant — the different institutional framework. Although governments are tackling the problems, perplexing regulations persist, byzantine bureaucracies still do interfere and corruption is far from eradicated.

AUTOMOTIVE NEWS/ANDREW TANK

South Asia has some strong auto firms as base for growth

By Andrew Tank
STAFF CORRESPONDENT

SINGAPORE — How soon will South Asia have world-beating firms? Are there any Hyundais about to emerge? How soon could this happen?

The answers lie as much in developments elsewhere in the world auto industry as in trends in the region itself.

According to Ho Tet Kheong, further automation of the U.S. industry could alter the picture radically. "If Saturn succeeds, this whole region will be ignored," he said. He is general manager of Assembly Services, one of Malaysia's largest auto assemblers.

That is probably an exaggeration, but it is clear that the future of South Asia will be tied to international cost considerations. A continued strong yen would encourage Japanese firms to subcontract more work. But the local market in South Asia will generate some internationally important enterprises.

Companies to watch include:

Telco: Telco is India's biggest truck maker. It was set up in the 1950s with technical aid from Daimler-Benz and with management drawn principally from General Motors (which was expelled from India in 1953). Telco is a well-managed auto firm.

It has exported trucks and buses to 56 countries in the Middle East, Africa and Asia and had record export sales of $50 million in 1984. Its basic product is rugged 12-ton truck chassis, 4,000 of which were sold outside India each year in the early 1980s before the world truck slump.

Telco recently introduced a 4.8-ton vehicle for use as a minibus or van. It is eager to help other developing countries set up their own manufacturing operations.

Said executive director A.N. Maira: "We see the export future as good since developing countries must develop their manufacturing capabilities to offset falling commodity prices."

Proton: Proton produces Malaysia's "national car," which must be exported in substantial volume if the project is to be financially viable.

At present, Proton is making 1.3-liter and 1.5-liter sedans that are virtually identical to the Mitsubishi Lancer. Fifty-eight percent of the value of the car is imported from Japan, but Proton hopes it will be virtually 100 percent Malaysian-built by 1990.

Proton has studied the British market, and the right-hand-drive car probably will make its European debut there. In the longer term, Proton hopes to export to the United States.

Bajaj Auto: Bajaj Auto is the world's third largest manufacturer of motor scooters, after Honda of Japan and Piaggio of Italy. The company is in the midst of a $130 million investment to boost annual output from 450,000 vehicles to 750,000 by 1988.

Chairman Rahul Bajaj explained his strategy: "To retain leadership in India over the next three years; to improve our competitiveness against the Japanese; and, by 1990, to make a specific marketing drive. By the mid-1990s, we expect to export 15-20 percent of our production."

That implies exports of 150,000 two-wheelers a year, worth about $70 million. Bajaj Auto now exports to developing nations, but its bid to enter the U.S. and European markets was thwarted by lawsuits filed by Piaggio, its old collaborator.

Maruti Udyog: India's biggest auto maker has such a long waiting list for its 800-cc Suzuki-designed vehicles that exports are not a priority. But managing director R.C. Bhargava is eager to export to provide an independent indicator of performance.

He hopes to capitalize on India's close ties with the Eastern Bloc countries and hopes to sign a deal to export some 25,000 cars to Hungary. Marati Udyog also is eying neighboring countries as a potential market.

Goodyear (Indonesia): The largest tire maker in Indonesia is also a sizable exporter.

Last year, Goodyear (Indonesia) sold almost $7 million worth of steel-belted radials to Australia and sold tires for construction vehicles to the Soviet Union.

Sjahfiri Alim, president-director, admits that it will be difficult to increase exports, but he is investigating the possibility of exporting to China.

Standard Motors: Standard Motors is a specialist Indian firm which collaborates with Britain's Rover Cars. In the early 1980s, it bought an old 2.5-liter diesel engine assembly line from Austin Rover. Most passengers in London taxis have ridden in a vehicle powered by one of those engines because Standard supplies about 600 a year to Carbodies, the specialist British cab builder.

More recently, Standard Motors entered into a venture to make a version of the Rover 2000 sedan suited for Indian conditions.

Like Maruti, Standard has plenty of orders at home, but the new sedan could be an export product in the future.

A present, none of the companies mentioned above has the international marketing clout to make a major splash in the world's biggest auto markets. And their hopes of making the Big Time will be postponed by the current recession.

Safety group asks NHTSA to recall 2¼ million J-cars

WASHINGTON — The Center for Auto Safety has asked NHTSA to recall some 2¼ million 1982-86 General Motors J-cars for alleged sudden acceleration problems.

Last February, the agency closed its investigation and — disagreeing with the center — denied that the problem could be caused by failure of a coolant sensor.

But the center said that a Virginia engineering firm, Technology Management Associates, disabled the coolant sensor on a 1985 Chevrolet Cavalier, thereby inducing the car to jump two curbs. The center said another car of the same model did the same thing last Aug. 31 in Scranton, Pa., when it hit and killed someone.

The center also said that when NHTSA ended its probe, it ignored a letter from GM saying that it has provided replacements for some 200,000 coolant sensors for those J-cars. That indicated a 10 percent failure rate, the center said.

In addition to the Cavalier, the GM J-cars are the Pontiac Sunbird, Oldsmobile Firenza, Buick Skyhawk and Cadillac Cimarron.

Mazda extends gasket warranty

WASHINGTON — Mazda has extended its reimbursement program for head gasket repairs on its 1979-82 626-series cars and 1979-84 B-2000 pickup trucks though Dec. 31.

The Center for Auto Safety had charged that Mazda's informal warranty extension did not provide adequate public notice. The center also criticized Mazda for requiring customers to waive their legal rights when the repairs were made.

Mazda revised the legal language to say that the customer acknowledges payment in full for fixing the vehicle and out-of-pocket expenses for the particular instance only.

Under the original program, which ran from Feb. 14 to May 31, Mazda reimbursed owners for certain head gasket repairs made prior to Feb. 28.

Mazda then extended the warranty coverage to five years or 60,000 miles. That continues in effect.

The Center for Auto Safety wanted Mazda to extend the warranty to six years or 60,000 miles and to advertise it nationwide.

GM recalling trucks and buses to fix potential tire problems

DETROIT — General Motors is recalling 600 1985 trucks and small school buses built on Chevrolet and GMC P30/35 chassis with I-beam front axles and 16-inch wheels. GM is telling owners to have dealers replace the wheels and tires.

The company said that "during certain maneuvers, the end of the tie rod in the front suspension could touch the inside tire wall, causing grooving of the tire." The tire eventually could fail under such stress, the company added.

GM said it is not aware of any incidents of tire failure as a result of the condition.

AUCTION DATES

American Motors

Sept. 30 — High Point Auto Auction, High Point, N.C.

Oct. 1 — Columbus Fair Auto Auction, Columbus, Ohio, and Kansas City Auto Auction, Kansas City, Mo.

Oct. 2 — Corry Auto Auction, Corry, Pa.; Minneapolis Northstar Auto Auction, Shakopee, Minn.; and Evansville Auto Auction, Evansville, Ind.

Oct. 7 — Aptco Auto Auction, Taylor, Mich., and D-A Auto Auction, New Stanton, Pa.

Chrysler Corp.

Sept. 30 — Hatfield Auto Auction, Hatfield, Pa.; Aptco Auto Auction, Taylor, Mich.; and Nu-CarPrep System, Santa Fe Springs, Calif.

OUTLOOK

FROM PAGE 1

They will examine their product lines in various segments and determine the best way to obtain the capacity for those products — through domestic production or through importation.

"What they are saying is, 'Let's have an orderly retreat from production capacity and fixed costs,'" Hammond said. "They are cutting costs more in line with their market shares."

General Motors, for example, has said it will close three assembly plants by 1990. It also has scaled back or postponed new-car programs. Ford Motor Co., which will get its small cars from Taiwan and Mexico, could close an assembly plant. Other plants may be cut back to one shift, Hammond said.

The domestics already are retreating almost entirely from domestic production of subcompacts. Hammond said if GM's Saturn plant does not reach 500,000 units per year by 1990, which it probably will not, then North American-sourced domestic subcompact capacity could drop by 1.3 million units a year to roughly 1.6 million units a year.

However, the domestics will not lose market share because they will sell more subcompacts from their overseas affiliates and from joint-venture projects.

Hammond said the strategy makes business sense because the automakers incur no facility or start-up cost and little product development cost. Profits are virtually guaranteed on each unit. At the same time, the Japanese and South Korean automaking partners of the domestics benefit through higher sales volume.

While the domestics back away from increased production, the Japanese will shift product mix away from subcompacts, the segment which is expected to have the most overcapacity. Instead, they will use the capacity to produce throughout other market segments.

How aggressively they will shift product mix remains to be seen.

The Japanese and South Koreans plan to produce 1.4 million units — mostly subcompacts — in North America by 1990, according to the World Outlook. Hammond said the subcompact capacity is excessive, given the trend away from subcompacts.

Hammond suggests the subcompact market be left to the South Koreans, Japanese transplants and the captive imports. The Japanese then should shift 330,000 units of imports from the subcompact segment to other market segments, he said.

Some could go to the compact segment, though not the majority because the domestics plan to defend the market aggressively, Hammond said.

The sporty segment could absorb more Japanese capacity because the domestics appear to be backing away from the market. GM has postponed its program to replace Chevrolet Camaro and Pontiac Firebird, and Chrysler will discontinue Laser, leaving room in the segment for the Japanese.

Hammond said the most fertile ground for the Japanese is the mid-size market, since they have only 5 percent of the sales there and, again, the domestics appear to be backing away from the market. GM is scaling back or stretching out plans for its GM10 program, its major mid-size product program. The future of the Chrysler E-body also is in doubt, Hammond said.

At the same time, the mid-size market segment likely will benefit most from changing demographics — baby boomers graduating to larger, higher-line vehicles.

In both the sporty and mid-size segments, the Japanese have no North American capacity planned, so imports could fill the niches.

If the Japanese follow the recommendation, they would enjoy higher profits and increased market share in all segments, Hammond said.

The strategy of the domestic automakers will position them for good financial performance during troubled times.

However, Hammond acknowledges that the Japanese may not pursue the product mix shift quickly enough to head off overcapacity, which could induce a price war and financial losses.

FORECASTS

FROM PAGE 1

boost output by 109,536 units, and 72,884 of that increase will come from Honda of American Manufacturing Co., New United Motor Manufacturing Inc. (General Motors-Toyota) and Nissan Motor Manufacturing Corp. U.S.A.

Of the U.S. Big Three, Ford Motor Co. anticipates a strong fourth-quarter gain, probably as a result of greater Taurus/Sable output, and Chrysler Motors Corp. also charts an advance. GM production is expected to decline, and so is output for American Motors and Volkswagen of America.

The fourth-quarter schedule of 2,079,620 cars is 23.12 percent more than the latest third-quarter estimate of 1,689,135.

Ann Knight, auto analyst for Paine Webber, said fourth-quarter production will rise as new sales incentives are offered by the domestic automakers. She said the quarter's output may end up higher than the manufacturers are estimating.

Maryann Keller, auto analyst for Furman Selz Mager Dietz & Birney, looks for an increase as consumers purchase new cars before the sales-tax deduction dies at the end of the year under the new tax law. Another incentive for late-1986 purchases is the phase-down of the interest deduction on new cars.

New models will contribute to the higher production for Honda, NUMMI and Nissan. Honda has added production of the Civic to its Marysville, Ohio, plant; NUMMI now is building cars for Toyota as well as for Chevrolet; and Nissan has added the four-door Sentra at its plant in Smyrna, Tenn.

Honda's fourth-quarter target of 75,695 cars is up 132.73 percent from 1985's 32,525; NUMMI's 51,000 is 77.42 percent more than last year's 28,745; and Nissan's 26,645 is 38.87 percent above 1985's 19,186.

Mid-September sales set record

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

With incentives by several automakers in full swing, mid-September domestic new-car sales topped the record for the period set last year.

The Sept. 11-20 total for the seven U.S. manufacturers was 294,636, up 1.7 percent from the year-ago period's 289,582.

There were nine selling days in the period both this year and last.

But mid-September sales dipped 20.1 percent below the 368,674 for Sept. 1-10, which was the first full 10-day period of the current incentives offered by General Motors, Ford Motor Co., Chrysler Motors and American Motors.

The early-September total — the highest for the first 10 days of any month — had one less selling day than the Sept. 11-20 span.

Although it had no special financing offers, Honda still led the pack in rate of increase with a 60 percent year-to-year gain.

Chrysler Motors, with 2.4 annual-percentage-rate financing, reported that its car sales, including imports, set a record for any mid-month period in the company's history.

Counting only domestic-car sales, Chrysler's total of 47,666 was up 29.3 percent from last year.

Despite its 2.9 percent APR incentive, General Motors eked out a mere 0.20 percent increase over the year-ago period. But that was enough to set a GM record for mid-September.

Cadillac said its mid-September sales set a record for the period. They were 33.5 percent better than the year-ago period's and marked the third consecutive 10-day sales record.

Ford also has 2.9 percent financing, but its sales declined 7.5 percent from last year.

AMC, with a zero financing rate, reported a 29 percent drop from the year-ago period. AMC said, however, that its mid-September sales were 84 percent higher than in mid-August.

Also reporting declines were Volkswagen, down 18.7 percent, and Nissan, down 16.1 percent.

FROM PAGE 1

of sales and marketing director Trevor Taylor, whose job is believed to be in jeopardy. He is on vacation.

In the United States, Raymond A. Ketchledge, president of Austin Rover Cars of North America, said the changes would have no effect on his company's operation. ARCONA plans to introduce its Sterling in January, and Ketchledge said everything is going according to schedule.

Musgrove's ouster had been widely anticipated after Day, the former head of British Shipbuilders, arrived at Rover Group in May as the hand-picked choice of Prime Minister Margaret Thatcher.

The heads of Rover Group's car and commercial vehicle divisions, Ray Horrocks and David Andrews, left the government-controlled company shortly after Day was installed. The latest changes complete an overhaul of Austin Rover personnel.

Under the reorganization, Snowdon's product planning job will not be filled. The engineering and design staff will report directly to the chairman, according to an Austin Rover spokesman.

"They've been in a box for a long time and existing management wasn't finding a way out," said analyst John Wormald of Booz, Allen's London office. "But what is Day going to do after the clean sweep?"

Day is scheduled to present a Rover corporate plan to the government by the end of the year. A key element is expected to be further collaboration with Honda of Japan.

One outcome could be use of Rover Group's assembly plant at Cowley by the Japanese company for production of Honda-badged cars for Europe. The deal would probably call for Honda to take an equity interest in Rover or for establishment of a joint-venture company.

Mercedes issues recall

MONTVALE, N.J. — Mercedes-Benz of North America is recalling 1,044 1986 190-E sedans with the 16-valve 2.3-liter engine to replace an electronic control unit that may cause excessive emissions.

PRODUCTION

U.S. auto output rises

By Kelley Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Auto production rose last week despite the closing of three General Motors plants because of an engine-related parts shortage and the closing of one Ford Motor Co. plant because of a parts problem.

Targeted output of 157,907 cars last week was 7.17 percent more than the previous week's 147,341 and 6.96 percent below the year-ago week's 169,716.

So far this year, 5,880,503 cars have been assembled, 5.04 percent below the 6,192,891 completed last year at this point.

Last week's scheduled production was split as follows: GM, 54.49; Ford, 20.58 percent; Chrysler Motors, 15.77 percent; Honda of America Manufacturing Inc., 3.42 percent; New United Motor Manufacturing Inc., 1.90 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.49 percent; Volkswagen of America, 1.27 percent; and American Motors, 1.08.

Because of the parts shortage, GM extended the downtime at its Tarrytown, N.Y., plant, affecting 4,380 workers, and also shut down its Framingham, Mass. (3,620 workers), and its Oklahoma City (5,800 workers) plants. All three plants assemble the A-body cars.

Production of the Ford Thunderbird and Mercury Cougar models at the Lorain, Ohio, plant was halted last week because of a parts problem. About 2,000 workers will be laid-off until the situation is remedied.

Ford's Wixom, Mich. plant is slated for overtime Saturday (Sept. 27).

Chrysler's Belvidere, Ill., and St. Louis (No. 2) plants are scheduled for Saturday overtime. Those plants and the Newark, Del., plant are scheduled for daily overtime this week (Sept. 29).

U.S. truck production up

Last week's scheduled domestic truck production of 78,494 was 3.78 percent more than the previous week's 75,638 and 7.91 percent more than the year-ago week's 72,738.

Year-to-date, 2,684,444 trucks have been assembled, 3.95 percent more than the 2,582,389 completed last year at this time.

General Motors' heavy-duty truck plant in Pontiac, Mich., resumed output last week (Sept. 22). The plant had been down for one week for inventory adjustment, idling 1,400 workers.

The following GM plants are slated for overtime Saturday (Sept. 27): Morain, Ohio; Flint, Mich.; St. Louis; and Janesville, Wis.

No Saturday overtime was scheduled at Ford plants.

Canadian car output dives

Downtime at two General Motors plants and a production cut at a third reduced Canadian auto output last week.

Scheduled assembly of 14,175 cars dipped 40.01 percent from the previous week's 23,627 and 28.74 percent from the year-ago week's 19,891.

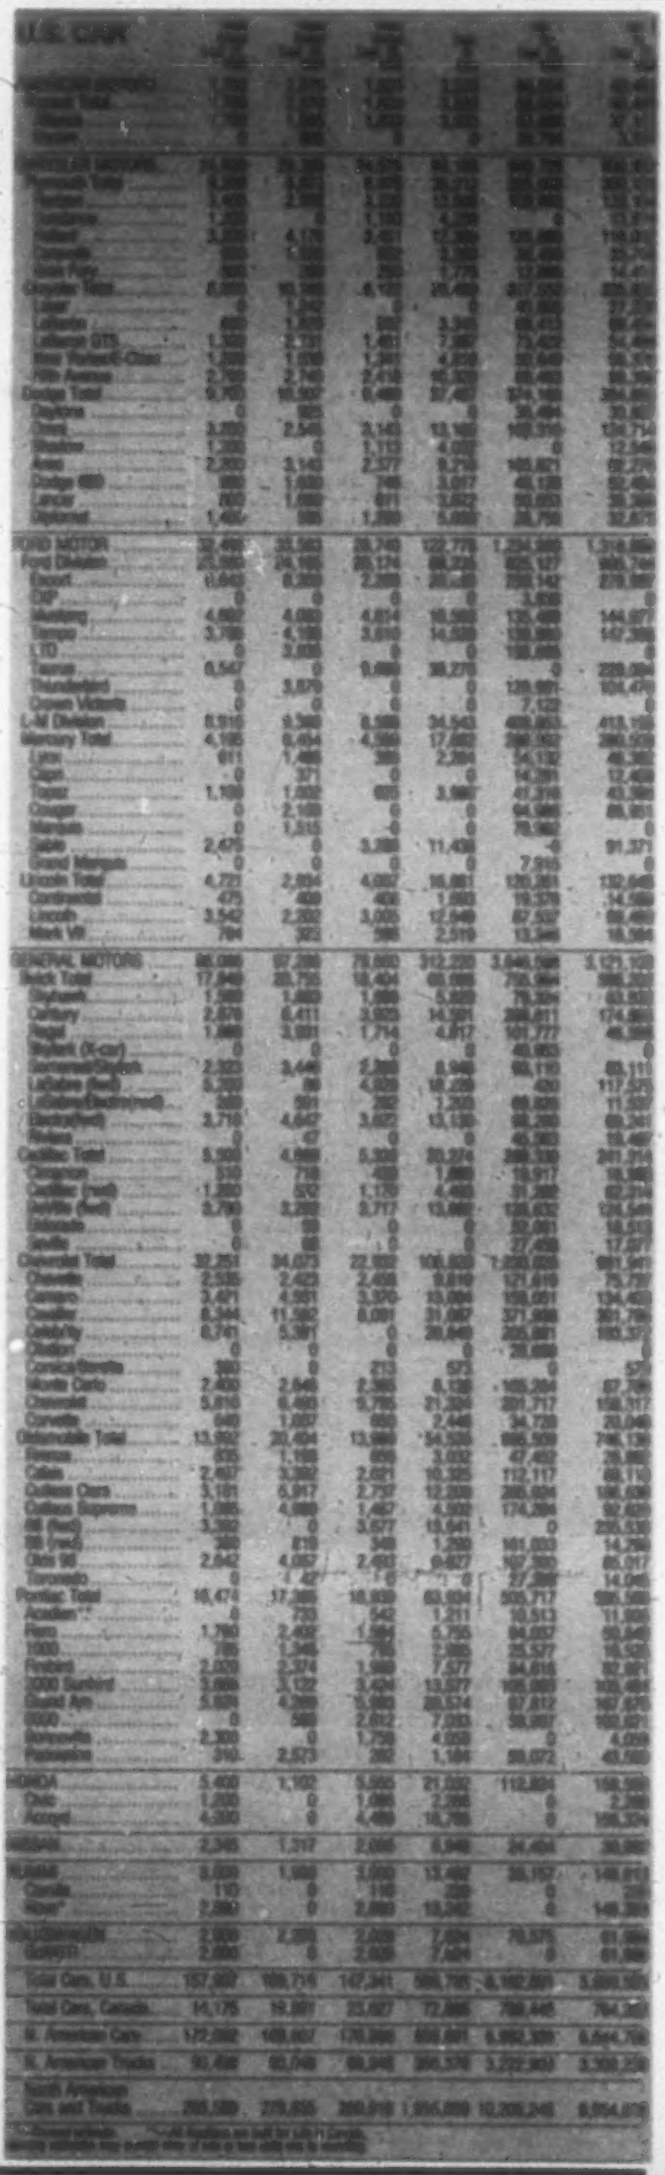
General Motors' Ste. Therese, Quebec, plant was idle last week (Sept. 22) for inventory adjustment. The plant is expected to resume output today (Sept. 29).

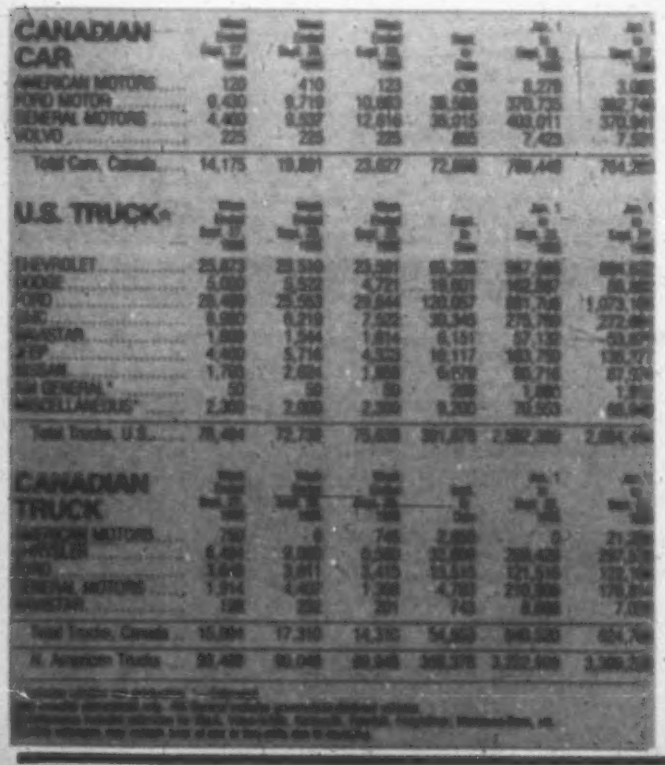
GM's car Oshawa, Ontario, (No. 2) plant was down last week because of a shortage of engine parts. The shortage also reduced production at the Oshawa (No. 1) plant also due to the shortage.

Truck makers' estimated output of 15,004 units last week, 4.85 percent more than the previous week's 14,310 but 13.02 percent below the year-ago week's 17,310.

The GM truck plant in Scarborough, Ontario, will close for one week on Oct. 6 for inventory adjustment.

On Oct. 27, output at that plant will be cut in half because of slow sales.





Honda starts Ohio build of car engines

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

ANNA, Ohio — Honda of America Manufacturing last week took a major step toward its goal of becoming a full-fledged U.S. auto manufacturing operation as it completed the first car engine at an expanded plant here.

It was also a necessary step if parent Honda Motor Co. is to reach its goal of one million U.S. car sales a year by 1990, said Shoichiro Irimajiri, Honda of America Manufacturing president.

Half of the cars would be imported and half would be built or partially built in this country.

Honda achieved two of Irimajiri's personal goals in September, he told 150 engine plant employees gathered for a ceremonial test start of the first Civic engine. One was clinching the 1986 Formula One constructor's championship with Honda's ninth victory in 14 races.

The other was the start of engine production in the United States.

"Building a car engine in the U.S. was always a dream to me," he said. "You have made that dream a reality today. You are part of the team that makes Honda the only manufacturer of both car and motorcycle engines in the U.S."

Honda expects to be running at an annualized rate of 60,000 engines at Anna by the end of this year, split between 1.2-liter models for Honda Gold Wing motorcycles and the new 1.5-liter four-cylinder overhead-cam Civic powerplant.

Production will speed up when a second shift is added Nov. 10 and will accelerate to 350 engines a day or 90,000 a year in 1987. Employment at the plant will grow from 150 to 200 by December.

Both engines are produced on the same line so the mix can easily be adjusted.

The Anna plant currently does aluminum die casting, painting, machining and assembly, which adds up to engines with about 25 percent U.S. content, including labor, Irimajiri said. Honda's eventual goal is 50 percent local content, although finding local suppliers for Honda's low volume and unconventional engine-part processes will be a challenge, he said.

Finished Civic and Gold Wing engines are shipped by truck approximately 40 miles to Honda's Marysville, Ohio, assembly plant.

That plant, enlarged this summer to an annual capacity of 300,000 cars, assembles three-door and four-door Accords and, since July, four-door Civics on a single line.

A separate line is Honda's sole world source for the top-of-the-line Gold Wing.

Also new is a $42 million plastics plant adjacent to the assembly plant. It is in pilot production of bumpers and other plastics parts for Marysville and Honda's new auto assembly plant near Alliston, Ontario, which will start regular production in October and eventually hit 60,000 units a year.

Honda already has announced it will expand Marysville again to reach 360,000 annual capacity by 1988. A feasibility study on a second Midwest assembly plant is continuing, Irimajiri said.

The Anna engine plant probably would likely be expanded if a second car assembly plant were added, Irimajiri said.

From Mustang to Vignale Gilda GAMMA-LIAISON

Jack J. Telnack, Ford Motor Co.'s chief North American Automotive Operations designer, stands beside a Vignale Gilda at the Paris auto show last week. The car — with striking resemblance to Cadillac's new Allante — is officially only a design exercise; unofficially, it is expected to become a 1989 model. It is based on the Ford Mustang chassis and drivetrain, but will probably be sold by one of the higher-line divisions. More on the Paris show on pages 56 and 57.

French improving, Europe strong as auto industry gathers in Paris

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

PARIS — The clouds which hung over Regie Renault and Peugeot S.A. at the 1984 Paris Auto Show have parted somewhat, and the stirrings of a French comeback dominated the 73rd Salon de L'Auto here last week.

The Paris show was held during an upbeat period for the European industry and there was a parade of new models, including several hot prospects for the U.S. market. But the French giants and their chief executives were at center stage.

Two years ago, Renault was bottoming out with a loss of $1.8 billion and Peugeot was in its fifth consecutive year of red ink.

PSA now is showing a profit, and Renault Chairman Georges Besse — installed by the French government a few months after the 1984 Paris show — last week forecast profitable operations by the fourth quarter of 1987.

Besse said Renault's losses for 1986 will be $750 million to $900 million, down from $1.6 billion last year. The company is operating at a profit, he said, but still registers an loss because of interest on about $9.4 billion in debt. He said the debt has been stabilized.

Renault, which showed facelifted R9 and R11 models and the R21 Nevada station wagon at the show, slipped to sixth and last place in sales among Europe's leading auto firms in the first six months of 1986 with 9.9 percent of the car market. But sales have rebounded with help from the new R21 launch last spring; Renault expects to conclude the year with 11 percent of the European car market.

Still, the company is not the force it was just four years ago, when it led European makers with a share of 14.6 percent.

The usually reticent Besse maintained a relatively high profile last week in Paris. But the 1986 Salon was also a showcase for Peugeot Chairman Jacques Calvet, the ex-

Renault chief vows no more AMC aid, will sell some assets

Georges Besse: "certainly not"

By Andrew McGill and Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTERS

PARIS — Renault Chairman Georges Besse said the company will sell assets to get out of the red and did not rule out the possibility of selling Renault's 46 percent stake in American Motors.

Although he would not say which assets would be sold, Besse said the sale should be complete by the end of 1987. The plan is to make Renault profitable by the fourth quarter of next year by reducing its debt servicing costs.

Besse would not respond to direct questions about the potential sale of all or part of AMC, but said Renault would "certainly not" consider further investments or loans to its U.S. affiliate.

Responding to an oft-publicized rumor that Chrysler Corp. is negotiating with Renault to buy all or

Domestic sales hit record for Sept.; model year off 3.5%

By Dave Zola
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers shattered the new-car sales record for September as incentives helped the industry move 953,025 units during the month.

The effort topped the old September record of 8?9,382 set in 1985.

Production up. Page 59

There was one more selling day this year, but even so, September 1986 sales of 38,121 for each of the 25 selling days easily outpaced the September 1985 daily average of 34,974.

The strong showing helped domestic carmakers finish the model year (Oct. 1, 1985, to Sept. 30, 1986) on a positive note. However, the final industry tally of 8,087,186 was down 3.5 percent from the 1985 model year count of 8,383,-195.

Cut-rate financing helped General Motors sell 519,077 domestic cars in September, a record for the month and third highest monthly sales total in GM history. It gave GM a commanding 54.5 percent of domestic-car sales for the month.

Ford Motor Co. reported a 4.1 percent drop from year-ago levels, with 219,609 units sold during the month.

Chrysler Motors car sales reached 140,451 in September, a 29 percent climb from last year's 108,-906.

American Motors sold 11,115 cars in September, down 8.8 percent from 12,188 last year. Volks-

Chevrolet redraws its sales districts in move to streamline management

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet will close 17 of its 39 zone offices, set up a national marketing center and restructure field sales positions by Jan. 1 in what one executive calls the division's most significant change ever.

related story, page 58

Chevrolet's program will be explained to dealers today as a three-part effort to better align its sales offices with automotive markets and improve dealer relations, in part by removing a layer of management between General Manager Robert Burger and dealers.

Details will be given at Chevy's national dealer meeting later this month in Orlando, Fla.

This is Chevrolet's second major change in field operations in a year and will result in fewer field sales personnel, although the division has not said how many jobs will be lost. Chevrolet's move is more comprehensive than a Buick restructuring which began in June and trimmed two zones and two regions. Oldsmobile is considering a Buick-type reorganization. "This is how we get into the 21st century," said Robert W. Starr, general sales and service manager.

"This is really a phase-in of the 1984 General Motors reorganization, but it's the most significant change since we started in business 75 years ago."

It is tied to GM's three-year-old drive to move from a postwar, manufacturing-oriented operation to one that is more attuned to customer demands.

"In the '20s, we tried to put sales offices near our assembly plants," said Michael H. Erdman, assistant general sales manager. But the boundaries of the 22 new "branches," as zone offices will be called as of Dec. 1, are drawn to reflect marketing realities, he said.

Chevrolet planners considered five factors in drawing up the boundaries of the new branches — continuity with current zone locations, alignment with state boundaries, alignment with market areas, zone size and cost effectiveness and the relation between travel time and dealer contact time for field personnel.

NEW CHEVY SALES BRANCHES

AUTOMOTIVE NEWS/CHARLOTTE WINTER

Resulting boundaries revamp traditional zones and split states into as many as three branches, but cleave closely to individual markets. The new alignment does not split any of the 215 Areas of Dominant Influence (ADIs) defined by Aribitron and used by marketers as the primary guide to buying local advertising, Erdman said.

That is an effort to make zones

'C' is for luxury
Chrysler's new full-size luxury C-body — tentatively named New Yorker — debuts late next year as a 1988 model. With a 107-inch wheelbase, it will be the largest front-drive sedan in Chrysler's lineup. It will initially be powered by a 3-liter V-6 from Mitsubishi, but later in 1988 Chrysler will add a U.S.-built V-6. A Dodge version of the C-body also is planned.

Flxible, Greyhound believed eyeing GM's bus operations

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

A lot of companies would like to buy General Motors' bus operations, if the price were right.

Strong interest reportedly has been expressed by Flxible Corp. and Greyhound Corp.

The sale of GM's bus business is being handled by Salomon Brothers, in New York. It will be a big topic of conversation among those attending the American Public Transit Association's annual convention in Detroit this week.

GM reportedly plans to sell all the tooling, rights and everything else "except the land and the four walls" of its bus-making operation, sources said.

GM employs 550 people in its bus operations in the Pontiac Central plant in Michigan, where it currently builds six coaches a day, according to a spokesman.

It has more than 600 bus orders "that will take us into early 1987" and is "still actively seeking additional orders," he added.

He said GM was talking to several interested prospects, but would not elaborate.

Mark J. Obert, president and chief operating officer of Flxible Corp., of Delaware, Ohio, would not comment on his interest in GM's operations or their worth. But, he added, "they're not the plum of GM's fleet."

Flxible is GM's chief competitor in the transit bus field. If GM's sales to New York — the only transit authority that doesn't put out bids — were excluded, Flxible would outsell GM, Obert said.

Flxible sold more than 800 new buses last year and expects an increase in fiscal 1986, Obert said.

The company has also been successful in refurbishing and reselling 814 Grumman buses it bought from New York.

A Greyhound spokesman denied any company interest in GM's operation, though industry sources reported conversations between its transportation manufacturing group and GM.

The group includes bus manufacturing operations of Motor Coach Industries, of Winnipeg, Manitoba, and Pembina, N.D., and the Transportation Manufacturing Corp., of Roswell, N.M. The group and its companies are headed by John Nasi, a former GM executive.

The two operations build large intercity buses for Greyhound and outside companies. Outside sales are handled by Hausman Bus Sales & Parts Co., of Des Plaines, Ill.

Greyhound's purchase of GM's bus business would put it into an entirely new market which, in many ways, is more competitive than the one in which it now competes.

But it would also open new opportunities for Greyhound, which has little prospect for growth in its own market.

The transit bus market in which GM competes is overcrowded with competitors and has excess production capacity.

GM has capacity to build 3,350 units yearly — more than enough for the entire market.

Competition in the market is so intense that 35-foot and 40-foot units, like GM's, are being sold for as little as $130,000 — or 15 to 18 percent below 1983 prices, according to Bob Lee, president of Neoplane U.S.A. Corp., of Lamar, Colo., another major competitor.

Volvo, which earlier this year dropped out of the market, sold articulated buses for $190,000. They used to be $250,000.

Lee characterized current pricing as "impossible for everyone."

However, the drop in the value of the dollar has made manufacturing operations like GM's more attractive.

Lee said that Neoplane's strategy next year was to build domestically the large over-the-road buses it had been importing from its parent company in Stuttgart, West Germany.

Neoplane competes in both transit and intercity markets, and has already been building transit buses in Lamar, Colo.

Lee said added that his firm had a full product line, and wasn't interested in the GM operation.

For calendar 1986 through Sept. 20, GM retailed 249 RTS coaches in the United States, down 32.5 percent from last year. It has averaged a 42 percent market share during the last five years.

GM of Canada produces buses in St. Eustache, Ontario. It builds another model called the Classic.

It built 325 Classics in the 1986 model year, up from 204 the year before, according to a spokesman.

GM reportedly is negotiating a separate sale of its Canadian bus operations.

Vapors controlled best in car, EPA report says

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A confidential EPA staff working paper concludes that it is far more desirable to control gasoline vapors in vehicles than to require gasoline stations to install special nozzles on their pumps to do the same job.

In addition, the paper — dated August 1986 — concludes that the major safety problems associated with vehicular controls could be fixed for less than $5 per car.

Automakers have opposed bigger canisters for vehicles to reduce the fumes. They say the EPA has grossly underestimated the cost and leadtime needed and that controlling gasoline nozzles is faster and cheaper.

The Insurance Institute for Highway Safety recently raised safety questions with the EPA about increased fire risk for vehicles equipped with the proposed canisters.

Gasoline vapors damage the ozone layer, and protecting it is the most pressing air pollution concern.

The staff paper concludes that controlling fumes on vehicles could cost as little as $19, less $5 for vapors that would be recycled into fuel by the canisters.

On the other hand, the average gas station would have to install $11,500 worth of equipment and incur annual upkeep costs of $4,100 less $890 for vapors recycled into gasoline.

The paper also concludes that putting the controls on cars would be 93 percent efficient in capturing the fumes, as opposed to 62 to 83 percent effectiveness for the gas-pump nozzles.

The EPA says it has not yet decided whether it will require controls on vehicles, pumps or on both. It says it has not sent recommendations for a proposed rule to the White House Office of Management and Budget but that the two staffs have discussed the issue. EPA said it is always amending staff papers and it hopes to issue a formal proposal on the issue by the end of the year.

The EPA staff paper assessed the safety problems of both gas-pump and vehicular controls. One potential problem is with vehicles involved in rollovers. The paper concludes that fuel spillage potential is greater with the controls because the vapor line port from the fuel tank must be larger. It suggests a mechanical valve near the fillcap that would open when the gas-pump nozzle is inserted and close when it is removed.

A solenoid operating basically the same way could be used, and so could a standpipe with a mechanical rollover valve, the paper concludes — even though automakers say there are problems in getting a positive seal with a large rollover valve.

Tampering would not pose a significant problem, the staff concludes.

NHTSA has preliminarily decided that onboard systems can meet the fuel-spillage requirements of Standard 301, although some hardware and crash testing may be required. The insurance group has disputed that safety conclusion.

The insurers say gas pump nozzles would be simpler to enforce, and they cite a study made in California that found that gas nozzles could be 80 percent effective within four years and 92 percent effective within six years.

Sixty-one areas of the country do not meet the ozone ambient air quality standard. In addition, California and the District of Columbia have enacted what are known as

CAFE eased for '87, '88

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The corporate average fuel economy standard for 1987 and 1988 cars is 26 mpg. The government's decision was in response to petitions from General Motors and Ford Motor Co. to reduce the standard from 27.5 mpg, and it drew mixed responses.

The 26-mpg standard also was in effect for the 1986 model year.

NHTSA did not lower the 1985 and 1984 CAFE standards retroactively as requested by both GM and Ford. GM still owes about $386 million in civil penalties for the 1985 model year, but while Ford initially also owed millions, it has enough credits to wipe out its obligation for that year.

Because some lawmakers feel that strong CAFE standards are still needed to conserve oil and keep domestic companies competitive worldwide, there was some possibility of congressional action in the final days of the session.

At presstime, there was talk that Sen. Daniel Evans, R. Wash., might try to hang an amendment on some "must" legislation not slated to go before the House Energy and Commerce Committee chaired by Rep. John Dingell, D-Mich., who would be expected to kill the provision in conference.

Once before, Evans sponsored a bill prohibiting auto companies from using carryforward and carryback credits if they came from a CAFE standard that had been lowered. The bill was passed by the Senate but died in conference with the House.

GM had warned NHTSA that it needed a CAFE standard of 26 mpg for 1987-88 to prevent massive job losses. GM initiated a campaign to stimulate letters from affected workers, from shareholders and from congressmen and other officials in states where GM jobs might be lost.

GM said last week's decision was indeed a "jobs issue" and was "good news for American consumers and autoworkers" and in tune with the law and the "real world."

Donald R. Buist, director of Ford's automotive emissions and fuel economy office, called the decision proper. He said its effect on oil savings would be tiny and that failure to change the standards could have had an unfortunate effect on consumers' choice and jobs.

GM opposed to public ownership for dealers

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — "Mega-dealers" who are considering turning their businesses into public corporations have drawn the attention of General Motors. A high-level GM executive said last week that the giant automaker would not go along with the idea.

William E. Hoglund, GM vice president in charge of the Buick-Oldsmobile-Cadillac Group, stopped short of saying GM would take action to stop a dealer contemplating a public stock offering.

Hoglund

But, he said, "we wouldn't support this at all."

GM's long-standing policy has been that any change in dealership owners must be approved by GM, and a request for a dealership to become a publicly held company will not be approved. GM said it has had no such requests.

Hoglund said public ownership would shift the focus of a dealership toward selling the corporation's stock. That, he said, would run counter to GM objective "to get franchisees loyal to what we make."

Hoglund said he prefers to deal with relatively small entrepreneurs who are personally involved in their operations.

He said he viewed the franchise as an extension of the corporate name and that GM wants "the franchise to represent our name."

He also said he believed that smaller dealers do a better job of satisfying customers.

Hoglund, speaking at an informal dinner with the press in New York, avoided saying whether GM would move to stop dealers from making public stock offerings. When asked whether GM would buy a dealer's stock to gain control, he said he didn't know whether the company would want to do that.

A Chrysler executive, at the company's preview of its 1987 cars, said he expected one of its "mega-dealers" to go public, perhaps by the end of the year.

Free world trade best for U.S., GM executive insists

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

American business needs cooperation, not protectionism, to compete effectively in the world marketplace, according to a top-ranking General Motors executive.

"Trade is like a mirror that reflects our performance," said Marina v.N. Whitman, GM vice president in charge of the Public Affairs Staffs Group.

Whitman

"Where we're not world competitive, trade barriers won't solve the problem any more than you can improve your looks by breaking your mirror and buying a new one," she said.

In an address to the Women's Economic Club of Detroit, Whitman said the United States is at a critical point in its foreign trade policy. The nation could reduce its spiraling trade deficit or cause an international economic crisis, she said.

On the positive side, she said, the United States has a good economic climate with lower interest rates, lower oil prices and lower inflation. The dollar, she said, has also come down "to reasonable levels" compared to other foreign currencies.

Whitman said the United States has discussed trade and currency imbalances with other countries. She praised efforts such as the Tokyo summit, held in May, and a September 1985 conference to adjust currencies for the United States, Japan, West Germany, Great Britain and France.

According to Whitman, those actions have improved trade relations between the United States and its large trading partners.

But cyclical and structural problems in the U.S. economy persist, she said. The federal budget deficit is intertwined with the trade deficit, producing a reliance on foreign investment that extends U.S. debt.

Germany and Japan, which export more domestic goods to the United States than they import from the United States, are reluctant to buy more U.S. goods, she said.

Slower growth and spending cuts also have limited the purchase of U.S. exports by developing and newly industrialized countries, Whitman said.

"We're pulling in additional imports faster than they are," she said.

The United States also faces an overvalued dollar, a slow growth in productivity and possible global overcapacity in many industries, Whitman said.

Such factors could intensify competition, she said.

Whitman said that if the United States wants to reduce its trade imbalance with other countries, the nation must insist that its trading partners open their markets to American goods. It also must insist that foreign governments curtail their subsidies.

Whitman said protectionism threatens global economic growth because a reduction in trade decreases the ability of developing countries to repay debts.

"The more trade restraints they must confront, the more difficult it will be for them to repay their debts — and the greater likelihood of serious breakdown somewhere in the global financial system," Whitman said.

Such an escalation in trade barriers could have a ripple effect on every country's growth and eventually cause an economic downturn, she said.

Whitman said the economic events in the 1930s are an example of how that could occur.

In order for the United States to avoid a protectionist climate, Whitman said, the nation must avoid recession, improve its trade deficit with other countries and open markets that are virtually closed to U.S.-made goods.

"That is a lot of ifs," she said.

GM Canada aides act to save jobs and Scarborough and Ste. Therese

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Workers at two General Motors of Canada assembly plants have taken steps to save their jobs in the face of an announcement of heavy layoffs and a threatened closing.

The assembly plants in question are in Scarborough, Ontario, and Ste. Therese, Quebec.

Representatives of the Canadian Auto Workers met with GM last week to propose a plan to keep both shifts working at the Scarborough van plant.

GM had announced it would eliminate one shift and lay off half of the workforce of 2,500 because of declining sales.

Basil Hargrove, assistant to CAW President Bob White, said the union proposed that both shifts continue working but on a reduced schedule.

He said that was done at Ford of Canada's St. Thomas, Ontario, plant for almost three years during the 1981-83 recession.

At that time, both shifts worked one to three weeks during the month, he said, and the plant was shut down during the other weeks.

He said that during the downtime, St. Thomas workers received unemployment compensation as well as supplemental unemployment benefits equal to 95 percent of wages.

"That way, a shift was not reduced. It's a form of job sharing," Hargrove said.

He said, however, that he expected talks on the proposal for the Scarborough plant to go on for some time.

A GM spokesman said the company was studying the union's proposal.

Hargrove also said that GM officials were meeting with the federal and provincial governments to ask for financial assistance in retooling the Ste. Therese facility.

Ste. Therese workers voted Sept. 22 to revise their local contract to try to save the facility, which has no product allocation beyond 1987.

The vote was 58.9 percent in favor of concessions — mainly reductions in classifications — to make the plant more competitive, he said.

The government money would be used for plant modernization to build another car at the facility, he said.

Initially, Ste. Therese is "looking at the A-body, which will come out of the Oshawa, Ontario, plant when it goes to the GM10 cars," he said.

The Ste. Therese facility now builds the rear-wheel-drive Pontiac Grand Prix and Oldsmobile Cutlass Supreme.

GM of Canada President George A. Peapples said that the new agreement at Ste. Therese "represents an important step in an ongoing effort to position the plant for a new product program."

GM said Peapples met with Quebec Premier Robert Bourassa and Michel Cote, federal minister of regional industrial expansion, "to explore opportunities which the new agreement may make possible."

GM said that with the cooperation of all involved, it hoped for a long-term future for St. Therese.

Mexican railway helping Chrysler hit export goal

MEXICO CITY — Mexico's National Railways System is helping Chrysler de Mexico reach its goal of $1 billion annually in exports, according to Vicente Ariztegui, chairman of Chrysler de Mexico's board of directors.

The Chrysler Toluca plant accounts for 65 percent of the firm's exports, including cars, trucks, engines, condensers and engine mounts. Ariztegui said Chrysler is shipping products to the United States, Canada, the Caribbean, Latin America and Asia.

More than $3 million has been invested in developing equipment for export at the Toluca assembly plant, Ariztegui said. The plant can ship 700 vehicles daily.

National Railways of Mexico now runs exclusive trains for Chrysler automotive exports. In the last nine months, the railway has transported nearly 32,000 Chrysler vehicles, using more than 2,900 freight cars.

1987 Ford Escorts roll
Ron Wallace, right, manager of Ford Motor Co.'s assembly plant in Edison, N.J., and Earl Nail, president of UAW Local 980, congratulate each other as the first 1987 Ford Escort is completed. The Edison facility, which employs 1,400 people, also produces the Mercury Lynx.

Chevy realignment boosts trucks

The first of a series of personnel changes in Chevrolet Motor Division's field sales reorganization will give added importance to trucks.

Four new sales managers were appointed by Robert W. Starr, general sales and service manager, with two in charge of trucks and two in charge of cars. The reorganization takes effect Dec. 1, consolidating Chevrolet's 39 zone offices into 22 branches.

"Truck leadership is important to Chevrolet, so we have formed a sales organization that will increase dealer efforts in this growing area of the business," Starr said.

"This new organization will ensure that trucks get as much attention as passenger cars."

Through all but the final 10 days of the 1986 model year, Chevy sold 1,701,057 cars and 1,254,698 trucks, a 58-42 split.

Named to the new posts were Charles B. Chauvin, passenger-car sales manager — East; Larry K. Mayfield, truck sales manager — East; John R. Kutina, passenger-car sales manager — West; and Emmett P. Feely Jr., truck sales manager — West. Chauvin and Mayfield will have 11 Eastern branch managers reporting to them on car and truck sales. Kutina and Feely will have the 11 Western branches.

That replaces a setup of zone managers responsible for both car and truck sales and reporting to one of four area sales managers.

Chauvin previously was sales manager — South. Mayfield formerly was Houston zone manager. Kutina has been sales manager — Central. Feely was sales manager — East.

Joseph W. Rooney, who has been sales manager — West, has not yet been reassigned. Executive assignments under the reorganization, which includes establishing a 400-person national marketing center in Detroit, are expected to reach about 90 before the first of the year.

Henry Ford: Better ideas aren't enough to survive

Henry Ford II, left, and Edsel Ford give presentation SANTA FABIO

DETROIT — In one of his rare public appearances since his retirement as Ford Motor Co. chairman, Henry Ford II said here last week that "auto companies worldwide are in a race for survival, and only the fittest will endure."

During a presentation with his son, Edsel B. Ford II, before the Detroit Section of the Society of Automotive Engineers, he said that Japanese competitors "seem to have been more adept than we in applying quickly and effectively some of our technical and managerial advances."

He told the technical gathering of 1,600 people at Cobo Hall: "My message to you is that it is not enough just to have better, more innovative ideas. We must also beat the competition in putting them to work."

In recounting the past, Ford, now a board member of Ford Motor Co. and chairman of the finance committee, said, "We all produced those big, powerful, chrome-laden, fin-swept cars. . . . But our excesses in size and shape left the bottom of the market to foreign cars . . . which began to penetrate our market in the late 1950s."

Recalling a statement he made in the mid-1970s about turning back import competition, Ford said, "We didn't exactly drive them from our shores, despite my prediction of some years ago."

He said government-imposed safety and emission-control legislation "caused us to take our eye off the ball in the late '60s and through much of the 1970s — but we can't blame government for all our problems."

"We really had lost our way through much of that period. We got careless and conceited. We were so successful for a long time following World War II that we took our dominance of our home market for granted," Ford said. We began to believe our own propaganda — that we had all the answers, our critics were misinformed and misguided, and that all we had to do to win was show up for the game.

"Eventually we put our act back together and produced high-quality products at almost-competitive prices. But in the meantime, we paid a big price for losing our way. . . . Foreign competition had come to stay and today it has become a part of domestic competition."

In sharing the podium with his father at the program commemorating the 75th anniversary of SAE's Detroit Section, Edsel Ford discussed what might be expected in the auto industry 75 years from now.

Edsel Ford, Lincoln-Mercury's general marketing manager, predicted that decision-making and control will be pushed farther down the organization.

"With more decisions made at lower levels, we'll also have to continue the emphasis on training and retraining," he said. ". . . People will change jobs more often. The ability to adapt to change will be the single most important attribute for people who work in the auto industry."

As for products of the year 2000, Ford forecast:

Cars without protruding door handles, rear-view mirrors or antennas; but with flush glass, variable ride-height control, skirts and spoilers, air inlet-outlet ducts and a full-length belly pan to reduce under-car turbulence.

He predicted light-emitting surfaces integrated into the glass; multiple cameras that portray the environment all around the car with no blind spots; an infrared system that provides good vision at night and in bad weather; a display on the windshield for forward-looking driver vision during heavy fog, rain or snow.

Also, a control system that tailors suspension rates and brake proportioning and orchestrates a complex four-wheel steering system; along with backup systems, "limp home" features and self-diagnostics to ensure that the car will almost never break down on the road.

Ford described those and other technologies and developments as "technically possible" and said some are available now.

"Time will tell whether they are all economically feasible," he added.

He said Ford Motor Co. will have a running model of Probe V — its "car of the year 2000" — as soon as next year.

SALES

FROM PAGE 1

wagen of America reported only a slight drop for the month, with 6,138 Golfs sold versus 6,492 in September 1985. Domestic Honda sales reached 51,537 vs. 33,315, and Nissan sales totaled 5,098, down from 6,641.

GM's sales totaled 4,552,762 for the 1986 model year, down 3.0 percent from 4,694,979 a year earlier.

Ford's 1986 model-year sales of 1,966,029 units were off 9.4 percent from 1985's 2,170,410.

Chrysler gained less than a percentage point in volume from 1985 levels, but its 1986 sales of 1,148,627 represented the company's best model year since 1977. Chrysler's 1985-model-year total was 1,144,682.

AMC suffered the biggest drop among the domestics, as 1986 model year sales dipped 40.1 percent to 82,298 from 137,493.

Nissan's 134.8 percent gain in model-year car sales was the domestic industry's largets. Its total was 49,325. Honda also posted a big year-to-year gain with a 41.5 percent rise in sales of domestic cars for a total of 211,735. VWoA sales of 76,410 were up 7.1 percent.

The winners in the battle for market share during the 1986 model year were Chrysler, Honda, Nissan and GM. VWoA remained stable and Ford and AMC lost ground.

Chrysler's market share for the period increased to 14.2 percent, up from 13.7 percent in 1985. Honda's share of domestic car sales climbed to 2.6 percent from 1.8 percent. Nissan captured 0.6 percent of the market, compared to its 0.2 percent share one year earlier.

GM held a tight grip on its share of the market, finishing the 1986 model year with a 56.3 percent penetration versus 56.0 percent in 1985.

Ford's market share dropped to 24.3 percent from 25.8 percent in 1985, the largest decline. AMC wound up with 1 percent of the market, compared with 1.6 percent in 1985. VWoa had 1.0 percent of the market vs. 0.9 percent a year ago.

Year's auto output tops 6 million

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers assembled their 6-millionth car of the year last Friday, 13 days behind 1985.

So far this year, 6,021,846 cars have been produced, 5.44 percent below the 6,368,350 completed last year at this point.

Last week's targeted production of 146,080 was 4.63 percent below the previous week's 153,170 and 16.42 percent below the year-ago week's 174,781.

Companies shared last week's scheduled output as follows: General Motors, 52.77 percent; Ford Motor Co., 21.20 percent; Chrysler Motors, 15.13 percent; Honda of America Manufacturing Inc., 4.50 percent; New United Motor Manufacturing Inc., 2.05 percent; Nissan Motor Manufacturing Co., U.S.A., 1.82 percent; Volkswagen of America, 1.37 percent; and American Motors, 1.16 percent.

GM's Pontiac G-line, in Pontiac, Mich., is idle beginning today for inventory adjustment. The line produces the Buick Regal and Oldsmobile Cutlass Supreme and will be down for two weeks, affecting 1,600 workers.

The GM Framingham, Mass.; Tarrytown, N.Y.; and Oklahoma City plants were to resume production today. All three plants had been down because of a material shortage.

Ford's Dearborn, Mich., plant is scheduled to be idle today and Tuesday for model changeover, affecting 1,800 workers. The plant is slated to resume output Wednesday. The plant was slated for overtime last Saturday.

GM's Lansing (No. 1) plant also was slated for overtime Saturday, and so were Chrysler's Belvidere, Ill., and Newark, Del., plants.

Chrysler's Belvidere, Newark and and St. Louis (No. 2) plant are slated for daily overtime this week.

Auto output rises 1% for model year

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Even though the Big Three show slight declines, auto production for the 1986 model year appears to have surpassed the 1985 total.

According to Automotive News estimates, the domestic makers assembled 8,041,423 cars during the 1986 model year, 0.82 percent more than the 7,975,390 built in the 1985 model year.

Contributing to the increase were a joint-venture company and three foreign-based firms that manufacture cars in the United States.

New United Motor Manufacturing Inc., the General Motors-Toyota joint-venture, produced 182,820 Novas compared with 27,943 in the 1985 model year when production was in the start-up phase.

Honda of America Manufacturing Inc.'s production of 189,114 was up 21.92 percent from 1985's 155,102, due to the high demand for the Accord and the addition of a second line for Accord and Civic late in the 1986 model year.

Nissan Motor Manufacturing Co. boosted car output 171.97 percent to 47,236 from 17,368. Nissan began assembling cars in the United States midway in the 1985 model year.

Volkswagen of America's output of 98,078, was up 18.45 percent from 1985's total of 82,797.

General Motors' production of 4,464,734 units during the 1986 model year was down slightly (0.58 percent) from 1985's 4,490,883.

However, Pontiac Motor Division posted the largest increase of any domestic make. It built 828,320 cars in the 1986 model year, up 59.48 percent from last year's 519,390. The increase was due to increased production of the Grand Am, Sunbird and 6000.

Ford Motor Co.'s output of 1,719,135 cars was down a bit (0.96 percent) from 1,735,782 in the 1985 model year despite the addition of Ford Taurus and Mercury Sable.

Chrysler Motors' production dipped 3.03 percent during the 1986 model year — to 1,275,433 cars, down from 1985's total of 1,315,326.

American Motors assembled 64,873 cars during the 1986 model year, down 56.81 percent from 150,189 in the 1985 model year. The Kenosha, Wis., plant was closed several times during the year for inventory adjustment.

GM returns; Canada rises

Car production in Canada rose last week as two General Motors plants resumed output.

The automakers' targeted output of 24,476 cars last week was 62.33 percent more than the previous week's 15,078 and 1.71 percent more than the year-ago week's 24,065.

GM's plant in Ste. Therese, Quebec, resumed production Sept. 29 after being idle for inventory adjustment.

GM's Oshawa, Ontario, car plant No. 2 also resumed output last week. The plant had been down because of a shortage of engine parts. The shortage had also affected production at the Oshawa No. 1 car plant, which is now back to full line speeds.

So far this year, 789,662 units have been assembled, 2.97 percent below the 813,845 completed last year at this point.

Last week's truck output was targeted at 15,252 units, 2.87 percent more than the previous week's 14,826 but 18.75 percent below the year-ago week's 18,772.

GM's Oshawa truck plant remains idle for model changeover. The plant is scheduled to resume production Dec. 8.

The GM truck plant in Scarborough, Ontario, was scheduled to shut down today for one week for inventory adjustment.

Honda of Canada Manufacturing Inc. will begin producing the Accord four-door sedan later this month at its new plant in Alliston, Ontario. Pilot production has begun.

Truck production is steady

Domestic truckmakers scheduled production of 73,943 units last week, 1.10 percent more than the prior week's 73,140 but 1.08 percent below the year-ago week's 74,750.

Year-to-date, 2,753,033 trucks have been assembled, 3.59 percent more than the 2,657,616 completed last year at this point.

Ford Motor Co.'s truck plant in Kansas City, Mo., will be idle for two weeks beginning today for model changeover; 800 workers will be laid off during that time.

General Motors scheduled Saturday (Oct. 4) overtime at its plants in Janesville, Wis., and Baltimore.

Ford's Twin Cities, Minn., and Norfolk, Va., plants are were slated for Saturday overtime. Daily overtime is scheduled this week at all Ford truck plants except Michigan Truck (Wayne).

Chrysler Motors' Warren, Mich., plant was slated to work overtime Saturday (Oct. 4) and is scheduled for daily overtime this week.

Audi chief to leave post; VW denies big shake-up

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

Peter Fischer, the vice president in charge of troubled Audi of America, soon will be assigned to another position in the Volkswagen organization. VW officials deny the change is part of a broader shake-up.

No replacement has been named for Fischer, who has been in charge of Audi for 4½ years.

Fischer

Thomas McDonald, spokesman for Volkswagen of America, the parent company, said the reassignment is part of a mutual agreement between Fischer and VWoA President Noel Phillips and does not reflect on Fischer's work or on Audi's problems, including the controversy earlier this year over sudden "unintended" acceleration.

However, one major Audi dealer, Norman Braman of Florida, said Fischer was being made the scapegoat for the problems.

McDonald had nothing but praise for Fischer and said it was under Fischer that Audi reached its highest sales of over 74,000 in 1985.

No successor has been named for Fischer and the search could take from two weeks to three months, according to McDonald. Until then, Fischer will continue in his position.

Fischer confirmed the reassignment and that it was mutually agreed upon. He had no further comment on the change.

Early in the week, rumors were rampant about the shift, which Audi announced only to its dealers.

One scenario proposed by various sources was that James Fuller, vice president in charge of Volkswagen United States, would move up to a vice presidential position in charge of both VW and Audi.

The same theory suggested Richard Marcy, now in charge of marketing for VW U.S., would move to head Audi, while Bruno Robess, head of VW Canada, would be placed in charge of VW U.S. Fischer would head up the Canadian operation.

McDonald said that Phillips is not considering any such moves. He also said Fischer's reassignment was not related to Audi's problems.

The Fischer reassignment is part of a troubled year for Audi. The company is facing a decline in sales

Ford widens program for minority suppliers

By Dave Zola
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. says it is getting serious about attracting minority-owned suppliers — a good news/bad news development for such firms.

For those that qualify, Ford will offer financial, technical and administrative assistance. But firms that refuse to grow with the program no longer will have Ford in their futures.

Ford isn't alone in broadening its program. General Motors and Chrysler also are increasing purchases from minority-owned businesses.

"Our goal is to establish a minority firm's viability," said Gary White, manager of Ford's minority supplier development program. "We don't just want to source parts with them; we want to make them profitable as well.

"We're finding that it doesn't cost any more to do that," White said. "If we help them become competent and efficient through technical assistance and we make sure quality is there, then it doesn't cost any more to do business with them than any other supplier."

But that doesn't mean every minority supplier will be able to cut it.

"There is a down side," White said. "As a result of this new approach, some guys that have been hanging on won't be able to any longer.

Stockpiles decline; most incentives end but return expected

By Edward Lapham, Michelle Krebs and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

The lowest-ever round of annual-percentage-rate finance incentives has proved to be an unqualified success in clearing out stocks of 1986 models and reducing domestic new-car inventories to an industry-wide 35-days' supply.

But even as the automakers were declaring victory and swearing off the incentives — General Motors' Chairman Roger Smith hinted that the giant would cut production instead — there was speculation that sales stimuli would return by mid-November, triggered in part by price increases for 1987 models.

In fact, some analysts believe the long string of incentives — stretching back nearly two years — may have changed the nature of automobile retailing to resemble the home entertainment and appliance industries, where sales and price selling are the rule.

"A good headline might be: 'Is GM going to Crazy Eddie's?' " said Thomas F. O'Grady, Integrated Automotive Resources auto analyst. O'Grady said he expects the automaker "to wait as long as possible" before going back to incentives, "like mid-November, when sales plummet."

He also said that GM could have taken a lesson from "other businesses that do sales" and used a 5.9 APR on a limited number of models, including slow sellers that needed to be cleared and hot sellers that build showroom traffic.

"The incentives were a success, but they were caused by a mistake," O'Grady said. "Five-nines should have been good enough."

Arthur G. Davis, of Prescott, Ball & Turben, agreed that the incentives "were too good, in retrospect."

Davis said "60 to 65 percent of the buying was done at 4.9" APR. He said that means the automakers, led by GM, went too low.

Ford Motor Co. and GM ended their programs at midweek. GM had no figure on the percent of car and truck buyers that preferred the low finance rates to rebates in its program, which ran from Aug. 28 to Oct. 8. Ford said about 65 percent of buyers in its program, which ran from Aug. 29 to Oct. 8, preferred the low rates. Chrysler estimated that about 70 percent of its buyers preferred the lower rates; its program started Aug. 29 and was scheduled to end over the weekend.

AMC said that only 30 percent of its buyers had opted for its zero percent 24-month loans.

Davis said the latest round of incentives proved that there is real interest in a "deal."

"It was a big, big plus for the industry," Davis said. However, he

GM wants Japan to cut shipments

Roger Smith: "The Japanese haven't done anything to open up their borders."

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has reversed its stand and is calling on the Japanese to reduce the number of vehicles they ship to the United States when the voluntary restraints expire March 31, 1987.

The current limit is 2.3 million cars a year. GM Chairman Roger B. Smith would not say what he felt the level should be.

Smith said that if the Japanese are really sincere in wanting to help the United States reduce its trade deficit with Japan, they must reduce their auto exports to this country.

Smith noted that with the yen appreciating against the U.S. dollar and Japanese automakers increasing prices to keep pace with the currency shift, the U.S. trade deficit with Japan is worsening. The Japanese are drawing more dollars out of the United States on the same number of automobiles, he said.

Smith acknowledged that his remarks represent a change in position. In the past, GM has favored lifting restraints, in part because it wanted to increase its imports from Suzuki and Isuzu, its Japanese partners.

Smith said GM has changed its position because the Japanese have not lived up to their end of the bargain. Ideally, he said, GM favors free trade and fair trade.

"But what have we got?" he asked. "Free trade. We haven't got the fair trade. The Japanese haven't done anything to open up their borders."

Smith said GM favors voluntary restraints over protectionist legislation that might be passed by Congress.

"What would I rather have — voluntary

Buick heads upscale to end Olds overlap

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

FLINT, Mich. — Edward H. Mertz, the new general manager of Buick Motor Division, said Buick will move further upscale and overlap less with Oldsmobile.

"Buick is an upscale division already," Mertz told Automotive News. "We feel that there definitely is room to move even more upscale."

Mertz

Mertz was director of the Buick-Oldsmobile-Cadillac Group's Lansing product team before becoming Buick general manager and a GM vice president Aug. 1. His appointment to Buick's top job was seen as a move to halt sliding sales and improve Buick's identity.

Mertz said Buick will move upwards in product design, features and content — not in every model, but in its top-of-the-line Riviera and Park Avenue, for example.

"Upscale doesn't necessarily mean super expensive," Mertz said. "Good-quality products come in a variety of prices, but upscale is even more than good quality. There's an intangible about something that's upscale — you know it when you see it. It's distinguished, it's refined, it's very professionally put together and presented."

The Buick repositioning reinforces GM's traditional price ladder: Cadillac at the top, followed by Buick and then Oldsmobile. In recent years, GM has been criticized for having look-alike cars in the Cadillac, Buick and Oldsmobile lines.

Mertz said that until recently, Buick and Olsmobile had worked separately to sort out their identities. Now they are working together to identify each division's strengths and which future markets are best served by one division or the other or both.

"That's a high priority of ours — to start to move apart instead of staying right on top of one another," Mertz said. "We'll never be completely separate, but we can both benefit from more separation than we have right now."

Mertz said the divisions' directions should be sorted out in the next six months.

He said moving upscale doesn't necessarily mean moving away from performance, a characteristic Buick has stressed in recent years with T-type models and the Buick Regal Grand National.

"Performance has been a strong point in Buick's heritage," Mertz said, "and people who want upscale cars want performance of all kinds including good acceleration. We'll never be out to have the fastest cars on the road in every class."

Mertz said that, contrary to popular belief, Buick is not moving away from installing the newest technology in its vehicles. It will continue to be interested in innovations that reinforce Buick's strong points, including comfort, he said.

"New technology in ride aspects in cars would be very appropriate for Buick," he said. "Our use of new technology would be focused on our key image characteristics."

Mertz said he hesitates to say Buick is returning to its "traditional luxury" image.

" 'Traditional' is widely misunderstood," he said. "We're going to build off the heritage we have, what has made Buick strong — for instance, the ride aspects of cars."

At the lower end of the product spectrum, Buick is evaluating its entry-level offering.

"What is an entry-level car? We're talking about that right now," Mertz said. "Certainly, we're not going to offer a Sprint-type vehicle. Neither is Park Avenue going to be our lowest-level car. We're asking ourselves at what level should Buick's entry level be."

Mertz said Buick's present entry-level line, the Skyhawk, will be around "for the foreseeable future." Dropping the Skyhawk has been considered since there is little brand loyalty at the low end and there is no guarantee that a Skyhawk buyer will trade up through Buick's line.

Mertz also said an all-wheel-drive model is a possibility for Buick. Lloyd Reuss, GM executive vice president in charge of North American car operations, said recently that GM will have a domestic four-wheel-drive car in about two years, but he didn't say which division or divisions will get it.

"I don't know if or where that fits yet." Mertz said. "That's one of the questions on the docket for the whole market-segmentation issue. I certainly wouldn't rule it out for Buick. It's a possibility."

Buick's re-evaluation of its product and marketing strategy is part of a corporate effort to define the role of each division and what products each should offer. The plan is to reduce the number of models GM offers and reduce the overlap of divisional products and markets.

"We're 20 percent along in getting that done," Mertz said. "The publicity has exceeded where we are actually in the process."

Stocks plunge to 35 days, lowest in 14 years

Arthur Flax and Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTERS

Incentives offered in September chopped stocks of new domestic cars to the lowest days-supply count in 14 years.

On Oct. 1, the supply was 35 days, a figure unmatched since Sept. 1, 1972, and unbeaten since Oct. 1, 1967, when the days' supply was 26.

As October opened, there were 1,291,280 new domestic cars in inventory at assembly plants and dealerships and in transit to dealerships. It was the lowest total since Oct. 1, 1985, when the count was 1,242,071.

Historically, stocks have dropped in autumn as manufacturers clear out inventories of the previous model year's autos.

Last year, domestic manufacturers offered 7.5 or 7.7 percent annual-percentage-rate financing to clear stocks. This year, the APR incentives were zero percent at American Motors, 2.4 percent at Chrysler Motors and 2.9 percent at Ford Motor Co. and General Motors.

The ideal days' suppiy is generally considered to be 50 days.

The industry's 35-day supply on Oct. 1 was 25 days lower than on Sept. 1. On Oct. 1, 1985, it was 36 days.

AMC recorded the greatest reduction in inventory with a 53-day supply on Oct. 1, compared with 142 days on Sept. 1.

Ford had the lowest supply of the Big Three with a 34-day inventory on Oct. 1, compared with 57 days at the start of the previous month; Chrysler Motors had a 35-day supply, down from 62; and General Motors had a 36-day supply, down from 63.

Volkswagen's supply rose from 59 days on Sept. 1 to 64 days on Oct. 1. Nissan, which had virtually no cars in stock on Sept. 1, filled its pipeline with a 28-day supply on Oct. 1. Honda increased its stock to 11 days on Oct. 1, up from eight days on Sept. 1.

Companies shared the Oct. 1 inventory as follows: General Motors, 57.28 percent; Ford Motor Co., 23.19 percent; Chrysler Motors, 15.31 percent; American Motors, 1.80 percent; Volkswagen, 1.22 percent; Honda, 0.76 percent; and Nissan, 0.44 percent.

A month earlier, shares had been: GM, 58.34 percent; Ford, 22.86 percent; Chrysler, 15.30 percent; AMC, 1.95 percent; Volkswagen, 0.95 percent; Honda, 0.42 percent; and Nissan, 0.18 percent.

Shares by market class on Oct. 1 were: Intermediate, 32.87 percent; compact, 21.65 percent; subcompact, 18.14 percent; standard, 15.27 percent; and luxury, 12.07 percent.

Shares on Sept. 1 were: Intermediate, 34.78 percent; compact, 20.38 percent; subcompact, 18.80 percent; standard, 14.29 percent; and luxury, 11.75 percent.

Inventories show declines for imported cars, trucks

Inventories of imported cars, which had climbed to a 3½-year high of 41 days' supply at the beginning of September, dipped to a 36-day supply on Oct. 1.

The stockpile of imported light trucks also fell significantly.

October opened with 391,724 imported cars in stock — at U.S. docks, in transit to dealerships and in dealerships. The figure was well below the Sept. 1 inventory of 437,297 and was the lowest since May 1, when the count was 346,487.

On Oct. 1, 1985, imported-car stocks totaled 280,248.

Before quotas, the ideal import days' supply level was considered to be 65 days.

During September, financing incentives helped reduce the supply of Mercury Merkur and Chevrolet's captive imports, Isuzu Spectrum and Suzuki Sprint.

The 36-day supply on Oct. 1 compares to a Sept. 1 stock of 41 days. On Oct. 1, 1985, the figure was 29 days.

By country of origin, the stockpile was split this way on Oct. 1: Japan, 70.00 percent; Germany, 17.93 percent; and other countries, 12.07 percent.

The Japanese makes averaged a 34-day supply on Oct. 1. Breakdown by make and days: Isuzu, 96; Mitsubishi, 76; Chrysler captives, 56; Subaru, 47; Chevrolet captives, 41; Nissan, 40; Mazda, 32, Acura, 24; Toyota, 21; and Honda, 9.

The average for German makes was 52 days: Audi, 86; Merkur, 58; BMW, 57; Volkswagen, 57; Porsche, 32; Mercedes-Benz, 27.

The average for cars from other countries was 32 days: Peugeot, 79; Yugo, 32; Alfa Romeo, 31; Volvo, 29; Saab, 27; Jaguar, 23; and Renault 21. The Hyundai figure was not available.

The Oct. 1 light-truck stockpile of 177,415 units was significantly below the 209,059 units on hand at the beginning of September. The latest figure is equivalent to a 46-day supply, down from 75 days a month earlier. On Oct. 1, a year ago, there was a 26-day supply of trucks, or 84,957 units.

Combining imported cars and trucks, there were 569,139 imports in the United States on Oct. 1, a 39-day supply. The stockpile was well below the Sept. 1 count of 646,356 units (48 days), but considerably above the Oct. 1, 1985 count of 365,205 (29 days).

Luxury 4wd van from Contempo
Contempo Vans of Sun Valley, Calif., and Pathfinder Equipment, of City of Industry, Calif., developed this four-wheel-drive van, designed to transport up to 14 people. The 4wd conversions, available through new-car dealers on full-sized Ford, Chevrolet and GMC vans, feature luxury interiors, heavy sound insulation, air conditioning and other amenities.

3 RV firms eye growth in van conversion field

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

SOUTH BEND, Ind. — Winnebago Industries and Coachmen Industries are eyeing expansion of their van conversion business, while Pathfinder Equipment has expanded its availability of four-wheel-drive van conversions and packages.

Winnebago, of Forest City, Iowa, is considering a licensing agreement or opening another plant, according to Fred Emmert, marketing vice president.

"By nature of where we're located, in the middle of an agricultural community, we've gone about as far as we can go in the Midwest," Emmert said.

He said the customized van business is regional because of transportation costs and the number of good, high-quality converters.

"Many are small and regional," he said. "They don't have the marketing organization that we do. We've looked at the possibility of providing a converter with the materials. They do the conversion, and we market it under the Winnebago name."

Coachmen Industries, of Middlebury, Ind., bought its manufacturing complex in Longview, Texas, with the idea of eventually expanding its van camper and van conversion operations, said Robert M. Wasieko, executive vice president of Coachmen Industries and president of Coachmen RV Co.

Coachman Vans, along with its other van customizing company, Consolidated Leisure Industries, sold about 2,000 conversions in the 1986 model year, the same as in 1985.

Meanwhile, Pathfinder Equipment Co., of City of Industry, Calif., has expanded operations to include what Vice President and General Manager Dick Long describes as "the most complete van conversion package in the industry."

Pathfinder is a long-time maker of 4wd conversions for vans. Its latest conversion package includes luxurious interiors — everything from full reclining seats to hand-rubbed solid oak accents — and custom exterior options such as luggage racks and panoramic windows.

Dealers can order conversion packages with or without the 4wd feature. And they can order the 4wd conversion without the interior-exterior package.

In addition to conversions for standard-sized vans, Pathfinder has begun offering 4wd conversions and custom interior-exterior packages for various minivan models.

All conversions are engineered and produced at its plant in Warren, Ohio.

Sony offering RV video products

SOUTH BEND, Ind. — Sony Corp. of America is offering various video products designed for the RV market. The products were displayed at the recent South Bend RV Show.

Doug Wilsterman, national OEM sales manager for Sony Special Markets, said that Sony has doubled its business each year since it entered the RV market in January 1984.

Sony recently established a national network of 10 distributors to handle RV sales and service.

William Hutton was hired as national sales manager for AES special markets. He handles sales and marketing for the RV market and Sony's original-equipment business. Hutton formerly was field sales manager for Midland International Corp.

The company also hired Mark Weir, a systems application engineer, to work with RV manufacturers in designing sound and video systems.

Video equipment makes recreational vehicles more saleable, Wilsterman said, but vans, motor homes and other RVs have trouble with TV reception while on the road.

Sony's AND-500 Mobile TV Diversity reception unit solves the problem by installing up to three antennas in the vehicle, he said.

As the vehicle moves, a microprocessor automatically switches to the antenna with the best signal. The switching is rapid enough to avoid interfering with sound or picture.

Sony, a first-time exhibitor at the South Bend show, also displayed a mobile 8-mm video playback deck and a Trinitron video monitor.

New records set for truck sales

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck manufacturers sold over a half-million units in September and nearly 4.6 million light-duty models in the 1986 model year, setting new records for both periods.

Domestic truck sales of 516,190 set a new September high, topping previous record by 30.6 percent.

The total included 494,348 Class 1-3 light duty sales, up from 371,494 a year earlier.

Medium-duty Class 4-6 sales of 4,357 were off from 5,634 a year earlier, according to the Motor Vehicle Manufacturers Association.

They included 589 Class 5 sales, off from 990 a year ago, and 3,768 Class 6 sales, off from 4,644. There were no reported Class 4 sales.

The September tally also saw 17,485 heavy-duty Class 7-8 sales, off from 18,012 in 1985. They included 8,204 Class 7 sales, down from 8,273 a year ago, and 9,281 Class 8 sales, down from 9,739.

For nine months of calendar 1986, the industry retailed a record 3,725,651 trucks, up from 3,557,537 in the same period of 1985.

The tally included 3,528,101 light duty sales, up from 3,345,424 in 1985. Also included were 37,869 medium-duty sales, down from 39,927 last year. In the medium segment, Class 5 sales of 4,048 were down from 4,356. Class 6 sales of 33,821 were down from 35,571 a year ago. There were no reported Class 4 sales.

Year-to-date, heavy-duty sales were 159,681, down from 172,186.

Within the heavy segment, Class 7 sales of 76,084 were up from 71,667. Class 8 sales of 83,597 were down from 100,519.

A number of manufacturers, including GMC, Jeep, Toyota, Mazda, Isuzu, Mitsubishi and Suzuki set model year records. Ford topped Chevrolet for industry leadership in light-duty and overall truck sales.

Both Ford and Chevrolet set a new model year record for light-duty truck sales, while both missed the overall truck sales records they established in the 1978 model year.

Ford's light-duty sales of 1,324,680 were a record, topping the previous high of 1,313,210 for 1978.

Ford retailed 1,381,243 trucks in the 1986 model year, second-highest behind 1,408,663 in 1978.

Chevrolet retailed a record 1,273,859 light-duty trucks in the 1986 model year, topping the previous high of 1,272,985 light-duties sold in 1978.

Its overall 1986 model truck sales of 1,294,345 was second-highest behind 1,317,467 in the 1978 model year.

GMC's sales, including light, medium and heavy trucks, set a model year record of 353,286, topping 1985's previous high of 347,153.

Its light-duty sales of 312,724 were also a record high over 306,679 last year.

SALES

September domestic-import sales top 1.2 million; best month ever

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Combined import and domestic sales of 1,216,781 units in September were the highest for any month in history.

The month's combined sales topped the previous record of 1,158,864 set in May 1978.

As reported earlier, domestic makers broke the new-car sales record for September.

The domestic record was set despite lackluster final-period sales of 261,603 units.

Sales during the last 10 days of September were down 16.7 percent from the year-ago period's 314,120 and also were down from mid-September's 294,636.

The revised total of 924,829 for the month topped the previous record of 839,382 set in September 1985.

September's domestic total was revised downward by 23,000 units to adjust for an American Honda report that included imports.

September import sales of 291,952 units were the second-best in history, trailing only the total of 305,209 in July 1986.

The month's import total was up 27.3 percent from the year-ago month's 229,284.

The record was set despite lackluster final-period sales of 261,603 units.

Import penetration rose to 24 percent in September from 21.45 percent in September 1985.

The daily selling rate in September was 48,671 cars, versus 44,528 in the year-ago month.

Import companies setting records last month included Yugo, which posted sales of 4,513 for its fourth consecutive monthly record.

Jaguar sales of 2,063 were a September record, up from 767 in the year-ago month and topping the previous September record of 1,276 set in 1983.

Saab sales of 3,445 units in September were also a record for the month. Hyundai recorded its 100,000th sale in the United States in September and its second month of 20,000-plus sales.

Domestic segmentation during the month shifted slightly from the year-ago period. Subcompacts accounted for 16.50 percent, vs. 15.38 last year. Compacts were down to 14.69 percent from 16.53; intermediates captured 27.11 percent vs. 27.95; standard-size cars had 9.55 percent, vs. 9.10; and luxury cars had 8.15 percent, down from 9.04.

U.S. automakers sold 8,058,818 cars during the 1986 model year, down 3.9 percent from 1985's 8,383,715.

Import sales totaled 3,138,559 cars for the 1986 model year, up 15.6 percent from 1985's 2,715,733.

Combined domestic and import sales for the 1986 model year were 11,197,377, up 0.88 percent from 11,099,448 in the 1985 model year.

Import penetration during the model year was 28 percent, up from 24.5 percent in 1985.

Import sales increase in Japan for August

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Sales of imported cars in Japan rose to 4,782 units in August, a record for the month and an increase of 27.69 percent over the 3,745 of a year ago.

According to the Japan Automobile Importers Association, import sales for the first eight months of 1986 were 43,061 units, up 31.64 percent over 32,711 last year.

West German cars took the largest share of the August market with 3,571 units, up 24.42 percent over last year. West Germany accounted for 74.68 percent of the August import market.

BMW accounted for 1,022 of the West German total, followed by Volkswagen, 1,007; Mercedes-Benz, 971; Audi, 491; Porsche, 67; and other makes, 13.

Manufacturers from Britain sold 342 units, up 67.64 percent over last year and good for a share of 7.15 percent.

Swedish makers sold 286 cars for an increase of 60.67 percent over last year and 5.98 percent of the market. Italy totaled 247 units sold, up 21.67 percent from a year ago for a share of 5.17 percent.

Volvo sold 208 units and Saab sold 78. The Italian sales breakdown was Fiat, 109; Autobianchi I, 94; Lancia, 10; Alfa Romeo, 7; and others, 27.

Sales of cars from the United States totaled 188 units, an increase of 2.2 percent over last year and good for 3.93 percent of the market. Sales by makes were Chevrolet, 46; Cadillac, 42; Pontiac, 36; Buick, 28; Ford, 22; Chrysler, 6; American Motors, 5; and Oldsmobile, 3.

France accounted for 2.93 percent of the market in August with 140 sales, an increase of 52.17 percent over a year ago. Citroen was tops among French cars with 69 units, followed by Renault, 37; Peugeot, 33; and others, 1.

Of the 43,061 units sold during the January-August period, West German cars accounted for 79.56 percent of the market; Britain, 5.66 percent; Sweden, 4.50 percent; Italy, 4.37 percent; United States, 3.33 percent; France, 2.38 percent; and others, 0.20 percent.

9 millionth vehicle sold by VW in U.S.

TROY, Mich. — Volkswagen sold its 9 millionth vehicle in the United States on Oct. 2 when Jan and Bruce Baker of Los Angeles bought a 1986 Jetta GL from Rusnak Volkswagen, in Culver City, Calif.

As a prize, Volkswagen United States gave the Bakers a one-week vacation trip to its parent company's headquarters in Wolfsburg, West Germany. Volkswagen has been selling cars in the United States since 1949.

Toyota subsidiary to make parts in Taiwan

TOYOTA CITY, Japan — Toyota Motor Corp. has broken ground for an auto parts plant for its Taiwanese subsidiary, Fung Yong Co.

The Toyota-Taiwanese joint venture is capitalized at $35.06 million — 80 percent from Toyota, the rest from Taiwan's Ho Tai Group.

The plant will employ 500 people and will supply stamped parts for car bodies to Kuo Zui Motors Ltd., Toyota's Taiwanese partner in a joint production venture in that country.

Successful Dealers— Take a look at this

Patent Number 4,574,614

DUZ-MOR

the collision repair system that lives up to its name because it does more than any other system in the industry

We were in the collision repair business for a long time—straightening cars and trucks, just like you, when we decided to build a rack of our own because we couldn't find one on the market that met all of our needs.

We needed:
• a machine that would straighten everything from uni-bodies to full-size pickups or vans
• to load a damaged vehicle on the rack at floor level and raise it to working height in seconds
• an overhead hoist
• more access under and around the rack
• a place to keep hydraulic and electrical lines off the floor and out of the way

After designing the most convenient and versatile machine possible, we added the best laser measuring system available.

Is it affordable?

You bet it is! In fact, the cost of a Duz-Mor Collision Repair System is far less than any comparable system on the market.

Better find out for yourself what we have to offer before you buy, rent or lease any other system.

Send for your free Duz-Mor Collision Repair Systems Comparison Pack today. Then you'll understand why we say "Duz-Mor lives up to its name."

For two businesses, help could bring growth

By Dave Zola
AUTOMOTIVE NEWS STAFF REPORTER

For minority entrepreneurs Ernie Young and Hank Aguirre, Ford Motor Co.'s rejuvenated program for minority-owned suppliers may be the ticket to expansion.

Young wants the auto industry's help to develop an industrial complex on an American Indian reservation in Mount Pleasant, Mich.

The complex would include a second manufacturing site for Young's growing injection-molding business, Special Plastic Products Inc., of Fair Haven, Mich. The company makes bumper supports, fascias and other plastic parts for the auto industry. It employs 120 people.

Young said that all he needs to proceed on the new site is approval from the Chippewa Indians and a business commitment from General Motors and Ford. Financial assistance from either of the two automakers also would help, he said.

Young said the second facility — a joint venture with the Chippewa tribe, with Special Plastic Products holding a 51 percent stake — would create 100 jobs in the Indian community within three years and eventually provide the $8 million firm with an additional $5 million in annual revenues.

About half of Special Plastic Products' business is Ford-related. The company nearly went bankrupt before landing its first automotive order from Ford in 1980.

Aguirre, a former major league baseball player and founder of Detroit-based Mexican Industries in Michigan, is counting on new business from Ford as a basis for his firm's second manufacturing facility.

Aguirre plans to locate the plant in the Detroit area. It will make leather-wrapped steering wheels, a new enterprise for the firm. Within five years, the plant could employ 300 to 500 workers and double the company's $17 million in annual revenues, Aguirre said.

Mexican Industries was formed in 1979 with four employees. The company now has 144 workers, 90 percent of them Hispanics. The firm makes soft interior trim items for Ford, Volkswagen of America and GM.

Ford accounts for 65 percent of Mexican Industries' business and recently awarded the firm its first contract to leather-wrap steering wheels.

Special Plastic Products and Mexican Industries are two of what Ford would term fast-trackers in the minority supplier arena. Both companies have succeeded in meeting Ford cost, quality and delivery requirements for a number of years. Both say that before long they'll achieve Ford's highest quality rating.

MINORITIES

FROM PAGE 1

"If they haven't been able to grow even with support, then they're going to have to deal with that."

But White said that most firms will like the revitalized program, which Ford also expects to benefit marketing.

"Long term, we view it as a marketing opportunity," he said. "This program helps create an image for Ford with minorities that we hope will lead to future sales."

General Motors — by far the industry's dollar-volume leader in parts and services bought from minority suppliers — expects to more than double the size of its program during the next several years.

In 1985, GM paid minority-owned firms $811 million for goods and services, according to John Haines, manager of minority supplier development.

GM began its program in 1968. By 1976, it was placing about $50 million worth of business annually with minority firms, according to Haines.

"Our goal for 1986 is to reach $1 billion — and we're well on our way to doing that," Haines said. "Over the next few years, we hope to reach $2.5 billion."

Like Ford, GM also offers financial and technical help.

Chrysler's minority program got off to a slow start, chiefly due to the company's struggle for survival beginning in the late 1970s. But Chrysler has made some headway in recent years.

"We've made a strong commitment to the minority community," said Gerald Greenwald, Chrysler Motors chairman, at a recent press conference. "Once we got out of the hole we were in financially, our purchases from minority suppliers increased dramatically."

Chrysler said dollar volume of purchases from minority suppliers increased fivefold in the last two years. About 1.2 percent of the automaker's outside purchases are from some 400 firms owned by minorities, including women and the handicapped.

Chrysler's immediate goal is to buy 2 percent of its goods and services from minority firms. Ultimately it would like minority-supplier sourcing to top 5 percent.

Chrysler has won the Corporation of the Year award from the Michigan Minority Business Development Council in each of the last two years. James A. Danforth, Chrysler's manager of special supplier programs, was named Coordinator of the Year for 1986.

Ford began reorganizing its 18-year-old program about two years ago.

Ford said it would do about $250 million worth of business with minority suppliers in 1986, an increase of about 40 percent over 1985. Ford's North American Automotive Operations and Diversified Products Operations spend more than $17 billion annually on outside purchases.

"We had annual goals set," White said. "But I've stopped talking about them, because we are already exceeding expectations."

The main difference in Ford's new approach is in the time the company spends with minority firms.

Ford established six "commodity councils," covering stamping, plastic injection molding, machined parts, transportation systems, construction and industrial supplies. The councils act as liaison with minority companies.

Ford employs nine people full-time on the councils; another 40 assist part-time.

"Our program is intensifying because to be a success, a supplier has to get to a certain size," White said. "He has to be big enough to have a cost-control person on his staff, and he has to have a certain volume to be able to afford a first-class quality guy.

"That takes money. And the only way to get money is through volume of business."

Help can range from financial backing to help in setting up a quality-control program or a five-year company plan.

In one case, Ford paid the expenses for the owner of a promising minority trucking firm to attend a recent Dartmouth College seminar for minority business executives.

In some instances, Ford has found minority buyers for companies on the auction block.

"The new era is that we're no longer diddling with it; we're doing serious development work," White said of the minority program. "I might say we're on the leading edge of companies making developmental efforts versus those just buying from minority suppliers.

"That's what's a plus about our program."

AUTOMOTIVE NEWS/JOE WILSDENS

Special Plastic Products Inc., in Fair Haven, Mich., supplies molded plastic parts to Buick and Ford. President Ernie Young, left, is looking for help to expand production to an American Indian reservation. Standing with him are sales manager Bill Bowman, center, and plant manager Robert Wheeler.

PRODUCTION

September auto production rises

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Auto production in the United States during September totaled 639,199 units, 33.57 percent more than August's 478,561 when model changeover idled several plants.

September's build was 0.61 percent more than the 635,329 cars assembled in September 1985.

Third-quarter output of 1,629,878 cars was the lowest for any quarter since the third quarter of 1984 when 1,623,724 units were built.

The quarter's production was 9.67 percent below the 1,804,335 assembled during the same period last year.

Last week's scheduled output of 159,339 cars was 7.09 percent more than the previous week's 148,790 but was 8.31 percent below the year-ago week's 173,786.

So far this year, 6,078,279 cars have been built, 4.99 percent below the 6,397,262 completed last year at this point.

Companies split last week's targeted output as follows: General Motors, 56.50 percent; Ford Motor Co., 20.30 percent; Chrysler Motors, 14.37 percent; Honda of America Manufacturing Inc., 3.99 percent; New United Motor Manufacturing Inc., 1.88 percent; Nissan Motor Manufacturing Co., U.S.A., 1.70 percent; and Volkswagen of America, 1.26 percent.

American Motors' Kenosha, Wis., plant was closed last week for inventory adjustment. The plant is expected to resume today (Oct. 13).

GM closed its Arlington, Texas, plant today for inventory adjustment, idling 2,000 workers. The plant is scheduled to resume output Oct. 20.

GM's Wentzville, Mo., plant is also idle this one week for inventory adjustment. It affects 5,000 employees.

GM's Janesville, Wis., plant will be down this week because of a materials shortage, idling 3,500 workers. That plant is also slated to resume production Oct. 20.

GM's Lansing (No. 1) plant was scheduled for overtime Saturday (Oct. 11).

Ford slated overtime Saturday at its Wixom, Mich. plant.

Chrysler's plants in Belvidere, Ill.; Sterling Heights, Mich.; and St. Louis (No. 2) are scheduled for daily overtime this week.

Trucks set record for 3rd quarter

Domestic truckmakers assembled a record 901,206 units in the third quarter, surpassing the previous third-quarter peak of 856,513 in 1978.

This year's total was 9.52 percent above the 822,867 trucks produced during the third quarter of 1985.

Truck production for September also set a record. September's build of 323,381 topped the prior record of 300,728 units in September 1977.

The month's production was also the highest for any month since April when 326,282 trucks were built. It was 19.70 percent more than August's 270,164 and 10.72 percent more than the 292,066 built in September 1985.

Last week's scheduled output of 71,273 was 5.99 percent below the previous week's 75,812 and 7.23 percent below the year-ago week's 76,826.

Year-to-date, 2,787,164 trucks have been assembled, 3.67 percent more than the 2,688,547 completed last year at this time.

General Motors' Pontiac, Mich. plant closed today (Oct. 13) for inventory adjustment. The plant is expected to resume output Oct. 20.

Ford's Michigan Truck plant in Wayne, Mich., resumed production last week (Oct. 6). The plant had been down for model-changeover since Sept. 12.

GM slated Saturday (Oct. 11) overtime at its St. Louis and Flint, Mich. plants.

Chrysler Motors' truck plant in Warren, Mich. is scheduled for daily overtime this week.

Quarterly output drops in Canada

Canada's third-quarter production of 197,153 cars was the lowest total for that period since 1982 when 184,233 units were counted.

The quarter's output was 21.34 percent below last year's third quarter total of 250,645.

September's production of 91,632 cars was 90.38 percent more than August's 48,131, when vacations and model changeover shut down several plants.

The month's output was down slightly (0.90 percent) from the September 1985 total of 92,463.

Last week's targeted production of 24,740 cars was 6.53 percent more than the previous week's 23,223 and 0.53 percent more than the year-ago week's 24,610.

So far this year, 806,421 cars have been assembled, 1.59 percent below the 819,422 completed last year at this point.

Third-quarter truck production of 156,388 was the lowest total for that period since 1983's output of 117,194.

The total was 13.07 percent below the 179,894 assembled during the third quarter of 1985.

September output of 60,037 trucks was 20.33 percent more than August's 49,895 but was 16.52 percent below the year-ago month's 71,920.

Scheduled production of 11,292 trucks last week was 26.69 percent below the prior week's 15,403 and 34.28 percent below the year-ago week's 17,183.

Year-to-date, 642,389 trucks have been built, 2.66 percent below the 659,925 assembled last year at this time.

Diamond-Star seeks subzone status for plant

WASHINGTON — Diamond-Star Motor Corp. is seeking Foreign-Trade Subzone status from the U.S. Commerce Department for the plant it will build in Bloomington-Normal, Ill.

Subzone status will allow the Chryser-Mitsubishi joint venture to avoid paying higher duties on imported components and to avoid duties entirely if parts or vehicles are exported from the plant.

In a petition filed with the Commerce Department's Foreign-Trade Zones Board, Diamond-Star said "certain components such as engines, transmissions, suspension and brake components will be purchased from Mitsubishi in Japan. Most of the steel and remaining components will be sourced domestically. The finished autos will be sold through Chrysler and Mitsubishi dealers."

The Foreign-Trade Zones Board said it will accept public comments on the petition until Oct. 26.

Ford getting bullish on British operations

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

BIRMINGHAM, England — Ford Motor Co. has made a huge commitment to its British operations in the form of a five-year, $2.1 billion capital investment program.

Ford of Britain Chairman Derek Barron announced plans for the massive cash infusion last week at the British international auto show here.

Among the announced projects are investments of $745 million on new vehicles and another $820 million on new engines and transmissions.

The announcement confirms that Britain will be a stronghold in Ford's overall European manufacturing program for the future. It is a monumental show of faith in the local industry.

The investment reflects a favorable currency exchange rate and improving industrial relations in Great Britain, and it also is a sign that Ford, the market leader in the United Kingdom, will concede noth-

Ace may sell in U.S., but it won't be a Ford

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

BIRMINGHAM, England — The 140-mph AC Ace sports car, which could be North America-bound, debuted at the British International Motor Show here as a concept car on the Ford stand.

But the Ace, a 2+2 design, four-wheel-drive revival of a British sports-car marque from the 1960s, does not fit into Ford's much-discussed luxury two-seater plans in North America.

The prototype was designed and developed by Autokraft — headed by Brian Angliss — and AC Cars in conjunction with Ford's European Design Staff. It would be manufactured and marketed by Autokraft, which is based in Brooklands, England.

The concept car employs Ford mechanical components and instruments and can be powered by either a fuel-injected Ford 2.8-liter V-6 or the Sierra Cosworth's turbocharged 2.0-liter four-cylinder engine, a 16-valve unit that develops 205 horsepower.

see ACE, page 49

GM auto loss cuts industry earnings

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Costly incentives offered by each of the Big Three and a substantial operating loss at General Motors will reduce combined third-quarter earnings of the three companies by about 30 percent from last year.

Ford Motor Co.'s quarterly profits are expected to be up substantially, and Chrysler Corp. will show less of a loss than GM.

The Big Three are expected to earn about $788 million for the third quarter, based on an average of estimates by 10 leading auto analysts. That compares with earnings of $1.15 billion in the third quarter of 1985.

The median estimate of the analysts queried by Automotive News was a third-quarter profit of $798 million.

For the year, the Big Three combined are expected to earn $6.75 billion, down 17 percent from the $8.1 billion earned in 1985. However, analysts say fourth-quarter and full-year earnings will depend upon whether the automakers use aggressive incentives in the fourth quarter.

General Motors is expected to earn about $85 million in the third quarter, based on the average of auto analysts' forecasts. That compares with profits of $517 million in the year-ago quarter. The median estimate is $80 million.

EARNINGS FORECAST
averages from 10 auto analysts, in millions

	GM	Ford	Chrysler
3rd quarter 1986	$85	$485	$218
3rd quarter 1985	$517	$313	$316
all of 1986	$2,600	$2,900	$1,250
all of 1985	$4,000	$2,500	$1,600

The $85 million would represent GM's lowest quarterly profit since the end of the early-1980s recession. GM lost $468 million in the third quarter of 1981.

Estimates for GM showed the widest range of the forecasts for any of the companies because analysts said they were unsure of what tax credits and financial accounting mechanisms GM would use to offset its substantial operating loss and how much GM's non-automotive businesses would contribute to earnings.

The analysts' third-quarter estimates for GM ranged from no

Navistar plans massive reshuffling of stock, debts

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Navistar International Corp. plans to refinance its debt and issue new classes of stock, seek approval to become a holding company and appoint new top executives.

The moves are expected to strengthen its financial position and open up diversification opportunities.

Industry sources say a deal is in the works for Navistar to market a Caterpillar engine under the International name.

Navistar's share of the medium- and heavy-truck markets, in which it competes, has been improving, but Navistar and its competitors expect a 10- to 15-percent drop industrywide in Class 8 demand this year.

And Navistar does not foresee

Dale Charlick, a technician in the anthropomorphic laboratory at the General Motors Proving Ground in Milford, Mich., wheels a Hybrid III dummy past Hybrid II models. The newer dummy, recently approved by NHTSA, provides 31 measures of impact severity, compared with eight on earlier models. Fashion note: GM dummies wear Hush Puppy shoes, size 11EE for the males.

DeLorean vs. U.S.: Fraud trial promises to be complicated

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The fraud and racketeering trial of former automaker John Z. DeLorean will begin in earnest this week in U.S. District Court in Detroit.

Much of the evidence and testimony is likely to involve complicated financial transactions and documents which form the government's audit-trail case.

However, the government may enter into evidence tax returns of John DeLorean and third ex-wife Cristina Ferrare, and there undoubtedly will be courtroom revelations about other prominent individuals, as well as fiery defense denunciations of the U.S. government, the British government and others. There may even be a surprise witness or two.

DeLorean, 61, is charged with 15 counts ranging from violations of the RICO (Racketeering Influenced and Corrupt Organizations) statute to mail fraud, tax fraud, wire fraud and interstate transportation of stolen money.

The charges stem from a series of 1978 and 1979 financial transactions relating to the financing of the defunct DeLorean sports-car project.

The government will try to prove that DeLorean took at least $8.5 million raised for research and development purposes, laundered it through a European banking maze and converted it for his personal use.

DeLorean, who was indicted by a federal grand jury on Sept. 20, 1965, pleaded innocent to all 15 counts.

Audi dealers win two key points in new franchise

By Dave Zola
AUTOMOTIVE NEWS STAFF REPORTER

The 410 Audi dealers in the United States next month will begin receiving new franchise agreements covering the next five years.

The new pact is not revolutionary, Audi of America officials and dealers agree. But those closely involved with its formation said the contract is among the best in the industry.

For the first time, Audi asked for dealer input in formulating the agreement -- and the importer paid a price in the process.

Audi said it gave in to dealers on two key areas, including the right of first refusal in dealership sales agreements.

Also dropped was a provision that would have allowed the importer to restrict the availability of future models to certain dealers.

The right of first refusal would have given Audi the power to veto unconditionally the sale of a dealership if the importer agreed to make the purchase itself on identical terms.

Other carmakers have that clause in their franchise agreements, and General Motors in some cases has used the provision to help minority applicants buy dealerships.

The clause also can be used to eliminate a sales point, with the manufacturer or importer buying and then closing the dealership.

"We really wanted to have that one in," said C.R. Garity, Audi market representation manager.

But Audi gave up when dealers complained that the provision would make it more difficult to find buyers if the deal could be quashed arbitrarily.

Audi also lost some flexibility by dropping the provision that allowed it to decide which dealerships can sell which models. As the contract now stands, anything branded with the Audi name must be made available to all dealers.

Only through creation of a separate franchise — as with Honda's Acura or Ford's Merkur — could Audi restrict availability of models. Dealers who helped draft the agreement said they are confident that is unlikely to happen because of the expense involved and Audi's present sales volume of under 100,000 vehicles annually.

"If we come out with some new product, like a high-performance replacement for the Coupe, and the car says 'Audi' on it, then every dealer has to be given the opportunity to sell it," Garity said.

"It would have given us the opportunity with any products we bring out in the next five years to say, 'You've got to get the tools and you have to be able to effectively service it (in order to sell the car),' " Garity said. "That also was taken away from us, which hurt us.

"But the dealers insisted on everybody

Another 400 strike at GM Tech Center; total is 655

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

A second unit of UAW Local 160 walked out last week in protest of subcontracting at General Motors' Tech Center in Warren, Mich. UAW Vice President Donald Ephlin called the local strike a company-wide issue.

About 400 Tech Center maintenance workers in the facilities section are striking because they are excluded from servicing Fisher Guide Division's administration building, a leased facility in the Tech Center area.

The maintenance workers join 255 in the research unit, which also includes skilled trades workers, who walked out Sept. 22 over outsourcing for GM's Trilby project (Automotive News, Oct. 13).

Building trades workers at the site also walked out, but nearly 4,000 members of other units of Local 160 are still on the job.

AUTOMOTIVE NEWS/JOE WILSSENS
UAW Local 160 members protest subcontracting at GM Tech Center

Ephlin, director of the union's GM department, said, "Outsourcing and subcontracting of our jobs continue to be a major problem throughout General Motors. The union will not sit idly by and see the integrity of its bargaining units eroded in a cavalier fashion."

A GM spokesman said that the buildings housing Fisher Guide headquarters and the Trilby project are leased and that landlords provide maintenance service.

He said he could give no specifics on the strike's effects but that "during any strike, some of the work doesn't get done."

Earl Hartman, the local's recording secretary, said that salaried personnel are doing some maintenance work, including manning the garbage trucks.

Hartman said that GM told the union the strike was illegal and that the company would take the issue before the National Labor Relations Board. "We said, 'See you in court,' " he said.

Hartman said the local's 1,300-member unit at Chevrolet-Pontiac-Canada Group headquarters is likely to get permission today (Oct. 20) to issue a five-day notice of its intention to strike on Oct. 27. Talks were continuing at presstime.

GM draws bouquets, brickbats on restraints

By Michelle Krebs and Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTERS

Domestic automakers and the UAW hailed General Motors' support of voluntary restraints on Japanese car exports while the U.S. subsidiaries of Japanese auto companies blasted GM for its changed position.

The reaction followed GM Chairman Roger B. Smith's interview with Automotive News in which he said the Japanese should reduce the number of cars they export to the United States when the voluntary restraints expire March 31, 1987. The current limit is 2.3 million cars a year.

Ford Motor Co. said it was "encouraged" by GM's change in position on restraints. Chrysler Corp. reiterated its contention that restraints be continued. Ford and Chrysler had actively supported voluntary restraints; GM had not.

At the same time, the U.S. subsidiaries of Japanese auto companies blasted GM for suggesting the Japanese reduce the number of cars shipped to the United States.

Robert M. McElwaine, president of the American International Automobile Dealers Association, said that GM's call for an extension of restraints "rings hollow, coming as it does against a backdrop of sustained profits and overblown salary bonuses for domestic auto industry executives."

McElwaine, like the executives of Japanese import companies, said consumers should greet GM's message with "cries of outrage." The domestic companies' profits of more than $24 billion from 1983 to 1985 have "come at the expense of consumers," who have paid an additional $12 billion since 1981 because of quotas, he said.

Bob McCurry, senior vice president of Toyota Motor Sales U.S.A., said he was "astonished" by Smith's remarks. He said that Smith called for fewer Japanese imports but also said the strong yen would reduce the Japanese share of the market and GM would enjoy larger profits in 1987.

"His expectations for reduced Japanese share and expanded GM earnings support our position that the higher prices of Japanese products and the robust health of the American auto industry make yet another year of restraints totally unnecessary," McCurry said.

Cliff Schmillen, American Honda executive vice president, said that if GM wants fewer Japanese imports, then GM must also reduce the number of Japanese imports it brings to the United States. GM imports the Spectrum from Isuzu and Sprint from Suzuki.

Jack Reilly, senior vice president and general manager of American Isuzu, said GM should go even farther: GM should reduce the number of foreign-made engines and transmissions used in domestically assembled GM cars. In response to Smith's call for the Japanese to open their borders to U.S. goods, Reilly said that GM has not built a right-hand-drive car for Japan.

Reilly said GM's changed position will have little impact on Isuzu unless GM decides to "turn off the spigot for Spectrum," in which case American Isuzu would win a bigger chunk of the Isuzu limit under restraints. "We might be in the clover," he said.

UAW President Owen Bieber welcomed GM's support of voluntary restraints.

"GM's belief that Japanese auto shipments to the United States should be cut will add needed unity to the fight of our own industry and its workers to defend themselves from one-sided, unfair trade practices," Bieber said.

However, the UAW issued another statement chastising GM for supporting voluntary restraints only as a means to ward off protectionist legislation.

Following publication of Smith's interview, GM issued a statement to clarify its position on international trade.

GM's clarification said the automaker had not changed its position on trade. It favored lifting all restraints "as the ultimate solution to world trade problems."

GM said it supported voluntary restraints "only because we believed it preferable to the sort of protectionist trade legislation we considered likely, given the Japanese failure to open their doors fully to two-way trade."

GM's statement reiterated what Smith had said in the interview: That because of the shift in the valuation of the yen and subsequent price increases on Japanese products, the U.S. trade deficit has worsened. The dollar flow out of the United States has increased on the same number of automobiles.

The UAW said GM's efforts to clarify its position on Japanese auto trade "sends the wrong message to Japan and points out how contradictory the corporation's basic position continues to be."

The union said that while GM supports restraints as a way to forestall restrictive trade legislation, "GM should understand that the trade position of the United States will continue to decline in the absence of an active overall trade policy."

"We cannot and should not expect swings in exchange rates or the goodwill of other countries to solve the problem," the union said.

Chrysler seeks 10-year pact, 'team' work

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors is seeking a 10-year local union agreement and a team concept of production at its Sterling Heights, Mich., assembly plant, according to a union bargaining committee source.

A local operating agreement covering 3,800 members of UAW Local 1700 at the plant expires Oct. 31.

Union members were scheduled to vote Sunday on Chrysler's demand for a team concept of production. Officials of the local union and representatives of the international UAW were scheduled to attend the meeting to explain the proposal.

The proposal calls for teams of seven to 15 employees to handle jobs in production areas and also provides for a "pay for knowledge" plan in which workers are compensated as they learn new jobs, the union source said.

The union is holding the vote only on the team concept because approval would affect negotiation of wage rates under the "pay for knowledge" plan.

Chrysler has negotiated team concept methods with the UAW at its Jefferson Avenue assembly plant in Detroit in a contract effective in 1988.

The union source said Local 1700 has received Chrysler's initial contract offer of 16 to 17 proposals but had not yet responded to the company.

Chrysler would not comment on negotiations regarding the local agreement.

The Chrysler proposal includes a demand for an unprecedented 10-year local agreement, the union source said. The union is seeking concurrent expiration of local and national labor agreements in 1988, which is traditional.

The trend-setting Jefferson Avenue pact is a seven-year agreement.

Also, the union source said, Chrysler is seeking a total of three production classifications and three skilled-trade classifications at Sterling Heights. The union is seeking an increase. The current agreement has nine production and seven skilled-trade classifications.

In its initial proposal, the union made 256 demands, the source said, covering health and safety issues and internal plant issues. One of the union's chief demands, the source said, would require the company to notify employees by noon each day of any change in shift expiration time.

Chrysler has been pressing local unions in its plants for so-called "progressive" operating agreements, saying they increase efficiency and productivity. In some cases, such as the Jefferson Avenue plant, it has made such an agreement a condition of future product commitment.

The Sterling Heights plant assembles the Plymouth Sundance, Dodge Shadow and Lancer and Chrysler LeBaron GTS.

Peterbilt introduces four new Class 8 conventional trucks

By Lon Fairfield
SPECIAL CORRESPONDENT

Cab dimensions have been increased 20 percent on the new models by widening the cab, moving the firewall forward and flattening the toeboard.

SCOTTSDALE, Ariz. — Peterbilt will begin delivering a new line of Class 8 conventionals to dealers for sale around Thanksgiving.

The new vehicles, introduced at a press preview here, feature larger cabs and redesigned steering systems. They replace Peterbilt's present conventional lineup.

The company also has a more comprehensive warranty for its new trucks and for all other models delivered after Oct. 1.

Basic coverage is 12 months or 100,000 miles.

Major component coverage is 36 months or 300,000 miles on Rockwell and Eaton axles, Eaton brakes and Fuller transmissions.

A corrosion warranty on the frame, structure and cab covers the vehicles against rust-through for 60 months or 500,000 miles.

Overall cab dimensions have been increased 20 percent on the new models by widening the cab, moving the firewall forward and flattening the toeboard.

Peterbilt's redesigned steering system has given models with a set-forward front axle a 50-degree wheel cut in both right and left turns, increasing their maneuverability in highway or construction applications.

The company has four new models, designated the 379, 377 375 and 357.

The 379 retains the classic appearance of the 359 which it replaces. It is aimed at traditional Peterbilt buyers.

Target markets for the 379 include long-haul freight and non-sleeper applications, such as heavy equipment hauling, logging and gravel hauling.

Peterbilt officials also consider it suitable for weight-sensitive tanker and bulk-hauler fleets.

Its standard bumper-to-back-of-cab, or BBC, measurement is 119 inches.

Standard features include a Rockwell FF961, 12,000-pound, set-forward front axle; a Rockwell SQ100, 40,000-pound rear axle; a Peterbilt four-spring, 34,000-pound rear suspension; a Cummins FNTC315 Big Cam IV engine with 315 horsepower at 1,800 rpm; and Fuller RT11609A nine-speed transmission.

The 379 also has standard power steering, dual 100-gallon fuel tanks and a new heater-air conditioner.

Peterbilt calls the 377 its "high-efficiency" model. It has the same riveted aluminum cab as other models, but styling is more aerodynamic.

The 377 has a fiberglass hood with a seven-degree slope, lightweight Cycolac bumper and fender-mounted composite halogen headlights.

An optional roof fairing, side trim tabs and cab extenders allow further tailoring of aerodynamics.

The 377 is targeted at the long-haul general freight customers in tanker, bulk-hauler and food-processor markets.

The 377 has a standard BBC of 122 inches. It is available with either a set-back or a set-forward axle configuration.

Standard specifications include a Rockwell FF961, 12,000-pound set-forward or set-back front axle; Rockwell SQ100, 40,000-pound rear axle; Peterbilt four-spring, 34,000-pound rear suspension; a Caterpillar 3406B ATAAC engine rated at 310 hp at 1,800 rpm; and Fuller RT11609A nine-speed transmission.

Optional engines provide up to 444 hp. The standard interior trim is the same as on the 379.

Peterbilt engineered the 375 to be a fleet truck. It has a hybrid design combining the aerodynamics of the 377 with the ruggedness of the 357.

With a 114-inch BBC, the 375 has a medium conventional length that is specifically packaged for short-haul general freight and the low-horsepower segment of the tanker and bulk-hauler and food-processor and distributor markets.

It is designed for a combination of lighter weight, aerodynamic efficiency and maneuverability.

Engines with ratings up to 300 hp are available available.

The 375, with standard vinyl interior, is aimed at fleet buyers. For the construction market, it is offered in four configurations.

A 111-inch BBC set-forward front axle model is geared to weight-conscious mixer and dumper customers.

A 119-inch BBC set-forward front axle is designed for straight or transfer dumps and related vocations.

A 119-inch BBC set-back front axle is aimed at the Eastern construction market.

A 6x6 with 119-inch BBC set-back front axle provides extra traction and payload-carrying capability.

The 357 is Peterbilt's new truck for construction applications. It has a 112-inch BBC dimension.

Peterbilt closing Calif. plant but will keep headquarters

PHOENIX, Ariz. — Peterbilt will mothball its manufacturing facility in Newark, Calif., rather than selling it, and will keep its divisional headquarters in Newark.

Peterbilt also is introducing a new refuse and solid-waste collection truck, designated the 320. It replaces the current 310 model. Production of the refuse truck is being moved from Mexico to Peterbilt's facility in Denton, Texas.

Michael A. Tembreull, general manager, said he thought Peterbilt would sell some additional land at its headquarters site in Newark.

But he said the manufacturing facility there would be mothballed, rather than sold, "in case we need it at some future time."

Tembreull added that company engineers, currently housed several miles from the Newark headquarters, would move to Newark in the first quarter of 1987. But there are no plans to move the headquarters operation itself, he said.

The 320 product line has been expanded to include, besides the waste-collection truck, a right-hand-drive option and a dual-drive with right-hand low-entry stand-up option for all solid-waste collection applications.

Peterbilt also added a tandem-steer front-axle option for applications such as concrete pumps and fuel tankers.

The 320 can be ordered with engines up to 350 horsepower and a wide range of manual or automatic transmissions.

The chassis has been refined to share more parts with the other Peterbilt models. Many of the new parts can be retrofitted to the 310.

The welded steel cab has an aluminum skin and a fiberglass roof and front quarter panels for improved corrosion resistance.

Cabs are eight feet wide and have a service module in the rear for easy access to oil fill and check, coolant fill and check and automatic transmission fill and check.

Robert S. Wood, product manager for the 320 Low Cab Forward model, estimated that the North American market for solid-waste-collection trucks is more than 10,000 units this year.

The market is growing because of increases in the population and the closing of local landfills and dump sites. The closings mean that more trucks are needed to haul refuse greater distances to other sites.

Automated side loaders and front loaders are becoming increasingly popular in that market, Wood added. Both applications require a low-cab-forward chassis.

Wood predicted that well over half of all Class 8 refuse trucks sold this year will have a low-cab-forward configuration.

INCLUDES MULTIPURPOSE VEHICLES. Compiled from official State Records by R.L. Polk & Co. Manufacturers' sales records are used in compiling Oklahoma for 1985 and 1986. Registrations for Massachusetts and Utah were temporarily delayed.

TVR goes with Bridgestone for four '87 models

Bridgestone Corp.'s high-performance radial will be the on-line tire for four 1987 sports cars made by TVR Engineering Ltd.

The Great Britain-based automaker will have RE71s as original equipment on the TVR 390SE, the TVR 420 SEAC, the TVR 350i and the TVR 280i.

Bridgestone's 50-series V-rated RE71s will appear on TVR's 390SE and 420 SEAC models in a 225/50VR15 size, and the 60-series V-rated RE71s will be shod on the 350i and 280i models in the 205/60VR15 size.

The North American replacement version of the RE71 is the Potenza RE71.

The RE71 has a racy low-profile appearance. Designed by Bridgestone engineers in Japan to fill the needs of the company's racing program, the RE71 features a racing-bred tread design and compound.

In February 1986, the Japanese tire producer, through its British sales subsidiary, Bridgestone Tyre UK Ltd., approached TVR by supplying it with tires to test. Following testing, TVR decided in September to equip its production cars with Bridgestone's RE71s.

Influencing the decision was TVR's success with the RE71 Sport in production sports car racing in Britain. Steve Cole has driven his 420 SEAC, fitted with 225/50VR15 RE71 Sports, to several victories in 1986.

TVR has been manufacturing production sports cars in England since the '50s. The current name of the company, TVR Engineering Ltd., was adopted in 1966. Since then, TVR has offered the elite European car buyer the Tasmin and the current TVR lineup.

The company produces only about 600-700 cars a year. Since establishment of TVR of America Inc. in 1983, TVR has seen 60-80 percent of its cars exported to North America.

Bridgestone is headquartered in Tokyo, and manufactures and sells its tires in over 150 countries. ■

The 420 SEAC (above) is one of four sports cars built by TVR that will receive Bridgestone's high-performance RE71 radials as original equipment for 1987.

Bankers fight loan subsidy at state level

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Consumer Bankers Association will carry its fight against automaker-subsidized car loans to state legislatures next year.

Association President Thomas E. Honey said the bankers will seek legislation that would force auto companies to offer loan subsidies to banks and other lenders whenever they subsidize loans for their captive finance companies.

In a speech delivered last week to consumer bankers in Pennsylvania, Honey said banking associations in each state are looking at legislative possibilities that would "mandate equal access to finance subsidies."

Honey told members in Pennsylvania that the association will be preparing "materials to help you deal with subvention" and pledged to "fight this battle . . . until all avenues are exhausted."

According to Honey, subvention "is the process whereby a car dealer can advertise a below-market rate — such as 2.9 percent. The car buyer can finance the car at that below-market rate, and the lender will have the difference between a fair market rate and the below-market rate subsidized by another party — usually the car manufacturer."

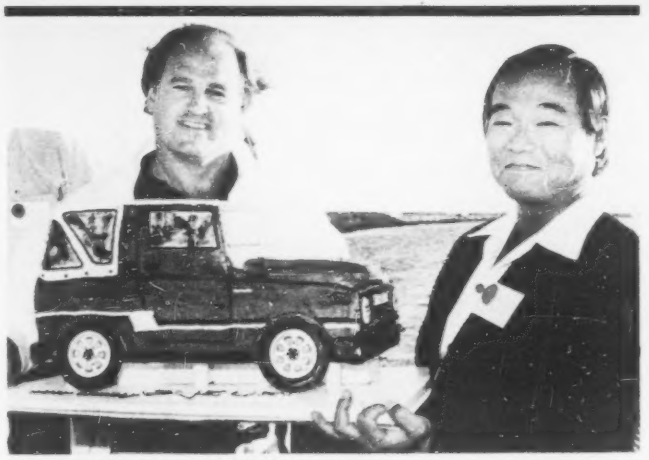
"The automakers' success in this market has only whetted their appetites for more of our traditional business," he said. "It is obvious the American auto makers, squeezed in their primary markets for cars, have decided to join other non-bank commercial interests in entering the consumer banking business."

Honey said that because of "shrinkage" in the bankers' share of the auto loan market, his association's members have lost more than $500 million in operating income during the 18 months ended last June.

"In the first six months of this year, as the Big Three — led by GM — dropped the rates on auto loans lower and lower . . . finance companies took 80.9 percent of all outstanding auto loan balance growth," Honey said. "Commercial banks, savings and loans and credit unions combined took only 19.1 percent. Commercial banks took 2.5 percent."

He contrasted the January-June 1986 numbers with the year-earlier period in which banks, credit unions and savings and loans accounted for 55 percent of the growth of auto loan balances, while finance companies had 45 percent.

The Consumer Bankers Association represents about 700 federally insured banks, savings and loans and credit unions.



Birthday bash for Suzuki of America
Suzuki of America Automotive Corp. celebrated its first year of business in the United States with a birthday party aboard an 85-foot yacht at Marina del Rey, Calif. Displaying a cake replica of the company's Samurai are Doug Mazza, left, vice president of sales and marketing, and T. Arai, president of Suzuki of America Automotive Corp.

Convertibles get exemption from passive-restraint rule

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has temporarily exempted convertibles from the passive-restraint standard.

The waiver is good during the phase-in period that begins in 1987, but NHTSA will rule later about convertibles for the 1990 and later model years.

NHTSA is still working on details of the passive-restraint standard even though the 1987 model year has begun and makers must begin complying with the standard by equipping 10 percent of this model year's production with air bags or automatic seat belts.

One of the major provisions of the standard not yet addressed is whether safety belts in light trucks, vans and buses will have a dynamic test (that is, using dummies in real crashes) or a static test (that is, testing the strength and elasticity of the webbing) as is done now.

NHTSA recently decided that dynamic testing of the active three-point belt system in cars will be required if the automatic-restraint requirement is rescinded. The standard is automatically voided if states with two-thirds of the nation's population adopt mandatory belt use laws meeting certain federal criteria.

Predictably, comments filed on convertibles showed disagreement between manufacturers and consumer advocates.

Automakers noted that through 1989, convertibles will average only slightly more than one percent of annual car production. They said that automatic belts are not a practical alternative for convertibles. General Motors, for example, said the belts would cost $600, mostly for vehicle structural changes, and that automatic lap belts are not as effective as active belts because extra slack is inherent in passive lap belts.

Cost estimates for air bags in convertibles ranged from $1,200 to $3,500, and most makers sought exemption on grounds that such higher costs would hurt sales. Ford Motor Co., Toyota and Volkswagen said that if passive restraints were mandated for convertibles, they would probably stop making them.

All makers providing data on current belts in convertibles said they install lap and shoulder belts although they are required only to install lap belts. Volkswagen of America suggested that the requirement be changed to require shoulder belts.

The Center for Auto Safety, the Insurance Institute for Highway Safety and State Farm all argued that since convertibles are luxury vehicles, sales would not be affected. The Center for Auto Safety noted that in NHTSA high-speed crash testing, convertibles performed much worse than the "parent" vehicle with two exceptions.

The National Transportation Safety Board told NHTSA that it should change its provision permitting only lap belts in convertibles. The NTSB recently released preliminary results of a study which showed that no belts sometimes are better than lap belts alone and that lap-shoulder belts are superior in all cases.

NHTSA agreed with the automakers for at least the phase-in period, partly because of cost and partly because Congress and the courts have allowed exceptions for some types of vehicle.

NHTSA reports status of safety investigations

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has opened two new preliminary defect investigations. They involve engine compartment fires in 1984 Dodge Maxivans and secondary hood-latch failures in 1984 Dodge Daytonas and Chrysler Lasers.

Upgraded investigations, reported by the safety agency for September, include:

- Engineering analysis of possible brake failure and firewall flexing in 1979-81 Chevrolet Chevettes (some 1.2 million vehicles) and Pontiac 1000s (more than 70,000) with one complaint that includes a report from Bendix.
- Engineering analysis of overloading of various micro-mini motor homes: 1984-86 models made by Saddleback RV; 1984-86 models made by Granville Inc.; 1980-83 models made by Rockwood Inc.; and 1986 Aerolite made by Establishment Industries.

During September, NHTSA sent letters to various manufacturers, including several to General Motors, suggesting voluntary recalls. One involves almost 3 million GM cars: A-, C-, G-, F- and N-bodies which comprise most of the company's high-volume models. At issue is potential windshield-wiper failure, about which NHTSA has almost 4,000 complaints and for which GM has sent several service kits to dealers.

The other involves some 448,000 1985-model GM A-, C- and X-vehicles because of possible seatback failures based on 155 reported incidents. The docket also includes more than 1,000 warranty claims against GM as of October 1985 and refers to four accidents and two injuries.

NHTSA sent letters to GM asking for more information:

- 1983-84 J-cars with possible seat track lock failure. There are now 150 complaints, 17 accidents and 26 injuries attributed to the condition. The earlier NHTSA probe of locking failures dealt only with the Cavalier, the Chevrolet J-car.
- Possible rear-brake failure on some 160,000 1982-86 Chevrolet Camaros and Pontiac Firebirds with rear disc brakes, on which NHTSA has reports of 109 complaints, eight accidents and two injuries.

Another NHTSA letter went to Ford Motor Co., expanding the inquiry into fires in 1985 Ford Escorts and EXPs and Mercury Lynxes to include model years 1984 and 1986.

NHTSA also sent letters to both GM and to Western Star Trucks about possible loss of brakes for vehicles using Anchorlok 30/30 spring brake chambers.

Two new recalls have been announced by GM. One involves 241 1986-model GMC Brigadier and General heavy-duty trucks with defective throttle return spring assemblies which could cause loss of accelerator control.

The other involves 106,111 1986 GM cars, light trucks and vans for faulty electrical contacts in push-pull headlight switches which could cause headlamps to flicker or fail. Cars affected by that recall include Pontiac, Cadillac Cimarron and Buick Estate Wagon.

NHTSA closed two investigations because it found no defect trend. One was seat track/belt failure in 1986 Saab 9000s and the other was hood-latch failure in 1981-84 Ford Escorts and EXPs and Mercury Lynxes and LN-7s.

Two other probes were closed because of recalls: brake failure in 1985-86 Lincoln Mark VIIs and Continentals and steering axle hub failure in 1975-81 Kenworth and Peterbilt trucks made by PACCAR.

No change in deductions for business use of vehicle

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The deduction for business use of a vehicle will remain the same, the Internal Revenue Service has announced.

For income tax returns covering 1986, the rate for business-use vehicles not fully depreciated will be 21 cents a mile for the first 15,000 miles and 11 cents a mile for additional mileage, the IRS said. After 60,000 miles, a vehicle is considered fully depreciated.

Cars used for charitable purposes will be allowed the same 12-cent-a-mile deduction allowed in 1985, and the 9-cent rate for medical and moving expenses remains the same, the IRS said.

The IRS allows taxpayers to deduct either the standard mileage rate or their actual expenses when operating vehicles for business reasons, or for charitable, medical or moving purposes.

After an aborted congressional attempt to require better taxpayer record-keeping when claiming business vehicle deductions, the IRS no longer requires the keeping of daily records when operating a business vehicle.

Operators of vehicles for other than personal reasons are allowed to deduct tolls and parking expenses related to non-personal travel, the IRS said.

EARNINGS

FROM PAGE 1

profit at all and even a possible loss to a high of $239 million. Their estimates for GM's operating loss ranged from $100 million to $1 billion.

David Healy of Drexel Burnham Lambert Inc. was the most pessimistic of the analysts. He said he believes GM may show a loss of as much as $50 million or only a slight profit at best. He predicted that GM's quarterly operating loss will be $1 billion.

Analysts said that GM continues to be plagued by high operating costs and excess manufacturing capacity that Ford and Chrysler don't have. Like the other auto companies, GM's earnings were reduced by costly finance incentives at the end of the 1986 model year.

For all of 1986, analysts expect GM to earn about $2.6 billion — average and median — a 35 percent drop from 1985's profit of $4.0 billion.

Ford is the only one of the Big Three expected to show an increase in quarterly and annual earnings.

The average of analysts' estimates put Ford's third-quarter earnings at $485 million. The median is $500 million. That compares with a $313 million profit in the third quarter of 1985.

For the year, Ford is expected to earn more than GM. The analysts' average for Ford is $2.9 billion; the median is $3.0 billion. Ford earned $2.5 billion in 1985 and $2.9 billion in 1984, its record year.

Chrysler is expected to earn $218 million — average and median — in the third quarter. That compares with a record $316 million profit in last year's third quarter.

For the full year, the earnings estimate for Chrysler is $1.25 million —average and median — compared with $1.6 billion in 1985.

Only two of the auto analysts queried follow American Motors. Arvid Jouppi of Arvid Jouppi & Associates expects AMC to show a profit of $19 million in the third quarter and a loss of $50 million for the year.

Ronald Glantz of Montgomery Securities predicted AMC will lose $33 million in the third quarter and $110 million for the year.

The company lost $19 million in the third quarter of 1985 and $125 million for all of 1985.

AMC executives have said the company will show a profit in the fourth quarter, which would be AMC's first quarterly profit since the fourth quarter of 1984. The executives further said that the full-year loss will be less than $100 million in 1986.

Feaheny personality, Ford stock conspiracy at issue in lawsuit

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The trial of Thomas J. Feaheny's lawsuit against a half dozen of his former fellow Ford Motor Co. officers will enter its third week here today with no clear-cut tilt of the scales in sight.

Scheduled to take the stand this week as witnesses for Feaheny are Ford Chairman Donald E. Petersen; William Clay Ford, vice chairman and chairman of the executive committee; and President Harold A. Poling, a defendant.

Further testimony is expected from another defendant, Louis R. Ross, executive vice president, Ford North American automotive operations.

Although the list of defendants includes two high-ranking incumbent Ford officers and four retired officers, the company is not named. It is reported to be paying for the defense, however, and to be ready to pay any of the approximately $150 million in damages Feaheny is seeking.

Testimony from day to day tends to be highly repetitious. The Wayne County Circuit Court jury has been examining letters, memos, tables of organization, management review reports and such internal company documents as minutes of meetings of the compensation and options committee. Some documents are heavily edited to delete references to people not involved in the case.

One member of the 10-member jury panel has been excused because of migraine headaches.

A jury of six is required, and Wayne County Judge Michael J. Talbot put 10 in the box in case any were excused. The civil trial is expected to last at least until mid-November, and the judge has said he is concerned over dropouts.

Feaheny was vice president — vehicle research when he left Ford, and is attempting to establish that the defendants conspired to interfere with his employment relationship with Ford and to shorten his career. He was fired in 1983 shortly after bringing suit.

Defendants are Philip Caldwell, retired Ford chairman; Poling; Ross; John McDougall, retired executive vice president for International Automotive Operations; Harold C. MacDonald, retired vice president for engineering and research; and Peter J. Sherry, retired vice president for personnel and organization.

Caldwell, MacDonald, Ross, McDougall and Sherry have testified. Each painted a picture of Feaheny and his situation at Ford that agreed in major points.

They said he was hot-tempered, and a source of controversy and that he failed to carry out his leadership role. All have agreed as to his brilliance as an engineer.

Other witnesses, including former Ford Chairman Henry Ford II, have said essentially the same.

Robert Alexander, who retired as one of Ford's top engineers, testified by deposition that he knew Feaheny well. "He has a powerful intellect and is very creative," Alexander said in his deposition. "Whether you like his personality or not, he gets the job done."

Testimony of others showed Alexander once successfully defended Feaheny when Lee A. Iacocca, then head of Ford North American Automotive Operations, had decided Feaheny should be fired.

Feaheny's leading attorney, James F. Schouman, is attempting to convince the jury that the defendants conspired for personal gain that would come in the form of stock options not given to Feaheny. Shares included in options not awarded to him would remain in the pool of shares available to the defendants, he contends.

Testimony has indicated that the pool of shares available to option holders was not depleted in any of the years in question. The defense is attempting to show that Feaheny's not getting options would have no appreciable effect on the shares available to the defendants.

AUTOMOTIVE NEWS JOE WILSSEMS
Ross heads to court.

Until late last week, it had been expected that expert witnesses would be called to testify as to the validity of documents. However, those documents were determined by the judge to be irrelevant and those witnesses will not testify.

Feaheny returned some 30,000 pages of documents to Ford during the preliminary discovery phase of the court case.

Feaheny and attorney Schouman have been friends since high school. The attorney is representing Feaheny in this case on a contingency-fee basis. He would be eligible for one-third of damages collected.

Witnesses have included John A. Manoogian, Ford executive in charge of the Alpha project; George Stirrat, retired Ford official who was chairman of the Taurus-Sable project; Chalmers L. Goyert, Ford retiree who served as staff executive director in the office of the vice chairman; and Norman Krandall, Ford retiree who was executive director in the corporate strategy analysis group.

Daf shopping Brazil for truck components

By Rik Turner
STAFF CORRESPONDENT

SAO PAOLO, Brazil — Daf Trucks, the Dutch heavy-truck and bus maker, is studying Brazil as a prime source of components.

It is part of an effort to diversify its component purchasing, 80 percent of which is done in the Netherlands and West Germany.

John Snyder, Daf's purchasing director, was in Brazil for the Salao do Automovel, the biennial auto and components show which was in Sao Paulo in early October. He left behind drawings and requests for prices on deals worth an annual $10 million, according to sources in Brazil.

That would represent 6 percent of Daf's annual component purchases and would achieve Daf's goal of reducing dependence on European sourcing to 90 percent.

Daf is looking for springs, filters, pistons, windows and windshield wipers.

Sources in the parts industry in Brazil said Daf has been studying Brazil's supplier potential since 1985 after a prolonged strike in West Germany in 1984 severely damaged its operations.

This is the first time a company official has actually visited Brazil, however. Daf also is understood to be studying sources in South Korea and Taiwan.

Many of the Dutch company's major competitors in Europe, such as Daimler-Benz, Scania and Volvo, are already manufacturing in Brazil and are building up their export operations in the country.

Imported-car sales in Japan post 2nd-best monthly total

By Doune Porter
SPECIAL CORRESPONDENT

TOKYO — Sales of imported cars in Japan, spurred by the dizzy heights of the Japanese yen, reached a 7½-year high in September. German automakers are benefiting most from the recovery.

The Japanese Automobile Importers' Association said last week that imported-car sales, based on registrations, totaled 7,348 in September, up 41.5 percent over the year-ago month but representing only 2 percent of the market.

The September total was second only to the record of 7,678 in March 1979.

Total sales for the first nine months were 50,409 units, up 33 percent from the year before. It is a reflection of the steady increase in the strength of the yen.

The yen has increased in value by more than 55 percent against the U.S. dollar, and although few benefits from the favorable exchange rates are passed on to consumers in Japan, imported cars have been a better deal.

Economy, however, is not the main appeal for the Japanese who buy foreign cars: They are interested in prestige, and improved marketing techniques have helped increase the small foreign share of the market.

The number of imported cars sold in Japan so far this year already exceeds last year's total of 50,172. The importers' association is predicting sales for 1986 will top the current record of 60,161 reached in 1979.

Volkswagen retained its position as the best-selling foreign maker in Japan. Its sales of 11,812 cars during the first nine months of this year were up 24.7 percent from the year-ago period. BMW was a close second with sales of 11,661, up 31.9 percent.

West German cars account for 80 percent of all imported-car sales in Japan.

After a steep plunge last year, U.S.makers managed to improve sales by 17.2 percent in the first nine months of this year.Sales of U.S. cars in Japan peaked in 1979 at 16,739, but fell to 1,816 last year. In the first three quarters of 1986, 1,737 imported U.S. cars were sold. General Motors has done far better than the average, posting an increase of 32.8 percent.

Iacocca gives aides more clout

By Mary Connelly and Dave Zola
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler Chairman Lee Iacocca has begun loosening his iron grip on the company's car and truck business in the year since Chrysler announced its reorganization.

Chrysler Motors President Harold K. Sperlich said a "weaning process" is under way as Iacocca begins laying the groundwork for the next era of management. But Sperlich stressed that "Lee didn't go away. He's still very active on major decisions."

Chrysler announced a corporate restructuring last November. It was approved by shareholders in May and became effective in June.

The revamping created a holding company and four subsidiaries. The move was designed to permit Chrysler to diversify into non-automotive areas and establish the organizational groundwork for the post-Iacocca era.

The company remains predominantly a car and truck business, with Chrysler Motors by far the largest subsidiary. The other subsidiaries are Chrysler Financial, Gulfstream Aerospace and Chrysler Technologies.

"It's not a giant change in the structure, but I think it's a desirable one," Sperlich said recently. "It's achieving its desired effect. We're a little broader-based company than we used to be."

Sperlich also said he and Chrysler Motors Chairman Gerald Greenwald have been given "a little more of a free hand to run the car and truck business."

"We're going through a (learning) process," he said. "Someday, Iacocca may decide to hang it up, so there is a weaning process. And let's say he decides to hang it up at 65 — that would be three years from now. Hopefully, he could look back and tell the board 'These guys have been running the car and truck business the last few years.' Hopefully, we'll grow as he backs off a little bit and lets us try our hand a bit.

"So it's a little bit of a training ground, a little better way to manage, a little more of a diversified company," Sperlich said.

Chrysler has diversified in the financial services area by acquiring E.F. Hutton Credit Corp. and FinanceAmerica Corp. The company also acquired Gulfstream Aerospace.

However, a planned major high-technology acquisition has been stalled and that section of the organizational chart remains vacant.

"We still would like to pick up a high-tech company. But it's hard to buy something with the stock market at record highs, so we're going slowly there," Sperlich said.

In July, Iacocca said Chrysler had failed in its efforts to acquire a "blockbuster" high-technology company and would begin courting smalier firms.

Some analysts have suggested that Chrysler has reduced its break-even point and is less in need of a high-tech acquisition to shield it from downturns in the auto business. Also, they said, Chrysler may be watching General Motors' experience with its Electronic Data Services acquisition before taking the plunge.

Domestic-car sales up 22% in final days of incentives

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The sales incentives went out with a bang, not with a whimper.

Early October new-car sales by the seven domestic producers rose 22.6 percent over the year-ago total to provide a fitting finale to the most recent round of annual-percentage-rate finance incentives.

Although the 247,623 retail deliveries in the Oct. 1-10 period were well above last year's 202,004, this year's total was still well below the period record of 298,105 set in 1968.

Honda, which did not use APR finance incentives, posted the largest year-to-year percentage gain with a 152.6 percent increase.

Other increases ranged from 28.6 percent for General Motors down to 2.5 percent for Chrysler Motors. Chrysler also had a finance incentive in early October last year.

Only Volkswagen, down 13.2 percent, and Nissan, down 20.4 percent, reported year-to-year sales declines.

3 GM plants down; week's output declines to 150,177 cars, off 3%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

With three General Motors plants idle, last week's targeted domestic auto production dipped 3.69 percent from the prior week's build.

Automakers scheduled output of 150,177 cars last week, down from the previous week's 155,933. The total was 4.84 percent below the year-ago week's 157,820.

So far this year, 6,225,050 cars have been built, 5.09 percent below the 6,559,224 completed last year at this point.

Last week's scheduled production was split as follows: GM, 50.68 percent; Ford Motor Co., 22.73 percent; Chrysler Motors, 16.78 percent; Honda of America Manufacturing Inc., 4.33 percent; New United Motor Manufacturing Inc., 2.00 percent; Volkswagen of America, 1.33 percent; Nissan Motor Manufacturing Co., U.S.A., 1.15 percent; and American Motors, 1.00 percent.

GM's Flint, Mich. (Buick City), plant is idle this week (Oct. 20) for inventory adjustment, affecting 4,700 workers. The plant is expected to resume production Oct. 27.

GM's plants in Arlington, Texas, and Wentzville, Mo., resumed output today (Oct. 20). Both plants had been idle for one week for inventory adjustment.

Downtime at GM's Janesville, Wis., plant was extended for one week because of a materials shortage. The plant is expected to resume Oct. 27.

GM's Linden, N.J., plant was slated for overtime Saturday (Oct. 18).

AMC's Kenosha, Wis., plant resumed output last week (Oct. 13). The plant had been closed for one week to adjust inventories.

All Ford plants are slated for daily overtime this week.

Three Ford plants are scheduled for overtime next Saturday (Oct. 25). They are Wixom, Mich.; Edison, N.J.; and Wayne, Mich.

Chrysler's Belvidere, Ill. and St. Louis (No. 2) plants were slated for overtime last Saturday.

Those plants along with Chrysler's Newark, Del., plant are scheduled for daily overtime this week.

Truck production holds steady for week

Last week's scheduled domestic truck production of 70,065 was down slightly (0.87 percent) from the previous week's 70,680 and was 1.19 percent below the year-ago week's 70,911.

So far this year, 2,856,636 trucks have been assembled, 3.46 percent more than the 2,761,031 completed last year at this point.

General Motors' Pontiac, Mich., plant was idle last week for inventory adjustment. The plant is scheduled to resume production today (Oct. 20).

Ford Motor Co. closed its plants in Norfolk, Va., and Twin Cities, Minn., today for model changeover, affecting 2,571 workers. Both plants are expected to resume output Oct. 27.

GM scheduled Saturday (Oct. 18) overtime at the following plants: Detroit; Baltimore; Flint, Mich. (No. 1); and Janesville, Wis.

Ford slated Saturday overtime at its St. Louis plant.

The following Ford plants are scheduled for daily overtime this week (Oct. 20): Kansas City, Mo.; Louisville, Ky.; Lorain, Ohio; Wayne, Mich.; and St. Louis.

Chrysler Motors' Warren, Mich., plant was slated for overtime last Saturday and also for daily overtime this week.

Holiday cuts Canada total

With all plants closed last Monday (Oct. 13) in observance of the Thanksgiving holiday, last week's scheduled car and truck production in Canada declined from the previous week's output.

Carmakers targeted 21,963 units last week, 7.83 percent below the prior week's 23,830. The total was 13.04 percent more than the year-ago week's 19,430, which was also a holiday week.

So far this year, 827,474 cars have been assembled, 1.29 percent below the 838,267 completed last year at this point.

Truck production dipped 9 percent to 10,217 from the previous week's 11,227, but it was 4.15 percent more than the year-ago week's 9,810.

Year-to-date, 652,541 trucks have been built, 2.70 percent below the 670,666 assembled last year at this time.

The GM truck plant in Scarborough, Ontario, resumed output last Monday (Oct. 13). The plant had been idle for one week to adjust inventories.

Toyota appoints Kentucky execs

GEORGETOWN, Ky. — Fujio Cho and Yoshiyuki Nakai have been named to high posts with Toyota Motor Manufacturing U.S.A., which is constructing an auto manufacturing plant here.

Cho was appointed executive vice president and chief operating officer, and Nakai was named manufacturing vice president.

Toyota Motor Manufacturing previously announced the appointments of Kaneyoshi Kusunoki as president and chief executive officer and Alex Warren Jr. as vice president — administration.

Cho, 49, joined Toyota in Japan in 1960 and became a general manager in the North American project office earlier this year. He will be the senior executive in Kentucky and will also be responsible for the production control, purchasing and finance departments.

Nakai, 46, joined Toyota in Japan in 1961 and also became a general manager in the North American project office this year. He will be responsible for the plant, quality control and production engineering departments.

Toyota also named general managers to head key departments.

Mike Dodge, 43, previously production manager at Volkswagen of America's Westmoreland, Pa., assembly plant, was named plant general manager.

Sam Heltman, 41, most recently vice president for personnel with New Holland Inc., was named general manager for human resources.

Dewey Crawford, 43, formerly employee relations manager at FMC Corp., was named personnel manager.

Purchasing, quality control and production engineering departments will be headed by Japanese managers to be named later. The rest of the management team will be named soon.

Chrysler's third quarter: A-OK

AUTOMOTIVE NEWS/JOE WILKINS

Chrysler Corp. Chairman Lee A. Iacocca last week reported Chrysler's third-quarter earnings of $235 million. It was Chrysler's third best third quarter for net earnings and second best for operating earnings. Iacocca said he would call it Chrysler's best quarter ever "considering the kind of competitive environment we've been playing in."

Chrysler: More power, luxury

Bigger engines, vehicles on drawing board

By Edward Lapham and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler Motors' product plans for the early 1990s call for more luxury and increased horsepower.

Automotive News has learned that recent proposals within Chrysler call for that power to be supplied by two new V-6 engines designed and built by Chrysler — a 3.3-liter version due in the 1990 model year and a high-tech 3.8-liter overhead cam version in the 1991 model year.

The addition of the two new Chrysler-built V-6 engines to the 3.0-liter V-6 the company currently buys from Mitsubishi would mean that by 1992, as much as half of Chrysler's 1.3 million annual domestic car and minivan production could be powered by V-6 engines.

The move toward bigger engines is part of a broader strategy to move Chrysler Motor products up the scale, both in size and content. The new engines are especially important to the Chrysler brand, which will be the corporation's large- and luxury-car specialist.

Added V-6 capacity is also seen as a strong addition to the minivan line, especially in light of marketing by Ford Motor Co. and General Motors that stresses their minivans' towing capacity and commercial applications.

Automotive News has learned that Chrysler is leaning toward introducing both Dodge and Chrysler versions of the C-body — full-sized, upscale front-wheel-drive cars due in 1988 — as well as both Chrysler and Imperial versions of the Y-body — upscale, stretched versions of the C-car that are due in 1989. Also on the boards is a Chrysler-brand long-wheelbase minivan in addition to Plymouth and Dodge versions.

When asked about the stretched Chrysler minivan, Chrysler brand general marketing manager A.C. "Bud" Liebler said that model was not approved yet, but that when and if it is, it will "undoubtedly be named Town & Country."

That name, like "LeBaron" and "Imperial," are traditional Chrysler names expected to elicit strong marketing, nostalgic responses.

A Chrysler spokesman last week confirmed the 3.3-liter engine program, which was first disclosed during concession talks with UAW workers at the Trenton, Mich., engine plant, where the new engines will be built. However, he declined to comment on the 3.8-liter version.

Big 3 earnings top year ago

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Big Three automakers' third-quarter performance was better than predicted: Combined earnings of $1.192 billion exceeded year-ago levels by 4 percent.

Earnings for the three companies had been expected to be down 30 percent, based on an average of estimates by 10 leading auto analysts. The analysts' average drastically underestimated earnings from General Motors and Ford Motor Co.

AUTOMAKERS' SALES, PROFITS (In Millions)

	GM	Ford	Chrysler
Third quarter			
1986 sales	$22,641.0	$14,365.8	$5,168.8
1985 sales	22,491.7	11,630.0	4,484.4
Third quarter			
1986 profit	$263.7	$693.3	$234.9
1985 profit	516.7	313.1	316.2
9 months			
1986 sales	$77,286.4	$46,453.4	$16,547.8
1985 sales	71,731.1	38,877.8	15,872.5
9 months			
1986 profit	$2,305.2	$2,500.0	$1,080.0
1985 profit	2,747.5	1,795.1	1,429.2

The analysts surveyed admitted GM's earnings were the most difficult to predict because they didn't know how large the operating loss would be and what tax credits and financial accounting mechanisms would be used to offset the loss.

Ford's earnings were uncertain because the automaker had sold off two operations during the period ended Sept. 30.

Third-quarter earnings for the Big Three in 1985 were $1.146 billion.

Quarterly sales for the Big Three totaled a record $42.4 billion, up 10 percent from $38.6 billion a year ago.

For the first nine months of this year, the Big Three earned $5.9 billion, compared with $6.0 billion a year ago. Sales so far have totaled $140.4 billion, up from 1985's $126.3 billion.

GENERAL MOTORS: GM reported net income of $264 million, down 49 percent from $517 million earned in the year-ago third quarter. Sales were a record $22.8 billion, up 1 percent from $22.5 billion. On a per-share basis, GM earned 56 cents in the quarter compared with $1.53.

GM reported an operating loss for the quarter of $339 million. That compares to an operating loss of $21 million in the same quarter a year ago.

GM said costly financing incentives, including its 2.9 percent program to clear inventories at the end of the model year, adversely affected third-quarter results. GM's operating loss was offset by a tax credit of $311 million because of its earnings decline and the continuing high level of amortization of U.S. investment tax credits.

During the third quarter, GM's profits as a percent of sales dropped to 1.2 percent compared with 2.3 percent in the 1985 third quarter. For the year to date, profit margins at GM are 3.0 percent, compared with 3.8 percent a year ago.

Working capital dropped to $4.9 billion as of Sept. 30, down from $6.3 billion on Sept. 30, 1985. Cash

Bringing sense to madness at Ford

By David Halberstam

Henry Ford I had outlived his era and his usefulness.

Once a popular figure with the average man, he had become known as one of the nation's leading labor baiters. He had helped usher in a new era of economic dignity for the common man, but he could not deal with the consequences.

His public statements during the Depression, while millions suffered — including thousands upon thousands of his own workers — were perhaps the most pitiless ever uttered by any capitalist. He repeatedly said that the Depression was good for the country and the only problem was that it might not last long enough, in which case people might not learn enough from it.

His workers, embittered by his labor policies, marched against him in the '30s and were put down by Harry Bennett's truncheons and guns. His security people were so vicious that when Ford's workers marched, they wore masks over their faces to hide their identity.

In business he was overtaken by General Motors, which relentlessly modernized its design, its production and its marketing. GM fed the appetites Henry Ford I had helped create. In addition, GM inaugurated a dynamic that haunted the Ford company for the next 50 years: Buyers started out driving Fords when they were young and had little money and slowly, as their earnings rose, graduated to more expensive GM cars.

Ford's legacy was a complicated one. Forty years after his death few remembered the ugliness of his final years. The harshness of his actions had been softened by time.

GM speeds up plans to close 6 U.S. plants

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors is speeding up plans to close a half-dozen assembly plants and associated components plants.

GM said it plans to close several U.S. assembly and metal fabricating facilities by the end of next year.

"In the coming weeks," GM said, "employees at the affected operations in the United States will be notified, and we'll then be in a position to provide additional detail

NEWSPAPER

Impending sale has GM's South African dealers relieved

By Jeremy Sinek, Michelle Krebs and Gavo Zola
AUTOMOTIVE NEWS STAFF

General Motors dealers in South Africa are reacting with cautious optimism combined with a degree of relief to the news that GM is selling its South African subsidiary.

GM said last week that it would sell the South African firm to management and other local interests. GM's assembly plant in Port Elizabeth employs 3,000 people — 60 percent of them non-white — and GM has 200 dealers in South Africa.

GM said it had lost money in South Africa for several years and it could see no turnaround in the near future. GM also has been the target of anti-apartheid activists in the United States.

"We have been disappointed in the pace of change in ending apartheid," said GM Chairman Roger B. Smith.

GM President F. James McDonald said South Africa was diverting the attention of executives from other GM problems.

GM dealers in Johannesburg were cautious in their comments because the identities of the new owners were not yet known. Bob White, GM South African managing director, said details of the deal could be announced before Nov. 4, and the transfer of ownership would take place by Jan. 1, 1987.

All that is known of the new owner team is that it includes present GM executives and outside individuals. No financial institutions are said to be involved. Some ex-Ford personnel have been mentioned as being involved, as have some GM dealers, including individuals behind the largest GM dealer chain in South Africa, Williams-Hunt.

Although dealers are cautious, they also are optimistic because they already have in place a modern, coherent product range to sell. And they are relieved that weeks and months of uncertainty and speculation had ended.

Dealers welcomed the change to South African ownership, which they said will result in more flexible and motivated management.

"First, they won't have to run to Detroit all the time to get things passed," said one dealer. "They can make instant decisions.

"Some South African boys know their business better than the Americans did."

Another dealer's comments typified a widespread feeling that a strong product has been handicapped by inadequate marketing: "I don't think GM has done a good marketing job in the past," one dealer said. "Now we will have a South African company run by South Africans. I hope politics will go away and we can get the show on the road."

Dave Rosevear, managing director of Williams-Hunt, South Africa's largest GM dealership (its 10 outlets account for at least 20 percent of all GM sales in the country), said: "The main question in everybody's mind is how credible the new people are and what the financing arrangement is. . . .

"From a customer's point of view there's some confusion, but generally the news has been positively accepted."

Peter Searle, president of the Association of Automobile Manufacturers of South Africa, said there are too many manufacturers in South Africa, and the development does not improve that situation. Seven manufacturers serve a market that this year is expected to total 180,000 cars and 100,000 commercial vehicles.

If GM had folded, Volkswagen would have been the only carmaker left in the Port Elizabeth area — once the Detroit of the South African motor industry.

Rival carmakers secretly regret that GM's products have not disappeared from the market. They console themselves with the hope that the uncertainty will further undermine the company's already shaky hold on the South African car market.

GM Chairman Smith's statement earlier this month that GM was considering pulling out of South Africa was quickly picked up by the South African press. The management in South Africa was clearly embarrassed and did nothing to soothe a rash of rumors until White finally called the press conference.

The new owners will inherit a fine product range, but it is going to take some determined marketing to convince consumers that Opel, Isuzu and Suzuki — the lines now sold by GM — will be around after GM's name has gone from the subsidiary.

White said the team will start with a better balance sheet than the subsidiary has had in 15 years. He said the cornerstone of the deal is that GM will clear GM South African's debts. The amount was not revealed but is said to be up to $50 million.

It is expected that little money will actually change hands in 1987 for the assets of GM South African, which are valued at approximately $180 million. The buyers are almost certainly getting the company at a fire-sale price and will not have to pay anything until well into 1988.

"It will be a unique event for the South African motor industry," White said, "when a team totally dedicated to the motor business has the opportunity to compete against other manufacturers owned by either large conglomerates or foreign multinationals."

The agreement is expected to contain a buy-back clause that could be enacted if the political and economic climate stabilizes.

In the meantime, the restructured company will continnue to sell cars from GM's German subsidiary, Adam Opel, and commercial vehicles from its Japanese partners, Isuzu and Suzuki.

GM will receive income from licensing fees and from the sale of components from Germany and Japan, yet will be freed from the daily problems of South Africa's auto industry.

Although other non-automotive companies followed GM's lead last week in pulling out of South Africa, Ford Motor Co. Chairman Donald Petersen said his company has no plans to change the way it has been doing business there.

Two years ago, Ford bought a 42 percent interest in SAMCOR, which makes and distributes Ford vehicles and other makes.

Sales in South Africa continue to drop as prices rise

By Jeremy Sinek
STAFF CORRESPONDENT

JOHANNESBURG, South Africa — September new-car sales in South Africa dipped slightly for the second consecutive month. The decline coincided with more auto price hikes.

The sales figure of 15,091 cars was down 1.9 percent from the August total. However, the truck and bus total of 8,400 was up 2 percent from the August count.

Gains were posted in June (15,769) and July (16,778). A new company-car tax program had been expected to boost sales in September.

Last month's prediction by the nation's automobile manufacturers association that sales would range between 15,500 and 17,500 during the rest of the year now looks overoptimistic.

Despite a more favorable economic climate in other business sectors, auto sales have slipped as prices continue to climb on a quarterly and sometimes bi-monthly basis. The average new-car price now is 40 to 45 percent higher than it was a year ago.

The latest auto price hike accompanied a recent improvement in the exchange rate. The value of the South African rand has risen from about 39 to 45 U.S. cents.

Toyota, the market leader, posted the biggest price increases — 8 percent on Cressida sedans and 6 percent on commercial vehicles. The top-selling Corolla, which had a small price adjustment when the 1987 model year began last month, remains unchanged.

Nissan followed Toyota's lead, and Samcor (Ford, Mazda, Mitsubishi) was expected to fall in line.

German carmakers, however, seem less affected by exchange rate vagaries. Mercedes-Benz, BMW and Volkswagen predicted no increases until November.

SOUTH AFRICAN AUTO SALES

	9 mos. 1986	9 mos. 1985
BMW	10,116	9,611
General Motors	10,507	13,731
Mercedes-Benz *	13,808	15,826
Nissan	10,521	10,155
Samcor ‡	27,871	30,696
Toyota	34,648	36,069
Volkswagen	22,893	21,143
Others	2,454	13,216

* Mercedes and Honda
‡ Ford, Mazda and Mitsubishi

On a year-to-date basis, Volkswagen remains the South African industry's rising star. Despite an industrywide downturn of 11.7 percent (from 150,447 to 132,816) in car sales, VW increased its volume by 8.3 percent, from 21,143 to 22,893. Its market penetration rose from 14.1 percent to 17.2 percent.

Nissan and BMW also bucked the trend by posting volume gains. The big two, Toyota and Samcor, were down in volume but up in market share.

GM was the biggest loser in September. Its volume was down 23.5 percent from the same period of 1985, and its market share dipped from 9.1 percent to 7.9 percent.

There was a gain for Samcor's Mazda-clone Ford Laser and Meteor models. In September, Laser-Meteor (1,589 sales) was the third best-selling car in South Africa, behind the traditional top two, Corolla (2,575) and VW Jetta (2,051).

If Laser-Meteor figures are combined with those of the Mazda 323 — all are built on the same production lines — the Samcor clones were only 73 units short of outselling the market leader.

Ford Europe losing top stylist

Andrew Jacobson to lead staff there

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

Uwe Bahnsen: His early retirement continues the exodus of top stylists from Ford's European design staff.

FRANKFURT, West Germany — One of the world's most acclaimed automotive stylists, Uwe Bahnsen, design vice president for Ford of Europe, will retire in December to join the Swiss branch of the Art Center College of Design.

Bahnsen, 56, has been head of the design team for the Scorpio, Sierra, Fiesta and Escort ranges, as well as the Cargo truck and the new Transit van.

He will be replaced by Andrew K. Jacobson, 44, an American who has worked with Bahnsen in Europe for the last five years. Jacobson currently is chief designer at Ford's Merkenich design studio near Cologne.

Jacobson will be Ford's chief designer in Europe. However, it is not clear whether he will immediately be given the title of vice president within Ford of Europe. He joined Ford in 1965 and has worked in Dearborn as well as at Ford design centers in Australia and the United Kingdom.

Bahnsen's early retirement continues a recent exodus of top stylists from Ford's European design staff. During the last two years, several of Bahnsen's key associates have moved to other European and U.S. companies. They included chief designers Trevor Creed, Patrick le Quement and executive designers Alan Jackson and Tom Scott.

Creed joined Chrysler; le Quement and Jackson moved to Volkswagen; and Scott became head of design at American Motors.

Ford officials have called the raids a tribute to pioneering aerodynamic designs of the Sierra and Scorpio in Europe and Tempo-Topaz, Thunderbird-Cougar and Taurus-Sable in the United States.

General Motors' European design staff at Adam Opel also has had a heavy turnover in the last two years. Talent raids on the U.S.-based companies may have been spurred by worldwide programs at Ford and GM to lower costs by reducing personnel.

Despite the drain, a Ford spokesman said last week that there is no shortage of styling talent at the company's European operations.

"The resources of Ford, with its different design centers worldwide, are quite huge," he said. "Uwe Bahnsen always said he had been part of a team."

Hamburg-born Bahnsen joined Ford in 1958 and was appointed to his present position in 1976. He will become director of education at the Art Center College of Design/Europe in January.

The Art Center College of Design is in Pasadena, Calif. Its European campus opened this fall in Latour-de-Peilz, Switzerland. The European campus is funded by European automakers, including Ford.

VW finance chief to quit; he'll become a consultant

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Rolf Selowsky, Volkswagen's chief financial officer, will leave the company next May. His departure reportedly stems from a disagreement with Chairman Carl Hahn.

However, Selowsky, 56, a member of VW's management board since 1982, will sign a new five-year pact as consultant to Volkswagen. A company spokesman said Selowsky made the decision to step down.

The move is expected to be made official at the Nov. 21 meeting of the VW supervisory board.

No reasons for the change were given by Selowsky or the company last week. However, a company source indicated that Selowsky may have disagreed with Hahn's proposal to create a position for a financial controller with responsibilities for the group's new operations in Spain and China.

Hahn is said to have revealed the plan last spring. The new position could have conflicted with Selowsky's established duties.

Creation of the new controller position is expected to be discussed at the November meeting. The supervisory panel also will review a report by a consultant firm on how the new responsibilities would be structured.

Earlier this year, the company acquired 51 percent of Seat, the Spanish government-owned automaker. VW will raise the stake to 75 percent by the end of this year and is scheduled to assume full control by 1990.

Volkswagen has also set up a joint venture in China, assembling Santanas in cooperation with Shanghai Automobile and Tractor Industry Corp. The project, launched two years ago, includes increasing the car's local content and building a VW engine plant.

Selowsky will have been at VW for five years when his contract expires next year. He joined VW from Klöckner-Humboldt-Deutz, a West German engineering firm.

Makers see little change if retirement rules die

By Louise Kertesz and Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTERS

President Reagan is expected to sign into law a measure that eliminates mandatory retirement for most workers at any age, but automakers expect the new legislation to have little effect on their operations.

Prior to the new measure, companies were barred from setting a retirement age lower than 70.

Though retirement is mandatory in Big Three labor agreements, the new law would not require automakers to do anything before their current contracts expire. And — according to union and Big Three spokesmen — changing the language of their agreements would not change the fact that most people in the auto business want to retire before age 70.

UAW sources said that most auto workers want to retire by 65 and that those who stay beyond that age do so to get pension credits. The trend in recent bargaining has been to lower retirement ages, they pointed out, and workers take advantage of the "30-and-out" auto contract provision.

Mandatory retirement will still apply to some management personnel. The bill, which was approved by Congress and sent to the president Oct. 17, allows mandatory retirement to remain in force for executives entitled to $44,000 or more in annual pension benefits.

Under the new law, mandatory retirement would be abolished as of Jan. 1, 1987. But mandatory retirement provisions in labor agreements entered into prior to June 30, 1986, may be enforced until expiration or until Jan. 1, 1990, whichever comes sooner.

Another bill of related nature requires that pensions be funded beyond age 65 if a worker remains on the job.

That provision is contained in the Budget Reconciliation Act, already signed by the president.

In Chrysler Corp.'s agreement with the UAW, which runs until 1988, the mandatory retirement age is 70, as in the current federal law.

But pension credits can't be acquired after age 68 unless an employee has less than 10 years of service, a union spokesman said.

A Chrysler spokesman said that company officials in the personnel department believe "the new law would not have any significant effect on us."

He said the personnel staff said the number of people who stay on the job at Chrysler past age 65 is "minuscule."

Under the Chrysler contract, hourly workers can retire after 30 years. Managers also have that option, he said.

He said that in his 29 years of service, he knew of only one person in management who stayed beyond 65.

A union spokesman said the negotiated retirement age at Ford Motor Co. is 65.

In the Ford agreement, an hourly employee may work beyond that age to get pension credits, but the company can retire a person who is 65 or older for inability to perform efficiently, he said.

A Ford spokesman said, "Most people want to retire at about 65 anyway so they can enjoy the fruits of their labor. There are exceptions, of course."

He said that when the new contract is negotiated next year, "the language will be changed to reflect the new law."

He continued, "People can go on if they want to beyond age 70, but the effect on us will be minimal. People seem to want to retire at the normal age.

"Senior executives of a certain rank have been expected to retire at 65 and they have."

Asked if there have been exceptions, he recalled that John McDougall, Ford executive vice president — International Automotive Operations, stayed for one year beyond his 65th birthday at the company's request.

He also recalled that Jim Allen in the public affairs department stayed until he was 67 or 68.

The union spokesman said that a GM employee with 10 years of service can retire at 65 and get a pension.

He said that a GM hourly worker is automatically retired at the end of the month in which he turns 70. Only with the approval of the corporation can the worker stay beyond that, the spokesman said.

A GM spokesman said, "Obviously, we'll go by the law."

It is believed that the last GM vice president who stayed beyond age 65 was Don E. Ahrens, Cadillac Motor Car Division general manager in the 1950s. Ahrens reached 65 in 1955 and retired at the end of 1956.

An American Motors spokesman said that the new law should have no effect on AMC. Since 1978, there has been no mandatory retirement age for salaried employees.

He said that mandatory retirement was eliminated in the Kenosha, Wis., agreement signed in July 1985, since Wisconsin law bars mandatory retirement.

Though mandatory retirement is required in the Toledo, Ohio, agreement, the AMC spokesman said the rule has never been a problem. Toledo's contract expires in February 1988.

Toyota eyes 1 million in annual U.S. sales

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

Toyota Motor Sales U.S.A. expects to be the first importer to sell more than 1 million vehicles in a calendar year.

The company forecasts 1986 sales of 630,000 cars and 380,000 trucks, according to Robert McCurry, senior vice president. Sales of about 10,000 Corolla FX-16 hatchbacks, the first U.S.-assembled cars to be sold under the Toyota nameplate, will help push Toyota over the top, he said.

"Next year, we'll sell 650,000 cars and 380,000 trucks," McCurry said. "And by 1988 (when Toyota's Georgetown, Ky., assembly plant begins production), our car sales alone should reach 750,000.

". . . That total will exceed this year's car sales for such brands as Plymouth, Chrysler, Dodge and Lincoln-Mercury."

McCurry's projections assume that voluntary export restrictions on Japanese cars will be extended next year with virtually no increase in volume.

"We have to plan that way, although we do not believe continued restrictions are necessary for the health of domestic manufacturers or desirable for consumers," he said.

The stronger yen and the likelihood that political friction over the mounting U.S. trade deficit with Japan would assure continued quotas in some form prompted Toyota to speed up work on its Kentucky plant earlier this year.

The plant now is scheduled to be on-line by early 1988 — six months sooner than originally planned. When full capacity is reached, it will be able to produce 200,000 Corolla-type units annually.

McCurry said Toyota has no plans to add truck production in the United States despite a 25 percent import duty on light trucks.

To keep up with the projected sales, Toyota will add dealers for the first time since 1980 — about 25 this year and another 25 in 1987. Most will be in the Sunbelt and the East.

Toyota's now has 1,085 dealers, according to a company executive.

AUTOMOTIVE NEWS/JOE WILKSEMS
Petersen: Ford does not plan any new plant construction in the near future

Ford plans to boost capacity for Taurus-Sable automatics

By Dave Zoia
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has decided to follow through on plans to expand capacity for automatic transaxles for Taurus and Sable.

Ford will boost output of the four-speed automatic (AXOD) transaxles at its Livonia, Mich., plant in order to meet demand for the unit in Taurus-Sable intermediate-sized front-wheel-drive cars.

Ford would not say how much additional capacity will be added in Livonia, but published reports indicated an increase of 100,000 units annually was planned. The tooling program is expected to take several months.

The Livonia plant has the capacity to assemble 500,000 AXOD transaxles a year. Annual assembly capacity of Taurus-Sable is more than 500,000 units.

In an Automotive News interview last week, Ford Chairman Donald E. Petersen said the expanded transaxle output is needed if Ford is to increase Taurus-Sable sales.

"The capacity increase gets the transmissions in better balance with the rest of the system," Petersen said. "It turned out we just didn't have quite the right balance between AXODs and engines."

The four-speed automatic is the only transaxle available with the Taurus-Sable 3-liter V-6 engine.

In addition to Taurus and Sable, the AXOD likely will be offered on a front-drive Continental expected to debut in the 1988 model year.

Ford expects 1987 to be a big year for Taurus and Sable.

"In 1987, we have the first calendar year where we'll have the full potential to build those in real volume — in excess of 500,000 if the market is there for them," Petersen said. "That has to be good news for Ford Motor Co."

Ford has been building many of its cars and trucks near capacity for the last two years.

"We haven't made all the final decisions, but it seems to me we will be continuing at or very close to that," Petersen said.

Petersen said Ford does not plan any new plant construction in the near future but will continue to increase capacity where possible at existing plants.

Mazda to offer 4-wheel steering on cars in U.S., Japan next year

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Mazda Motor Corp. will introduce an optional four-wheel-steering system in both Japan and the United States within one year.

The system controls the steering direction and angle of the vehicle's rear wheels in response to vehicle speed.

Tadahiko Takiguchi, manager of Mazda's chassis design engineering division, said last week that the four-wheel-steering system will be used on a new model and introduced in Japan a few months before it bows in the United States.

Takiguchi would not give details of that model. However, he said the system will be used in conjunction with an anti-lock braking system, which the company believes is necessary for optimum performance of the steering system.

The four-wheel-steering system will cost consumers "approximately the same as ABS," Takiguchi said. No firm price has been set.

Mazda's four-wheel-steering system debuted in 1983 on the MX-02 engineering prototype vehicle.

At low to medium speeds, the system steers the rear wheels in the opposite direction of the front wheels, reducing the turning radius of the car and facilitating tight turning and parking.

At high speeds, the rear wheels are turned in the same direction as the front wheels which improves straight-line stability and cornering stability, Mazda said.

According to Mazda documents, the steering angle of the rear-wheel is not necessarily in proportion to that of the front wheel. It is closely modulated according to the vehicle's speed. The steering ratio of the rear wheels to the front wheels in each speed range is adjusted automatically by a control unit equipped with a vehicle speed sensor and a steering angle sensor.

Takiguchi also said the system will be offered only on the high-line versions of the new model.

Program encourages extra time for repairs

By Arthur Flax
AUTMOTIVE NEWS STAFF REPORTER

AUTOMOTIVE NEWS ARTHUR FLAX

Rocky Walker, a GM senior technical writer, determines the time needed to make a repair under warranty at the GM Tech Center.

Chevrolet Motor Division is conducting a pilot program under which dealership technicians are encouraged to spend additional time on warranty repairs to make sure they are performed correctly.

"Our goal is to improve customer satisfaction," said Richard E. Lannen, sales manager for service and customer satisfaction in the Chevrolet central office.

". . . The No. 1 item that dissatisfies customers is not having their car fixed right the first time."

Lannen said technicians involved in the Chevrolet Master Repair Program will be paid for the extra time it takes to evaluate an auto malfunction before replacing parts or performing the repair procedure and to road test (or otherwise evaluate) the repair.

The pilot program also requires the dealer to phone the customer within 24 hours after the car leaves the shop to see if the repair has been performed correctly.

"In the past, a car might be written up by the service manager for handling problems," Lannen said. "The technician might immediately align the suspension. Now we want the technician to evaluate what is wrong before going to the next step."

He said the program also encourages service managers to write the "complete story" on the repair order. Technicians will be paid for time spent removing and testing a component that turns out to be functioning correctly.

The Master Repair Program started last December with 20 dealers; 800 of Chevrolet's 5,000 dealers now are involved. Lannen said Chevrolet will take another eight or 10 months to evaluate the program before deciding its future.

"During the past several years, we have given service managers the authority to approve extra time for repairs," Lannen said. "That authority was not always used. Now we are making it clear that we want them to use this extra time."

Throughout the industry, manufacturers generally offer some means of compensating technicians for efforts to make sure a car is repaired right.

A Chrysler representative said technicians are expected to complete a repair. Chrysler has a form for dealers to explain why the repair took longer than specified in the flat-rate manual.

Burt Schimpke, manager of the advanced service engineering department for Ford Parts and Service Division, said certain repairs follow strict diagnostic routines with a specific amount of time allowed for the repair.

In other cases, he said, "you can't define the diagnostic routine. An example would be diagnosing squeaks and rattles. We allow the technician the actual time it takes and requests for that time are made with the district office."

In another category, technicians who have gone through Ford's intensive, five-day, EEC-IV (electronic engine control) certification course are allowed to use their judgment and charge whatever time is necessary.

Charles M. Bounds, owner of Charles Bounds Chevrolet Inc., in Denison, Texas, said the Chevrolet program allows technicians to include under warranty charges all time spent searching for a problem. Bounds is a member of the Chevrolet National Dealer Council.

"This program allows the technician to go that extra mile," he said. ". . . It offers tangible proof that Chevrolet and General Motors are committed to product quality."

Bounds said warranty expenses have not increased significantly at his dealership since the pilot program began.

Before the program, he said, cars that weren't fixed right the first time could be brought back to the dealership and a warranty claim could be written for a different type of malfunction.

With the pilot program, Bounds said, the car often will have one claim with an additional three-tenths to six-tenths of an hour for warranty time. That time, he said, is often spent road-testing the vehicle.

"In my opinion, there is a potential for savings in the long term," he said.

Lannen said, "We are hopeful costs won't run away. If it's a wash, we'll be happy. We are most concerned with improving customer satisfaction."

Bounds predicted that the increase in the diagnostic time allowance will be most beneficial for technicians seeking to fix problems that are not immediately apparent, such as vibrations and rattles.

He said electronic engine and vehicle controls, which have frustrated technicians trained on older vehicles, will become the easiest components to fix as computerized diagnostic equipment becomes more available and electronics are improved.

Lannen included electronic malfunctions as the types of problems that could be better serviced under the pilot warranty program.

Byron Scott, director of home office service for Buick Motor Division, said Buick is not conducting a similar program but has surveyed 60 dealers for their reaction.

"In general," he said, "most technicians in the industry feel there is a place for such a program."

Dealer service business dropped in August, but stayed above '85 level

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships in August was lower than in some months this year, but it remained above the 1985 level.

Service volume for the first eight months of 1986 also outpaced the volume during the corresponding 1985 period.

The Automotive News Service Index found that shop business at dealerships in August amounted to 102.6 percent of the volume recorded in August 1985.

August was the fifth straight month in which service volume topped that of the year-ago month.

In the first eight months of 1986, service volume was 105 percent of that in the same 1985 period.

"We had a record month in July," said a Chevrolet dealer in the South whose business declined in August. "Also, school begins in August. It seems like people hold back a little at this time."

Other dealers also attributed the declines to end-of-summer doldrums.

A Big Three source predicted that indicators would show an increase in service business for September as a result of incentives, with more new-car customers entering the dealerships.

"When customers are buying cars, they are typically selling cars," he said. "And, in anticipation of selling their old cars, they have a tendency to bring their cars in for the small repairs that they have been putting off."

He predicted service business would continue to show an increase in October as a result of new cars returning for warranty service.

A Dodge-BMW dealer in the Northwest said that business had increased slightly. He credited "increased tourist traffic."

Some dealers who reported service increases in August said they made extra efforts to improve business.

A Buick dealer in the Northeast said, "Business increased as a result of longer working hours and additional mechanics. Also, we put a new service scheduling computer in place."

SERVICE INDEX
102.6*

	August, '86 vs. August, '85	8 mos., '86 vs. 8 mos., '85
Gross Profit on All Labor and P&A Sales	+2.1%	+6.8%
Repair Orders Written	−0.8%	+0.2%
Total Labor Sales (Customer & Warranty)	+3.2%	+8.9%
Shop Parts Sales (Customer & Warranty)	+ 6.3%	+6.4%
Sales of All P&A	+ 2.2%	+2.8%

*—Survey by Automotive News shows that dealers' service and parts business in August, 1986, was 102.6 percent of business in August, 1985. Service business in the first 8 months of 1986 was 105.0 percent of business in the corresponding period in 1985.

A Ford dealer in the Midwest whose service business increased slightly said he knew of no reason for the increase, "other than that we did some newspaper and radio advertising."

A Buick-Pontiac dealer in the Midwest said his volume increased because of a greater number of large jobs. "Dollar sales per repair order were much higher," he said.

In August, shop parts sales (customer paid and warranty) showed the biggest gain, up 6.3 percent.

Total labor sales (customer paid and warranty) were up 3.2 percent; sales of all parts and accessories were up 2.2 percent; and gross profit on all labor, parts and accessories sales climbed 2.1 percent.

Repair orders written were down 0.8 percent.

In addition, parts and accessories sales to off-premises customers were down 0.9 percent in August.

Total labor sales registered the biggest gain for the first eight months of 1986, climbing 8.9 percent over the 1985 period. Other indicators showing gains through August were gross profit on all labor, parts and accessories sales, up 6.8 percent; shop parts sales, up 6.4 percent; sales of all parts and accessories, up 2.8 percent and repair orders written, up 0.2 percent.

Parts and accessories sales to off-premises customers were down 0.3 percent through August 1986.

Chrysler staging seminars on car buying, maintenance

Chrysler Motors has been conducting seminars to provide information to the public on buying and maintaining automobiles.

Unlike the company's "Right From the Start Car Care Seminar," which is held at dealerships for recent buyers of new Chrysler products, the AutoInfo seminars have been held in hotels and a public library so as not to put pressure on the participants to buy autos.

Originally designed for women, the seminars have attracted a 50-50 mix of men and women.

Since March, the seminars have been held in New Orleans; Dallas; Chicago; and Windsor, Ontario.

At the seminars, participants are advised to ask to see the dealership's service department and to meet the service manager before making the decision to buy a car.

SHOP TALK

ARTHUR FLAX

Participants are told that dealers "sincerely hope you will return for your service needs. If you are not satisfied with the dealership's service department during the buying phase, you should consider going to a different dealership."

Kurt's service advice

Dealers might improve their service business by following the advice of independent garage owner Charles Kurt, of Kurt's Auto and Truck Center, Rockford, Ill.

Kurt, who said business is up 35 percent this year, told participants at the Congress of Automotive Repair and Service, "Your success is based on your image. The question the customer asks is 'Are you competent to fix my car?' If your garage is neat and clean, it goes a long way toward building your image."

Kurt runs a clean shop staffed by competent personnel and makes a point of selling his image.

He has appeared on television shows discussing such topics as winter car preparation and how to avoid service rip-offs.

He is also building a classroom in his service facility to teach customers the basics of car care. Kurt trains his technicians and others in the area (at cost) in the classroom.

He invites special interest groups as well as customers to his seminars. One group was offered a further class on understanding the function of the car so they would be better able to communicate with the technician.

Sixty of the 80 people in the group signed up.

"Most of the problem in the service industry is a lack of understanding by consumers of what is involved in a repair," Kurt said. "If consumers understand how complex the car is and how hard it is to pinpoint problems, they can learn to communicate the things that can help us pinpoint the problems."

He said consumers should be aware of when an automobile malfunctions — is it right after starting the engine or is it after the engine has been running for a while — and how to describe the malfunction.

Advice on gasoline

A Chevrolet dealer service bulletin lists brands of gasoline advertised to have detergent properties to remove deposits from port fuel injectors or to keep port fuel injectors clean.

The bulletin says the claims of the gasoline suppliers are not based on General Motors data, "but we have no reason to doubt the truth of the claims."

Clenet designs a new vehicle — a 4wd sport-utility

By Mait DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Alain Clenet, best known for the neoclassic car bearing his name, has designed a four-wheel-drive sport-utility vehicle that he hopes to market either through a new company or one of the Big Four U.S. automakers.

Clenet said he has developed a new concept for his vehicle, one that promises low manufacturing costs, enabling the 4x4 to be sold in the $7,000 to $10,000 range.

"All 4wd vehicles in the world are following in the tradition started by Jeep, using a rigid axle and a short wheelbase," Clenet said. He said that his concept "has more in common with a motorcycle than a Jeep or a tank."

Clenet said he and his partner, Mark Stehrnberger, have designed a car that is inexpensive to build, has a light unsprung weight, independent suspension and long wheel travel to absorb bumps.

The vehicle, which will weigh between 2,300 and 2,500 pounds, is about the size of a Jeep CJ, Clenet said. However, he claimed that the styling is "two generations ahead of the Jeep Wrangler."

Clenet said the secret to keeping manufacturing costs down on his proposed vehicle is the unique design which calls for a longitudinal mounting of a conventional front-wheel-drive engine and transaxle combination in the center of the vehicle. Clenet said that with the transaxle pointing fore and aft, the output shafts are connected to small differentials at the front and rear to power all four wheels.

The system is designed to be full-time 4wd. Independent MacPherson struts provide the suspension all the way around. Clenet said this use of a front-wheel-drive powerplant eliminates the need for a transfer case and, when coupled with a suspension similar to those on fwd cars, manufacturing costs will be greatly reduced.

According to his plan, the vehicle would be powered by a 2.5-liter four-cylinder engine in normally aspirated and turbocharged versions providing 130 to 180 horsepower.

Clenet said he approached a manufacturer formerly in the sport-utility market, but the deal fell through. He declined to elaborate. However, a U.S. manufacturer that fits the description is Navistar which, when called International Harvester, built the Scout.

Clenet said one of the Big Four domestic auto manufacturers has first right of refusal on the project but, again, he declined to specify which one. His statement about a 2.5-liter four-cylinder engine mated to a transaxle could apply to Chrysler.

Clenet is constructing a full-sized mockup and anticipates building four prototypes for further study. Stehrnberger/Clenet Design has been given a contract for the work by a new company, Asha Corp., formed by Clenet. Asha's stock is being traded on the Denver and Spokane, Wash., stock exchanges.

Clenet said about $500,000 worth of "A" warrants have been sold. Asha hopes to sell $2 million worth of "A" warrants to cover design and $5 million in "B" warrants to bring the design to prototype stage.

Clenet said it's possible the vehicle will be finished in time for a late 1988 introduction as a 1989 model.

"We feel strong this time," Clenet said, alluding to the troubles encountered by his former neoclassic car company which was forced into involuntary bankruptcy by creditors. Clenet Coachworks was eventually sold and restarted by a former employee, Al DiMora.

Renault making up lost ground in European sales

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Renault is reclaiming chunks of the European new-car market it has given up over the past several years.

A recent sales revival has narrowed the gap between the French government's embattled carmaker and the five other full-range producers in Europe. But Renault remained in sixth and last place among volume manufacturers through September, according to industry estimates compiled by Automotive News.

The Volkswagen Group continued to lead the European sales race at the three-quarter mark, while Japanese makers boosted market share in September.

New-car sales in Europe totaled 8,921,700 for the first nine months of 1986, up 8.3 percent over the January-September period last year. The European market is still on pace to eclipse the record 10.6 million cars sold in 1985.

While the industry was up 11.4 percent overall in September, Renault spurted 22.1 percent — by far the biggest gain among the six volume producers. The sales comeback, sparked by introduction of the R-21 sedan last spring and aggressive marketing at home, is a key element in Renault's general recovery.

Renault's European sales last month totaled 83,900, up from 68,700 in September, 1985. The French company trailed its 1985 pace by nearly 2 percent at midyear, but is now 3.6 percent ahead of 1985 with sales of 896,400.

Renault's market share edged up from 9.9 percent to 10 percent during the third quarter, while every other volume builder in Europe except Ford suffered a decline in market share in the wake of Japanese competition.

Ford's third-quarter numbers reflected the annual August selling peak in the United Kingdom, where the company is dominant. August sales in the U.K. traditionally dwarf those of other months because of the model-year changeover.

Top executives at Renault say the company will achieve 11 percent of the European market by the end of this year. However, that is still a far cry from 1982, when Renault led all makers with 14.6 percent.

The company had a strong September in several key markets. It was up 67 percent in the U.K., 30.5 percent in West Germany, 12.3 percent in Spain, 33.3 percent in the Netherlands, 32.4 percent in Switzerland and 46 percent in Austria.

But the most important gains were made at home. Renault sales in France increased 24.6 percent last month, while rival Peugeot SA was down 6.2 percent. Renault captured 30.9 percent of the French market share in September with sales of 39,000 units. PSA had 28.6 percent on sales of 36,100.

Peugeot SA maintained a nine-month advantage in its home market. Including the Peugeot, Citroen and Talbot marques, PSA has sold 437,300 cars to Renault's 410,100.

Renault's aggressive pricing strategy in France has drawn criticism from PSA. However, Renault Chairman Georges Besse and sales and marketing chief Jose Dedeurwaerder have recently denied any schemes to restore market share at the expense of profitability.

Overall, the VW Group, including Audi and Seat, held on to 14.4 percent of the nine-month European market and first place with sales of 1,287,000. But the group's share was down from 14.6 percent at midyear.

The Fiat Group is a strong second in the European standings with nine-month sales of 1,121,900 and 12.6 percent of the market. While Fiat volume was up 14.8 percent in September and up 10.1 for the year, its European market share slipped from 13 percent at the half-year point.

Ford was next with sales of 1,057,900 and an 11.9 percent share through the first nine months. Sales were up 7 percent for the year. General Motors was at 11.2 percent on sales of 1,002,000, an increase of 4.9 percent over the first nine months of 1985. GM's share at the end of June was 11.4 percent.

PSA's share dipped slightly from 11.2 percent at midyear to 11.1 percent at the three-quarter mark. Sales totaled 991,200 through September, an increase of 7.

Much of the market share surrendered by the Big Six has gone to Japanese companies, which boosted their sales last month. Japanese manufacturers had a combined share of 13.7 percent in September, up from 13.2 percent in August. September's total of 118,300 was 19.5 percent better than the same month in 1985.

For the first nine months of this year, Japanese manufacturers were up 20.6 percent over 1985 and had 12 percent of the market. Toyota has increased its sales 25 percent, Nissan is up 12.6 percent, Mazda is ahead 21.3 percent and Honda has risen 19.9 percent.

Nissan continues to lead Toyota in the tight European competition between Japan's two largest makers. Through September, Nissan had sold 273,300 cars in Europe for 3.1 percent of the market, and Toyota had sold 266,000 for 3 percent.

Incentives end; sales decline

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

With Big Three sales incentives discontinued, mid-October sales plunged 32.78 percent from the 247,623 cars sold in the first 10 days of October.

But the Oct. 11-20 total of 166,446 was up 2.29 percent from the year-ago period's 162,724.

Mid-October sales were nowhere near the record 334,290 cars sold during the period in 1971.

Honda posted the biggest year-to-year percentage gain: 24.34 percent. Chrysler was next with a gain of 21.02 percent, followed by Ford, up 14.52 percent and Nissan, up 7.10 percent.

American Motors, still offering zero percent annual-percentage-rate financing, was down 35.09 percent from a year ago. General Motors was down 8.31 percent, and Volkswagen was off 1.18 percent.

There were eight selling days in the Oct. 11-20 period this year and last.

EARNINGS

FROM PAGE 3

and marketable securities dropped to $3.9 billion by the end of the third quarter, down from $7.8 billion a year ago before the purchase of Hughes Aircraft.

Worldwide factory sales were 1,820,000 units for the third quarter, down from 2,150,000 in the year-ago quarter. For the year to date, GM sold 6,560,000 vehicles, down from 6,975,000 a year ago.

Nine-month profits for GM were $2.3 billion, down 15 percent from $2.7 billion.

On a per-share basis, earnings so far this year were $6.48 compared with $8.43 a year ago. Sales were $77.3 billion for the nine months, up 8 percent from $71.7 billion.

GM's third-quarter operating loss was further offset by higher profits for GM's subsidiaries — General Motors Acceptance Corp., General Motors Hughes Electronics and Electronic Data Systems.

GMAC: Net income was $313.7 million for the quarter, up 18 percent from $266.2 million a year ago.

For the first nine months, GMAC profits totaled $888.9 million, up 22 percent from $731.4 million in 1985.

GMAC said the increase in earnings resulted from growth in its earning assets, which averaged $82.0 billion for the third quarter and $77.3 billion for the first nine months, and also from lower borrowing costs.

In the third quarter, GMAC financed sales of 1,277,000 new GM vehicles, a record total. In September, when GM offered 2.9 percent financing, GMAC set a monthly record by financing 629,000 GM vehicles.

GM sold 697,728 vehicles in September and 1,674,080 for the quarter.

HUGHES: GMHE, the GM subsidiary which includes Hughes Aircraft and Delco Electronics, earned $148 million on sales and revenues of $2.5 billion. If GMHE had existed a year ago, it would have earned $137 million on $2.4 billion of sales.

For the first nine months, GMHE reported earnings of $439 million on sales of $7.9 billion. That would compare to $355 million on sales of $7.1 billion a year ago.

GMHE said Hughes Aircraft sales increased in the third quarter from year-ago levels while Delco Electronics had lower sales because of lower production rates of GM vehicles.

EDS: EDS reported a third-quarter profit of $71.1 million, or 58 cents per share, up 37 percent from $51.9 million, or 43 cents per share, a year earlier. Sales were $1.2 billion, up 26 percent from the year-ago quarter.

For the nine months, EDS profits were $189 million, up 43 percent, from $132 million. On a per share basis, EDS profits were $1.55 compared with $1.10.

FORD MOTOR CO.: Ford reported earnings of $693 million, or $2.61 per share. That represents a 121 percent increase from 1985's $313 million, or $1.48 per share. Earnings passed the previous third-quarter record of $380 million in 1984.

Ford's third-quarter profits included $102 million from the sales of Ford's North American paint operation and Ford Aerospace's interest in Starnet Corp.

Earnings outside of the U.S. were $86 million, compared with $102 million in the year-ago quarter. Ford said improved earnings in Europe were more than offset by less-favorable results in Asia-Pacific, primarily because of the strong yen relative to the U.S. and Australian dollars.

Sales were a third-quarter record at $14.4 billion, up 24 percent from 1985's $11.6 billion and up from the previous record of $11.8 billion in the third quarter of 1984.

Ford attributed the earnings improvement to higher factory sales and a more profitable product mix in North America as well as productivity improvements worldwide and the sale of two operations.

For the first nine months, Ford earned $2.5 billion, up 39 percent from $1.8 billion last year. Year-to-date sales totaled $46.5 billion, up 20 percent from $38.7 million a year ago.

Ford's cash and marketable securities increased during the third quarter to $8.1 billion, up from $5.9 billion a year ago.

Worldwide factory sales for the third quarter were 1,334,775 units, up from 1,241,119 a year ago. For the nine months, factory sales totaled 4,494,973, up from 4,191,928.

FORD CREDIT: Also contributing to Ford's earnings were higher profits for Ford Motor Credit Co. The finance subsidiary reported third-quarter profits of $156 million, up 63 percent form $96 million.

Because of low-interest-rate financing programs during the period, Ford Credit financed 613,000 vehicles in the United States, more than 100,000 higher than any quarter in Ford Credit's history. During the quarter, Ford Credit financed more than 50 percent of the new cars and trucks sold by Ford dealers in the United States, up from 48 percent a year ago.

For the first nine months, Ford Credit's income was $448 million, exceeding full-year 1985 earnings of $441 million, previously the record year.

The company's assets were $39.0 billion, up $9.6 billion, or 33 percent, from a year ago.

CHRYSLER CORP.: Chrysler Corp. reported net income in the third quarter of $235 million, or $1.60 per share, down 26 percent from $316 million, or $1.83 per share. It was Chrysler's third best third quarter for net earnings.

"But that doesn't tell the whole story any more," said Chrysler Chairman Lee Iacocca at a press conference to announce third-quarter results. "I'd characterize Chrysler's third quarter as our best ever considering the kind of competitive environment we've been playing in: The giant of the industry decides to peddle almost a million cars with fire-sale financing in just 42 days. We did GM's Big One one better with our 2.4 percent program. We still had operating earnings of $347 million and netted $235 million.

"GM and Ford lost market share during this 90-day donnybrook," Iacocca added. "We jumped during those 90 days to 12.2 percent market share."

Sales for the quarter were $5.2 billion, up 15 percent from $4.5 billion a year ago, setting a new third-quarter record.

For the first nine months of 1986, Chrysler's earnings totaled $1.1 billion, down 21 percent from $1.4 billion a year ago. Sales for the year totaled $16.6 billion, up 4 percent from 1985's $15.9 billion.

Chrysler's cash and marketable securities rose to $3.2 billion from $3.1 billion a year ago.

Worldwide factory sales for the quarter were 502,352, up from 472,344 in the year-ago quarter. In the first nine months, Chrysler's factory sales were 1,641,992 vehicles, up from 1,637,854.

CHRYSLER FINANCIAL: Also contributing to Chrysler's earnings were higher profits from Chrysler Financial Corp. The finance subsidiary reported record profits of $48 million, up 29 percent from the previous third-quarter record of $38 million set in 1985. CFC set a new nine-month record with profits of $134 million, 28 percent higher than the previous record of $105 million in the year-ago period.

The improved performance was due to special-rate finance programs offered by Chrysler during the period as well as contributions from CFC's recently acquired non-automotive financing operations.

Chrysler Credit, the auto financing arm of CFC, financed 213,554 new vehicles during the third quarter, or 41 percent of Chrysler's U.S. sales. That compares with 38 percent financed a year ago.

PRODUCTION

Week's output is 162,969, highest total since June

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production was the highest for any week since June.

The automakers scheduled 162,969 cars. They had not exceeded that total since the week ended June 28, when 175,718 were assembled.

Estimated car production last week was 8.73 percent more than the previous week's 149,889 and 6.91 percent more than the year-ago week's 152,430. Production in the year-ago week was affected by the UAW strike against Chrysler Motors.

Companies divided last week's estimated production as follows: General Motors, 52.51 percent; Ford Motor Co., 23.68 percent; Chrysler Motors, 14.11 percent; Honda of America Manufacturing Inc., 3.99 percent; New United Motor Manufacturing Inc., 1.84 percent; Nissan Motor Manufacturing Co., U.S.A., 1.72 percent; Volkswagen of America, 1.23 percent; and American Motors, 0.92 percent.

GM's Flint, Mich. (Buick City), plant resumed output last Monday (Oct. 20) after being idle one week for inventory adjustment. GM's Janesville, Wis., plant returned last Monday after two weeks of downtime due to a materials shortage.

GM's Linden, N.J., and Lansing, Mich. (No. 1), plants were slated for overtime Saturday (Oct. 25).

Three Ford plants were scheduled for Saturday overtime: Wixom, Mich.; Wayne, Mich.; and Edison, N.J.

All Ford plants except the Edison facility are slated for daily overtime this week (Oct. 27).

Chrysler's Belvidere, Ill., and St. Louis (No. 2) plants were scheduled for overtime Saturday. Those plants, along with Chrysler's Sterling Heights, Mich., plant are slated for daily overtime this week.

Truck production dips 7%

United States truck production dipped last week as two Ford Motor Co. plants were idle for model changeover.

Last week's target of 64,844 units was 7.49 percent below the previous week's 70,094 but was exactly the same as the year-ago week's total.

Ford's Norfolk, Va., and Twin Cities, Minn.,' plants resumed output today (Oct. 27) after being down one week for model changeover.

General Motors' Pontiac, Mich., plant resumed output last week. The plant had been idle for inventory adjustment.

Saturday (Oct. 25) overtime was slated at GM's St. Louis plant.

Three Ford plants are scheduled for daily overtime this week (Oct. 27). They are Louisville, Ky.; Kansas City, Mo.; and St. Louis.

Chrysler's Warren, Mich., plant is slated for daily overtime this week.

Canada matches U.S. car upturn

Like their domestic counterparts, Canadian auto manufacturers posted the highest week's production in four months.

Last week's scheduled output of 25,518 cars was the fattest Canadian total since the week ended June 21, when 25,753 were completed.

The build was 31.64 percent more than the previous week's 19,385 (affected by the Thanksgiving holiday) and 3.52 percent more than the year-ago week's 24,650.

Truck output of 11,216 units last week dipped slightly (0.85 percent) from the prior week's 11,312 and was 1.59 percent below the year-ago week's 11,397.

Engineers await market for electric vehicle sales

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — It's a bit like praying for disaster, but engineers gathered here for the eighth annual International Electric Vehicle Symposium need another oil shortage.

Electric-vehicle research is continuing, but at a slow pace.

General Motors halted its electric van program some months ago, and Ford Motor Co. is doing limited research with money from the U.S. Department of Energy, which sponsored the symposium.

"We've accumulated a wealth of knowledge and experience about electric vehicles," a GM spokesman said, "but the economics are just not there."

Bradford Bates, director of Ford's electric-vehicle projects, said support for electric-vehicle research has been dampened by depressed oil prices, but he insisted that the work is paying off.

"We have to take the long view," he said.

Eaton Corp. also believes its electric-vehicle components program will benefit the company.

And Bates said that even if there are no commercial markets, Ford's work on electric vehicles is helping to develop drive-by-wire systems and engine-monitoring sensors.

Drive-by-wire refers to electronic vehicle-control devices that eliminate mechanical controls. Bates said many engineers consider them the next wave in on-board electronic controls.

Money from the Department of Energy has enabled Ford to build an electric transaxle system that couples energy efficiency with characteristics suitable for city and suburban traffic, Bates said. The program, called ETX-I, resulted in production of an electric-powered Mercury LN7, which will be tested at a government lab.

A more recent DOE award is paying for work on electrical subsystems and a more powerful transaxle, Bates said.

Eventually, the product will be mounted in a Ford Aerostar van. Bates said the goal of the three-year program, called ETX-II, is to advance electric-vehicle technology to the point that government and industry researchers can determine its commercial potential.

David Harris, North American operations manager for Britain's Lucas Chloride, said his firm had been supplying electric-vehicle drive systems to GM. The components have been used for the conversion of the GM Griffon, which had been produced in England for sale to utility companies in the United States. In England, it was sold as an electric Bedford van.

Unfortunately, Harris said, GM recently suspended the program, leaving about 400 orders unfilled in the United Kingdom. British truckmaker Leyland is expected to pick up the orders, he said.

GM's decision to abandon electric vehicles is a disappointment to electric utility companies in the United States. Several have used electric vehicles for light-duty field work. Through membership in the Electric Power Research Institute, the utilities have been funding work on electric vehicles through Electric Vehicle Development Corp., which was established for that purpose.
